## Vanishing Desert

The lara hodiday waekend provided a gond opportunity to revsit lhe large desert area south and west of Al-Ain, varicusly caelled Reamlat Al-Ham'a, Horelma, or the Eastem Desert. Sirce t7e early 19905 this area has been served by a melwoik of galch roade that facilitete access to agricultural plantations, including some very lerge rurseries. The road network has not tecen expanded since the mid-1990s, but the main anseries are now landscaper wilh three raws of exatic shrubs an either side, nourished by drip Irigazion. The total lenigh of raed in questiar is same 225 kilmmetres in acritton, these roads are fonced wiln chair-link fen=a lopped by barbed whice, whth access via marmed and unmanned gates at major junctions and selected ofher locations. A signpost at a workstation along the way indlcates that ithls is a "Roadside Afforesiation Project ${ }^{7}$ for the ares, and it is at least possibe that a principal p.urpose of thet fencas is to prevent foraging comels ज̈ars enting the iannskenpeur sitiobs, in addition to kerping them off ithe roade.

Puttirg aside questimins ul Lie purpose and axpense of roadside afforestation and fencing. and its possible aesthetic appeal, these developmends have a nultibur of diazdvanleges for travel ars in search of a "desert exporlonce." Firsl, the roadeide plantinga detrect from the impression of raw wildemess 1rat is a malor part of the appeal of then dessar. Second, it is no Irnger possjble Just to stop at scank spols adarig the roped and walk or pienic in the adjacent deserl. Tles farica is a barrier to all. Third, and perhaps mosi ominously, i= one has in fact sutcereded in entering and navigating the sands, wh ch can be formideble in this area, one must keep in mhad that It is not poseible to exil at will - you can only exi: at gates in the fence, which a*e tews and tar between. This may condemm the werary resent Iraveller to further time and travall. Exlling cauld prover especially problematic afler raln. when sabkha ruulus (where riws: gates are locpted) are impassable.

And what of the desert itself, beyone the roadside plan:lings afte the fences? It has to be eaid that the big dunes
and parss and the spen vistas remalr speciacular, but on closor inspection the view at y日ar-enc, 2000 is troubling. The nomal desert vegrtation appars to have been devalatated by a combination of drought and owergrazhig by carmels. In duine areas. most vegetation is brown and cropped, much of it apparenity dead. The tip off thet this is not just the result of diought is the cropaing, and tre fiect that rare specimens of the wispy sllrub Calllganum compsum, the sedge Cype-
 Flowering heliatrope Heliotrojium digynum. su vive in good condiaion high on the soft dae alopes of dunas where they are too much :rouble for camels to reach. In sand flate, $Z y$ gophyllum, a choice of last resorl for camels, is now overwhelmingly corminani, and in fact appears to have exbendes its habitat into low dures.

Numerous temporary camel stallons dot fletticr argas. The largest ha-d obsarved was some 90 strong. These anlmals aic watctuo and ofiten fed on sile, but by day they ara released to forage the landscape, which they seem to do very well.

Is there any goad news? Well, maybe. The cape hare (Lepus capensis) appears to be thriving, perraps because it likes $Z_{\text {gopophyllum. }}$ Tris may help to meindain populatlons of predators such as red fox. deas't e日gle awh, and long-laggac buzzard. Areated report ls also in. cluded in this issue.

Rapor' by Gary Fepulner

## An eye-opening experience

On a recen: hike in :Fe Kuagndam spmething happened that I won'l torget in at huity. At the end of the hike I felt something in my eye which I trought might be a hair. On returning home ry ese became progressivoly wase, alluragh I couldrit locate the son, irce of the problem. I awoke with a starl at approximately

