CBT's design for the Early Childhood Education Center and Campus Library at The Learning Center for the Deaf will feature a multipurpose meeting room, flexible classrooms equipped with state-of-the-art technology, spaces for health and physical therapy services, and a spacious new library. The abundant use of glass within the interior spaces helps encourage visual and social connectivity between students and staff, while learning spaces are acoustically engineered to block out sound for students learning to hear with cochlear implants. Flexible classrooms utilize full-height demountable walls as divisions between the classrooms, allowing for rooms to be adjusted depending on the size of the class. The building's exterior aesthetics takes cues from the existing New England vernacular buildings, while the interior is contemporary and playful. A playground on the upper level is directly accessible from classrooms and an outdoor terrace on the lower level knits the building into the campus' fabric. The project is slated for LEED Gold certification and features high performance attributes. The building strategically takes advantage of unobstructed southern daylight through its east-west orientation. Clerestories draw light deep into the classrooms while minimizing glare. A rooftop photovoltaic array will absorb daylight and help moderate the building's temperature and will provide 1/3 of the building's annual energy. The design will also implement a geoechange system to help heat and cool the building efficiently. Water-efficient plumbing fixtures and non-toxic finishes will also be implemented. (CBT)

## Middlebury College — Starr-Axinn Center, Middlebury, VT – 2008

82,400 SF

### **Awards:**

**2009 Sustainable Design Award from the Boston Society of Architects (BSA)**

**2009 Society for College and University Planning (SCUP) Excellence in Architecture Award.**

Classrooms, social spaces, faculty offices, winter garden

The design for Middlebury College's Axinn Center at Starr Library reinvents a beloved campus landmark, meets the need for additional classrooms and faculty offices, brings disparate departments together for increased interdisciplinary collaboration, and redefines the Center of an expanding campus. Located on the historic Old Stone Row quad, the project preserved the original 1927 neoclassical Starr Library, the 1957 Shepley Pavilion Reading Room, and added 50,000 SF of new space. Previous additions, which engulfed the original library, were deconstructed and reclaimed elements of the additions were used in the construction of the new project. The program called for the historic reading rooms in the library to be restored and other existing spaces to be adapted as classrooms and a 65-seat screening room. Two new symmetrical wings, designed to reference the style and character of the college's original Old Stone Row buildings, provide offices for the History, Film and Media Culture, and the English and American Literatures departments. The new space accommodates faculty offices, technologically "smart" classrooms, a 45-seat tiered classroom, 2-story film production and editing studios. A light-filled winter garden which overlooks a sustainable landscaped, south-facing courtyard, connects all of these dynamic program elements and is the major horizontal circulation for the project. (CBT) <http://www.cbtarchitects.com/architecture/academic/classrooms/>

.....The project preserved original 1927 neoclassical Starr Library and the 1957 Shepley Pavilion Reading Room, and added 50,000 square feet of new space.

Renovations on the original 1927 Neoclassical Starr Library, at the heart of the Middlebury College campus, included the preservation of historic details and the addition of two new wings.....

## Harvard Public Library, Harvard, MA - USA 2007

Addition: 11,500 sqf., Renovation: 8,000 sqf.

### **Awards:**

**AIA New England Design Award**

**Massachusetts Historical Commission Historic Preservation Award**

**Building Design and Construction Annual Reconstruction Award**

Renovation, preservation and new construction

Located at the heart of the Town Center in Harvard, Massachusetts, the building known as Old Bromfield started life in 1877 as a public school house. The building was originally designed by Peabody (1845-1917) and Stearns (1843-1917) and constructed with a grant from Margaret Bromfield Blanchard. Generations of the town's children passed through its doors until it closed in 2003 due to the structure's inability to serve as a modern academic building. By 2003, Harvard's existing library had also become outdated, with little room to grow on its present site to accommodate the ever-growing needs of the town, and the town saw the opportunity to save Old Bromfield by reusing it as a site for a replacement library. In 2007 the original building, with an 11,500-square-foot addition, reopened as the town's new public library. The renovation preserves the building into its next century, and the addition perpetuates and expands the educational, civic and recreational qualities of the library. The building's Queen Anne-style architectural and ornamental details were restored both inside and out. The woodwork of the floors and book cases was refinished and repaired, and original lighting fixtures were replicated and augmented to achieve similar quality of light. Acoustical ceiling tile was removed from the second floor to reveal the splendor of grand wooden trusses and the newly created room was renamed Volunteers Hall. The design of the addition is scaled and detailed to complement the original building. The space houses the library's reference resources, main stacks, reading rooms, and study areas. Its additional workspaces have allowed the library to expand its inner-library loan program, and to develop additional book groups and more creative programs for children and teenagers.

## John Adams Courthouse and Social Law Library, Boston, MA – USA 2004

430,000 sqf., Renovation and restoration

Designed by Boston city architect George Albert Clough (\*27.05.1843 Blue Hill, Maine - +30.12.1910 Brookline, MA), the courthouse was completed in 1894 at a cost of approximately \$3.8 million.

<http://blogs.umb.edu/pumpingstation/2013/03/30/george-albert-clough/>

<http://www.mass.gov/courts/sjc/virtual-tour-1.html>

Designed in 1894 by George A. Clough (George Albert Clough 1843-1910, Snell & Gregerson, Boston), Boston's first city architect, the courthouse was originally built for the Supreme Judicial Court (SJC) and the Social Law Library, the country's oldest subscription law library. Four additional floors were added in 1909 and 1914. Today, the 430,000-square-foot courthouse is listed on both the State and National Historic Registers and is a Boston Landmark. CBT completely reorganized the interior to accommodate the needs of a 21st century appellate court while restoring the building's architectural features to their original grandeur. CBT's renovation provided clarity to the plan and improved vertical movement. Major court functions were moved to the second and third floors, and the ground floor was remodeled to accommodate public functions. The original entry was reconfigured to allow direct views into the central atrium, a soaring four-story space that serves as an important pedestrian link between adjacent neighborhoods. Notable features were cleaned and refurbished, including coffered vaults, sculptured corbels, frescoes, and justice-inspired allegorical statues. Five of the building's wood-paneled courtrooms were returned to their original opulence, including a 1890s courtroom that was formerly used by the SJC and noted jurist Oliver Wendell Holmes. The Social Law Library was completely renovated and expanded to house the Commonwealth's historic law collection, including reading rooms with skylights and large stack space. Additional new program elements include a social science library, a courtroom, judges' chambers, conference rooms, and offices. Along with restoration of the historic interior, new technology was integrated without disturbing the building's

architectural intent. Lighting, HVAC, telecommunications, and security systems were concealed, while allowing a contemporary infrastructure necessary to administer justice in the Commonwealth.

### [Thomas Crane Public Library, Quincy, MA – USA 2001](#)

56,000 sqf.

Renovation, restoration, addition, exhibition space, cafe, performance area

Listed on the National Register of Historic Places, the landmark 1882 (Coletti Building 1939) Thomas Crane Public Library is regarded as one of the finest works of noted architect Henry Hobson Richardson (\*29.09.1838St. James Parish, LA -+27.4.1886 Brookline MA) [http://en.wikipedia.org/wiki/Henry\\_Hobson\\_Richardson#Public\\_libraries](http://en.wikipedia.org/wiki/Henry_Hobson_Richardson#Public_libraries). CBT worked closely with civic leaders and state agencies to preserve this historic asset while upgrading the library to accommodate modern services and demand for space. The 56,000-square-foot addition blends with the existing structure, creating a cohesive, visually appealing composition. The original building plan was extended with major program functions concentrated around a new light-filled, three-story atrium. This central gathering place welcomes and orients visitors with exhibit space for artwork and doubles as a performance area and seating for the adjacent cafe. Central organization occurs on each level, allowing broad, general visibility from circulation and reference desks. The children's library is housed on the ground level. A broadcast facility for the local cable station was blended into the complex with a separate entrance and its own architectural identity. The historic reading room in the 1882 building was restored with the help of original photographs. Period light fixtures were reconstructed, the original Richardson-designed tables and chairs were returned to use, and new mechanical and fire protection systems were installed.

### [Lucius Beebe Memorial Library, Wakefield, MA – USA 1998](#)

(1923 by Ralph Adams Cram \*16.12.1863 Hampton Falls, NH -+16.12.1942 Boston, MA > Cram & Ferguson > HDB/Cram and Ferguson, Boston) [http://en.wikipedia.org/wiki/Ralph\\_Adams\\_Cram](http://en.wikipedia.org/wiki/Ralph_Adams_Cram) CBT designed this new structure to meet the Wakefield community's need for a local arts center. The 500-seat theater will be used as an educational and municipal assembly space for both local and visiting performance groups. The center is also expected to accommodate business conferences by way of the spacious auditorium and state-of-the-art audio/visual facilities.

### [Brooks Free Library, Addition, Renovation, Harwich, MA - 1998](#)

CBT developed schematic designs for the renovation and major addition to this historically rich municipal facility. Located in the Cape Cod community of Harwich, Massachusetts, the Brooks Free Library is housed in a 19th century wood frame building in an historic district of town. The Board of Trustees desired to increase usable space, improve functional relationships between spaces, upgrade environmental systems, improve parking, and provide proper ADA accessibility.

The two-story addition was sited to the east of the existing library, in order to extend the library's presence along Main Street. The axis of the addition is in the north-south direction, forming an L-shaped plan with the original library in a manner that maintains the scale of the street. The addition's massing reflects the size increments of the existing buildings, creating a humanly scaled composition. Hipped roofs further tie the new and original building elements together. A modest tower was introduced to signal the civic importance of this building in the town center and to mark the entrance areas. The new, formal Main Street entrance is characterized by columns, which balance those of the existing annex building. The entrance from the parking area on the south side is more casual with a welcoming porch wrapping the entry doors.

The library is organized around the first-floor central space, which connects the new and existing wings of the library. The central space also provides access for the entire main staircase and elevator. The focus of that space is the circulation desk, from which the librarians are able to greet all visitors, check books, and virtually control the full length of the library, including the entrance. As part of the circulation desk organization, the librarian's workroom and director's office are located directly adjacent to the entry. The efficient relationship allows staff to assist at the desk at peak periods with minimal effort.

### [The Butterfly Library, Taipei - Taiwan on design](#)

6,000 sqf.

The new Butterfly Library in Taipei is a living symbol of sustainability, designed to serve the community, tenants in two adjacent residential towers, and the Taiwan Butterfly Association. The new library is sited at the transition of a steep slope facing a temple and will be a gateway to the green trail network of Jian Nan Mountain. This 6,000 square-foot four-story structure is composed of an elongated glass box that appears to float above the ground floor. Sustainable design features include a double skin façade composed of an artfully etched high performance glass wall that maximizes natural daylight and a secondary louver system to provide shade, moderating the subtropical temperatures and minimizing energy use from the grid. The project will also promote the use of renewable energy through photovoltaics, wind turbines and geo-thermal.

### [CDFL – Cooke Douglass Farr Lemons, Architects and Engineers PA – Jackson, Mississippi – USA](#)

<http://www.cdf.com>

Libraries:

[The University of Mississippi Thad Cochran National Center for Natural Products Research, Oxford, MI – USA 2009 Phase I / 2015 Phase II](#)

A center for primary research in the utilization of natural products, the Cochran Center has brought together an alliance of academia, government and the private sector to integrate research, development and commercialization of useful natural products. The center is designed to address completely unknown chemical and biological elements for human and animal health as a natural research center and is designed to contain all potential hazardous elements as investigations proceed. Safety and research integrity, critical to the center's success, had a major influence on the design of the facility.

The laboratory component contains bio-safety work areas, entomology and environmental chambers, synthetic chemistry sections, cold labs, a scientific library, plus centers for agronomy and microbiology. An animal center houses twenty-five principal investigation suites with complete support operation, including surgical, necropsy and care centers. The facility also includes a material intake suite to categorize collected specimens and a full conference center.

The complex was developed in phases to facilitate funding availability. The design and construction concept utilized two phases and 11 construction packages spanning 25 years of development.

**Joint Venture with Laboratory Research Group**

### **Willie Morris Library, Jackson, Mississippi – USA 2004 – 2006**

The Willie Morris Library in Jackson, Mississippi is located on land donated to the City of Jackson by the Entergy Corporation for the sole purpose of providing a permanent building for the city's most utilized library branch. The narrow, wooded site is situated next to an ox-bow pond that is recharged by nearby Hanging Moss Creek. The architectural design draws inspiration from the trees and vegetation that are common to the site as well as the region. Architectural standing seam roofing, mixed shades of jumbo brick, and details of cypress wood on the siding and exterior soffit fuse modern elements with the regional vernacular. Unique design features ensure an informative and enjoyable experience for library patrons. Oversized glazing allows a visual melding of the wooded area surrounding the building with the interior of the library. Clerestories protected by overhangs provide copious southern light to the reading area. Patrons are offered a variety of seating options from comfortable sofas to more traditional tables and chairs as well as computer alcoves for word processing and Internet access. The children's collection area plays on the outdoor, woodland vocabulary incorporating forest creature footprints in the design of the carpet, tree-shaped cutouts in the furniture and a "cloud" canopy to foster imagination and curiosity. A "flying gutter" feature collects and transports approximately thirty percent of roof water to the ox-bow pond next to the building creating an uncommon waterfall on rainy days. Circulations have increased by approximately 30% and the building is poised for more volume and service expansion.

[http://www.dcd.com/case\\_studies/0805/080524.html](http://www.dcd.com/case_studies/0805/080524.html)

### **Galtney Center for Academic Computing, University of Mississippi, Oxford, Mississippi – USA 2002**

The Galtney Center for Academic Computing is the end result of a complete interior and exterior renovation of the two-level reinforced concrete structure formally called Weir Hall. The project also includes new classroom additions and landscaped plazas linking the facility to adjacent student activities. The first floor houses the core components for the building, including seminar rooms, administrative offices, student and professor help desks, a 24-hour coffee café, and the student computing center or "virtual library". The second floor contains additional administrative offices and classrooms. Upon its completion in 2003, this project was awarded an American Institute of Architects/Mississippi Chapter Honor Citation for design excellence.

<http://www.cdfi.com/what-we-do/galtney-center-for-academic-computing/>

### **Celli-Flynn Brennan Architects, Pittsburgh, PA – USA**

Celli-Flynn Brennan Architects & Planners is a full-service architectural and planning firm located in the cultural district of downtown Pittsburgh. The firm was founded in 1949 and has completed work across a wide range of market sectors— from industrial paper manufacturing plants to government commissions, private colleges, public universities, K-12 schools, hotels and cathedrals. Celli-Flynn Brennan's higher education work has led the firm to national recognition in this field. We are experts in campus planning, 21st century learning design and recruitment consulting. Our approach is client-focused, consistent and contextual. We reach design goals through careful listening, the highest levels of principal involvement and collaborative design.

<http://www.cfbarchitects.com>

### **University of Pittsburgh, Hillman Library, Pittsburgh, PA – USA 2013**

.....Hillman Library was built on land that had bordered Forbes Field and was donated in the 1950s to Pitt by coal magnate John H. Hillman, Jr. When Forbes Field was razed in 1971, three other buildings were planned as a cluster for the site: Wesley W. Posvar Hall, David L. Lawrence Hall, and the University of Pittsburgh School of Law.

Design of Hillman Library was led by Celli-Flynn and Associates who served as coordinating architects. Kuhn, Newcomer & Valentour served as associated architects with Harrison & Abramovitz acting as consulting architects to the university. Dolores Miller and Associates consulted on the interior design, and Keyes Metcalf served as a library consultant. Construction began in June 1965, and the library opened on January 8, 1968, while its formal dedication was held on September 6, 1968. It is named for John H. Hillman, Jr. Both the Hillman family and the Hillman Foundation gave millions toward its construction. The facade consisting of Indiana Limestone alternated with rows of Max Abramovitz designed oriel windows. The floor-to-ceiling windows were placed at a bay window angle in order to be inconspicuous on the plane surface of the outer wall while still providing light. With five floors, seating for 1,539 students, and holding 1.9 million volumes, Hillman is the largest of the 17 libraries on the Pitt campus. In 1996, architect Celli-Flynn and Associates and Kuhn, Newcomer & Valentour won the Timeless Award for Enduring Design from the Pittsburgh chapter of the American Institute of Architects for its design of Hillman Library.....

[http://en.wikipedia.org/wiki/Hillman\\_Library](http://en.wikipedia.org/wiki/Hillman_Library)

In 1997, Celli-Flynn Brennan received the "Timeless Award" from the Pennsylvania Society of Architects for the Hillman Library at the University of Pittsburgh. CFB functioned as coordinating architects in the development of this building, which opened in 1967. The award was received for a building that had stood the "test of time" particularly well – still performing its original function with what is considered a fresh architecture thirty years after completion.

Recently, CFB completed the design for a \$25 million, renovation to the building and plaza. When the building renovation is complete, this major research library will have 1300 seats, new elevators, new stacks, group study areas, and a new entrance pavilion.

<http://cfbarchitects.com/higher-education/selected-projects/academic-buildings-libraries-learning-commons/university-of-pittsburgh/>

### **Robert Morris University, New Business School, Moon Township, PA – USA 2011**

The new 18,000-square-foot School of Business, which includes the PNC Trading Center with 34 double-screen monitors and a Bloomberg Computer; the United States Steel Corporation Video Conferencing Center with a Cisco TelePresence System, and the Allegheny Technologies Global Business Library with an Interactive Marketing Wall, gives the University's business school its first

official home at its campus in Moon Township. It was funded through RMU's Changing Lives, Building Futures capital campaign, the first comprehensive capital campaign in the university's history.

"This high-tech business laboratory gives Robert Morris University, its graduates, and its faculty the reputation they deserve, the reputation they have earned through their hard work, professional success, and dedicated service to the community," said President Gregory G. Dell'Omo. "It is a transformative facility that moves our business school and university to another level."

The building features the latest in business technology to facilitate project-based learning, provide students access to real-time financial market data, and bring students from remote locations together face-to-face around a virtual meeting table to enhance collaboration and accelerate innovation. "Having a new home lets us replant the flag of who we are, how we do things differently and better," said Daria C. Crawley, Associate Professor of Management. "The technology pulls us closer to that international marketplace. It enables students to engage in better conversations."

In addition to providing state-of-the-art teaching and learning spaces, the building's location and orientation achieve several campus planning initiatives. The Business School completes a quadrangle with Massey Hall and the Lafayette Center and enhances the historic Rudolph Family Garden. Its scale, configuration and alignment respect the garden and existing buildings while creating a strong identity for the School. The building also acts as a natural connector providing a path for students from the main part of campus to the west to the quad.

The building design incorporates numerous LEED strategies and has been awarded Gold Certification by USGBC. This building was also designed and constructed utilizing BIM (Building Information Model).

<http://cfbarchitects.com/higher-education/selected-projects/academic-buildings-libraries-learning-commons/robert-morris-university/>

### [William Peace University, Lucy Cooper Finch Library, Raleigh, NC – USA 2009](#)

The library at William Peace University underwent total transformation and now features a modern learning commons, flexible study spaces and a coffee bar – ideal for the 21st century student. This 1962 building in the Colonial/Georgian style sits in the front yard of a beautiful and consistent campus. The renovation removed all books from the ground floor, except for a reference area, and installed a new information commons. An addition with new porch and columnar front matches other buildings on campus. By careful placement of the addition, we were able to relocate the main library entry to the interior of the campus facing similar porches on Findley and Main buildings. A historic district and the Raleigh tree ordinance were taken into account with this sensitive placement.

Inside the new entry is a coffee bar, looking out to the Quad and memorial garden adjacent to the Library. The learning commons accommodates the college's IT staff who have desks right in the space. Additional presentation rooms, group study rooms and refurbished archives were also included in the renovation. The tutorial center occupies the second floor with the main stacks in a large reading room with a vaulted ceiling. Now, William Peace University has a library suitable for the students of today.

<http://cfbarchitects.com/higher-education/selected-projects/academic-buildings-libraries-learning-commons/peace-college-lucy-cooper-finch-library/>

### [Westmoreland County, Community College, New Kensington Education Center, New Kensington PA – USA 2009](#)

The New Kensington Education Center Westmoreland County Community College is a new satellite campus which allowed Westmoreland County Community College to open its doors to students who live across the county. Catering to a wide range of students and professionals, the Center offers night classes and houses CareerLink, an organization that provides resources for job seekers. The college expects that the Education Center will act as a catalyst for development on Main St. of New Kensington, PA. The Center is a flexible, dynamic building that houses academic classrooms, a high-tech video conferencing room, a science lab and office space. Colorful accent walls and a bold floor tile design make the interior fresh and engaging. Computer kiosks dot the student zone so students can check their email or catch up on the news.

New Kensington was designed to meet LEED standards. Built on a brownfield site it protected undeveloped land from construction. The total paving area was kept to a minimum to reduce the amount of impervious surfaces on the site and a rain garden was designed for storm water retention and filtration. Locally grown indigenous plants were specified to reduce impact from transportation and to support the local economy. A highly reflective thermo-plastic olefin (TPO) roof system was installed to reduce the heat island effect. The heating, ventilation, air conditioning and refrigeration systems exceed minimum energy performance provisions set forth by ASHRAE. All interior architectural woodwork, adhesives and sealants contain low VOC.

<http://cfbarchitects.com/higher-education/selected-projects/academic-buildings-libraries-learning-commons/westmoreland-county-community-college/>

### [Pennsylvania State University, Paterno/Pattee Library Complex, University Park, PA – USA 2000](#)

.....Paterno Library is named for Fred Lewis Pattee, regarded as the first professor of American Literature (1895–1928) and author of the Penn State Alma Mater. Pattee Library was built as part of a Public Works Administration-General State Authority project. Construction took place over 1937-1940. Between 1940 and 1973, the library was expanded three times. The "Stacks" or Stack Building was added in 1953, "West Pattee" in 1966, and "East Pattee" in 1973. A renovation which included the construction of the Paterno Library began in 1998, and was completed in 2000.....

....In 1983, as Penn State football coach Joe Paterno was being honored for his first national championship, he gave a speech challenging the university's Board of Trustees to make Penn State number one in academics as well as athletics. He specifically targeted the need for a top-quality library, stating, "Without a great library, you can't have a great university." In 1993, he and his wife Sue began a campaign which raised \$13.75 million for the construction of a new library. The groundbreaking for the library, named the Paterno Library in their honor, took place in April 1997. Paterno has also donated several million of his own money towards the library. Construction was completed in fall 2000, and the building was dedicated on September 8, 2000. The building is connected to the Pattee Library, and shares a common circulation desk. The former East Wing of Pattee forms a portion of the Paterno Library....

[http://en.wikipedia.org/wiki/Pennsylvania\\_State\\_University\\_Libraries](http://en.wikipedia.org/wiki/Pennsylvania_State_University_Libraries)

Celli-Flynn Brennan provided full design and construction administration services for the \$22 million Paterno/Pattee Library Complex at Penn State University. The Paterno Library is a five story, 132,000 sq. ft. addition to the existing Pattee Library, which received extensive renovation and restoration as a part of the work. The Pattee Library was built in the 1930's and a stack building was added in 1949, while the west wing (1962), and the East Wing (1973) came later. The program addressed certain structural, mechanical and electrical deficiencies in the existing building.

The renovation/addition also included a complete reorganization of visitor circulation, installation of modern computerized facilities throughout, establishment of a 24-hour library and use of a "library within a library" concept for development of the various floors. Major reading rooms, stack areas, offices and similar facilities were upgraded and improved. New lobby entrances were added, both from the historic mall in front of the building and from the heavily traveled Curtin Road. The University's budget was \$23 million, and bids were received \$1 million under the University's budget.