3am with iniense pai. and shone a :crich Ir. a mítor so as to sea lhe ey a bedter. To my u:ter horror I 5aw larvae of some kind coaving around. was shacked and after convincing my whe to take a ook, we prococded to remova 6 magarats larvapiwirms, approkimately $1-2 \mathrm{~mm}$ In languh. Nagaless to sayy I did not sleep a wink alter th:at and at dawn fushed to the local hospital for profersional assigharce. There I was mot with incrodulous stares and a "пudge-nudge...wink-wink" attitude whtich did mol gu dowil well. T'ו ER siaff found "nothing" in my eye except "imutus, thet somatimes cari look like worme zir" - | left for a priwote medcal practiee whout delay. The doctar hare was more sympsthetic and professional and, although he faund nothing in my eye, made an appointment with an opnthin molngist. I returned home and dug oul anot'er larvae, put It on Ice. and almost gave in to road rage an the way :o the next appo. ttment Hars the Ophthalralogist canfronted with my evidence, statec
 his carger, the other being a Nigerian n the USA, who had also beer sean as mad with his clarm of worms in his eye). He suggestec that my problarn rould be the laryane: of some kind of fly. Tho laboratoy confirmed this, although no quick fixes wele suggus'od, uxcipl ricchanically removing tham as I had been doing. I eventually removed a total of 10 larvaes : could hava passed somethilrg nto my eye dusing the trip becearea I had been collecilrg fox faeces and scrachlry ground in bat guarsa. Now te silghtost irritation still sonds me rushing in penic for the clinsest mirrar. This incletent carfimed my general atritude lowards arhropods. The irioral of the stury: Curi'l uiderestimate the powe' of nature and certainly don't hand lle faeces wiftout glover or w'thout washing your hands scon afterwards. This should enve ae a rerninder thet hiking doee have its risks and not all threats have leath andiar tannge.

## Eastern Desert Watch

A chllly holday outing in the Easter Desert, SW of Al.-Ain, recultad ir some interesting willilife observatians by Peter Curningham and Gary Feulner:

Mammals: The cape hare (Lepus
 encojohtered allve: three were flushed during excurgions on foot in areas near gravel mesas, and abundant tacs were seen. The cepe าare does not burrow sut simply exsts or ratiras in hollows beneadh shrubs, ledges or other cover. Hare racks can ba quile var able dependIng on the speed of mation, up or downhill dirsction, and the firmnese of the sand. Whith lis toes spread. the hare can make a track resemblligg trat of a cat, and its claws tan mimic those geen in fox pritts. Gerbll prints were seen in a couple ol arass as well as a single set nf jerboa tracks. Fox lracks wices rare, but e dead red fos (Vulpes wulpes) was found In a sheliered bollow bolow a mese.

Reptiles: Jy day, Peter successfully "fished" for the white-spotted lizerd (Acanthodactyius scrmidtl), probebly the mag: cammonly sean izard In the decper deserts. He also saw a single sand skink or 'sand fish" (Scincus mitranus). By nlygnt, \#te caol tamperatures may have kept some desen dwellers indoo's. Lanterr light revealed the tracks of a couple of sand boas and more while-spoited lizaide, plus a specimen of the noclurnal Arabian sand gackp Stenodactylus arabicus, the UAE's smalrest cesert accko, whose embath akin appeare almost traneparent and whose forefoet ate dlslinctivaly wetbed.

Birds: Hoopoe larks and desem

Wheatear (males only! were relatively common. A faw crestert larks were seen aiong the road, some retatlively fcealess dusurd? warblers nead: \#te road and in the sands, and house sjatrows at oases and gatahouses, feeding on the plantings. Ir ghaf grovas a bit more aut of the way, a pair of longlegged buzzards was sean (probabiy a breeding pair) as well as 3 nests of brom-neched rauents, at least one of them epparentify in use. a little owil was seen near its burrow bengeth the gravel nodf of a mesa and numerous simiar stles yinilduad cwl pellels. Dr:e langar averhang appeared to have been used as regular "picnic" site. In addition to owil pellets, it contained Izarc, hare, skink and passibly ba: bones, as well es most of the carcass of a small cliub. All of thess wers probsbly the remains of proy of a little owd or desert eagle owl: but the site also contained hare prints and fox dreppings, Indicating that it was a papular site for mare than one specles.