## **Centerbrook, Centerbrook, CT , Architects and Planners – USA**

<http://www.centerbrook.com>

### **Libraries:**

#### **Yale University, School of Forestry and Environmental Studies, Kroon Hall, New Haven, CT – USA 2009**

Kroon Hall, the School's flag-ship building, is named for the Philanthropist Richard Kroon (Yale Class of 1964). The building has 50,000 square feet (5,000 m2) of space and is "a showcase of the latest developments in green building technology, a healthy and supportive environment for work and study, and a beautiful building that actively connects students, faculty, staff, and visitors with the natural world."

Kroon Hall is a landmark in sustainable green design (Yale University)

"We love our new Kroon Hall. It is not only a feast for the eyes but a joy in which to work. Thank you for your inspired vision and execution." James Gustave Speth, Former Dean, School of Forestry & Environmental Studies, Yale University

Kroon Hall is Yale's greenest building, LEED Platinum certified, and a flagship for the university's commitment to sustainable ideals. It is designed to use 50 percent of the energy of a comparably sized, efficient modern building. The new home for the School of Forestry & Environmental Studies joins with two adjacent buildings to create a new unified campus within a campus, establishing a highly visible center for the study of the environment at Yale. Kroon Hall received extensive media attention in 2009, its first year of operation, and seven design awards, including an AIA New England Honor Award and a prestigious national green building award that will be announced officially later in 2010. Constructed of stone, concrete, steel, and glass, it is sited between two neo-Gothic buildings on Yale's Science Hill. It forms two new courtyards, reintroducing the collegiate urban fabric of Yale's core campus to Science Hill. The gabled roof recalls its neighbors while integrating photovoltaic solar collectors and skylights. The end walls are glass with wooden screens that offer sheltered views in both directions. The top floor is a cathedral space housing a conference center with large lecture hall, classrooms, and a cafe. The middle floors accommodate faculty offices, while the bottom floor has more classrooms and a library that lead out to the lower courtyard. The Platinum Rating from the U. S. Green Building Council is the highest attainable. Sustainable features include solar photovoltaic panels, ground source heat pumps, displacement air systems, high thermal retention, daylight harvesting, energy recovering ventilation, a rainwater collection and cleansing pond, a green roof, and recycled, local, and sustainable building materials. Centerbrook as Executive Architect collaborated on the project with the Design Architects, Hopkins Architects of London and an all-star team of consultants including ARUP engineers, atelier 10, Nitsch engineering, Kalin Associates, and Olin Partnership.

#### **Yale University, Lewis Walpole Library, New Haven, CT – USA 2007**

The Lewis Walpole Library, a department of Yale University Library, is an internationally recognized research institute for eighteenth-century studies and the primary center for the study of Horace Walpole, the English man of letters. Wilmarth Sheldon "Lefty" Lewis, a pre-eminent scholar of Walpole, gave the collection along with his eighteenth-century Farmington, Connecticut estate to Yale University. This posed a quandary for Yale since the historic house would be difficult to preserve if modified to accommodate the larger spaces and the controlled environment that the collection required. Centerbrook's solution was to create an attached 'barn' with state-of-the-art systems. The 13,000 square foot addition includes a spacious reading room, modern collection storage, and innovative staff and conservation workspaces. The addition is in the tradition of connected Connecticut farm buildings, and fits a large building into an historic neighborhood. It preserves the existing historic frame house, retaining its residential image and scale. The library and other twentieth-century additions to the original building were restored and renovated to accommodate exhibits, classes, and social events. (Centerbrook)

[http://www.centerbrook.com/project/yale\\_university\\_lewis\\_walpole\\_library](http://www.centerbrook.com/project/yale_university_lewis_walpole_library)

#### **University of Colorado, Anschutz Medical Campus, Health Sciences Library, Aurora, CO – USA 2007**

As a joint venture with Davis Partnership Architects of Denver, Centerbrook designed this 116,000-square-foot medical library, which is located along the center quadrangle of the new University of Colorado Health Science Center campus. The library serves the medical school, four hospitals, and numerous biomedical research facilities. Designed as a social bridge between all campus disciplines, the library's prominent location near public transportation creates a gateway welcoming community use, as well.

The library provides public access at the first floor and becomes increasingly private and quiet on upper floors. The facility includes collection storage with a reading room as well as indoor and outdoor private and team study spaces. It also includes administrative offices, reference services, classrooms, a conference center, a learning resource center, systems-database support, education and health informatics support, and storage of and access to a History of Medicine rare book collection.

[http://www.centerbrook.com/project/university\\_of\\_colorado\\_denver\\_health\\_sciences\\_library\\_anschutz\\_medical\\_campus/8](http://www.centerbrook.com/project/university_of_colorado_denver_health_sciences_library_anschutz_medical_campus/8)

#### **University of Colorado, Wolf Law School, Boulder, CO – USA 2007**

Centerbrook is the Design Architect. Davis Partnership Architects of Denver is the Architect of Record.

The Wolf Law School is prominently sited at the south entrance of the University of Colorado in Boulder and acts as a gateway to the campus. The building was designed to recall and reinforce the distinctive character of the historic Boulder campus. The campus was originally characterized by low-scale, sandstone buildings with tile roofs. Much of this quality was missing in recent campus architecture and the University wanted it restored. The Law School is constructed of local red sandstone with limestone details and a red tile roof. It is five stories tall and steps back at its upper floors to maintain the scale of the historic campus. It is "L" shaped and orientated around a large courtyard opening to the southwest, providing views of the Flatiron Mountains throughout the building. Benches and shade trees fill the courtyard, making it an informal social space and community center for the School. The building has courtrooms, classrooms, seminar rooms, faculty offices, a law clinic, a student center, and a law library. Classrooms have wireless networking and video conferencing capabilities for distance-learning. There are internet-based video recording stations and interview rooms as well as digital information kiosks on all floors. The law library is an integral part of the Law School, easily accessible from classrooms and faculty offices. It is the regional archive for the United States government, making it the most complete law library in Colorado. The Law School has received a LEED Gold Rating from the U. S. Green Building Council.

### [Manchester Community College, Library, Manchester, CT – USA 2003](#)

This 35,000-square-foot library is the lynchpin of a 250,000 square foot expansion of Manchester Community College. The library was envisioned as a learning resource center where students could retrieve information from books, periodicals, and other written documents as well as from electronic sources such as CD ROMs, the Internet, DVDs, and videos. The library is a largely open, one-floor space arrayed around a central circulation desk. The ceiling pops up into raised areas with clerestory windows in several important places, including the circulation desk, a large reading lounge with a fireplace, and a study area. Breakout rooms and lounge spaces invite students to gather and work in groups. Lighting for study areas and stacks are custom-designed uplights, which produce comfortable, non-glare illumination and afford flexibility in adjusting stack locations in the future. Sculpture and art is brought into the building and integrated into lounge areas for the enjoyment of patrons. The goal is to create a bright, friendly, and sociable environment where the college's students feel welcome and at home.

### [Mark Twain Library, Redding, CT – USA 2000](#)

The Mark Twain Library was established in 1910 through the efforts of Samuel Clemens' daughter, Jean Clemens, to create and endow a library in memory of her father (Mark Twain) who spent his last years in Redding under her care. Many of the original books were from Mark Twain's personal library. The original building was built with help from the local townspeople and friends of Mark Twain. Slow but steady population growth in the 1970s resulted in an addition built of exposed concrete. In keeping with the philosophy of central library "control," then popular, the addition was round with a central circulation desk. This allowed a small staff to survey the entire facility from a single vantage point. Further community growth in the 1980s and 1990s and rapid changes in information technology created the need for renovations and expansion. The Library Board worked with Centerbrook to shape a facility that would respond to present and future community needs. The new addition screens the view of the 1970s concrete structure and serves as the entrance to the library. The choice of shapes and materials is intended to complement the surrounding New England community. The addition contains the children's functions, separating the noise associated with children's activities from the main library. The center of the existing round building was reshaped as a display area, (vaguely reminiscent of a river boat paddle wheel). The display cases can be moved to allow larger public functions. At the far end of the central axis sits a restored sculpture of Mark Twain surrounded by characters from many of his stories. The architectural frieze around the entire facility is composed of quotes from Mark Twain's lectures and novels. The original Mark Twain Library building has been renovated for special collections and is available for public functions, meetings, and musical performances.

### [Quinnipiac University, Arnold Bernhard Library, Hamden, CT – USA 2000](#)

This project undertook the renovation and expansion of a thoroughly inadequate library built in 1969 for a then young New England college. The front of the old building was remodeled to make its spire a beacon of radiating light and to provide a stepped proscenium at the spire's base for socializing and frequent ceremonies and concerts. The rear of the building was largely demolished and replaced with a larger addition now open to a wooded glade and the panorama of stream and mountain beyond. Inside, the old structure was reduced from three floors to two, merged via a skylit rotunda and open balconies. There is a variety of ambiances ranging from the lively cyber café to the secluded team study rooms cantilevered out into the treetops. The library includes the Lender Family Special Collections Room housing a unique American exhibit on An Gorta Mor, the Great Hunger in Ireland during the late-nineteenth century. The exhibit features paintings, sculptures, an illustrated history, and a comprehensive collection of published materials. In addition to answering current functional and technical demands, Centerbrook saw the building as having the power, through its unique language of procession, emotion, and symbolism, to be an alternative to, or a sanctuary from the more troubling aspects of the cultural environment students must contend with today. Its design was to be informed by the core philosophical concerns of humankind: knowledge, individual conduct, and governance. First, Centerbrook sought to make it a place that celebrates the life of the mind. Computer access to knowledge is not relegated to enclosed rooms but is instead integrated into the building along with over a hundred artworks spanning centuries. Second, the more admirable traits of individual conduct were considered and the organization of the building was made rational, structured, and processional. An important goal was to achieve the attributes of craft and care and a balance between rationality and emotion; a balance between exuberance and serenity. Perhaps most importantly, Centerbrook strove to make a place of harmony and beauty that would nurture contemplation. Third, both within the library and at its front door, settings for social interaction and forums for a public life were created, both essential constructs of a sense of community and the polis. Out of these three aspects of knowledge, conduct, and community, Centerbrook attempted to make of the building a symbol of humankind's highest aspirations, and, like Ariadne's gift of the golden cord to Theseus, help students to more easily find their way out of the labyrinth.

### [University of Connecticut, Homer D. Babbidge Library, Information Cafes, Storrs, CT – USA 1998](#)

#### **Awards:**

**AIA Connecticut Design Award**

The Information Cafés are the centerpiece of the University Electronic Information Center, inserted into the Homer D. Babbidge Library. Each is laid out in an open plan cluster of several hexagonal workstations. The effect of the clusters is of a sociable café, a far cry from the typical academic reading room where quiet reigns. The intent of the Cafés is to encourage students to be at ease in the library and to interact freely in small learning groups. Designed according to black box theater principles, the Cafés are wired flexibly from below by means of raised floors and lit from above by track lighting. Integrated up-lighting under each umbrella provides non-glare illumination for computer screens. The co-mingling of technology, theater, and retail paradigms puts the Cafés at the forefront of library innovation.

### East Hampton Library, East Hampton, CT – USA 1997

This building houses a library, community center, day care, and a senior center. Local citizens were an important part of the design process. A committee of 35 diverse residents collaborated in a series of workshops which initially focused on the site and user needs. Further work included "dream drawings" to supply architectural imagery. The complex site affected the design. Watercourse setbacks, solar orientation, parking, adjacent residential and industrial neighborhoods, access and identity considerations were all heeded. Laid out on an east-west axis, the building opens to south light and averts the cold with long roofs. The smallest component, the Senior Center, is closest to the road and sized to match residential neighbors. The day care center follows, and the large library is at the rear. This stepped plan gives all three parts equal recognition from the street. The building was designed like a steel framed pole barn with space under the sloping roof used for several mechanical attics (the water table prohibited a basement). Ceilings also rise and fall as needed, making space grand where appropriate - at the library entry and reading room, at the seniors main hall, and at the shared meeting room. Other places are cozy - a senior fireplace niche and drop-in center, a day care aedicula, and the children's library. Here two sets of "Three Bears" easy chairs preside. The smallest is child sized, the middle is a normal chair, and the largest makes even adults look childlike. The building is designed to harmonize with its small village surroundings and still evoke pride in the citizenry. Bell patterns were stenciled at entries and in the library, reminding of the town's heritage as "Belltown" (it is the original home of our nation's bell manufacturing). The family of chimney, ventilator and bell towers spire high as civic markers, while windows and dormers give a friendly cadence to the building's substantial mass. The long porch, anchored at the street by the bell tower entry, ties the complex together. Overall, this building has the stature of an important public structure, its varying functions drawing community members together.

### Quinnipiac University, School of Law Center, Hamden, CT – USA 1995

The 130,000 square foot law school center and library forms the west terminus of the university's "village street" established under Centerbrook's 1979 campus master plan. This large complex is brought into scale with the rest of the campus by its division into four wings and an overall height of two stories above grade, achieved by placing the third level library below grade. Daylight is brought into this level by a ten-foot-wide, glass roof that extends the entire perimeter of the library wing. The library encloses 50,000 square feet in the building, accommodating 552,000 volumes and a seating capacity of 400. The four wings form a courtyard that is the complex's central organizing feature. The main interior hallway of the building encircles the courtyard, giving the building a clear and memorable organization. On an emotional level, the south-facing courtyard collects the ambiance of the morning sun and a sense of community. Café tables, chairs, benches, and blossoming shade trees adorn the courtyard's lawn and add to the attraction of this enclave. On both a symbolic and functional level, the courtyard provides a forum for public life, a yard for the court, in effect. Twin spires and a clock tower further distinguish the courtyard. The east spire serves as a landmark identifying the main entrance from both the courtyard to the south and the driveway to the north. The complex's overall sociability, its places to sit on the edges of paths, its enclaves for gatherings, its small cafés within and without, all speak to the central purpose of the practice of law and the school itself, that of bringing people together. To enhance a sense of place, a wide array of furniture and light fixtures were designed for the building.

### East Lyme Library and Community Center, East Lyme, CT – USA 1990

This 35,000 square foot building combines a public town library with senior and youth centers, offices for the Visiting Nurse Association and the Town Parks and Recreation Department, and a multipurpose meeting room. The town requested that each of these maintain a separate identity and visibility while being housed in a one-story building of New England character with sloping roofs. The site complicated the requirements. It borders residences, wetlands, and the Smith Harris House, an historic Greek Revival farmstead on the National Register. Early studies revealed just enough room to fit the building and required parking on the narrow site. The building was set on the north half to leave the south end as an entry and parking "orchard," sunny in winter and shaded in summer. The tripartite building faces the parking with three open pavilion entries. The longest of these, in the middle, leads to a high lobby in which all departments have indoor entries. The youth and senior centers claim the two other pavilions as their own outdoor entries. The sloping roofs required by the town were massive. To break down their scale, entry pavilions and dormers, which are Greek Revival, reflecting the Smith Harris House were added. A gallery pavilion, tall with glass and almost the same size as the house, juts out the back of the lobby to face it. The trim and fenestration throughout the building, though newly invented, also recall the house's style along with the stretched columnar brick piers and pediments of the three building wings. Since Greek Revival was prevalent at the town's founding, this all helped celebrate the town's 150th anniversary. Inside, off the lobby, each facility opens through a procession of regular spaces in irregular patterns. Especially in the library, large spaces lead to small which lead in turn to large again to dramatize the pleasures and uses of each. In addition to administrative and technical services offices, the 18,000 square foot library includes a grand reading room. It is preceded by a checkout desk off a tapered entry hall and is surrounded by stacks, special pods for media, new books, periodicals, a children's library, and the "East Lyme Room" with mahogany cabinets displaying town memorabilia. Between the Senior Center and the large subdivided multi-purpose room is a full kitchen capable of serving 400 meals. The Senior Center also offers its own meal site room, a day room, and crafts studio. The Youth Center separates into counseling offices and a recreation hall where a snack bar and DJ booth/TV "tower of power" in the middle are surrounded by game tables and seating.

Cherry Huffman Architects, Raleigh, NC – USA

INDIANAPOLIS — March 2011 — RATIO Architects, Inc. with studios in Indianapolis and Champaign, Ill., recently announced it has merged with prominent Raleigh, N.C., firm Cherry Huffman Architects. Principals of both firms are calling the business transaction a merger of equals given the firms' expertise and their similar design philosophies. Louis Cherry, FAIA, LEED AP, principal of Cherry Huffman, has been named the sixth RATIO principal.

"We know the time is right for this merger and our continued national expansion," says RATIO's Founding Principal and President Bill Browne, FAIA, LEED AP. "As the economy shows signs of rebounding, we are anticipating increased client needs at the national level. Providing geographic reach and breadth of talented work teams is a win for our clients as we eye larger and more complex projects."

RATIO principals became aware of Cherry Huffman about two years ago. "We've worked in the North Carolina market and completed various projects for Duke University, observing many of the architectural teams in the area along the way. Simply stated, we are impressed with Louis Cherry's leadership and his creative and innovative team. Our design philosophies, work cultures and styles are very similar," says Browne.

RATIO and Cherry Huffman are privately held firms, and terms of the transaction will not be publicly disclosed.

#### **Libraries:**

#### **[Chatham Community Library \(Central Carolina Community College\), Pittsboro, NC – USA 2010](#)**

The Chatham County Library is located on the campus of Central Carolina Community College in Pittsboro. The library will serve as the library for the community college as well as the regional public library. The Chatham County community is committed to being leaders in sustainable design and the library design incorporates many highly innovative features. The project is on track to receive a LEED Gold certification. The library is designed to use natural light for almost all of the functional light during daytime. Extensive on-site daylight modeling was completed with Dr. Wayne Place. Electric lights automatically turn off when sufficient daylight is present. The design was extensively tested through prototype models and physical analysis. As one of the ways of meaningfully engaging the community, several artists are incorporated into the design. A mural artist is painting the children's program area. A metal worker is designing custom fences and bicycle racks and a ceramic artist is designing tiles for two "hearth" features. These and several other inclusions of local artisans serve to reinforce the library as a community anchor. (Cherry)  
<http://www.cccc.edu/news/story.php?story=421>

#### **[Cameron Village Regional Library, Raleigh, NC – USA 2006](#)**

The library is located in the oldest shopping center of its kind in the southeast. The design created a window into the community, expressing the library's individual function while maintaining continuity with its surroundings. The library's updated interior and exterior has added light, energy and transparency to the building—an integral part of the library's new identity. It now welcomes 3,500 visitors a day. The open plan combines the two sides of the building into one library. An addition to the second floor provides more floor space with the ability to separate quiet and public study zones. The relocated entry opens into an atrium connecting the first and second floors. The southern exposure of the primary facade offers an opportunity to take advantage of an ideal day lighting circumstance. Through the use of carefully designed shading structures the design responds to environmental concerns, maximizing daylight and views inside and out while avoiding direct light and undesirable heat gain. The primary view from the street is the activities occurring within the library—connecting the inside and outside. The library received a Merit Award from the American Institute of Architects, North Carolina Chapter in 2006. (Cherry)

#### **[Clark Construction Group, Bethesda, MD – USA](#)**

<http://www.clarkconstruction.com>

#### **[Edward S. John Learning and teaching Center, University of Maryland, College Park Campus, College Park, MD – USA 2016](#)**

New Learning and Teaching Center Coming to UMD's College Park Campus

College Park, Md. — Continuing a relationship that has lasted seven decades, the University of Maryland awarded Clark Construction Group a \$40 million contract to build the Edward St. John Learning and Teaching Center. The new, 95,800 square-foot facility will be located on the university's College Park campus.

To prepare for the new academic building, Clark and its team first will demolish the university's Shriver Laboratory and part of Holzapfel Hall. The team will then renovate 27,400 square feet of Holzapfel Hall and construct a 63,400 square-foot addition. The scope of work also includes constructing a 5,000 square-foot central utility building as well as performing site and utility improvements.

The Edward St. John Learning and Teaching Center will accommodate 2,000 students in multiple classrooms ranging in size from 80 to 320 seats. All spaces will be equipped with the latest classroom technologies managed from a centralized technology service unit. This is the first new building on campus dedicated solely to classroom space in 50 years. The university estimates that 10,000 students will take advantage of the facility every day.

The project will be designed to earn LEED® Silver certification.

Construction will begin in 2014 and completion is expected in February 2016. Clark has partnered with the University of Maryland since the 1940s. The company has constructed some of the College Park campus' most notable buildings including the Chapel, McKeldin and Hornbake Libraries, and the recently-completed Oakland Hall.

About Clark's Partners:

Ayers Saint Gross of Baltimore, Md., is the project architect.

University of Maryland at Baltimore, Architect: The Design Collective

The second largest medical library on the East Coast provides the highest level of library and computing services available. The state-of-the-art information services building serves over 900 libraries in 10 states as part of the biomedical network of the National Library of Medicine. Many highgrade finishes are incorporated into the six-level building, including maple and cherry-wood paneling and black granite counter tops. Telecommunications cabling, fiber-optics, and 1500 computer data connections were installed throughout the facility. The Information Access and Management Center, located on the building's main floor, allows users to access database and networked information. Three Technology-Assisted Learning Classrooms are used for training, advanced applications, file management, and design of expert systems.

## **Clark Enersen Partners, Lincoln, NE - USA**

<http://www.clarkenersen.com>

### **Libraries:**

#### **Hastings Public Library, Renovation and Addition, Hastings, NE – USA on design**

Currently in fund acquisition, this project will remodel the existing 27,000-square-foot building and add 5,000 new square feet. The floor plan will be completely re-configured to bring the library up to 21st Century standards as well as meet all life safety requirements.

Improvements include a reallocation of space, from print to digital, a new larger, dynamic area for teens and children, and a new central open stair, for visual and physical connectivity and to maximize staff efficiency.

<http://www.clarkenersen.com/#/whatwedo/portfolio/libraries.htm>

#### **Ashland Community Resource Center, Ashland, NE – USA on design**

The new Ashland Community Resource Center will replace the community's existing library, and provide meeting space that will serve as a senior center. The project is currently in the fund acquisition phase.

The proposed community center would offer 13,000 square feet. The library would occupy more than half of that space, and feature 24 computer workstations, a separate story time area for small children and another area for young adults. Two individual study rooms are planned, along with a room for genealogy. The center also will offer a dividable meeting room with capacity for 150 people, with a warming kitchen, restrooms and community office space nearby.

Set to be built on a corner near the town's east entrance, the center will create an attractive and functional gathering place to anchor the east end of Ashland's historic business district.

<http://www.clarkenersen.com/#/whatwedo/portfolio/libraries.htm>

read more:

[http://journalstar.com/news/local/ashland-nears-goal-for-new-community-resource-center/article\\_0e849abf-305c-5dca-858c-4ddb16d7b230.html](http://journalstar.com/news/local/ashland-nears-goal-for-new-community-resource-center/article_0e849abf-305c-5dca-858c-4ddb16d7b230.html)

#### **Cape Girardeau Public Library, Cape Girardeau, MO – USA 2009**

The design of the Cape Girardeau (Mo.) Public Library was inspired by the Mississippi River. Walls are clad with blue glass tile “washing up” toward limestone brick, out of which bamboo panels emerge representing the forest. Overhead, the undulating ceiling recalls clouds, while the exterior features three shades of brick and limestone bands that abstractly reflect flood high-water marks.