## Mangrove Afforestation

A recent article in the Khaleej Times Informs us that the Umm Al-Qaiwain baged Marine Resources and Research Centru (MRREj or Ule PMir isisy of Agriculture and Fisheries is entgaged in several projects intendec to facilita:e mangrove afforestation in the UAE. I: is reportecty noped that thia will help create fish nursory arcas. protect coastal arass iram erosion, and help in grgening the desern cassts.

An MRRC report puta the area $a^{-}$ mangrove foresi in the UAE, Including mainland and island intertidal zones. at 2.950 hectares. The only spectics present is Avicennia marina, the mangrove specits most tolerent of salinity and low temperatures. The anticle indicatcs, but without giving detels, that a eharp daclira in mangrove resources ras been registaresi recently.

In the northern tim rales, although development has frequendy been at the expense of coastal kาors and wet-

Ends, destncelion of mangrave arass has sc lar boen limbted and has heen cxameantrated mainly in Ras \&l Kha mah. where the RAK Free Zone and a new stoppirng mall liave ericroached on peripheral mangroves n Kho: Hulaylah and Ras Al Khaimah Khor, respectively. Of the other hanc, in Dubai, e rinngrave afforestavion project over the past decade has succbsafully "preanted" the head of Dusai Creek, an area which is otherwise undeveloped.

Headess davedapment ramaits the greatest enemy of mangroves. Since mangraves are, by delifilition, Intertldal, large nengrove forests require extensive areas of muddy' ground stbject to periode tldal flooding. Such land is af litte other econemic use ond is ofien theught of as a cardictate for "improvament" by ankfill or diedeging. As a rosalt, If the mangrove aforestation hapes of MRKC and the minusiry are to succead, they may hava to mase thuir case more effectlvely to local mu-

MRRC fiald exparimenis have studled 1he survival sind growth of Avicennia marira. Among ather thirgs. It hos boen found that man grave seeda will not propagata al sallnitles greater than 60 ppl (seaweter is 35 ppt !, efter more than 12 hours in crude oil, or in soil having an vil saturation of and that lial $25 \%$

## Molly's Snakebite

iEditor's mote: Maly McQuprrie of the ENHFG In Abu Dflabi jatso a DNHG nember and Gazelfe stibscriberl Was pant of the quiz-winming feam at last years anter-Emirates Weakend is Fijemixh. Sha thes submitted oocasiomed fixd recourds to the Gazelfo. most recerifly on clarf shormpes th the Hatla area. Wody is a hands-om natural hislory butf and ber schood classroon in Abw Dhabi has tong hola' a coliaction of local tosots and ofher animots. Sto also dabbles in stmpentrat fess benigri oreafures such os scorprons and vipers. There are pqcupeJonal hazards. hewever, as dolly ibports bekon:

Keith Gibhins: John Reid anc I were cru sing Detween Madam Roundabout and Meleiha in March or Aprll 2000. Keill i spolleal a pielit of plymuod quite close to the road, so we stopped and axplared. I faund 2 baby bnakes and I grabbed ore snake before I saw the other mene. Itriad to grab the aecond with my loft hand and It bit me on the 4 hh finger. We callacled botn snakes In wator bottles. They were about 25 to 3C cm long or lees and were alawscale vipers [Echis carinatus] as far as we could tell. There was eorme itahiriess of the finger but no sweling. so we continued on with our explorelions.

At home tho shakes ware housed in en aquarium wi:h gravel, rocks, eto. I triod various foods but thay would not eat mealworms or meahworm beetles. Atler about 2 wegks we took them outside on the balcony in the cage and sat them in the s.rit bo watm Lp. WUP put homegrown but native crickels in with them, The crickete disappesped and there were 1 lny lumps in orie snake. Then my cnekg: popular tlon fliamj crashed and sturpud raproducing.

One of the anakes was growing faster than the other. To solve botn problams I beparster" tham to anaure that hoth had the opportunity to eat and tiod to wean lliem oreer to pinky mice. This workerl fine for one snake, althougr eve plnky mice call rapidly get too big for the snake to ingest and
my mouse colory was not always producing newboms at a steady rates.

The other snake was a problem, tre escezped twice, and wo couldny find her. Aboul a month later I hoard a noisa and found the oscapees coiled up and "sawing" on tre kltchorn floor. I caught her and relurned her to a cage which was betler escape-prooted. She rofussed to eat mice, althoigh the other srokse was gobbling them down and fatter as a result.

Mernwhile the eating soake was learning how to strike. Apparently it is not fully Instlnctual to neatly kill and then manneuvre the mouse arounc to go down rose first. It wes quilta interecting to wateh it loam to strike and learn that the mouse actually became paradysed by the bte. Presumatly the poison sacs and fang-rnuscle contraction-Injection steps all are leamed n some develup'neatal sequance of events.
i startad wonying about the unfed make and deolded to force feed it so it twould at least learn that a mouse is edible. It was early aflernoon and Kowth was asleap. I was sure he would not agree to my plan. I knew that foed ng behaviour and digestion can be stimulated by warm water. I drew a bath" pf warm wit ter In the kitchen sinc. The snake was not fond of the beth. She swam around wildly and tried to escape. I thought I could just get hold of her with the left hand fol my flngers slightly to open the jow, and using a palr of tweczers soluf the mouse down her throat. Workged fine.

I droppec the sarake back into the 'water. She leverad harsalt af the side of the sink at my offerding hand and pat my laft index fingar hith one fang. I managed to grab her vilt the barbeque torgs and keep a rather exclted snake from escaping again, meanwhile shouting For Keith to "Come herel You're not going to like 11is!" Thr smake was cought and caged and left to cigeat.

My finger was intengely itchy end started to swel. I phoned Llick

Homby and asked him wherther I thould go to the hospital. He consulted his wife who said to go immeLialaly. Tho index finger was ilchy and sontinued to swell. I grabbed my Michael Gallagher snake pamphlet anc beaded for Central Hoapi tal. The now Khallfa Hospital has the emergency departmand od I went there and told then I had been bitten by a poisonaus snake. The admatung clerk thought maybe I had not been anverborned. The back of the rand was swelling now. I had my baok and my positive identificaloun and I insislec that I had been bitten by a poisonous snake and that I has been envenomed. I was admitted to an emergency bed. The Amarican tactor on duty had 7 years Saudi axperience and rad snaka blte experlance. I was worried that the anti-vanom may not be ava lable in Abu Lhabl. However, it lurned out thet that wase the desionater emergency depertment for the whole city on Fridays, 60 it was prapared. Thai- plabralacy hasd some antl-vervom on hand, and 2 sensitivity teats wore performed. These wrere negatpi.

Since Kralifa Hospital is for laces and the emergency department essen:ially boes trizge, 1 was :rantParred by ambulance aboul 50 yarcs to Central Haspilal and adm thed to intenslue care to be connected to a heat monitor and the anti venurn was started someline afler 5 pm . Tlue doctor decded to administer it over $1 / 2$ hour vertus 45 minutes. Thls proved too fast. I hed a hiatamine reaction in my th"oat which I recognizec from years of allargies. So the IV was stopped for 20 mm mutes and after 30 minutes restarted at E slower rate with ro more adverse effects. The anti-venom is manufactured (preparad) in Riyadh and covers all 5 of the haemptowic s.akes of the Arabian peninsula. It is not uselul aruaires sea snake verrom which is netarotoxic.

I did not bleged intemally from any organs. The blood vessels in the under portion of :he upper lalt arm dec leak and a great bruise look ng mess appeered in thad part $0^{+}$the cortinued on paga 7