<http://americanlibrariesmagazine.org/category/tags/clark-enersen-partners>

The Cape Girardeau Public Library was in need of a significant expansion, to help it meet the needs of a service area with more than 35,000 people. The project included a 21,000-square-foot expansion and a major renovation of the existing 18,000-square-foot library. The library features the first RFID retrieval and restocking system in Missouri. It also features a leading-edge teen area complete with a gaming room with sound-tube systems to contain noise around a video game player.

The design reflects the community's heritage as a Mississippi River town. The main corridor is a metaphor for the river, with carpet that evokes moving water, and walls that feature blue tiles, rough-cut limestone, and bamboo paneling. The exterior continues the theme. Flared cornices on the canopies resemble the stacks of steamships that once plied the Mississippi. Limestone bands symbolize high watermarks from floods, and layers of colored brick match the actual riverbank.

<http://www.clarkenersen.com/#/whatwedo/portfolio/libraries.htm>

#### **Leewood Pioneer Branch Library, Renovation and Addition, Leewood, KS – USA 2009**

We completed design services for the Leewood Pioneer Branch Library renovation and addition. The 8,668-square-foot addition respects the architectural integrity of the neighboring courthouse with matching brick, stone and window patterns. The architectural character of the building also is similar to the adjacent Leewood City Hall. A connecting courtyard creates a campus environment. The project expands the library for current and future family-oriented programs, and also upgrades the HVAC system, replaces the roof, and improves vehicular and pedestrian circulation.

The youth area is beneath a high-bay space, making it easy to identify as a destination. Clerestory windows bring indirect natural light into the space, which is furthest from perimeter windows. The bright, colorful area accommodates technology for the youngest users, with computers, flat screens, and gaming spaces.

<http://www.clarkenersen.com/#/whatwedo/portfolio/libraries.htm>

#### **Falls City Library and Art Center, Falls City, NE - USA 2007**

An cover from a 1940's Saturday Evening Post, "Falls City at Christmas" inspired the concept for the 15,000-square-foot library. Painted by a Falls City native, the illustration depicts a snow-covered street bustling with holiday shoppers. Similar to buildings in the painting, the new library features a low-sloped roof, simple facade and modular shape. This International Style of architecture was a symbol of progress in the 1940s, and our design reflects a new sense of progress and civic pride instilled by the library.

The open floor plan is user-friendly, and more efficient for staff. The children's area, inspired by the idea of story time, features a big blue circle as the organizing element, and smaller circles for individual or small group activities. For efficient patron assistance and monitoring, the director's office is by the circulation desk, and a staff work area is next to the book drop and computer room.

#### **Auburn Memorial Library, Addition and Renovation, Auburn, NE – USA 2006**

The project involved a 1,350-square-foot addition and renovation to the existing 5,800-square-foot Auburn Memorial Library. The addition houses a new youth services area, as well as a new conference room/office, mechanical room and workroom. The library's existing public copy area was renovated to allow a new entrance into the addition. The project also provided a new roof over the existing structure, and resolved several pre-existing drainage issues.

Aesthetically, the library addition is respectful of the original building fabric. Certain sections create interest by utilizing alternating brick patterns and depths. Large expanses of glazing allow natural light to fill the children's area. Special care was given to

providing a unique children's reading nook with unique lighting. On the interior, certain sections of the original west facade will remain exposed to tell the story of the library's origins and growth.  
<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

### Seward Public Library, Seward, NE - 2003

We completed a new 26,000-square-foot library in Seward, Nebraska. The building was designed to complement the nearby historic County Courthouse. The project goal was to create a library that is functional to meet current needs and flexible to allow future growth, while also providing patrons with a welcoming and warm atmosphere.

To enhance security, the circulation desk is strategically located between the two main entry points into the library, and is adjacent to the stack areas. A drive-up service window adjacent to the circulation desk minimizes staffing needs. The library also features a technology training room, staff offices, staff lounge, work rooms, storage facilities and restrooms. The children's and young adult spaces highlight the east side of the building. In the children's area, a circular reading room provides an identifying architectural form and attracts children to the space.

<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

### Peru State College Library, Peru, NE – USA 2003

We converted an underutilized gymnasium into a library that provides a quality study and research environment. This project was featured in American Libraries magazine in 2005 for its innovative design and adaptive reuse of an existing building.

The gymnasium floor was renovated to accommodate high traffic library functions--current periodicals, the reference collection, a technology training room, and the circulation desk and staff offices. Roofed enclosures reduce the volume of this large space, creating "buildings within buildings." The reference desk and reference librarian's office sit below a series of cherry wood fins that help to draw attention to this destination point.

<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

<http://www.youtube.com/watch?v=un5AJbTJzK4>

### Eiseley and Walt Branch Library, Lincoln, NE - USA 2002

We completed two new branch libraries for the City of Lincoln. In order to reduce costs, we designed a 32,000-square-foot prototype that was used for both locations. The design concept is based on creating information shopping centers, with a distinctly modern 200-foot-long "main street" serving as the circulation spine. This main street is outfitted with bright graphics and signage to direct patrons to their destination points. Windows above the circulation spine provide controlled natural light into the library. Indirect lighting systems create optimal reading and computer viewing environments. Data, telecommunication, and audio-visual systems were designed to provide maximum flexibility for current and future technology. We also incorporated many green design elements, explained by signage, to raise public awareness of the responsibility to preserve the environment.

<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

### Love Library, University of Nebraska-Lincoln, Lincoln, NE – USA 2002

Love Library, the flagship library for the University of Nebraska, had not seen major improvements in 55 years. We were presented with the challenge to make key infrastructure modifications without compromising the architectural integrity of the 158,000 square-foot landmark, and to keep the building operational during construction. Initial plans called for an upgrade to mechanical and electrical systems only. However, we devised a cost-effective approach that allowed us to improve the function and aesthetic of the entire building while making the necessary infrastructure upgrades. We repositioned functions to improve circulation and access. Sensitive archives, such as an original Shakespeare folio, were placed where a special HVAC system can halt deterioration. For ambience and security, the stacks were made more open and a new lighting system installed. A new glass vestibule provides a highly visible and attractive entrance.

<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

### McGoogan Library, Interior Renovation, University of Nebraska Medical Center, Omaha, NE – USA 1999-2000

We provided interior design services for the McGoogan Library at the University of Nebraska Medical Center. We were responsible for the selection of interior finishes, furniture, fixtures, and equipment.

The design sought to de-institutionalize the library. We gave the space warmth and personality through the use of materials, color, and furnishings. New stack-mounted aisle fixtures bathe shelves with light, making it easy to read titles on the bottom shelf. A bold, yet soothing, marine blue wall color was used throughout public spaces. Floors were re-carpeted using modular carpet for ease of installation and maintenance. Rust-red granite countertops complement the predominant blue hue found in other materials.

<http://www.unmc.edu/library/about.htm>

### Gothenburg Public Library, Gothenburg, NE – USA 1999

The Gothenburg Public Library is listed on the National Register of Historic Places. It is located along a tree-lined highway, at the corner of an intersection that connects the downtown business district with an established residential neighborhood. We developed a program and design for the renovation and reuse of the original two-story library, and the construction of a one-story, 7,000-square-foot addition.

The layout has three primary areas: community room, children's library and general library collection. The new central lobby features entrances from two sides of the building, provides access to the ADA-accessible restrooms and elevator, and opens to the three primary areas. The exterior features two design vocabularies, one clearly modern, and the other reflective of the historical context of the old library and surrounding neighborhood. A flat-roofed glass entrance lobby connects the old and new, contrasting and enhancing the library's historic image with modern simplicity.

<http://www.clarkensersen.com/#/whatwedo/portfolio/libraries.htm>

### Clark Nexsen, Norfolk, VA – USA

<http://www.clarknexsen.com>

**Libraries:**

[Patricia W. & J. Douglas Perry Library, Student Success Center, Old Dominion University, Norfolk, VA – USA 2011](#)

The Patricia W. and J. Douglas Perry Library is home to most of the Old Dominion University Libraries' collections and services. The University Library was opened in its present location off 43rd street in 1976, with a major addition and renovation completed in February 1998. It was renamed the Patricia W. and J. Douglas Perry Library on December 10, 1998 and was dedicated on April 15, 1999.

Completed in: 2011, Project size: 76,316 SF; Construction cost: \$9,700,000

To create an interactive "Learning Commons" and accommodate the University College, which helps students transition to college life, the library at Old Dominion University underwent both a renovation to some of its existing spaces, as well as an addition of 30,000 SF.

Approximately 20,000 SF on the first floor of the existing Perry Library was captured to create the "Learning Commons", which includes multi-task open work areas, enclosed meeting rooms and project rooms, social gathering spaces, and a small cafe.

Additionally, approximately 30,000 SF were added to accommodate University College and its support services to students.

The Center serves as a central hub for 24,000 students and operates 24 hours. Our design direction was for an atmosphere of exploration, collaboration, and social activity. The Center is a destination, a place to see and be seen, and a home base for commuting students.

A single inversion arc draws students to the main entry addition. The arc curves through the iconic Perry Library to form a strong geometry unifying the 1973 vernacular with the new. The design incorporates ODU "blue" paired with a warm "gold". Overall tones borrow from the existing library neutrals and feature exposed concrete, reinforcing the overall technology theme. Glass partitions expand the spaces one into the next for a dramatic layering effect. The University embraced a "for students/by students" philosophy and a student advisory committee participated in the design process. Furniture selections support technology-driven requirements. Mock-ups were installed for onsite testing for a semester. Overall comfort, performance, and ease of power and data integration Civil engineering design for this project included site layout and grading for a series of ramps and curved steps to integrate with the campus overall master landscape plan. Stormwater design, which included a new bioretention facility and compliance with the campus stormwater master plan, and site utility design, including the design of a 12-inch City-owned water main for future use. Extensive coordination was involved with DCR for stormwater approval, Hampton Roads Sanitation District (HRSD) for sanitary sewer coordination, and the City of Norfolk Utilities Department for design and approval of the 12-inch water main. drove product selection. Practicality meets imagination in this community and technology-driven center.

## **Health Sciences Education Building, Phoenix Biomedical Campus, Phoenix, AZ – USA 2012**

see also: <http://www.asg-architects.com>

268.000 sqf., \$ 187.000.000(includes \$ 99.000.000 construction costs)

The HSEB, together with the planned Arizona Biomedical Collaborative II research building, will consist of 600,000 square feet of educational and research space, fostering development of clinical and translational research opportunities and establishing new models of interdisciplinary clinical care and education. It will serve students and faculty of the UA College of Medicine-Phoenix, UA College of Pharmacy and the NAU College of Allied Health Sciences. The HSEB contains flexible classrooms, simulation laboratories, gross anatomy facilities, pre-clinical training facilities, learning resources center, student services, faculty offices and administrative space. Inspired by Arizona's iconic canyon formations, the façade meets objective criteria for thermal performance and durability, while creating an architectural expression specific to the building's place and time. CO Architects: Executive & Design Architect; Ayers Saint Gross: Associate Architect

## **San Pietro High School, John & Muriel Olguin Campus, San Pedro, CA – USA 2012**

Los Angeles Unified School District

The new, sustainable high school offers a collaborative learning environment based upon the small high school concept. The design creates an inviting campus environment that respects its rich historical site and embraces open views of the Pacific Ocean to the south and southwest. Main teaching space is organized into two small-school groupings – freestanding, two-story clusters of classroom buildings surrounding sunken courtyards. Five additional buildings house food services, library, performing arts, gymnasium, administrative, office and service/maintenance functions. The high school generates electricity from renewable energy on site through photovoltaic and wind turbine technology. Cool roofs, natural light and operable windows also help reduce energy consumption.

## **Santa Monica College Library – Santa Monica, CA – USA 2003**

CONTACT: Bruce Smith Public Information Officer

(310) 434-4209 FOR IMMEDIATE RELEASE

DATE: November 14, 2005

Website

SMC LIBRARY, SCIENCE COMPLEX WIN

STATE ARCHITECTURAL AWARDS

Santa Monica College's Library Expansion & Modernization Project and its Science Complex have both won prestigious statewide awards from the Community College Facility Coalition. Both projects were designed by CO Architects of Los Angeles, formerly Anshen + Allen.

The Library project won the Award of Honor in the Modernization Project category and the Science Complex won the Award of Honor in the Growth Project category.

The coalition is made up of representatives of California community colleges, architects, engineers and contractors. The 2005 awards were presented for the best in design for California community college projects.

The \$23.6 million Library Modernization and Expansion project – which was completed in August 2003 – nearly doubled the size of the facility to 96,500-square feet and provided widespread Internet access. In addition, the project included seismic retrofitting and a redesign of the exterior, with landscaping, benches, lighting and more.

With three stories divided into five levels, the Library features plentiful skylights and atriums, giving the structure an open and airy feel. The centerpiece is an elliptical wood-paneled “building-within-a-building,” flanked at the north end by a dramatic three-story glass elevator tower.

The \$30 million state-of-the art Science Complex – which opened in August 1999 – is a 98,000-square-foot facility made up of two buildings separated by a courtyard but connected at the second floor. The gray-green-white building has many environmentally sensitive features, as well as modern labs and classrooms.

The complex includes two 100-seat lecture halls, including built-ins such as infrared assisted-listening devices and computerized control modules for the professor to display DVDs, CDs, and other media; labs ranging from plant propagation to instrument labs and a Nuclear Magnetic Resonance Spectrometer, one of only two at a community college. #### **Learning Commons, Lane Library Extension, Armstrong Atlantic State University, Savannah, GA – USA 2013**

The Lane Library & Learning Commons, Armstrong Atlantic State University, Savannah, project added a commons adjacent to the library for flexibility and to support group work. CREDITS: Cogdell & Mendrala, PC, architects; Richard Le Johnson  
<http://lj.libraryjournal.com/2013/11/buildings/year-in-architecture-2013-a-lot-of-learning-to-do/>

(Oct. 2, 2013) – Armstrong Atlantic State University’s Learning Commons expansion recently earned LEED Gold certification, recognizing the university’s commitment to sustainable design and green building principles.

The certification marks the second time an Armstrong building has been honored with LEED status. Armstrong’s Student Union received LEED Silver certification in 2011.

“Part of educating Armstrong students for the future involves demonstrating our commitment to sustainability on campus,” said David Carson, Armstrong’s vice president for business and finance. “We want to lead by example and to underscore the importance of environmental responsibility at Armstrong.”

Sustainable design components at Armstrong’s Learning Commons include the following:

- Sustainable finishes and building materials.
- Energy-efficient mechanical systems and lighting fixtures.
- Energy management system enhancing access to natural daylight.
- Solar photovoltaic panels on the roof, which allow for the production of renewable energy on-site.
- Water efficiency, including low water flow plumbing fixtures.
- Highly reflective roof membrane, reducing solar heat gain.
- Green roof, including a 500-square-foot vegetated roof garden.

Cogdell & Mendrala Architects, P.C. served as the lead architecture firm for the project. The construction manager was Garbutt/Christman, LLC.

The Learning Commons was conceptualized as a technology-rich knowledge center offering students a place to learn and share in an interactive environment that is adaptable and accommodates new technology. The 15,000-square-foot building, which officially opened on June 1, includes a repurposed existing facility designed to facilitate and encourage collaborative learning. The satellite library expansion incorporates the latest learning and information-sharing technologies and provides flexible student collaborative study environments.

The Learning Commons was originally constructed on the main quadrangle at Armstrong in 1965 as the Campus Student Center. The building was expanded in the 1980s with the addition of a bookstore and was renovated again in the 1990s to house the university’s Information Technology Services division.

The LEED certification program is administered by The U.S. Green Building Council (USGBC) through the Green Building Certification Institute, a third-party administrator. The Green Building Certification Institute performs the technical reviews and verification of LEED-registered projects to determine if they have met the standards set forth by the LEED rating system.

(April 24, 2013) Armstrong will hold a public ribbon cutting for the university’s new Learning Commons on Monday, April 29 at 3:00p.m. The Learning Commons is a technology-rich resource for students and faculty to study, collaborate, and interact. The 14,000-square-foot building holds Mac and PC computer labs, interactive technology tables, audio/video editing room, library reference rooms, group study spaces, seating for 300, a lecture space, and more.

The Learning Commons is an adaptive reuse project and has been designed to LEED Gold standards of the U.S. Green Building Council. Through the project, Armstrong was able to repurpose the original student union, built in 1965. More recently, the structure housed Information Technology Services (ITS) before the department was consolidated and moved to the Armstrong Center. The architect for the project was Savannah-based Cogdell Mendrala Architects.

“Armstrong wanted to expand its library services and technology for students, and we also needed to consolidate our campus information technology services,” said David Carson, Armstrong’s vice president for business and finance. “In line with the university’s commitment to sustainability and good fiscal stewardship of state funds, we decided to move ITS to an existing structure and repurpose their building for the new Learning Commons. The location of the Learning Commons in the center of the academic quad was chosen to enhance the opportunity for student success.”

Sustainable features of the building include a vegetated “green roof” and rooftop solar panels, which are expected to save nearly 20 percent of total energy costs. A monitor inside the Learning Commons will run a continuous display of total energy consumption and solar panel savings.

[http://www.armstrong.edu/about/construction\\_growth/construction\\_growth\\_library\\_renovations](http://www.armstrong.edu/about/construction_growth/construction_growth_library_renovations)

### [Zach S. Henderson Library, Georgia Southern University, Statesboro, Georgia – USA 2008](#)

- The expansion/renovation project began in summer 2004 and was completed in August 2008.
- The completed building is as large as a city block. The total square footage of the library is 235,000. A helpful feature is the color coding of the carpet by floor: Green – first, Blue – second, Red – third, and Purple - fourth.
- The \$22.75 million project added 101,000-square foot to the original building.
- The expanded building was designed more for people than for books.
- Floor to ceiling windows are featured throughout with seating at all the outer edges and the collections nearer the center.
- By the end of 2008, there will be more than 1900 seats and twenty-nine group study rooms available.
- The new Learning Commons (second floor) offers bright, flexible seating for group collaboration, faculty – student collaboration and research, and multimedia creation and projection.
- The Automated Retrieval Collection (ARC) is currently capable of storing 800,000 items in 5,848 separate bins that are stacked 45 feet high is one of the most exciting features of the building.
- When the ARC is expanded to its full capacity the building will be large enough to house a collection of more than two million items.
- There will be more than 300 hard wired computers and wireless is available throughout the building.
- A welcome addition to the original building is the rear entrance that allows access from the parking lot.
- The library is open almost 24 x 7. During regular terms, it's only closed from ten pm on Friday until 9:00 am on Saturday and from 10:00 pm on Saturday until noon on Sunday. See schedule.
- The striking three-story glass atrium with its virtual waterfall is a highlight of the eastern addition.
- The L shaped western addition features a cathedral ceiling on the third floor with impressive views from both the third and fourth floors.

### [Library & Information Technology Center, Georgia College & State University, Milledgeville, Georgia – USA 2005](#)

see: **Holzman Moss**

The existing facility consisted of an original building constructed in 1926 and expanded in 1965, which together totaled approximately 45,000 sf.

The new two phase \$15,000,000 project added a 100,000 sf addition and completely renovated the existing facility following the Design-Bid-Build delivery method. The first phase consisted of a new three story addition. When the addition was completed, the Library was able to relocate all of it staff, materials, and student functions from the existing facility into the new addition. The move was coordinated with the semester break which created minimal disturbance to the University's Library services. Once relocation was complete in the new addition, the second phase involving the renovation of the existing facility began. When completed, a partial move of certain temporary departments, went back into the existing building.

Features include a 24-hour student gathering/study zone with a cyber-cafe, graduate study lounge, group study rooms, electronic classrooms, and additional reference areas. Complete access to the library's computer labs are now available anywhere within the complex. State-of-the-art technologies and high-density shelving contribute to the doubled capacity for collections and reader seats. The Flannery O'Connor Memorial Room, a museum and archive dedicated to the author and Georgia College alumnus, is joined by additional gallery spaces and an adjoining Education Room for museum-quality exhibitions and special campus events.

<http://www.cogdellmendrala.com/home.swf>

### [Live Oak Public Library, Bull Street Branch, Savannah, Georgia – USA 2000](#)

On 2002 Bull Street is, arguably, the oldest library within the Savannah city limits. The history of the entire Live Oak Libraries system is closely linked with this particular branch. It was opened in November 1916, costing \$104,041.78 to construct, the money mostly coming from a Carnegie grant. Its 23, 000 item collection was brought from East Henry Street's Carnegie Library, which had previously served the local African-American community. For more information on the Carnegie Library: [www.liveoakpl.org/upload/LibraryHistoryLeMays.pdf](http://www.liveoakpl.org/upload/LibraryHistoryLeMays.pdf)

Designed by H. W. Witcover (**Hyman Wallace Witcover 1871 – 1936**), the Bull Street library is a beautiful example of neoclassical architecture. In the following decades the building went under several renovations. The first came in 1936 when the WPA (Works Progress Administration) added a small wing for more book stacks and painted a Robin Hood mural in the Children's Section.

In 1956, while there was no change to the building itself, it was renamed the Chatham-Effingham-Liberty Library. It served as the single library building for all three counties, only aided by book mobiles that had routes through Effingham and Liberty Counties. This service was discontinued December 31, 1944 due to a lack of funding.

Ten years later in 1966, a whole new addition, in the form of a nearby residence, was annexed to the building that doubled its size, making it better able to handle the increased traffic after segregation had ended. A reading lounge and more room for the staff were specifically designed, as well as more stack space.

In 1999, the building went through an overhaul. Restored to its prime, the building's size was again doubled to almost 66,000 sq. ft. It was painted in the very recognizable neoclassical style of Robert Adams, a famous Scottish architect, interior designer and furniture designer. He was considered the leader of the first phase classical revival in 1790 in the United Kingdom, specifically Scotland and England. Some of his most notable works are Derby House, the front screen in Whitehall, in London, Kedleston Hall, and Pulteney Bridge, in Bath. For more information on Robert Adams : [en.wikipedia.org/wiki/Robert\\_Adam](http://en.wikipedia.org/wiki/Robert_Adam)

The Bull Street Library's split-block addition from 1966 was replaced with white Grecian marble, vivid colors in the rest of the décor, and beautiful window walls that gave a lovely view of the live oaks that line Bull Street. In honor of these trees, the entire library system was renamed Live Oak Libraries in 2002.

## **The Collaborative Inc., Toledo, OH – USA**

<http://www.thecollaborativeinc.com>

### **Libraries:**

#### **Beverly K-8 School, Toldedo Public Schools, Toledo OH –USA 2011**

Beverly boasts LEED Gold Certification under the LEED for Schools program.

Toledo, Ohio This new K-8 school houses 712 students in 98,839 SF. A significant driver to the layout of the plan was the desire to separate the younger children from those in middle school. The design provides separate wings for elementary and middle school, with the media center located at the juncture. Additional shared spaces include the gymnasium, auditorium, and music room.

Beverly's mechanical systems exceed minimum efficiency standards by 24%. Use of products manufactured regionally and/or made of recycled materials adds to the building's LEED credits. The School is designed to use 40% less water inside the school, and use no irrigation for landscape plantings. The site storm water is mitigated through bioretention gardens.

Interior light shelves reflect indirect sunlight onto classroom ceilings, reaching three-quarters of the way across the sloped ceiling.

Most of the classrooms face south to take advantage of solar orientation, and glare is mitigated with sun louvers mounted outside on the larger-than-average windows.

<http://thecollaborativeinc.com/project/beverly-k-8-school#>

#### **John & Christine Warner Library & Student Center (Central Ohio Technical College – Ohio State University), Newark, OH – USA 2008**

<http://oncampus.osu.edu/campus-community-mourns-passing-of-christine-warner-powell/>

### **Awards:**

ACUI ( Association of College Unions International ) Design Award 2009

AS & U ( American School & University ) Educational Interiors Showcase Bronze Citation 2009

Central Ohio Technical College (COTC) is forging ahead and looking forward to a future of growth. The vision for of The John L. and Christine Warner Library and Student Center is now a reality, as the structure of this state-of the art facility nears completion. Construction began in the spring of 2007, and now the campus is preparing for the move of the various services and resources over the summer months. When the doors to the new building open, it is anticipated that not only will the face of the campus change but so will its feel. Structurally and symbolically this nearly 84,000 square foot building will be the union of information access and the information generation. The facility will feature 25,000 square feet of library space; nearly double the space of the current library. The new library will house an ever-changing array of research tools for teaching, learning and research. The new student center features a modern dining area, student organizational space, a learning commons, various activity areas and a new bookstore. Through volunteerism and student employment, the center will offer first-hand experiences in citizenship and educate students in leadership development, social responsibility, multiculturalism and values. Spaces that will be available to community, non-profit organizations at no charge include: the library, dining hall, bookstore, public lounge areas, and the Sleight Community Room. Brian Boehmer, Architect and Project Director, stated: "The concept of having an open facility that houses a library, dining, bookstore and student spaces is very unique. The notion that there are no physical barriers between the food service operations and the library and the fact that food and/or books can literally go anywhere in the building strengthens this concept." Additionally, the Warner Center features three working fireplaces for those cold Ohio days. Like other spaces on campus, the building provides complete wireless internet access. All classrooms and most of the learning labs will have full multi-media components. Students will be able to sign out laptops at multiple locations throughout the building. Dr. Bonnie L. Coe, President of COTC, stated, "It is our hope that the center will foster a sense of community that will cultivate enduring loyalty to both COTC and Ohio State Newark. The building was made possible through the foresight and generosity of its namesakes – John L. and Christine Warner, who are credited with the unique concept of combining the library and student center into one facility. The Warners' generous donation consists of a \$4.5 million lead gift, followed by the establishment of three charitable remainder trusts of varying amounts and years." <http://www.newarkcolleges.com>

The Warner Student Center & Library fills multiple needs on the joint campuses of Central Ohio Technical College and Ohio State University, Newark. The 86,000 square foot Center includes student organization offices, bookstore, meeting rooms, math & writing training labs, counseling offices, safety & security offices, and dining facilities for 500. The library portion of the building incorporates a "Fireside Lounge" where students can quietly study in a home-like atmosphere.

The building's subtle curve emphasizes an "open arms" feel toward the campus. The sophisticated, yet warm, interior is enhanced through the extensive use of glass, taking advantage of natural lighting and passive solar opportunities.

#### **Adrian College, Shipman Library Addition & Renovation, Adrian, MI – USA 2000**

22,000 sqf. Addition, 29,000 sqf. Renovation, 4,752,000 €

The expansion and renovation of Shipman Library on the campus of Adrian College transformed a 40-year-old functional, but nondescript library. The project is the first step in a campus renaissance, the college's first major building project in more than a decade. It symbolizes a commitment to academic excellence. Renovation 51,000 square feet of virtually new space. It establishes a new benchmark of quality for future campus projects. The existing building and new addition are linked dramatically with a vaulted connector that functionally and visually unifies the entire building, while creating a major organizational space similar in character to traditional collegiate reading rooms. The new addition is shaped to respect and enhance the pedestrian scale of the campus. It incorporates an exterior palette of limestone and masonry, which harmonizes with the two existing distinct campus-building styles. The library has become an academic and social center, and also houses the campus' technology center. The new Shipman Library combines the historical tradition of libraries with 21st-century technology.

New Alpharetta Library Ground Breaking!

New Alpharetta Library The Atlanta-Fulton Public Library System will break ground on the new Alpharetta Library Tuesday, March 25 at 11:00 a.m. and we'd love to see you there!

The new 25,000-square-foot library for Alpharetta is part of Phase I of the Library Building Program, currently underway. The library will be located in the Alpharetta City Center project in downtown Alpharetta, near the corner of Haynes Bridge Road and Thompson Street.

Cooper Carry, in association with Vines Architecture, is contracted with Fulton County to provide design and engineering services for the new library. Peter R. Brown/Moss Construction, Inc., is contracted to provide construction management services on this project, and Heery/Russell is the program management team.

The grand opening of the Alpharetta Library is expected in the 2nd quarter of 2015

### **Georgia Highlands College, Bartow Center, Cartersville, GA – USA 2005**

Project Scope 135,000 SF; 3 floors, Design Services Architecture, Interior Design, Client BOR / Georgia Highlands College Foundation / Georgia Highlands College

Bartow Center is the first building on a new campus for Georgia Highlands College, a two year institution of the University System of Georgia. The building is the catalyst for a future campus of interconnected greenspaces with perimeter vehicular access and parking separate from the core campus. The interior planning includes all program elements of an independent campus while anticipating flexibility for future growth. The main gallery and library become the central gathering space for the campus and contribute to collaborative learning. Classrooms, administrative services, faculty spaces, science labs and bookstore are organized to promote connections in this progressive learning environment.

**Libraries:**

### **Washington, DC, Public Library Branches, Rosedale Community Center and Library, Renovation, Modernization – USA 2012**

New Building Multi-Purpose Recreation / Community Center / 26,200 SF / Washington, DC

The new Rosedale Community Center and Library will replace the current dilapidated building, rejuvenating this neighborhood with improved community amenities. The community center will have a gymnasium, meeting rooms for general purposes as well as for the teen and senior age groups, a community kitchen, and fitness room. Outside of the building users will find a new swimming pool, new artificial turf field, basketball court and playground. The design is straightforward and is comprised of three rectangular buildings, a gymnasium wing, community center wing, and a library wing with a central entry point. The community center wing will be housed under a green roof and provide storm water retention and filtration, the 9,000 sf green roof will help reduce the heat island effect providing points for LEED certification. The new building, designed to LEED Gold standards, is intended to provide a modern facility to foster activities such as continuing education, arts and crafts, indoor sports as well as neighborhood meetings and events. ### [Washington, DC, Public Library Branches, Mt. Pleasant Branch Public Library, Washington, DC – USA 2012](#)

CORE, along with HMA2, was hired in 2008 to renovate, redesign, and restore the Mt Pleasant Library at 16th and Lamont Streets, NW. The overarching project goal is to improve the functionality of the library. To do this, CORE will increase usable space, add a new wing for community gathering space, improve circulation, design for all ages, and preserve the historic structure and spirit of the neighborhood. Throughout 2009, CORE has worked diligently to develop a design that meets the needs and interests of local community group, historic preservation groups, and design review boards. CORE has created a design that blends the new wing with the historic structure in a subtle yet provocative way. The project is scheduled to begin construction the first quarter of 2010.

#### [Reed School / Westover Library, Westover, VA – USA 2009](#)

On May 9, 2008, a Groundbreaking Ceremony was held at the Reed School site for the \$21.6M Reed School/Westover Library project. The project included tearing down the entire building, with the exception of the original 1938 shell, and rebuilding into a 61,000-square-foot (5,700 m<sup>2</sup>) building which houses the new Westover Branch Library and Arlington Public School programs. The library reopened on October 31, 2009, having been relocated from its former location approximately one block northeast

[http://en.wikipedia.org/wiki/Westover,\\_Arlington,\\_Virginia](http://en.wikipedia.org/wiki/Westover,_Arlington,_Virginia)

Services: Completion: Area: 60,000 gsf, LEED Gold Certified

Cox graae + spack architects designed the Reed School / Westover Library complex on behalf of both Arlington Public Schools and Arlington County Government. Public input led to a design solution for the renovation and expansion of the historic Reed School to house both public school functions and a local library branch. The new Westover Library branch replaces and expands the old library within the historic ca. 1938 Reed School building. Additions to the historic school building house several programs for Arlington Public Schools including a preschool program, an integration preschool for children with autism, and a teen parenting program.

### [Gelman Library Kiev Collection, George Washington University, Washington, DC – USA 1998](#)

<http://library.gwu.edu/collections/kyiv>

Services: Completion: Area: Space Planning, Exhibit Design, FF&E 1998, 2,500 gsf

The George Washington University sought to develop a special facility within their Gelman Library to house one of the most valuable collections of Judaica in the United States. The I. Edward Kiev Collection contains 20,000 volumes of rare books and manuscripts spanning the 15th to 20th centuries. cox graae + spack architects designed the space to both protect and preserve the collection while also displaying the historic material to the broader library community through a custom two-sided, stainless steel and glass display case. The interior of the space features museum-quality protection for the collection including a complete space vapor barrier, specialized lighting controls and window coverings, and specially engineered HVAC systems.

### Washington Theological Union, Washington, DC – USA 1997

Services: Completion: Area: Awards: Master Planning, Adaptive Reuse, Renovations, Additions 1997, 80,000 gsf

#### **Awards:**

**Award of Excellence in Religious Architecture, National AIA Award of Merit, Washington Chapter AIA**

cox graae + spack architects designed the renovation of the Washington Theological Union, a Roman Catholic graduate school of ministry in Washington, DC. The school desired to have a permanent home and purchased an aging, eclectic complex of buildings to transform into their new campus. cox graae + spack architects carefully designed a program of selective demolition, adaptive reuse, and infill of new construction to transform the campus. A dark and unfriendly inner courtyard was converted into a skylit Library while a dramatic new Chapel rose on the foundation of an old boiler plant. cox graae + spack architects designed all the school's major spaces along a pedestrian "main street" to provide generous space for flexible use.

### Craig Gaulden Davis, Greenville, SC – USA

<http://www.cgdarch.com>

#### **Libraries:**

#### A. J. Eastwood Library Limenstone College, Gaffney, SC – USA on design

Area: 30,500 SF, Completion: On hold, pending funding, Cost: \$3.5 Million (2011 Estimate), Client Website:

CGD authored a feasibility study and developed a conceptual design during a two month period to provide the College with tools to begin private fund-raising and meet accreditation requirements. The conceptual design nearly doubles the size of the library, re-oriens the entrance and changes the style of the library from modern design to more traditional in keeping with the rest of the campus. As part of the study, CGD

- Accompanied the Owner on a tour of several case study libraries
- Programmed the new library needs based on the anticipated growth of the College
- Measured and documented the existing conditions of the existing facility
- Developed an itemized FF&E budget, including furniture to be reused, and developed project budgets identifying all soft costs related to the project
- Provided the College with a list of naming opportunities to assist with the fund raising efforts

### South Carolina State College, Miller F. Whittaker Library, Orangeburg, SC – USA on construction (2016)

#### **ABOUT THE LIBRARY**

The Miller F. Whittaker Library was constructed in 1969 with the mezzanine addition in 1979. Various print and electronic collections are housed in more than 47,500 square feet of space. The library provides resources to meet the instructional and research needs of students and faculty.

#### **THE MILLER F. WHITTAKER LIBRARY RENOVATION**

The new library will be located in the approximate same location as the present facility, and will include approximately 74,500 square feet. In the first phase, a wing of the library will be built in the existing adjacent south parking lot. The second phase will consist of relocating the contents of the present library into the new wing and then demolish the existing library to make room for the new construction. The three-story steel framed brick and glass structure will feature natural lighting from windows and an integrated skylight system. The majority of the print collection will be housed on compact shelving, which requires less square footage than conventional shelving. The new facility will house several state-of-the-art amenities, including a WiFi system allowing students the use of laptops throughout the facility. Some additional features include lounge and conventional seating for more than nine hundred fifty; classrooms for bibliographic instruction and lectures; a fifty seat computer commons area; meeting rooms, study rooms, and conference rooms of various sizes; a children's room and curriculum lab; multimedia lab; and a café. The facility has been carefully designed to meet newly adopted SCSU architectural design criteria, academic needs and fit the learning style of South Carolina State University students. Once complete, the facility will be a positive statement to the continued commitment and progress which will be synonymous with South Carolina State University well into the 21st century.

### Athens-Clark County Library, Athens, GA – 2013

Area: 81,600 SF, Completion: 2013, Cost: \$9 Million (estimated), Associate Architect: Studio 3 Design Group, Recognitions: LEED Certification (anticipated)

Client Website: <http://www.clarke.public.lib.ga.us>

Craig Gaulden Davis was commissioned to oversee and coordinate a complex renovation and addition of to an existing, 60,000 SF, land-locked main library on Baxter Street in Athens, Georgia. With no room to attain the required spaces on site, CGD recommended the Library enter a joint-use agreement with the adjacent school to utilize excess parking on school property. With this agreement in place, the addition is positioned in front of the existing library on a steeply sloped embankment not suitable for parking. This location affords the opportunity to reinvent the library entrance and make it more visible from Baxter Street.

- Work phased to allow operation during construction

- Addition houses meeting rooms, café, and stacks
  - Accommodates 160 public computers
  - Utilizes RFID technology
  - CGD-designed FF&E
- <http://cgdarch.com/portfolio/athens-clarke-county-library/>

### [Post Road Branch Library, Cumming, GA – USA 2013](#)

Area: 23,000 SF, Completion: Fall 2013 (Anticipated), Cost: Estimated \$5.2 Million, In Association With: Professional Design Group  
Recognition: LEED-Certified (Anticipated)

The Forsyth County Public Library commissioned CGD to design their new branch to compliment the surrounding residential neighborhoods and to be their first LEED-Certified facility. The exterior design utilizes indigenous materials and elements comprised of fieldstone, wood siding, and trellises and draws on the equestrian architecture of the area. The floorplan features a central “spine” that organizes internal patron circulation and admits natural light through the use of clerestory windows.

- Exterior materials selected to compliment the surrounding area
- Reflective roofing to reduce heat gain
- 142 parking spaces organized to preserve mature trees
- RFID sorting room with drive-up access
- Incorporates a raised floor to efficiently heat and cool the space and provide flexible infrastructure

<http://cgdarch.com/portfolio/northeast-branch-library-2/>

read more:

<http://www.forsythpl.org/locations/postRoad.aspx>

### [Forest Park Library, Forest Park, GA – USA 2012](#)

Area: 16,000 SF, Completion: 2012, Cost: Unavailable, In Association With: Gerding Collaborative

Sensitively designed to preserve a cluster of mature hardwood trees, this new library in suburban Forest Park maintains a close connection with its site. The glass west wall encircles the trees, whose leaves and branches diffuse the natural light entering the building. With the circulation desk at its center and the general collection and children’s library on either side, the facility is simple to navigate. Users can come and go with ease, but the views and the sunlit interiors will entice many to sit and enjoy a book.

- Circular glass wall organizes browsing and reading areas around views of the neighboring hardwood trees
- Public meeting room designed to support after-hours use
- Children’s and adult computer stations designed to meet growing demand
- Vibrant colors and graphics used to accent children’s area, program room, and teen study room
- Expansive windows and solar shading devices provide adjustable natural lighting
- Incorporates a raised floor to efficiently heat and cool the space and provide flexible infrastructure

<http://cgdarch.com/portfolio/forest-park-library/>

read more:

<http://forestparklibrary.wordpress.com/>

### [Porter Memorial Branch Library, Covington, GA – USA 2010](#)

Area: 19,000 SF, Completion: Fall 2010, Cost: \$4 Million, Associate Architect: Studio 3 Design Group, Recognitions: LEED Gold Certified

One of the Owner’s key goals for this branch was to set an example of sustainable design for public libraries throughout the state. With an ample budget and the Owner’s vision in mind, CGD developed sustainable goals for the project that will save the Owner money, use less energy, conserve water and utilize recycled and renewable resources. Rather than simply housing information and tools for learning, the building itself will be a teaching tool for sustainable design and the role architecture plays in preserving the environment.

- Incorporates day-lighting to reduce light usage
- Incorporates a raised floor to efficiently heat and cool the space and provide flexible infrastructure
- Indigenous plants eliminate landscape irrigation
- Rainwater collection reduces water usage
- Reflective roof surfaces to reduce heat gain
- First LEED Gold Library in Georgia

### [Augusta Main Library, Augusta, GA – USA 2010](#)

Area: 90,000 SF, Completion: Summer 2010, Cost: \$17 Million, Associate Architect: Studio 3 Design Group

Located in Augusta’s Historic district, the site chosen for the new library bridges areas which are economically and racially diverse and hopes to encourage downtown development perpendicular to the river. The site is surrounded by an eclectic collection of architectural styles (13 different styles within one block of the site). CGD’s design is historically sensitive through the use and arrangement of materials, scale, and forms while creating a 21st century library that reflects current uses and contemporary architectural thought.

- Limestone, brick and glass exterior
- Granite 3 story lobby
- Roof terrace overlooking Greene Street
- 100 On-site Parking Spaces
- 300 seat, dividable multi-purpose room
- 3 story glass paneled graphic at stair depicting history of the Augusta Library and the Savannah River
- Classic book theme in Children’s area

<http://cgdarch.com/portfolio/augusta-main-library/>

<http://www.wjbf.com/story/21688008/augustas-main-library-preparing-to-close-and-move-into-new-building>

### [Nancy Guinn Memorial Library, Conyeo, Rockdale, GA – USA 2010](#)

Architect: Craig Gaulden Davis in association with Studio 3 Design Group  
Area: 46,500 SF, Completion: 2010, Cost: \$6 Million\$ 5.500.000

Enhanced Functionality: The expansion and renovation of the Nancy Guinn Memorial Library addressed a number of shortcomings with the existing building: leaks and water damage caused by measures taken to support the rooftop mechanical units, improperly functioning mechanical units, and an inefficient circular-oriented floor plan. A 9,000-square-foot addition brought the library's total size to 47,000 square feet and offers views of a wooded public park and amphitheater. A 200-seat meeting room was relocated to the upper floor and given a separate entrance so it can be used after hours. Other amenities include three small-group study rooms, a 12-seat conference room, a children's story hour room, and a computer training lab.

CGD was commissioned to design additions and renovations to the existing library; and simultaneously address significant shortcomings in the original building design and construction. The existing building's roof structure did not accommodate the original roof top mechanical units, and subsequent structures were added to keep the units from falling through the roof. These remedial measures left the roof with severe leaks and interior water damage. In addition, the mechanical systems did not function properly and the circular-oriented floor plan was inefficient. CGD's design addressed the short-comings, maximized the buildable area on the site and provided additional parking.

- Existing mechanical units removed, new roof installed
  - CGD designed FF&E
  - Existing skylights eliminated
  - Work phased to allow operation during construction
- <http://cgdarch.com/portfolio/nancy-guinn-memorial-library/>

### [Greenwood County Library, Greenwood, SC – USA 2010](#)

Area: 43,000 SF, Completion: 2010, Cost: \$7.5 Million, Recognitions: LEED Certified, Client Website: [www2.youseemore.com/Greenwood](http://www2.youseemore.com/Greenwood)

With 76% in favor of a referendum to fund a new main library, Greenwood County turned to CGD to design a new signature landmark to represent Greenwood's vision for the future. On the site of a former, vacant grocery store, the library is located at the south end of Main Street with the intent to anchor downtown redevelopment efforts and reinvigorate the surrounding neighborhood. As Main Street bends gently to the south, the rotunda and dome of the library become the focal point and visual terminus of the city.

- Meeting room provides space for County Council meetings and allows for after-hour use
- Rotunda contains the children's program room and the main reading room
- Stacked plumbing core maximizes efficiency
- Designed for future expansion
- Greenspace reclaimed on site
- First LEED library in South Carolina

[http://www.sccounties.org/Data/Sites/1/media/publications/countyfocus/cf\\_vol22no1.pdf](http://www.sccounties.org/Data/Sites/1/media/publications/countyfocus/cf_vol22no1.pdf)

### [R.T. Jones Branch Library, Canton, GA – USA 2010](#)

Area: 30,000 SF Renovation; 1,200 SF Addition, Completion: 2010, Cost: \$1.2 Million, Associate Architect: Professional Design Group, Marietta, Georgia

With an extremely tight budget this project was originally envisioned as a 3,000 square foot addition to an existing library with minimal renovations. After CGD received the commission for the project, it became apparent that by re-thinking the internal organization of the library, the entire expanded program could fit within the existing structure. This allowed the available project funds to be redirected into a major renovation that replaced all the finishes, millwork and interior lighting. In the end, there were enough funds remaining to construct a 1,200 square foot addition.

<http://cgdarch.com/portfolio/r-t-jones-branch-library/>

### [Etowah Branch Library, Etowah, Henderson County, NC – USA 2008](#)

Area: 8,000 sqf., Cost: \$ 1.300.000

#### **Awards:**

**Best New Library Under 10,000 SF, 2008 North Carolina Public Library Directors Association**

Located near Hendersonville, NC in a community with a population of approximately 2,700 people, this new library overlooks the Etowah Valley and Blue Ridge Mountains. Nestled on a gently sloping site, the library is the center of this small community. The project came in under budget, has many sustainable features and is designed to accommodate future expansion. • Building facade faces due south to maximize daylighting opportunities and capture views towards the Blue Ridge Mountains, Fritted, high performance glass to reduce heat gain, Large 6' overhang protects facade from summer sun but allows warmth in the winter, Exterior uses indigenous materials and colors, Interior floor features renewable cork flooring, Multi-purpose room with after-hour entrance, Children's area is enclosed from rest of the public area for security and acoustical isolation.

### [Pendleton Branch Library, Pendleton, Anderson County, SC – USA 2007](#)

Area: 12,000 SF, Completion: 2007, Cost: \$1.9 Million

Situated on virgin forest donated by a Clemson entomology professor for the preservation of an environmental sanctuary, the library is built next to the ruins of an 1860 southern plantation home known as Tanglewood. Proportioned after the original home, the exterior is classical in its articulation while the interior focuses views into the lush surrounding forest. The Children's program room and reading areas provide views into the archeological ruin which CGD's design reclaimed from decades of overgrowth and converted into an exterior reading garden and history lesson for the community. Plentiful natural daylight, Seating along the exterior to capture views, Central circulation/help desk for visual control, Public meeting room, Children's program room Lobby star-burst relates back to terrazzo floor pattern in the main library (also designed by CGD). (Craig)

<http://cgdarch.com/portfolio/pendleton-branch-library/>

### [The Thrift Library, Anderson University, Anderson, SC – USA 2007](#)

Area: 60,000 SF, Completion: 2007, Cost: \$6.75 Million, Client Website: [www.andersonuniversity.edu](http://www.andersonuniversity.edu)

Constructed to anchor the northern edge of this small private university, the library makes a strong visual connection to the center of the campus and establishes a vibrant new facility to serve as the intellectual and social center for its students. The library boasts a significantly expanded collection, a large seminar room, an art gallery and an internet café. Its contextual design blends with the early 20th century architecture predominant on campus while establishing a strong individual identity.

- 100,000 volume collection
- 100 seat multipurpose seminar room
- Art gallery for exhibits and events
- Internet café with extended hours
- 10,000 SF of expansion space at lower level
- Outdoor plaza with commissioned sculpture and fountain
- CGD designed FF&E

### [F\(rederick\) W Symmes Branch Library, Greenville, SC – USA 2006](#)

Area: 20,000 SF, Completion: 2006, Cost: \$4.3 Million, Client Website: [www.greenvillelibrary.org](http://www.greenvillelibrary.org)

Designed by CGD in 1988, the Symmes Branch Library is the most highly used branch library out of the 13 branches in the County Library System. The interior is organized around a long, central help desk that consolidates staff functions to one area and maximizes visibility and control of the public space. CGD was commissioned a second time to renovate the interior by upgrading finishes, expanding the staff work space, re-constituting unused space, adding capacity for additional computers and re-arranging furniture to maximize collection capacity.

- Increased collection capacity by 20% without exterior additions
- Converted projection room off of the meeting room into a conference room
- Expanded staff work area and increased circulation desk to accommodate self check units
- Upgraded lighting to more efficient fixtures
- Made ADA compliant

### [Horry County Library, Conway, SC – USA 2006](#)

Area: 20,000 sqf., Cost: \$ 4.300.000

Associate Architect: Moseley, Wilkins and Wood

#### **Awards:**

**C. P. Quattlebaum Design Award, 2006** City of Conway, South Carolina, Presented for an outstanding contribution to quality development in the restoration, landscape or design category

Public meeting room with after hour entrance, Two-story lobby organizing public space, All shelving 66" high or less to create a sense of openness, Plentiful windows to provide daylight, Designed to receive a 20,000 sf addition, Indirect lighting throughout, CGD designed FF&E

This library is located on the same site, adjacent to the historic Burroughs School and Auditorium on Main Street in Conway, SC. With plans to convert the school and auditorium into a museum and theater, the library was sited to frame an entry drive and help organize the site into a "cultural campus" while maintaining several large live oak trees original to the school. The two story façade of the library balances the scale and style of the auditorium façade and provides this small library with a strong civic presence visible from Main Street.

### [Columbia County Main Library, Evans, GA – USA 2005](#)

Area: 50,000 SF, Completion: 2005, Cost: \$8 Million, Associate Architect: Hinman Architectural Group

Client Website: [www.columbiacountyga.gov](http://www.columbiacountyga.gov)

As the centerpiece of a public park (also designed by CGD), the library contains a 300 seat performing hall, conference center, and café. By combining several uses in one facility, CGD helped the County maximize their resources through shared spaces. Four computer classrooms double as general classrooms, conference space, and dressing rooms for theatre productions. The library is organized over two floors with a 2 story reading room facing the park and amphitheater. The Children's Area features a wood and glass-enclosed "tree house" (program room) and a floor pattern that emulates fallen leaves.

- Covered drop-off
- Designated bus parking
- 300 seat theater with stage house & scene shop
- Designed for future expansion
- 2 story reading room overlooking park
- CGD designed FF&E

### [Doctors Bruce and Lee Library, Florence, Florence County, SC – USA 2004](#)

designed 1925 by Wilkins & Hopkins, Florence

Building Area: 83,000 gross square feet on a 5 Acre site, Cost: \$ 17.000.000

When a new foundation dedicated to advancing the greater good of the community wanted to make a monumental statement, it chose Craig Gaulden Davis to create the city's first civic structure in more than thirty years: a public library, classically designed, that would serve as a catalyst for future growth and progress. To quantify the importance they placed upon this vision, the foundation insisted that the library be made 8,000 square feet larger than the State Library's formula's recommendations, which are based on population size. The Drs. Bruce and Lee Foundation Library in Florence, South Carolina, has lived up to – and exceeded – its mandate. This strong, timeless edifice has engaged the existing community, spurred revitalization of the downtown business district, and boosted commercial investment, economic development, professional recruitment and educational achievement throughout the Pee Dee region. Massive but exceptionally well-sited and proportioned, the library is clad in limestone, its grand walkway leading to a portico with elegant hand-carved Corinthian and Ionic capitals. Lush grounds include a landscaped public plaza and a great lawn, ideal for hosting concerts and other civic events. Organized around a central two-story atrium, the facility features a bright, colorful children's library that overlooks the great lawn, a bank of Internet-equipped public computers that are in near-constant demand; a 48-computer classroom/training suite; a large South Carolina History Room with separate climate control systems and a fireproof vault; and a variety of meeting rooms for individual study or research, team projects and training sessions. To accommodate after-hours events, the Founder's Room is equipped with a separate entrance that allows admittance from the building's exterior while also providing easy access to service facilities. With a functional fireplace, conference table, comfortable seating areas and traditional furnishings, the Founders Room is the perfect setting for special events such as meetings, catered affairs and book signings. To allow convenient access while preserving the structure's dramatic street appeal, public parking is located on either side of the facility rather than in front. An elevated plinth suits the building's classical design while also concealing a secret: a self-draining mechanical room that distributes air quietly and evenly without creating typical aesthetic issues associated with air-handling equipment. Craig Gaulden Davis is passionate about creating libraries that showcase community ideals. Like the Pee Dee region it serves, the Drs. Bruce and Lee Library has its own character and context, making it a treasured resource for all generations. Program: Central Atrium/Circulation Area, Children's Area, Internet Area, Periodicals & New Book Collection, Adult Fiction Collection, Adult Non Fiction Collection, Reference Collection, Reference Offices, South Carolina History Collection, Private Study Rooms, Public Training Classroom, Administrative Offices & Work Areas, Public Meeting Room, and Founder's Room Conference Suite.

### [Hughes Main Library, Greenville County Library, Greenville, SC – USA 2002](#)

Area: 120,000 SF, Completion: Fall 2002, Cost: \$17.8 Million, Associate Architect: MGA Partners, Client Website:

<http://www.greenvillelibrary.org>

#### **Awards:**

First Place Hospitality/Public Space Category 2006, StarNet

Merit Award 2004, AIA South Carolina

Honor Award 2004, Brick Association of the Carolinas

Honor Award 2003, AIA South Carolina

Honor Award 2003, AIA Greenville

When architect David Moore needed inspiration for the design of the Hughes Library, he needed only to look to the past. Recalling the rich textile industry on which Greenville was founded, Moore, partner of Craig Gaulden & Davis, Inc (CGD) and project architect designed a building that marries traditional architecture with modern design. To further evoke the past, Moore brought in large oak trees around the exterior of the building. And the building was completed in 20 months, just in time to move the 440,000 items from the old Main Library to the new location. Utilizing a fast track, design build approach to accommodate Greenville County's 20-month turnkey schedule, CGD in association with MGA partners out of Philadelphia, PA created a design that accommodates the needs of the library system and the patrons. Craig, Gaulden & Davis are no strangers to library design, having designed nearly 1.3 million square feet of library space throughout the Southeast including new main libraries for Anderson, Lexington, Charleston and Florence counties in South Carolina. However, The Hughes Library is the first in the state to utilize a design/build approach. This method teams the architect and contractor together to provide the owner a single source of responsibility for the design and construction of the project. Greenville County Library System executive director, Beverly James notes, "Because of our time constraints and the complexity of the project, it was essential to have experts in library design as well as in construction leading our efforts." The library's exterior. Moore saw the new library as the main vehicle to extend the existing Heritage Green campus. Greenville's downtown cultural arts campus, Heritage Green is also home to The Greenville Art Museum, a 600-seat community theater and the future site of a Children's Museum. The new library rests on an adjacent block—formerly the site of a Coca-Cola bottling plant—that is surrounded by traditional red brick structures. "By utilizing colors from all the buildings on the campus, the library becomes a transitional element that ties the entire campus together," says Moore. Founded in 1921, the Greenville County Library has been a part of the Greenville Community for 81 years. Named the Hughes Library, through a generous gift from Phil and Bob Hughes in honor of their parents, R.F. and Mary Hughes, the new facility has been described as a "piece of fine art." Creating "this piece of fine art" was surely a collaborative effort. Moore called on the help of Brian Melson of Buford Goff, Inc. and Carrie Welker of the Thompson Company in Atlanta when he began designing the lighting for the library. Moore's goal was to incorporate as much natural daylight as possible. He also wanted the space to be well illuminated at night to show the activity that occurs in the library—people talking, people reading books, people studying at the tables. Further, Moore used linear, indirect fixtures in the library stacks to provide even lighting over the shelves. He also used lighting as a sculptural element in the building. The children's wing is the focal point of the library and this area created a unique lighting design challenge. Since the new addition was created to encourage children to read and to inspire their imaginations while encouraging family visits, Moore and Melson used an innovative lighting design. The solution was both playful and functional. They selected a low-voltage, cable lighting system manufactured by Translite-Sonoma. Brian Melson and David Jordan of The Schneider Company designed the system utilizing crisp halogen accent lights. Animal-like spotlights, called "Byrdys" appear to walk across the horizontally suspended cables. An assortment of five different colored; hand-blown glass downlights were also suspended from the cable system to further inspire young imaginations. Undulating colored nylon ribbons were also suspended from the ceiling. Hughes Library has been described as "a great vessel of learning and leisure opportunities awaiting the citizens of Greenville County." Architect David Moore looked to the past and saw the future. (<http://www.theschneidercompany.com>)

CGD's 3rd contribution to Heritage Green, Greenville's downtown cultural campus, the 120,000 SF Hughes Main Library serves to expand Heritage Green and promote further downtown development. Utilizing a design-build delivery system, Greenville County required that the library be programmed, designed, constructed, and opened to the public in 20 months or less. As the lead architect of the selected design-build team, CGD was responsible for programming, architectural design, interior design and coordination of all architectural and engineering disciplines, including specialty lighting, library technology and building security design. In order to meet this aggressive schedule, the Team utilized a "fast track" approach that required the early release of construction packages during the design process to allow construction to commence before the entire library was designed and documented. (Graig)

### Anderson County Main Library, Anderson, SC – USA 2000

Client: Anderson County Library System, Location: Anderson, South Carolina, Cost (2000): \$10,100,000, Area: 96,000 square feet on a 5-acre site, Program: Public meeting rooms, cafe, store, local history help desk and collection .

[In the early 1900s, Andrew Carnegie donated \$50,000 to build Anderson Public Library at the corner of Tenth and Jackson streets. The city's only Neo-classical structure (completed in 1905) includes extraordinary craftsmanship such as oak fireplaces, a stained glass rotunda, classic columns, marble stairway, and special lighting.]

The Anderson County Main Library is more than a book depository; it is the center of discovery, discourse, research, and gatherings for the community. Craig Gaulden Davis' design combined traditional library functions with those of a convention center, bookstore, cafe, copy shop, print center, video store, computer school and living room. During its first year, library usage more than doubled, attracting over 400 outside organizations. As expected, the boom in activity has brought new life to surrounding commercial neighborhoods. Located at the highest point in the city, the library is a beacon to its role as the intellectual and community center of the county. A sloping site features a public green with ancient trees and extensive landscaping. A contemporary arrangement of Jeffersonian columns, porticos and pediments, crowned by a copper dome, declares the building's civic role, while the interior reflects the information age it serves. Floor plans bear out the library's role as community center. Circulation, Audio/Visual, and Children's help desks are placed near an internal "Main Street". Meeting rooms, cafe, store, new materials, current periodicals, adult fiction, audio/visual, and the children's collection are on the Main Level; Reference, Periodical, and Local History are on the Upper Level. A single entry, and clear visual control of the public space from service desks, help address security concerns. Efficient workflow design, durable materials, and creative use of daylighting minimize operating costs. The technology infrastructure and options for building expansion offer flexibility over the long haul.

<http://cgdarch.com/portfolio/anderson-county-main-library/>

### Lexington County Main Library, Lexington, SC – USA 1998

Area: 47,700 SF, Completion: 1998, Cost: \$4.25 Million

Located just outside of Columbia, S.C., the 5 acres donated for the new library was a former stone quarry situated South of Lexington along US Highway #1. The two-story structure is nestled into the steepest part of the site to allow parking at the flatter areas and to take advantage of the small stream and wooded area that borders the site's North edge. The design also takes advantage of the Northern orientation with large windows to capture daylight and views on both the lower and upper levels.

- Help desks are strategically located for visual control
- Meeting room allows for after hour use
- CGD created "hand print" tiles on walls in the lobby of the library as a fund raiser for the Friends and as a way to build public support and excitement for the library
- The building is designed to receive a 2-story addition
- CGD designed FF&E

<http://cgdarch.com/portfolio/lexington-county-main-library/>

### Charleston County Branch Libraries, Charleston County, SC – USA 1997

Area: 14,000 SF per Branch, Completion: 1997, Cost: \$1.1 Million per Branch, Associated Architect: McKellar-Bell Architects, Mount Pleasant, SC

Designed as a prototype for five locations throughout Charleston County, these branch libraries feature low country styling and bright open interior spaces to provide improved library service to all parts of the region. The exterior design is constructed of brick veneer, stucco, storefront glazing and a light colored, metal roof with deep overhangs. The prototypical design considered all sites to consolidate access, parking and service issues simultaneously with the development of the interior functionality.

- Large covered entrance portico
- Centralized circulation desk
- Large voluminous interior spaces filled with natural and artificial lighting

### Utah Valley University Library, Orem, UT – USA 2008

196,000 sqf.

Collaboration with: Alspector Architects

The Digital Learning Center (DLC) features cutting-edge technology and plenty of room for growth. Governor Huntsman said Utah Valley University's library, as the first building completed under Utah's High Performance Building program, was the "greenest" state-funded building in Utah. The library also received two merit awards for green construction by Intermountain Construction in 2008.

Included in the building are group study rooms, a commons area with more than 90 computers with access to the latest in computer software packages and expanded collections. Other facts about the DLC include:

190,000 square feet, Over 200,000 books, Access to over 10,000 journals, More than 100 public computers, Mac and PC computer labs, Double the size of current collections, 31 group study rooms, Extended hours area, Café, Media viewing rooms, Writing Center

#### **Northeast Library, Minneapolis, MN – USA 2009**

16,500 sqf., Client: Minneapolis Public Library

Northeast Library's renovation and addition transforms this busy north side library into a daylit, accessible gathering place for the entire community. Collections and technology are integrated with comfortable seating areas suitable for various modes of study and reading to serve this diverse community. Children, teens, new Americans, seniors and families are provided with areas designed to respond to their unique needs. Improved interior planning provides appropriate adjacencies to better support staff in their delivery of library services. The library better serves as a community anchor and cultural resource with this new design.

Functioning as a welcoming lantern on this busy Central Avenue corner, the library features a new entry commons with flexible gallery space for this arts rich community. Site improvements include low maintenance attractive landscaping, a rain garden, clear signage and new lighting.

The project puts the community first by creating accessible, intuitive environments, increasing collections and services, providing self-service for patrons and providing a welcoming accommodation for a diverse community.

Sustainable features include new high efficiency windows, mechanical systems and lighting, daylight harvesting, low maintenance landscaping, storage for bikes, use of low VOC finishes, and use of regionally manufactured materials.

#### **Rancho Mirage Public Library, Rancho Mirage, CA – USA 2006**

\$ 8,250,000, Client City of Rancho Mirage Library Board of Rancho Mirage

The City of Rancho Mirage identified a new, enlarged library as a major goal for their growing city in the burgeoning Coachella Valley of Southern California. Cunningham Group worked in collaboration with library design architect, MS&R on the new 36,000-square-foot library. The library houses approximately 125,000 books and recordings and features a programmable 350-seat auditorium, outdoor program areas, computer work stations and a full service audio visual services area. In response to the desert climate, the building design and the landscaping is environmentally sensitive and includes special provisions for energy conservation, daylight harvesting and control and drought tolerant landscaping.

#### **MCTC (Minneapolis Community Technical College) Wheelock Whitney Library – USA 2003**

Client: Minneapolis Community and Technical College (MCTC), Project Size 63,000 Square Feet of New Construction

5,000 Square Feet of Remodeled Space

### **Awards:**

**American Institute of Architects - Minneapolis, Merit Award, 2003**

This new 64,000-square-foot, three-story library and instructional technology facility was designed to solve functional problems, create new instructional space for MCTC's Library Studies program and a growing Customized Training program utilized by local businesses, and create a more welcoming "front door" for the campus.

The project establishes an enhanced and open identity for the college, unifies two former facilities, and creates a clear entrance to the campus. In one easily accessible location, the new library and technology center bring together the tools for learning in the 21st century and greatly strengthens MCTC's ability to provide state-of-the-art instructional services to students.

## **Cutler Anderson Architects, Bainbridge Islands, WA – USA**

<http://www.cutleranderson.com>

### **Libraries:**

[Capitol Hill Library, Capitol Hill, Seattle, WA – USA 2004](#)

11,200 sqf., \$ 5,200,000

This 11,200 sqf. Library is located in the most densely populated and actively urban neighborhood in Seattle, Washington. The architect's intention was to create a quiet refuge in the intense neighborhood, while designing a building that could hold its own in the visually active context of Capitol Hill. To achieve this end, the community and the architects also wanted the building to respond to the site's natural and manmade context. In response, the architects looked the winter solstice to determine the shape of the central reading room. A triangular pitched roof whose rainwater runoff is expressed in a central open downspout reinforces this shape. To foster life, the exterior and interior of the brick portions of the building were wrapped with a veil of stainless steel mesh, upon which 16 varieties of climbing plants have been trained. When the planting matures, lighting that has been placed between the pant-supporting wire and the brick will be turned on and the building will glow green with life. (Cutler)

<http://johnstonarchitects.com/projects/public/capitol-hill-library/>

[Maple Valley Library, Maple Valley, WA – USA 2001](#)

see: <http://www.johnstonarchitects.com>

### **Awards:**

Award of Excellence Building with Trees Awards 2003

AIA National Honor Award 2001

AIA Honor Award, Seattler Chapter 2001

Honor Award The Wood Design Awards 2001

### **Literature:**

Holtzman, Anna, Book leaves in a Library in Maple Valley, Washington. Nature in heard above readers's whispers, in: Architecture, Vol. 92,2003,3,pp. 90-93

In 2002 the Maple Valley Library was one of only 18 projects in the US to win an AIA Honor Award. It is credited with preserving 90 percent of the trees on the site by nestling the parking in between the existing forest and some clever planning. The building is pulled back away from the adjacent road and hidden within the forest. Large open corners enhance views through a grid of windows and blur the relationship of inside and outside spaces. The building also implements a sculptural pool to collect rainwater in the central courtyard.

<http://www.mimoo.eu/projects/United%20States/Maple%20Valley/Maple%20Valley%20Library>

Built in the midst of a rapidly developing suburban area, this 12,000 sqf library is designed to serve the long term needs of the community while attempting to preserve the small 1-3/4 acre forest in which it is placed. The book collection, lounges, children's areas, offices and study areas are designed for maximum flexibility while attempting to visually connect the occupants with the living world around them. The "U" shape shed roof was designed to minimize the visual impact of the building/forest side of the building while presenting a "crown" of wooden eaves to the busy arterial road to the south. This roof configuration also serves to gather all of the water to one central gravel pool. The edges of the pool are serrated in order to catch arganic debris that will serve as nutrients for a "moss pool". By visually displaying the amount of water displaced by the building and the life that it can foster, it is hoped that this wooden building will further connect its users to the place.

## **CWZ Charles Walton Associates, Glendale, CA – USA**

<http://www.charleswaltonassoc.com>

CWA AIA, Inc. is a leader of innovation in library architecture. Since their inception in 1949, CWA architects have designed over 30 libraries in southern California and surrounding areas. They are pioneers in design, transforming a library into a center for educating and enriching the community. CWA was started when Charles Walton was given the project of remodeling the Brand Library and Art Gallery for the City of Glendale in 1949. Through years of prominent civic projects, CWA architects have become experts in architecture, urban planning, and interior design. CWA architects integrate theme or "experience" into library architecture. Their first themed library to be recognized is the Cerritos Millennium Library for the City of Cerritos. The exterior of the building is clad in titanium sheets that reflect the present modern time of the millennium. The interior is divided into multiple sections. Each section boasts a fantastic theme while still fitting together. CWA's incorporation of themes creates an encouraging environment for local residents to explore. (CWZ)

**East Los Angeles Library, Los Angeles, CA – USA 2004**

The paving treatment at the east and west entrances and in the lobby of the new East Los Angeles Library were designed by the project architect, Stephen Finney of CWA AIA, Inc., Glendale, California in collaboration with Artist Jose Antonio Aguirre. During the early design phases of the project, input from East Los Angeles residents was sought at public meetings held in the local community. Residents requested that the new library reflect, at least in part, Mayan design references and theme. Mr. Finney researched Mayan architectural design and history and noted that many extant Mayan structures in southern Mexico and Central America today are astronomical observatories originally designed to mark and record the annual solstices and the movement and alignment of celestial bodies. With this in mind, the designers incorporated in the paving treatment at the entrances and in the lobby of the East Los Angeles Library references to the sun and the moon, both prevalent themes in Mayan art.

The main entrance of the library is identified by two half-cylinders that form the backdrop for the interior and exterior pavement designs. The cylinder as you enter the library from the west (from the parking lot) represents the sun, and the cylinder as you enter from the east (the lakeside) represents the moon. The spiral patterns on the interior lobby floor move out of the lobby through the east and west entrances and onto the exterior pavement. The ribbons are a lyrical treatment that alludes to the movement of the bodies through the sky. The exterior pavement designs invite people to follow them into the library where they end in the center of each cylinder as graphic representations of the sun and the moon on the lobby floor. The interior cylinder with the sun graphic at its center has an opening near the top to allow sunlight to dance across the vertical and horizontal surfaces of the lobby. Constellations are placed in the pavement outside of the west entrance and represent distant suns that rise as our own sun sets in the west. Rays of the sun radiate from the center of the taller cylinder and cross the east patio as a blue ribbon traces the rising moon.

**Libraries:**

**Walnut Hill Branch Public Library, Dallas, TX – USA on design**

Size 19,700 sqf.

The City of Dallas is pursuing a goal of Silver LEED® Certification for the new library. The sustainable design will incorporate significant energyefficient design components, as well as WI-FI technology for the staff and community. Additionally, because the location is adjacent to an airport, the design team is defining solutions for the acoustical challenges the facility must address. The city would like a notable design. Consequently, LEO A DALY is working with local artist Linnea Glatt to incorporate public art into the design of the building. It will be designed to showcase the art, as well as present the architecture as a work of art itself. This library is located in a diverse area of Dallas. In order to reach out to the community, the client wants the exterior architecture to be recognizable as a library. The facility will be a place for learning, gathering, research, and the arts. The library will be designed as a functional building that is user-friendly and provides a welcoming atmosphere for this diverse group of people. The library will

contain a black box theatre that will double as a multipurpose room. Dallas' Department of Cultural Affairs will work with the library to schedule theatrical events three months out of the year. The library staff will utilize the theatre as a flexible space, auditorium, or multipurpose room the remaining nine months. (Daly)  
<http://www.leoadaly.com/images/pdfs/LIB-015-10005-MK1-1.pdf>

### [Georgia Gwinnett College Library, Lawrenceville GA – USA 2010](#)

(ATLANTA – Feb. 23, 2011) The U.S. Green Building Council awarded the Leadership in Energy and Environmental Design (LEED)® Gold certification to the recently completed Georgia Gwinnett College (GGC) Library and Learning Center in Lawrenceville, Ga. Designed by international architecture, planning, engineering, interior design and program management firm LEO A DALY, GGC's facility is the first academic library in Georgia to achieve this status and one of only seven Gold-certified academic libraries in the U.S.

"Georgia Gwinnett College is visionary in its approach to education," said Jerry Voith, vice president and managing principal of LEO A DALY Atlanta. "Both the college and our project team wanted to build a library that not only had world-class facilities but also was committed to its sustainable responsibilities. Achieving the LEED® Gold certification, which exceeded the mandated LEED® Silver goal, is proof of that commitment."

The new 90,883 square-foot, four-story library was conceived, designed and built as a "Knowledge Center" with public areas on floors two, three and four. In addition to book shelving spaces that can store up to 300,000 volumes, the facility includes an Academic Enhancement Center, a Center for Teaching Excellence, a large multi-purpose lecture room, a quiet reading room, an archives area, 37 study rooms and a café.

The building's centerpiece is a three-story atrium that houses the Information Commons, an open study area providing a variety of furnishings for individual or group study. The atrium's curtain wall provides impressive views to and from the central campus. Balconies and windows overlook the expansive atrium area from upper level floors.

"From the start, our students made it very clear that they wanted their college to uphold the highest standards of environmental responsibility and stewardship," said GGC President Daniel J. Kaufman. "Earning a LEED® Gold certification is a testament to our students' collective vision, our staff's dedication to that vision, and the insightful skills of the building's designers."

Designing and constructing the facility to LEED specifications proved a challenge as libraries traditionally use large amounts of energy for lighting and for climate control systems to preserve printed materials. Using an integrated design approach and strategy that included high-efficiency lighting fixtures, windows that saturated 75 percent of the interior spaces with natural daylight as well as efficient insulation, the team achieved a 32 percent reduction in energy use.

"LEO A DALY's team designed a building that is not only beautiful, but functional and efficient," Kaufman said. "The features that contributed to earning the LEED® Gold certification are impressive. We are very proud of the entire project team's work."

As the library is located on a previously undeveloped site, the project team took several measures to minimize the clearance of the site. Pre-construction discussions ensured that the disturbance limits were reduced. Utilizing four stories reduced the building footprint and maximized the conservation of existing natural terrain around the building. This enabled preserving twice the outdoor space to promote biodiversity and provided a high ratio of open space to development footprint.

Recycling and reusing materials during construction was another area of emphasis. More than 95 percent of the construction waste was diverted from landfills to local recycling facilities. Almost 95 percent of the reinforced steel used was recycled from scrap cars. The drywall used on the project is made of 95 percent recycled content and is a by-product of industrial waste material. All the wood ceilings in the building are fabricated from 97 percent recycled materials. Additionally, more than 30 percent of the recycled content was used within a 500-mile radius of the site.

Other sustainable elements included reducing the water use by 40 percent over the typical library through features such as high-efficiency restroom fixtures and occupant sensors; designing drought-tolerant landscaping for more efficient use of exterior water; high indoor air quality; use of natural materials and finishes and using 2.5 percent environmentally-focused products as well as products with low off-gassing.

<http://www.leoadaly.com/news.aspx?wpage=news&loc=press&seq=56A858A235FE40ACBB93ACE8830F2087>

Georgia Gwinnett College, the fastest growing campus in the Georgia Board of Regents University System, awarded Leo A Daly to program and design a new 95,370-SF, four-story library. The library is located in the heart of the campus, framing the central quadrangle. Among other functions and services traditionally provided by a college library, the project also consists of the following:

- High-tech information commons
- Small group study rooms
- Distance learning
- Video conference rooms
- Stacks for 400,000 volumes
- Faculty teaching/learning center
- Student success center

This project was designed applying sustainable design principles and has received LEED® Gold certification.

Check out our image flipbook.

"Leo A Daly, whose expertise Georgia Gwinnett College was fortunate to acquire in the design of our Library...By far the strongest points of recommendation center around the firm's creativity and fluency in terms of design as well as their sincere interest in the client's needs."

F.E. Ruffin, Jr., Director, Georgia Gwinnett College Library

### [Georgia State University, Library Transformation, Atlanta, GA – USA 2007](#)

Owner: Georgia State University

The design transformation for the library updates, unites, expands, and makes more user-friendly two buildings. The five- and eight-story buildings were built over the last 40 years on the urban campus. The end result, which allows increased reader and collection spaces (using compact shelving), reaches slightly over 300,000 SF.

Grouped around a new 150-seat "Learning Commons," users have access to a great variety of study space options. Exciting glass-enclosed bridges, connecting the buildings at five levels (across a city street), are filled with collaborative and interactive study stations and natural daylight.

"... congratulations to the Georgia State folks for a lovely new space. Comfy chairs, booths, rockers, bright and lively colors. Nice collaborative work tables, shiny new workstations. Very urban – modern – sleek – upscale."

Merryll S. Penson, Executive Director, Library Services

<http://www.leodaly.com/projects.aspx?wpage=markets&loc=libraries&seq=091-10025-MKT>

### [Roberts Wesleyan College, Golsisano Library, Rochester, NY – USA 2007](#)

\$ 10,000,000

Passero Associates was part of the design team preparing documents for this LEED certified building, serving as the civil and site engineering subconsultant to the design architect and Roberts Wesleyan College for the \$10 million Library project. The design of the new Library on an existing parking lot required relocation of the displaced vehicles to an appropriate location with pedestrian access to the campus. The new Library site was selected to become the focal point for the campus with views from multiple locations. Pre-design services included a due diligence study, review of local zoning codes and a utility conditions report.

Complement and elevate the architectural language of the campus; provide robust, invigorating, friendly, and collaborative study environments; and illustrate the educational value and benefits of a sustainably designed library.

[http://www.passero.com/PP\\_RWCGolisano.pdf](http://www.passero.com/PP_RWCGolisano.pdf)

According to Roberts Wesleyan College, its \$11 million B. Thomas Golsisano Library has received a silver LEED rating from the U.S. Green Building Council (USGBC). LEED is a third-party certification program and the nationally accepted benchmark for the design, construction and operation of high performance green buildings. The new library is one of the first colleges or universities to receive silver LEED certification in the area. LEED certification was obtained after submitting an application documenting compliance with the requirements of the rating system as well as paying registration and certification fees. "Receiving silver LEED certification is a great honor," said Richard Greer, facilities director at Roberts Wesleyan College. "It reaffirms that we achieved everything we set out to do. We have created a comfortable workspace that is both user-friendly and efficient, all while adhering to the highest environmental standards. The LEED process is rigorous, but worthwhile and we hope that the success of this project will serve as an example to the community." Funding for the library was made possible through a \$5 million contribution from Golsisano. An additional \$7 million was raised from other sources and allocated to both the B. Thomas Golsisano Library and to the original library, which is being renovated, renamed and transformed into the Robert and Mary Hastings Academic Center. The lead architectural firm, Leo A Daly with SWBR Architects, designed the two-story, 43,000 s/f library that incorporates unique design elements, and was built with the environment top-of-mind. The library features an Information Commons comprised of a 1,600 s/f café, a computer lab, group study rooms, large meeting rooms, and wireless capability throughout the facility. It also includes a graduate study room, a reading room, and an upgraded archives and special collections area. LEED promotes a holistic approach to sustainable design by recognizing performance in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection and indoor environmental quality. The library incorporates the following aspects: \* Renewable materials such as cork flooring and carpet squares made of highly recycled content and sunflower board cabinetry. \* T-5 fluorescent lighting. \* Geothermal heating and cooling systems (pumps draw water from beneath the earth's surface instead of from outside air to provide heating and air conditioning). \* 100% "green E" power - energy derived from wind or bio fuels. \* Natural light leveraged throughout the building to extend energy efficiency, including white paint and solar shades that are used to reflect the direct rays of the sun and bounce light to specific areas. The combined use of the employed energy-savings systems account for the library being 40% more energy-efficient than what the NYS Energy Code recommends, according to NYSERDA.

<http://nyrej.com/24861>

The new, 43,000-SF Golsisano Library is designed to provide increased space for reader collection and collaborative learning; complement and elevate the architectural language of the campus; provide robust, invigorating, friendly, and collaborative study environments; and illustrate the educational value and benefits of a sustainably designed library. Built as a friendly great room, this "architecture of interaction" encourages increased use, both day and night. The facility uses natural daylight, geothermal heat pumps, and natural resources very effectively. The coffee shop, fireplaces, and reading lounges make this dynamic study place even more attractive. The project received LEED-NC® Silver Certification.

### [Palm Beach Atlantic University, Warren Library, West Palm Beach, FL – USA 2007](#)

Collaborative. Comfortable. Conversational. Casual. These are words that describe the atmosphere of PBA's Warren Library. While there are places for solitary study, the overall atmosphere of the Warren Library encourages conversation and collaboration. The Warren Library is an elegant architectural expression of how we see our University. It is a wonderful space filled with Florida sunshine that draws students to the books, publications, technology and one another. Opened in 2007, the first month use of the library increased 800 percent. It is now the place for students to be at Palm Beach Atlantic University and has transformed our campus forever.

<http://www.pba.edu/the-warren-library>

Working closely with PBAU staff and leadership, the design of the Warren Library is a high-technology, user-friendly campus "living room" that appeals to all potential users. The project includes the reuse and transformation of the 26,000-SF chapel, built in 1933, into a wonderful new reading room with surrounding balconies. The new 87,000-SF library includes a 60-seat coffee shop; 70-seat information commons; two new library and computer lab instructional classrooms; 25 two- to four-seat group study rooms; four six- to eight-seat group study rooms; and a 55-seat, high-tech boardroom with serving kitchen. A red-tile roof with stucco and stone exterior creates a comfortable fit within the Spanish Mediterranean architecture of the campus.

"The new library is GLORIOUS. Tom Findley and his crew were GREAT. They listened to the library staff for what we wanted as well as to the Board of Trustees to stay within budget."

Debra B. Mattingly, Area Librarian II, Anne Arundel County Public Library (formerly with PBAU)

"The Warren Library is an elegant architectural expression of how we see our university as a place to learn. It is a wonderful space filled with Florida sunshine that draws students to the books, publications, technology, and one another. In the first month, use of the

library increased 800 percent! It is now the place for students to be at Palm Beach Atlantic University and has transformed our campus forever."

David W. Clark, PhD President, Palm Beach Atlantic University

<http://www.leodaly.com/projects.aspx?wpage=markets&loc=libraries&seq=003-01103-MK1>

### [Incline Village Library, Incline Village, NV – USA 2005](#)

#### **Awards :**

AIA Northern Nevada, Award of Citation 2007

ALA / IIDA ( International Interior Design Association), Inaugural Library Design Competition, Honor Award 2006

#### Statement of Design Approach:

The new Incline Village Library is designed to settle into the context of the existing site, respecting the vernacular of the area while incorporating a fresh contemporary attitude into the "Tahoe Style." All roof slopes, color, and building height as well as exterior wall materials are in accordance with the Tahoe Regional Planning Agency (TRPA) Code of Ordinances. The TRPA helps define the requirements for all of the projects in the Lake Tahoe basin.

With a sloped roof silhouette that commands attention from the nearby highway, the new facility incorporates ample amounts of glass to take advantage of the tremendous views in all directions. Exterior wall materials consist of a combination of split-face concrete block at all bearing walls, and cementitious lap siding at the wood framed exterior walls.

The construction cost for the 11,045 square foot facility totaled \$3,600,000.00 for a cost per square foot of \$325.93.

#### Sustainable description

The Incline Village Library incorporates many sustainable aspects.

#### Daylight Harvesting

The library's design focuses on providing excellent daylighting. A ridge skylights that spans the length of the open library space provides much, if not all, of the lighting required for the space during daylight hours. Glazing solutions for the building were well researched resulting in different high performance glazing selected for each orientation.

#### Computer Controlled Systems

Direct Digital Control of the HVAC systems reduces operating cost. The Plumbing system uses the latest in low flow technology.

#### Community Gathering Spot

From the beginning of the design process, one of the original goals of the building was to support the community and become a gathering spot for Incline Village residents. In addition to its repository of books and journals, the facility also offers a classroom, a number of public computer stations, as well as place to relax and socialize, with a café, and numerous "nooks" that form quiet reading and meeting areas.

<http://www.library.unlv.edu/arch/aia/awa2008/b08019.html>

The National American Library Association's award-winning, new Incline Village Library incorporates the "tahoe style" of the area and settles in nicely between the 80-foot tall Austrian pines on site. Indigenous materials were used, including stone and heavy timber construction. A continuous translucent skylight, along the ridge of the sloped roof, floods the room with soft diffused light and adds to the open, airy feeling. Ample glass, on all sides of the library, captures the view in all directions. The building features a large stone fireplace surrounded by over-stuffed chairs; adequate and accessible stack space to meet the growing demands of the community; a separate young people's library; and a sub-dividable community meeting room.

### [Largo Public Library, Largo, FL – USA 2005](#)

Leo A Daly planned and designed a new public library that would serve the community for the next 30 or more years. Since 1976, the library's collections, departments and programs had grown with the community, but the facility remained the same. Together with Collman & Karsky Architects and Biltmore Construction, we worked with city officials, library staff, and the public to meet the community's needs and provide an architectural statement that reflects its surroundings.

The design of library provides natural light, landscaped reader courtyards, and updated technology. It utilizes sustainable concepts, saving resources for the future. Since opening, public use has increased by 150 percent.

"My sincere appreciation for the quality of the working relationship between the staff of Leo A Daly, the local architectural firm, and the City. Your willingness to listen and be flexible to input helped to create a team whose combined efforts have resulted in a building which is derivative of community input, and integral to its park setting. This library is uniquely Largo."

Barbara Murphey, Library Director Largo Public Library

<http://www.leodaly.com/projects.aspx?wpage=markets&loc=libraries&seq=003-02001-MK1>

### [Peachtree City Library Renovation and Expansion, Peachtree City, GA – USA 2005](#)

34,636 sqf.

Originally built in 1987, the Peachtree City Library had outgrown its 20,000-SF facility. LEO A DALY, through a series of user-interactive work sessions, prepared a "Vision-Study for the Future," including a multidisciplinary facility condition update analysis, space needs analysis, proposed master plan for total renovation, and a 12,000-SF addition, three-dimensional image study sketches of optional solutions, and cost estimates. The challenge was to not only add space and update the facility, but also to create a dramatic and inspirational new sense of place for the public library. The chosen design concept added an expanded children's area in a soft, curved form at the front of the library, with a translucent conical dome, bringing in natural light through the top and simulating a sunlit clearing in a forest. The raised roof canopy that invites and welcomes library patrons not only boldly marks the library entry, but also highlights the coffee shop bistro that beckons the Peachtree City residents to stop and meet their friends for morning coffee or afternoon tea. At night, it glows like a lantern in the park. The library, which is designed to be a highly appealing, stimulating, and unforgettable place for all ages, includes projecting reading bay windows facing the heavily vegetated park, a cozy fireplace reading nook, and a brightly colored teen zone.

"I don't think they (the residents) know how beautiful it is...the children' section...is perhaps the library's crown jewel. LEO A DALY designed a plan that meets the 20-year old Peachtree City Library's present needs, while allowing room for future growth. We've come up with a really good building that will stand the test of time." Jill Prouty, Library Administrator, Peachtree City Library

### [Lamar State College Master Plan and Ron E. Lewis Library, Orange, TX – USA 2002](#)

Owner Texas State University System, Size 47,000 SF, Scope Architecture, Engineering, Structural, Engineering, MEP Engineering, Interior Design, Programming

#### **Awards:**

**Award ABC Excellence in Construction Award**

The Lamar State College-Orange campus developed over time through sporadic acquisitions of multiple downtown Orange, Texas properties.

The College challenged the LEO A DALY team with developing a new image and master plan to consolidate its disjointed collection into a fourblock pedestrian campus plan to support its academic mission. To achieve the consolidation, the design team creating a system of pedestrian-friendly walkways and landscaped open spaces to form a unified

campus. Covered arcades border the campus green and provide pedestrian connections to key buildings. During the master plan's development, it became

obvious that the multi-property campus also needed a significant building to serve as a central uniting focus as well as an anchor for future

downtown development. The three-story, 43,000- SF Ron E. Lewis Library and Administration building now serves that need. More importantly, it provides the needed new academic campus image while maintaining compatibility with the existing context.

LEO A DALY, along with its subsidiary Lockwood, Andrews, & Newam, Inc. (LAN), provided full A/E services in the implementation of the master plan, as well as Program Management, MEP engineering and structural engineering for the new library, and a new central energy plant. Satisfied with the team's solutions for meeting the university's needs, the client retained the LEO A DALY/ LAN team to complete subsequent Orange projects including Phase II of the master plan improvements. These include redevelopment of the

old library into an office and classroom building, the Green Avenue Plaza renovation and redevelopment, a student center, and an academic

building together with landscaping and parking improvements.

### [University of Las Vegas, Ernst W. Lied Library, Las Vegas, NV – USA 2001](#)

302,000 sqf.

#### **Awards:**

**2001 Youth Design Jury Award American Institute of Architects, Nebraska**

**2001 Louis I. Kahn Award for Best Post-Secondary Education Facility American School and University**

**2001 Best of the Southwest - Outstanding Architectural Project Southwest Contractor**

**1997 Award for Unbuilt Projects American Institute of Architects, Nevada**

A primary objective of the University of Nevada, Las Vegas library was to become a life-enhancing space and act as a central campus meeting venue. As lead designer and engineer, LEO A DALY planned a landmark structure to add definition and clarity to its highly visible position on the master plan and serve as the southwest cornerstone of a proposed academic loop. Using a series of interactive meetings with university leaders and community members, our team, with local firm Welles Pugsley, designed the 302,000 SF library so all four sides would be clearly seen. The design placed importance on library activity and visibility, creating an added layer of campus connectivity and energy. The building is a blend of technology and sustainability, housing 2.3 million volumes. It uses an automated storage and retrieval system that saves nearly 100,000 SF, reducing construction and operational costs. The library harmonizes with its desert environment by harvesting natural daylight to deflect heat, offsetting energy costs. Computerized simulations of daylight conditions were used to maximize natural light. The exterior skin includes low-e insulated glass with perforated aluminum sun louvers and deflectors. Zinc-alloy cladding on "floating" vertical walls and its barrel-vaulted roof deflect heat and contribute to its landmark status. The interiors provide intuitive wayfinding. The core encourages social and technological interaction. As visitors move through the collection toward exterior walls, the atmosphere becomes more private. The stacks are used as filters for sound, providing solitude.

"This is a magnificent building, beautiful, functional, and we were so pleased with our partnership with LEO A DALY."

Dr. Carol C. Harter, Former President, UNLV

### [Pahrump Community Library, Pahrump, NV – USA 2001](#)

Size 24,000 sqf.

LEO A DALY provided planning and bond issue assistance to the City of Pahrump for a new public library. The City had outgrown its 5,000- SF library, which housed the adult library, children's library, offices, bookbinding and repair, employee kitchen, restrooms, checkout desks, computer areas and other amenities. The City was in need of a permanent home for the Pahrump Community Library, and was given two acres of land just north of the city cemetery. In 1998, voters approved a \$3 million bond issue for the new library, which included funding for paved parking, sewer, water and power and landscaping. The new Pahrump Community Library is a gathering and research facility for the people of Pahrump Valley. The 20,000- SF facility makes the entire library collection available to patrons, while providing much needed community meeting and conference space. The year following the building's completion, LEO A DALY was retained to design a 4,000-SF, residential style library annex.

## Southern Methodist University (SMU), Fondren Library Addition, Dallas, TX – 1998

Owner: Southern Methodist University

As Southern Methodist University (SMU) grew, so did its library's needs. Its collections were spread between two buildings with multiple entry points, which required additional staffing, security and, therefore, funding. SMU retained Leo A Daly's team to design a two-story centralized entry connector to create a prominent single entry point to centralize circulation and provide security for both buildings. To meet SMU's campus master plan standards, and because it links the historic central campus to future campus expansion, the highly visible building required particular respect for the collegiate Georgian style.

The completed Fondren Library building addition, with its exterior courtyard space, meets the university's functional needs, defines the library entrance and unifies earlier additions. Administrators are so pleased with the building's design that the sky-lit rotunda space of the addition and adjacent courtyard are frequently used for special university ceremonies and community events.

"...with my arrival at SMU, I quickly recognized that the Daly team members were both knowledgeable and responsive to the needs of our staff. I especially liked their 'future' orientation and enthusiasm for cutting-edge technology. They shared our enthusiasm for the benefits technology brings to libraries...You embraced our vision, which sees the library as the heart of the university."

Gillian M. McCombs, Central University Librarian, Southern Methodist University

## Council Bluffs Public Library, Council Bluffs, IA – USA 1998

Size 70,951 sqf.

### **Awards:**

Design Award Programm, AIA Nebraska 2000

Youth Design Award 2000

City officials recognized that a library should enhance the life-quality of its users and the community in which it is located, and the cramped conditions of its existing library discouraged general use and made it completely inaccessible to some citizens.

Library staff and patrons joined Leo A Daly's library design specialists to create a new library vision. Powerful, three-dimensional schematics were developed and Leo A Daly representatives attended meetings and events with city officials to raise awareness, and aid in securing private funding. After funding, we assisted the city with selection of an appropriate site for the new facility.

When it initiated the vision, the city expected to have to build a larger library. Leo A Daly's specialists demonstrated how technology and experience can actually reduce a building's size and improve its quality. The community is pleased with the collaborative results that have provided an inviting space appealing to all ages and dramatically increased patronage.

"We are quite proud of our new facility. The Library is a spectacular monument to the City. It is truly a great achievement and it would not have been possible without the professional skill and dedication, which you (Leo A Daly) gave to the project."

John P. Nelson, Community Leader

"... such a masterpiece has been created. The quiet reflective spaces of beauty at the Council Bluffs Public Library inspire as well as inform."

Will Manley, American Libraries Editorialist

<http://www.leodaly.com/projects.aspx?wpage=markets&loc=libraries&seq=001-00795-MK1>

LEO A DALY designed this 68,500-SF Prairiestyle library to replace the city's Carnegiestyle circa 1905 downtown main library.

Its environmentally-friendly brick exterior and insulation and finish system (EIFS) was carefully combined with wide roof overhangs to provide an inviting atmosphere relating to adjacent residential neighborhoods and downtown structures. The interior of the two-story structure is flexible and open to accommodate changing technology, with the main focus being a dramatic central atrium that houses the central service desks. Providing three times the space of the old library, the new library uses the latest technology for book retrieval and check in. In addition to book, magazine, video, and computer station spaces, the program accommodates a large children's area, public meeting rooms and volunteer gift shop.

"We are quite proud of our new facility. The Library is a spectacular monument to the City. It is truly a great achievement and it would not have been possible without the professional skill and dedication, which you [LEO A DALY] gave to the project."

John P. Nelson, Community Leader Library Journal Dec. 1999

## Dattner Architects, New York – USA

<http://www.dattner.com>

### **Libraries:**

#### Great Neck Library Renovation and Addition, Great Neck, NY – USA 2014

61,000 sf total, 45,000 sf renovation, 16,000 sf addition, Completion 2014, Client Great Neck Library

The planned renovation of the existing 45,000 sf Great Neck Library and 13,000 sf addition consolidates circulating and reference collections on a single level, expands the children's area, creates a new young adult section, expands and conveniently locates the A/V collection, and centralizes staff functions. Community spaces at the lower level are connected by a public gallery suitable for receptions and gatherings. Natural lighting is a key design element; new skylight openings provide daylight into deep floor areas while new floor openings provide visual connection between levels. The Library was designed to LEED Silver standards.

<http://www.dattner.com/portfolio/great-neck-library-renovation-and-addition/>

#### Washington Heights Library, New York, NY – USA 2013

Area 23,000 sf, Completion 2013, Client New York Public Library, New York City Department of Design and Construction

The Washington Heights Library in upper Manhattan is a 1914 Carnegie library designed by Carrère & Hastings. In two-phases, we are designing a facility-wide renovation which preserves and highlights the historic integrity of the library while meeting functional and technical requirements with a contemporary architectural expression. The first phase will improve accessibility with a new entry

configuration and a limited-use elevator to provide access between the foyer and the main reading room floor. Phase two will bring the library into the 21st century and the advent of electronic media and e-books. The first floor has been redesigned as a commons where patrons can access online materials, through work stations or wirelessly. Desks, casual seating, and group meeting spaces will accommodate a variety of uses with new furniture, layouts and a high-tech media area.

[http://www.dattner.com/portfolio/washington-heights-library/#next\\_image](http://www.dattner.com/portfolio/washington-heights-library/#next_image)

### [Inwood Opportunity School, New York, Bronx, NY – USA 2011 - 2013](#)

Area Total: 98,000 sf, Phase I: 43,000 sf, Phase II: 33,000 sf, Phase III: 22,000 sf, Client Inwood Opportunity, LLC

This adaptive reuse and expansion transforms a former parochial school into a home for three K–8 charter schools. Each school is nominally independent, with its own staff, administration and classrooms, and shares a common curriculum. The interior layout has been modified to suit the charter school program. The building is being renovated in phases. The first phase included a gut renovation of the 1st floor for classrooms, the library and the public assembly spaces. Phase 2 includes the gut renovation of the 2nd floor and the addition of the 3rd floor; both levels will house classrooms. Phase 3 will renovate the grade level classrooms, cafeteria and gymnasium.

<http://www.dattner.com/portfolio/inwood-opportunity-school/>

### [New Settlement Community Campus, New York, Bronx, NY – USA 2012](#)

#### **References:**

**New York Times: [At a New School, a Math Lesson from the Mayor](#)**

Area 172,000sf, Completion 2012, Client Settlement Housing Fund, New York City School Construction Authority, New York City Department of Education

The New Settlement Community Campus is a unique model for school development and institutional collaboration. Through a partnership between the New York City Department of Education and the School Construction Authority, New Visions, and the Settlement Housing Fund, a new mixed-use campus has been created housing two new schools and a community center. This community campus serves over 1,000 Pre-K to 12th graders with 56 classrooms, a 350-seat auditorium, competition gymnasium, cafeteria, library/technology hub, landscaped amphitheater, and play yards. The integral community center features a 25 yard pool, dance studio, multi-function rooms, and an outdoor teaching classroom. The entire complex will be managed by New Settlement and available for use by the local community. This project was designed in association with Edelman Sultan Knox Wood / Architects.

### [PS/IS 79 Annex, New York, NY – USA 2010](#)

Area 65,000 sf addition, 134,100 sf original building, Client New York City School Construction Authority

The recent expansion and renovation to historic PS/ IS 79 adds much needed capacity within tight site constraints to allow the facility to serve 1,600 Pre-K through 8th grade students with age-appropriate learning spaces, a new gym and cafeteria, and an expanded library. The addition was sited in the schoolyard, directly adjacent to the existing building, allowing for aligned floor plates. To recapture play area for the students, the roof of the new cafeteria was designed as an outdoor play yard with a running track. The addition follows the NYC School Construction Authority's Green Schools Guide, which Dattner Architects developed.

<http://www.dattner.com/portfolio/psis-79/>

### [Battery Park City School, PS/IS 276, New York, NY – USA 2010](#)

Area 125,000 sf, Client New York City Department of Education, New York City School Construction Authority

#### **EXHIBITIONS**

**AIA NY Design for Decades, 2010**

A notable example of a flexible “high-rise” school, the 8-story PS/IS 276’s massing reflects the vertical orientation of the program to accommodate 1,000 students on a half-acre site. The lower school levels are at the base of the building and the intermediate school floors are stacked at the top of the structure. Spaces shared by both schools, including the library, cafeteria, and art rooms, are located on the floors in between. PS/IS 276 was one of the first schools to be built under the New York City School Construction Authority’s Green Schools Guide—which we developed for the NYCSCA in 2007. Special sustainable design features, including one of the city’s largest photovoltaic panel arrays and an extensive energy and weather monitoring system, were made possible through the collaboration of the NYCSCA and the Battery Park City Authority.

### [Intermediate School / High School 362, New York, Bronx, NY – USA 2008](#)

Area 188,000 sf, Client New York City School Construction Authority, New York City Board of Education

IS/HS 362 houses an intermediate school, two high schools and a special education facility, each independently-operated and co-located on a single site to serve 1,920 students. Occupying a constrained site in an urban residential area, the school is comprised of two volumes; a low commons building and a taller classroom building wrapping the commons building on two sides. Shared areas such as the auditorium, gymnasium, library and cafeteria are arranged along a skylit “interior street” on the ground floor

<http://www.dattner.com/portfolio/intermediate-school-high-school-362/>

### [Schomburg Center for Research in Black Culture, New York, NY – USA 2007](#)

Area 16,000 sf, New York Public Library, New York City Department of Design and Construction

The renovation of New York Public Library’s Schomburg Center transforms the building’s street presence with a new glass façade, complete with a video wall viewable at night from Malcolm X Boulevard, and a prominent new entry. A new street-level gallery was created by inserting a partial floor in the double-height reading room. The renovation allowed for the creation of a new Center for Scholars with a dedicated Scholar’s Forum area for readings and lectures, as well as private offices and a conference room. The reading and reference areas, electronic research area, photo print vault room, stacks were also renovated.

### **Bronx Library Center, New York Public Library, New York, NY – USA 2001 – 2006**

78,000 sqf., Completion 2006, Client The New York Public Library

#### **Awards:**

**Building Design and Construction Building Team Silver Award**

**New York City Green Building Award Honorable Mention**

**Environmental Design + Construction Excellence in Design Award**

**International Interior Design Association / Illuminating Engineering Society Award of Merit**

**GE Edison Lighting Award of Excellence**

**GE Edison Lighting Award for Sustainable Design**

The new Bronx Library Center replaces the former Fordham Branch Library. The facility provides expanded circulation and reference collections, cutting-edge information technology, a full range of education, business and technology training for all ages, literacy classes, and English language proficiency programs. The BLC also houses the Latino and Puerto Rican Cultural Center, with extensive bilingual collections, educational and cultural programs, and multi-media exhibits. Key design concepts include maximizing natural light, minimizing internal circulation, providing clear lines of sight, establishing an appropriate planning module for efficient stack layout, and providing an adaptable open plan. Each floor is conceived as a rational, rectangular public space surrounded by service, circulation and smaller program spaces fitting into the irregularities of the site. Planning follows a basic daylight strategy: Services at the relatively enclosed western side, books and other collection items in the middle and most of the seating in the glazed day-lit areas at the perimeter. Individually designed public stairs provide different types of processional experience between floors. They make circulation through the building an important part of the visitors experience, and highlight the connections between the various parts of the library collection distributed throughout the building. Bronx Library Center DattnerArchitects The project received LEED® Silver Certification from the United States Green Building Council. It is the first public building in New York City and the first library in The New York Public Library system to receive LEED certification

Davis Brody Bond is now **Aedas** <http://www.aedas.com>

#### **Libraries:**

#### **Benning Neighborhood Library, Washington, DC - USA 2011**

Benning Library is located on a sloped site along Benning Road, N.E. The building is terraced into the terrain allowing access from both Benning Road at the upper level and from a commercial shopping area at the lower level. The two floors of the 22,000 square foot facility are connected by a public stair inside the building, creating a space which encourages pedestrian circulation through the library in order to connect one street elevation to another. Benning Library utilizes a warm color palette of earth tones and a copper panel facade to complement its residential setting. Approximately 315 copper panels chosen for the exterior reflect the sun and provide a warm glow in the late afternoon. The completed facility includes community spaces on the lower level including a 100-person multi-purpose room, two 12-person conference rooms and a public gathering and exhibition space. The upper level of the library houses the library's collection, which on opening day included 40,000 books, DVDs, CDs and other library materials. The library has space to allow the collection to expand to up to 80,000 items. Additionally, the upper level features separate reading areas for adults, teens and children, as well as the children's program area. Five small study rooms offer opportunities for quiet study or tutoring sessions. The library has 32 computers for public use. Designed to meet LEED Silver Certification, Benning Library incorporates a vegetative green roof, a displacement air system, solar control and daylight management and extensive use of recyclable and renewable materials. The quality and nature of light was an important factor in the design approach. The library is situated in a bowl-like condition with ample southern exposure.

<http://www.davisbrody.com/portfolio/#02cultural>

### **District of Columbia Public Library, Benning Neighborhood Dorothy I. Height Library, Washington, DC – USA 2010**

The library received LEED Gold Certification from the U.S. Green Building Council for environmentally sustainable design. It has won a number of other design awards, including:

- Building of America Award 2010
- Associated General Contractors Washington Contractor Award 2010
- National Association of Contractors and Builders Proclamation Award 2010
- Developers and Builders Alliance Community Advancement Award, Best Developments of the Year, USA & Canada 2010
- North American Copper in Architecture Award, New Construction 2010
- Icestone Installation Award, Commercial Interiors 2010
- Washington Building Congress Craftsmanship Award for Special Construction – Thermal and Moisture Protection Category 2011

The District of Columbia Public Library opened the new 22,000 square-foot Benning Neighborhood Library on Monday. It is the first of five new libraries to open this year and one of two designed by Davis Brody Bond Aedas. In addition to celebrating the library's opening, the event showcased the district's rapidly improving library system. The new \$12 million library, targeted for LEED Silver Certification, houses community space on the first level with library functions above connected by a staircase. Nestled into the site to maintain the scale of the mostly residential buildings around it, the building incorporates many sustainable features including a vegetated roof, solar and daylight controls; and extensive use of recycled and renewable materials. At the building's opening ceremony, Chief Librarian Ginnie Cooper said, "New buildings only scratch the surface of the library's transformation. More people are making their way to the D.C. library for the improved book collections, the great author talks and workshops, and the robust Internet connection. We are excited that people are becoming aware of the district's top-notch library." Additional

Libraries will also open this year in nearby Anacostia (April 26), Deanwood (summer), Georgetown (October) and Tenley (December). The district is also moving forward with two new libraries designed by London-based architect David Adjaye. Sharon McHugh, U.S. Correspondent

### [Watha Daniel/Shaw Neighborhood Library, Washington, DC - USA 2010](#)

22,800 sqf, \$ 12,000,000

In 2007, Davis Brody Bond Aedas was commissioned to design two new branch libraries, as part of the DC Public Library's initiative to develop a first-class, state-of-the-art neighborhood library system. Each library is programmed for 20,000 square feet of space, which, in addition to the traditional needs of a neighborhood library also includes public meeting space for the local community which can be accessible independently from the library proper. The DCPL has a mandate to build sustainable facilities, and our charge has been that these libraries should achieve Silver LEED Certification. The Watha T. Daniel / Shaw Neighborhood Library is located along Rhode Island Avenue at 7th Street, on a triangular urban site near Howard University. A wide variety of functions surround the site, including multi-family residential, commercial, educational and religious. The building marks this important intersection as a civic place. The building will fill the site, and be composed of three floors: one below grade and two above. The entry plaza at the east end of the site welcomes the public to the library. The main lobby provides access to the lower level which houses community spaces including a multi-purpose room for up to 100 people, as well as access to the library proper. At this main ground level are located the main service point and staff area for the library, as well as new materials and catalog stations for the general collections, and the children's library. The upper level of the library will house the bulk of the adult collection, including reference and periodical sections, and adult/young adult reading rooms. There will be online catalogs dispersed throughout the floor, with access to the DCPL electronic resources available at all locations. Conference rooms and individual study rooms allow for collaborative work in a non-disruptive setting. The library incorporates a number of sustainable features, including passive solar design and daylight management, displacement air system and extensive use of recycled or renewable materials. (Davis)

### [Health Sciences Learning Center University of Wisconsin, Madison, WI – USA 2004](#)

The University of Wisconsin Health Sciences Learning Center is the second phase of a major consolidation of Health Sciences learning and research activities at the western end of the Madison campus. The 350,000 square foot building serves the Schools of Medicine, Nursing and Pharmacy, and is also a resource to researchers, clinicians and patients in the adjacent Hospital and Laboratory facilities. The major components of the Health Sciences Learning Center include: Health Sciences Library • Alumni Auditorium (350 seats), • Lecture Halls and Distance Learning Classrooms, • Classroom, Seminar and Group Study Facilities, • Computer Laboratories and Support, • Specialized Suites for Clinical Skills Education and Testing, • Administrative Offices for the School of Medicine, • A Lounge, Cafe and Bookstore, • Underground Parking for 220 Cars, • Bike Parking for 250 A major goal of the building is to foster interdisciplinary exchange, team work, and a sense of community for students in the health sciences. Student study space is organized as a series of clustered communities, including private study rooms, lockers, mailboxes and lounge areas. The library and group study areas are organized around a central atrium, which introduces natural light and reinforces a sense of community within the building. (Davis)

### [The Learning Resource Center Chesapeake College, Wye Mills, MD – USA 2002](#)

The Learning Resource Center at Chesapeake College, a rural campus on the eastern shore of Maryland, is a new facility that enabled the consolidation and expansion of traditional and new learning resources at the College. These resources include: print collections, electronic information, and learning assistance facilities. To create an integrated mix of resources and staff services that accurately reflects the needs of faculty and students at Chesapeake, compartmentalized functions such as “library” and “computer lab” were avoided. Instead, the program for the new Learning Resource Center is broken down into major components which include: Library Collections, Library Services, Electronic Resources, Labs and Classrooms, Faculty Development, Learning Assistance (Tutoring and Writing Center), Special Collections, and Building Support. The siting and development of the building afforded the College an opportunity to further develop a central campus quadrangle. The Learning Center’s massing also projects into the space of the quad to form both a physical and implied center of learning. (Davis)

### [Wallach Division of Art, Architecture, Prints & Photographs Restoration, The New York Public Library, New York, NY – USA 2001](#)

The recently renovated Wallach Division is composed of three separate groups: the Art and Architecture collection, the Prints collection and the Photography collection. It houses original works of art as well as reference materials covering painting, sculpture, drawing, printmaking, photography, and the history of architecture and design from prehistoric times to the present. The renovation dramatically increased the public and staff space of the division. Collection space was centralized and expanded and a more efficient flow was created between the reference staff, the readers, and materials through the redesign of reference areas. The reconfiguration of staff work spaces into discrete areas opened up the space within the division’s reading rooms for Prints and Photography and for Art and Architecture. The reading rooms became wired for laptop computers and internet access. The Art and Architecture Collection is a conventional library facility, composed mostly of print materials that are available for view by the general public. The Prints and Photography Collections serve more curatorial functions and contain objects that require specific and controlled environmental conditions. The Prints collection contains a number of different storage facilities to provide for the different objects: flat files, boxes and file drawers. The Photography Collection is currently undergoing a major digital transformation and will include a digital library of its collection, enabling the collection to be viewed online. The Photography and Prints Collections offer limited access to their resources and are available only to those that apply to use these facilities. Size: 14,000 Square Feet. (Davis)

### [Lila Acheson Wallace Library Renovation. The Juilliard School. New York, NY – USA 1999](#)

Located on the fifth floor of the school’s well-known 1960 building, the Music Library at the Juilliard School had not been renovated since its original construction. In addition to an overall refurbishment of the Library, the client desired to introduce data and power to all reader seats, provide small group listening and study areas, to create an environmentally controlled rare book room, to expand staff work space as well as to increase capacity for print collections. Due to the minimal amount of additional floor area available for program expansion, the renovation incorporated an underutilized organ rehearsal studio and a music practice room, which were converted to house rare books and manuscripts. Additional space for staff and collections was found by clarifying circulation pathways, utilizing compact shelving, replanning underutilized study space, and strategic expansion into the main open space of the library. The major design feature is a fourteen-foot freestanding wall, clad in cherry, which contains exhibit cases. This wall provides a sense of definition, a visual focus at entry, and a compositional balance to the open stair and railings that were retained from the original scheme. Upstairs, new stacks and a listening library reinforce the spatial organization around the open two story reading room. All library tables and carrels were custom-designed to accommodate accessible pathways for power and data, and to complement the character of the new space. (Davis)

## [The Langston Hughes Community Library and Cultural Center, The Queens Borough Public Library, Queens, NY – USA 1999](#)

### **Awards:**

Building Award for Excellence, Queens County Builders & Contractors Association, Inc. 1999

### **Publications:**

Oculus, December 1, 2000, DDC Updates Emphasize Quality Design, Fair Pay

The Langston Hughes Community Library & Cultural Center was founded in 1969 to meet the local community's need for an educational and cultural center that explored the Black Experience. Its centerpiece is the Black Heritage Reference Center, the largest circulating collection of books, magazines and artifacts on Langston Hughes in New York. In the late nineties, the collection outgrew its former storefront building, and Davis Brody Bond designed a facility to accommodate its ever-expanding collection and to provide for future growth in functions and services. The two-story building's ground floor contains the library – a general circulation area, a Black Heritage Reference Room and a children's library. Located on the second floor are the administrative offices as well as community-based facilities that include an art gallery and a multi-purpose hall for concerts and lectures. The adjacent outdoor plaza is designed for cultural events and community activities. The entrance is distinguished by a 28-foot-high wall etched with selected writings and an image of Langston Hughes. This powerful image and the words are intended to draw in visitors, establishing the library as a place not only to read books, but also to explore one's heritage. (Davis)

The New York Times January 2, 1999. Beyond the Stacks of Pride and Money A-3-Way

Library Race: Charting Speed, Amenities & Attitude

The New York Public Library, completed in 1911, is a classical building with a unique plan, inspired by the library's first director, Dr. John Shaw Billings. Billings placed the monumental reading room on the top floor to maximize light and air, directly above 8 levels of book stack storage. Over the years the original space for readers diminished as other functions such as copy services, microforms and card stack storage encroached on it. Layers of dirt, water damage, and heavy usage left the reading room looking makeshift and tired. In addition to the need to preserve the reading room, the Library faced an increasing demand to provide access to electronic information. To meet this mission, Davis Brody Bond conducted a meticulous restoration which returned the room, one of the largest uncolumned rooms in the nation, to its former grandeur and function. The team of restoration architects adapted the room to maximize efficiency of library service while maintaining its historic and aesthetic integrity. Improvements to The Rose Main Reading Room include expanded capacity, new electronic resources, faster and more reliable book delivery, a multimedia viewing area, a self-service copy center, improved access for readers with disabilities and a reorganized open-shelf reference collection. Thirty of 42 original historic tables were carefully restored and adapted to allow most user stations to access data and power for library equipment and personal laptops. This project preserved one of New York City's most beloved spaces, restoring it to its original glory, while at the same time optimizing access to the collections it serves, and introducing the infrastructure to provide the latest in electronic, on-line services. (Davis)

Achitectural Record February 1, 1995 Cable-Car College

Baruch College Journalism Program Juni 1, 1994 The New Campus Library and Technology center

Architectural Record February 1, 1995 Cable-Car College

The Baruch College Newman Library and Technology Center is the first part of a master plan designed by Davis Brody Bond to introduce much needed facilities onto the College's urban campus. Baruch College has one of the largest undergraduate business schools in the country, made up of student body which commutes daily to the school. To create the new library, the architects completely renovated an 1894 industrial building designed in Italian Renaissance style. The original Pompeiian brick, terra cotta, and pink New England limestone facade was restored, while only the structural columns of the building are part of the new interior. The 330,000-square-foot building is divided into nine floors and includes, in addition to the library, a conference center, a state-of-the-art computing and technology center, a media center, and the offices of enrollment. A grand staircase in the two-story entrance lobby leads to the main floor of the library which is organized around a five-story skylit atrium created from an existing lightwell.

The atrium, as well as most of the other library interiors, is paneled in cherry wood and topped by a 70-by-90-foot skylight. The new library accommodates 525,000 volumes. Since this facility opened, library daily attendance figures have tripled and the circulation of materials have more than doubled. (Davis)

### [Biddle Law Library University of Pennsylvania, Philadelphia, PA – USA 1994](#)

In 1987, the University of Pennsylvania hired Davis Brody Bond to undertake a master plan for the expansion of its Law School. The first phase in implementation of this plan was construction of the new Biddle Law Library and Tannenbaum Hall. With the expansion, the School wished to maintain its small school atmosphere evoked by a quadrangle that contained the existing Law School facilities. This sense of cohesion was preserved by extending the courtyard with the addition of a U-shaped building that relates in scale and style to adjacent historic buildings. A major goal of the Library was to complement the existing campus buildings without diminishing their historic character. Its red brick and buff limestone echoes the materials on existing buildings while the simple details on its facade stand in contrast to those of original buildings, which are richly decorated. Round windows and double-height reading rooms, features from the original buildings, further provide a connection to the old Law School. The interior is planned to offer a variety of spaces for reading and study in a modern and flexible facility while preserving some of the grandeur of a traditional library. (Davis)

**Vanderbilt's award winning Eskind Biomedical Library**

**American Libraries April 1, 1999 Honoring Advances in Architecture: The AIA/ALA Building Awards**

The Eskind Biomedical Library at Vanderbilt University is the “crown jewel” of the Medical Center Campus. It serves multiple purposes including teaching, clinical work and research and houses services that allow students and researchers to access information and to seek assistance from trained professionals in the use of information. Designed to mitigate the collegiate-scaled main campus and the overwhelming density of a modern academic medical center, the library serves as the gateway to the campus. The top floor is occupied by the Center for Biomedical Informatics, which is responsible for integrating the Medical Center’s information systems and developing new applications for computers to medical research, education, and practice. The primary design challenge was to provide a building infrastructure to allow the smooth migration of generations of technology from the Center for Biomedical Informatics down to the Library floors where users could operate them. A transparent glass curtain wall introduces a light, delicate, and transparent facade and unifies the building’s composition. The stacks, housed in clearly organized blocks, provide an efficient and highly functional arrangement for print materials while reading and study areas are located in open areas along the glass wall, near natural light. Throughout the Library a range of spaces was developed to encourage collaborative work, from group study rooms with monitors and white boards, to small informal areas. This library acknowledges that it serves as both a repository for traditional print media and as a center for the communication of electronic information. Throughout the design, the goal was to express both the traditional and familiar role of the library and the exciting potential of new technologies. The Eskind Library is a dynamic addition to the Vanderbilt campus, both as a facility for information services, and as a symbol of the institution’s future in the medical sciences. (Davis)

### [Astor Rare Book and Manuscript Reading Room, New York Public Library, NY – USA 1993](#)

The Brooke Russell Astor Rare Books and Manuscripts Reading Room is a specially designed preservation environment that contains the New York Public Library’s important rare-book collections. Once scattered throughout the Central Research Branch, they are now housed together in the former History and Genealogy Room, which is now a secure research space conditioned for the storage of rare books and manuscripts. The Rare Books Collection is now comprised of a storage vault and a reading room. The storage vault stands directly below the reading room and access is available by stairs and a dumbwaiter. Environmental control and theft prevention were the two main concerns in the design. Sophisticated HVAC units were installed to maintain the climate as well as environmentally sensitive lighting to prevent any damage to the books and manuscripts. The archival steel bookcases, designed to fit into the existing mezzanine structure, are completely sealed and finished with a powder coating to prevent out-gassing. A tinted UV-filtering glass is used for the glass doors. Library patrons are not allowed direct access to the cases, which are locked and kept secure. New furniture for the room includes illuminated oak study tables, which have built-in outlets for laptop computers. These individual tables, rather than the usual long ones, confine research material to a smaller area and make visual supervision of these precious materials easier for librarians. Other woodwork, such as the main counter and the original Carrère and Hastings chairs, was rehabilitated. (Davis)

#### **Libraries:**

### [John C. Hart Library Children’s Room, Shrub Oak \(Yorktown\), NY – USA 2013](#)

On the boarder of Yorktown and Shrub Oak New York, there has spouted a newly renovated children’s rlibrary where little library patrons can read, hear stories, look at picture books, or use the computers and do homework. A merry “beanstalk” theme winds its way from area to area, connecting all parts of the spacious new room with a bit of whimsy.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/John\\_C.\\_Hart\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/John_C._Hart_Childrens_Library.html)

### [Upper Saddle River Children’s Library, Upper Saddle River, NJ – USA 2012](#)

The Upper Saddle River Library has high ceilings and a great amount of open space -- how then to indicate where the children’s section begins, with no door to mark? How about with a giant playful tree from which characters pop out and invite you in? The high ceilings also allow for beloved characters to ride their books like magic carpets overhead as little readers choose their books.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Upper\\_Saddle\\_River\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Upper_Saddle_River_Childrens_Library.html)

### [Cliffside Park Children’s Library, Cliffside Park, NJ – USA 2012](#)

The Cliffside Park Public Library stands on the grounds of what once was the iconic Palisades Amusement Park. The theme for the entrance to the Children's Rooms therefore rather dictated itself: beloved children's book characters ride the roller coaster and ferris wheel and visit the ticket booth -- all of which are made of books, because books are, after all, a ticket to adventure! The entrance drew so much positive attention that JDD was invited back to bring the magic inside the children's room itself. A 46' mural down the library's long wall expanded on the Palisades Amusement Park theme, with a carousel of horses reading books, a tilt-a-whirl with book seats, and of course a nod to the Palisade Park's famous salt water wave pool where aquatically-inclined characters could be found splashing away. The adjacent wall has four mega-postcards, each extolling that a great time can be had in the Land of a Good Book. Tying the room together across the long stretch of ceiling are brightly colored disks that create a random polka-dot pattern.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Cliffside\\_Park\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Cliffside_Park_Childrens_Library.html)

### [Franklin Lakes Children's Library, Franklin Lakes, NJ – USA 2011](#)

The lovely library in Franklin Lakes New Jersey asked to have a custom-designed entrance for their own children's section. While many libraries are eager to have a Children's Room entrance that features a playful theme involving invitingly-represented books and children's book characters, and while therefore some elements may reappear, JDD never replicates a design that was commissioned by other clients. All of our work is original, and we are as excited to go back to find a new twist on an old theme each time as though it were the first!

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Franklin\\_Lakes\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Franklin_Lakes_Childrens_Library.html)

### [Levi Yitzchak Children's Library, Cedarhurst, Long Island, NY- USA 2010](#)

The Five Towns of Long Island needed a library that featured Jewish children's books which tend to be scarce in most public libraries. A family and community needed and wanted to honor the memory of a very special little boy who left their world way too soon. In designing the Levi Yitzchak Children's Library in Cedarhurst, Long Island, it's been the goal of Janice Davis Design to create a library that little Levi would have loved. It is a privilege and a true honor for to be a part of this wonderful project and touching tribute.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Levi\\_Yitzchak\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Levi_Yitzchak_Childrens_Library.html)

### [Fremont Indiana Children's Library, Fremont, IN – USA 2010](#)

Lovely Fremont Indiana is proud of the beauty of its wooded location, and wanted to carry the idea of the forest inside the Children's Area of the library. It couldn't be a literal forest, though -- that was something they could see just by walking out the door. It was a playful, magical forest where the leaves were polka dots and their favorite children's book characters were playing together amidst the trees.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Fremont\\_Indiana\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Fremont_Indiana_Childrens_Library.html)

### [Bay Shore-Brighwaters Children's Library, Bay Shore-Brighwaters, NY – USA 2008](#)

Everyone is clamoring and scampering to get into the children's section of the Bay Shore-Brightwaters Library on Long Island -- even Babar and Winnie the Pooh and The Cat In The Hat! Familiar faces from children's literature old and new pop out of a higgledy-piggledy stack of oversized books that create an entrance arch to entice children to come in and experience the magic of books. Inside, custom-designed surrounds on all the structural columns carry on the theme.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Bay\\_Shore-Brighwaters\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Bay_Shore-Brighwaters_Childrens_Library.html)

### [White Plains Children's Library, "The Trove", White Plains, NY – USA 2005](#)

The pages of the books that are "tumbling open" at the entrance to The Trove (the White Plains Children's Library) tell the story of a little boy and girl who pull a book off a dusty old library shelf to have the shelf magically burst open and reveal the enchanted library beyond. No dusty, stodgy bookshelves here! A fantasy tree trail leads to caves and castles and pirate ships where reading is fun and stories spring to life.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/White\\_Plains\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/White_Plains_Childrens_Library.html)

read more:

<http://thetrove.org/>

### [Hendrick Hudson Free Library, Children's Room, Montrose, NY – USA 2002](#)

The Hendrick Hudson Library in Montrose, New York (bordering the Hudson River), wanted to pay homage to its namesake in the children's section. Like the intrepid explorer, children's characters steer Book-Boats over the seas, and frolic on the Hudson River shores. Each area of the room features a collage of materials forming sculpted river banks and plexiglass waves, and the oversized books remind us that reading is the key to the adventure!

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/Hendrick\\_Hudson\\_Free\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/Hendrick_Hudson_Free_Library.html)

### [New Rochelle Library Children's Room Entrance, New Rochelle, NY – USA 1997](#)

The town of New Rochelle has a large and lovely library, and now there is not longer confusion about "which way to the children's section?" Brightly colored giant books support an arch that clearly announces that this is kids' territory. The figures reading at the top are a nod to the children's room most honored treasure: an original Norman Rockwell painting of children reading.

[http://www.janicedavisdesign.com/Childrens\\_Libraries/Pages/New\\_Rochelle\\_Childrens\\_Library.html](http://www.janicedavisdesign.com/Childrens_Libraries/Pages/New_Rochelle_Childrens_Library.html)

<http://davispartnership.com/>

### **Libraries:**

#### [University of Colorado Denver HSC – Anschutz Medical Campus Library, Aurora, CO – USA 2007](#)

Size: 116,000 s.f. , Completed July 2007

Library architectural design blends study, social interaction

This \$24.8 million library serves as a state-of-the-art medical research facility for CU students and faculty, as well as patients and medical professionals throughout the Rocky Mountain region. The 116,000 square-foot facility houses a large medical science collection and includes historic and rare books. The library provides a variety of spaces for learning and study, including multi-media and computer access stations as well as monographs and journal stacks. The linear floor plan includes a grand monumental stair that extends from the main lobby to an exhibit gallery linked at all three levels. The building plan makes the most of natural daylight opportunities in strategic spaces. A café positions the library as a social hub on campus and is accessible from the library's covered entry. The project was designed in association with Centerbrook Architects.

The building positioning relative to the landmark Red Cross and original Army hospital provides an initial framework for the development of a central quadrangle and campus entry point. The exterior makes use of the established campus palette of brick, limestone, and sandstone. A tower, and other signature elements lend unique architectural character and make the building readily identifiable. see also: <http://www.centerbrook.com>  
<http://davispartnership.com/projects/university-colorado-denver-health-sciences-center-anschutz-medical-campus-library>

### Leeds School of Business, University of Colorado Boulder, Boulder, CO – USA 2007

Size: 166,000 s.f. , Completed July 2007

#### **Awards:**

**2007 Colorado Construction Magazine Gold Hard Hat Award Outstanding Education Project**

Higher education addition and renovation embodies mission to inspire students

The renovation and expansion of the 165,000 square-foot Leeds School of Business included interior and exterior planning, as well as site design encompassing nine acres. Designed in association with Architectural Resources Cambridge, Inc., this LEED Gold-certified building embodies the institution's mission to inspire innovative thinking and produce globally relevant business research and education. A state-of-the-art learning environment, featuring both smart and distance-learning technology in a comfortable setting satisfies the central goal of the project – to create a social environment that supports teamwork, communication, and collaboration among students, faculty, and the business community.

The exterior design continues the historic Tuscan vernacular of the Boulder campus– red mission-style roofs and sandstone walls trimmed with limestone. The building's interior supports the functional and programmatic needs of a high-tech, twenty-first century business school. The multi-story Bryon Koste Atrium serves as the social heart of the business school fostering student, faculty, and staff interaction to accommodate both academic and social functions.

The William M. White Business Library, a major relocated component of the project, contains a substantial business research collection, reading room, teaching lab, and Information Commons. A café within the Commons signals a casual and relaxed wireless environment that combines computer access stations, study tables, and lounge seating.

The site work component of the project included the development of a business school quadrangle and was accomplished without reduction in parking, recreational field space, or green space.

### Wolf Law Building, University of Colorado Boulder, Boulder, CO – USA 2006

Size: 182,390 s.f. , Completed August 2006

#### **Awards:**

**2007 American Society of Interior Designers (ASID) IDA Award - Colorado Chapter Honorable Mention-Sustainability Design**

**2006 Colorado Construction Magazine Silver Hard Hat Award Outstanding Public Project**

Library serves as nexus in law school design

The 182,000 square-foot Wolf Law Building, designed in collaboration with Centerbrook Architects, is situated on the site of the original law school. This LEED Gold-certified structure contains “smart” classrooms, faculty and administrative offices, mock courtrooms, group study areas, a law clinic, a student center, and a 60,000 square-foot library. The design of the building is reminiscent of the red sandstone and red tile roofs of Tuscan villages that is in keeping with the traditional character of the Boulder campus. The design creates a courtyard that opens to the southwest, providing dramatic views of the Boulder Flatirons.

Boasting the region's largest public legal reference collection, the Wise Family Law Library, housed within the law building, articulates the state's longstanding legal heritage while capturing the spirit of the West. Since the library is the focal point of every law student's education, it is positioned on the main entry of the second floor where it serves as the nexus of student activity, classrooms, and study lounges. To accomplish overall integration of the library with the law school, the space extends down three levels through the core of the building.

Reading lounges, study rooms, and tables are located around the library's perimeter, adjacent to generous windows that offer abundant daylight and stunning views of the Flatirons. Rich paint schemes, organic fabric motifs, and bold carpeting express the colors and patterns found in Colorado's western landscape.

#### **Libraries:**

[Espanola Public Library, Espanola, NM – USA on design](#)

<http://www.riograndesun.com/articles/2013/08/28/news/city/doc521538fa8cd4a995081956.txt>

This new 16,000sf library was designed to replace Española's outdated and undersized library with a modern facility that better meets the community's needs. Preliminary Design focused on evaluating 5 potential sites for the new facility, defining the project goals and space program, and creating a preliminary site plan and floor plan. D/P/S worked closely with the Coalition for a New Library, provided regular updates to City Council, and facilitated a series of public input meetings. Additional community input was encouraged through an online blog, printed comment cards, and visits to local groups including the Senior Center. The proposed new library was sited to enhance the Plaza de Española area and provide room for collection and computing expansion as well as needed areas for Children and Teen areas, a Cultural/Historical Alcove, and public meeting space. The design provides an internal point of control to allow the multipurpose rooms, Friends room, and restrooms to remain open after library hours for community use. The service desk is positioned to welcome visitors and provide line of sight control over nearly the entire facility. The Children's area provides space for parents and children to use computers, for school age children to do homework, and for story programs. A glass-enclosed Teen Room has areas for books, computer and media use, and socializing while allowing for visual control by staff. Three outdoor patio/courtyard areas accommodate use by children, teens, and adults for reading and programs.

The City of Española is still seeking funding for this project. An alternate site was evaluated in 2011, which would involve the renovation of an existing building on the opposite site of the Plaza de Española. This site would accommodate the same program spaces, but provide additional opportunities to renovate a once-prominent building in the heart of Española, that has been abandoned; help revitalize struggling Main Street businesses adjacent to the site; and demonstrate sustainable renovation strategies for existing buildings.

Location: Espanola, NM

Size: 16,000sf

<http://www.dpsdesign.org/espanola-public-library>

## [NMJC \(New Mexico Junior College\) Pannell Library Renovation and Addition, Hobbs, NM – USA 2010](#)

3.800.000 \$

This renovation of a 30,000sf existing library focused on increasing space efficiency and thoroughly upgrading the building to respond to concerns about safety, accessibility, and sustainability. New classrooms, computer labs, offices, and support spaces will be created on the second floor. On the first floor, fixed stacks will be replaced with high-density mobile shelving units to provide additional collection capacity. Library support spaces will be renovated, the main circulation desk will be replaced, and a periodicals desk will be added. Restrooms, mechanical systems, ceilings, lighting, and the sprinkler system will be upgraded to meet current needs. A small building addition will provide a new entry vestibule, stair, and elevator to address code issues. This addition updates the look of the building with curtainwall, metal panels, and a metal canopy, all of which relate to the material palette of other recent campus buildings. Existing glazing is also being replaced to improve maintenance and energy conservation. (Dekker)

<http://www.dpsdesign.org/nmjc-pannell-library>

## [UNR \(University of Nevada, Reno\) Knowledge Center, Reno, NV – USA 2008](#)

Size: 295,000sf

Dekker/Perich/Sabatini served as the lead design firm on the project and collaborated with Hershenow+Klippenstein (architect-of-record) throughout all project phases. Designed as a library of the future compatible with the neo-Jeffersonian style of the university's original campus, this building combines traditional library functions with technology classrooms, video-conferencing facilities and specialized computer labs. UNR has embraced the idea of the library as a comfortable space for both students and the public to spend long periods of time and the building features lounge areas, public meeting rooms, a café and a 13,000sf automated storage and retrieval system capable of providing 20 years of collection growth in a compact footprint. The building design incorporates efficient use of natural and artificial light: a combination of curtain wall, shading devices, light shelves, atrium glazing, and roof skylights to provide well-controlled natural light for a large portion of the public space, and an automated electric lighting control system to manage energy use and occupancy sensors to maximize efficiency.

<http://www.dpsdesign.org/unr-knowledge-center>

## [San Juan College Learning Commons, Farmington, NM – USA 2005](#)

This new Learning Commons serves as the new 'front door' to the San Juan College campus. The concept brings together the media center, art center, and student activities center to create a hub of intellectual and social interaction on campus. Traditional library functions are combined with multimedia resources and student amenities in a relaxed atmosphere. The wireless network and mix of study and lounge furniture allows students to work and socialize flexibly throughout the building. Low, widely spaced book shelves reinforce the open, spacious feeling of the library. Over 9,000sf of the existing building was renovated to house the bookstore operations and other spaces, and a 33,000sf two-story addition accommodates the remainder of the program. The first floor focuses on student activities, such as student club stations, recreation areas, gaming spaces, and student offices. The second floor houses library collections, seating, computer labs, and study rooms.

<http://www.dpsdesign.org/san-juan-college-learning-commons>

## [Paseo Verde Library, Henderson, NV – USA 2002](#)

### **Awards:**

AIA Nevada Excellence Design Award 2003

This 40,000sf library for the Henderson District Public Library System (HDPL) houses 100,000 volumes of general collections and 50,000 volumes of children collections. A large reading room on the north end provides patrons a separate quiet area with views of the entire Las Vegas valley. A secure courtyard can be used as a programmable space. Several additional features encourage greater community and individual use, such as a young people's library, a community meeting room, and a coffee/sandwich shop. The shop has indoor and outdoor seating and is a popular hangout, particularly during the lunch hour. Also incorporated were numerous private study rooms and computer labs. Daylighting is introduced through clerestories and high volumes, and stack and reading spaces are protected from direct solar exposure. The technological infrastructure includes a wireless network and a self-checkout system. Numerous computer stations are placed strategically around the library to provide accessibility and privacy.

<http://www.dpsdesign.org/nmjc-pannell-library>

## [Whitney Library, Las Vegas, NV – USA 1994](#)

This branch library for the Las Vegas-Clark County Library District is organized around three distinct areas: Adult Reading, Young People's Library, and Performing Arts. All of these areas spin off a central control area which unites the circular form of the young people's area with the more linear plan of the other areas. Community use is encouraged through a 300 seat public auditorium, an art gallery and a special collections room dedicated to materials relating specifically to the American Southwest. Also included are several private study rooms, meeting rooms and computer rooms. To create an identifiable public image along a major, high speed city artery, the building is brightly colored with an introspective wall canted slightly to the plane of the street. This attracts the eye without using the commercial signs associated with strip shopping. The building incorporates indirect daylight and clerestories to bring natural, protected daylight into the stack and reading areas.

<http://demcointeriors.com>

### **Libraries:**

## [Frankfort Community Public Library, Frankfort, IN – USA 2011](#)

Teen Space, Designer: Kimberly Bolan & Associates, LLC, Architect: Browning Day Mullins Dierdorf

Client: Frankfort Community Public Library, Total Population Served: 30,400, Completion Date: May 2011

The Frankfort Community Public Library (FCPL) gives teens a space where they can be themselves. The lower level of the FCPL Carnegie building was formerly a staff and storage area, which was then renovated into the teen area and new staff area. The teen area, known as The Edge, consists of two adjoining rooms that are designed and dedicated just for teens. It is in this area that teens study, read, research, hang out, meet with a club or join in any of the library's various other teen events. The library is constantly bringing new programming to The Edge — including movies, crafts and the art of Harlem Renaissance. There are also program favorites like Wii Gaming, Anime Club and the Read What You Like Book Club. As you can see, there's something for every teen in The Edge!

The creation of this space was truly a collaborative effort among architects, designers and vendors. DEMCO Interiors submitted a layout, as well as furniture options, based on Kimberly Bolan & Associates' program, and the final layout was a combination of several people's work. DEMCO Interiors was one of two vendors selected to furnish the teen-centric layout that encourages teens to make the library their new hang out. A mixture of funky wall and floor displays along with movable tables and chairs welcome teens to their own space. Bold colored accent walls and new complementary furniture create a refreshing look that draws teens into the space. A magazine display that wraps around an existing structural column not only makes the most of the relatively small footprint, but also adds interest and visibility to the collection. Incorporating mobile display shelving, flexible tables, chairs and soft seating helps maximize the space and transform it into a multipurpose events area. The teen librarian's desk is purposefully located at a vantage point that allows for visibility to nearly every area of The Edge. With its lightness of scale, it can easily be repositioned to adapt to future changes.

This successful teen zone meets quite a few of the guidelines written in the National Teen Space Guidelines, which was put together by industry experts in 2012. Provided by the Young Adult Library Services Association (YALSA), this document is a tool for evaluating a public library's overall level of success in providing physical and virtual space dedicated to teens, aged 12-18. Perhaps one of the most critical learnings is not to lose focus of the teens and the reason for implementing a teen space in your library. Guideline #5 states that the purpose of a teen space is to centralize the information and recreation resources of this age group while offering teens a safe, supportive and positive space that is uniquely their own. The Edge for teens in Frankfort does just that!

### **Waupun Public Library Teen Space, Waupun, WI – USA 2010**

Waupun Wisconsin is a small community of just over 11,000 residents and 3,400 households. It is located two miles from The Horicon Marsh, the largest freshwater cattail marsh in the United States. The marsh is a critical rest stop for thousands of migrating ducks and Canada geese, earning Waupun the title of "Wild Goose Center of Wisconsin."

One of the biggest drivers for a recent expansion of its public library was to provide a place specifically for teens which represent approximately 10% of the total population. DEMCO Interiors worked library director, Bret Jaeger, to bring their vision to life. Jaeger recalled, "we envisioned a place of their own, with furniture designed specifically for young adults and an environment that made them feel comfortable." Jaeger and his colleagues collaborated with a group of teens that provided input in the design of their area — particularly helping with color palettes, layout and furniture selection.

The most striking feature of the teen zone is the multi-panel wall graphics. The design team used artwork from Demco posters and scaled them to become colored wall panels. Another important aspect of the teen area was the soft seating. Jaeger wanted seating that would invite teens to gather in the space, hang out, be themselves, and know that the area was designed specifically for them.

Happily reflecting on the finished space in his library, Jaeger said, "the positive change, of course, is seeing teens in that area. They truly consider it their own." He excitedly continued to say, "I know we succeeded when people see our teen zone and ask who designed it!"

### **New Orleans Public Library, LA – USA 2006**

see also: <http://www.msrltd.com>

Branch Library Journal 2006 Makeover, Location: New Orleans, LA, Architect: Meyers, Sherer & Rockcastle, Total Square Feet: 2,500

The New Orleans Public Library System is in the midst of rebuilding following Hurricane Katrina in the Fall of 2005. Alvar is the first flooded branch to be rebuilt since the hurricane. It serves the neighborhoods of Bywater, Marigny, St. Roch, St. Claude, the Desire and Florida areas, and since Katrina, Holy Cross, the Lower Ninth Ward, and St. Bernard Parish. It was rebuilt through the coordinated effort of Library Journal magazine and many contributing vendors. DEMCO Interiors supplied the shelving and custom end panels found throughout the building.

### **St. Louis Public Library, St. Louis, MO – USA 2005**

Location: St. Louis, MO, Architect: Team 4 Architecture, Interior Design: Team 4 Architecture, Client: St. Louis Public Library  
Total Square Feet: 6,900, Completion Date: July 2005

The St. Louis Public Library was a joint effort between DEMCO Interiors and Team 4 Architecture. Client objective was to create a modern contemporary library within the historical St. Louis Public Library building. Contemporary shelving was selected, and the entire stock was shelved face-out style, resulting in an "express" branch library.

[http://demcointeriors.com/index.php?option=com\\_content&view=article&id=230:st-louis&catid=40:portfolio-public&Itemid=93](http://demcointeriors.com/index.php?option=com_content&view=article&id=230:st-louis&catid=40:portfolio-public&Itemid=93)

### **Farmington Public Library, Farmington, NM – USA 2003**

see also: <http://rmjmhillier.com>

Architect: Hidell & Associates, Total Square Feet: 50,000, Community Size: 43,000

The Farmington Public Library provides materials and services to help community residents obtain information meeting their personal, educational, and professional needs. The new library building, built in 2003 is on the cutting edge of technology and provides services and programs for all ages. Contemporary furniture adds emphasis to the modern feeling of the building.

## [James Madison University - College of Integrated Science and Technology Library, Harrisonburg, VA – USA 2008](#)

Client: JMU

Services/Scope: Architecture, interior architecture and landscape architecture services.

Project Components: The 100,000 SF building houses five floors of stacks, computer labs, teaching spaces, and a 100-seat Information Commons. The Center for Teaching Excellence and Computer Information Technology occupy the upper floor of the building.

This science and technology library located on James Madison University's East Campus was specifically designed to reflect the many activities served by the modern library. The primary objective was to create a learning commons that encourages interaction, individual and group study while offering easy

access to collections and information resources. The design intent was to: 1. Create an inviting learning commons for this rapidly growing campus; 2. Provide spaces that foster collaborative and individual study methods; and 3. Establish an entry threshold and defined north edge for the campus

The design for the new library is a direct reflection of the desired interface between students, librarians and information resources in a learning commons environment. Services and collections stem around the main entrance which is on axis with the existing campus buildings along the north side of the East Campus. Controlled daylight and framed views are made possible by carefully placed apertures, clerestories and the placement of a covered walkway facing a mature grove of trees to the south.

A series of open learning trays spiraling up from the entrance offers progressively smaller and quieter floors, providing a variety of social habitats to support individual and collaborative study methods. Stairs linking each level are deliberately separated to encourage interaction. A reading room and balcony overlooks the main (west) campus. These activity spaces are expressed in the building's exterior to attract students and create a distinctive threshold and contextual edge to the campus.

The new \$22 million, 108,000 SF library houses an Information Commons, four large computer labs and lecture rooms. The project includes a 40-seat foodservice facility among 40 group study areas that encourage collaborative work among students, faculty and community. The library houses over 107,000 stacks for volumes and periodicals.

**Libraries:**

### [Grosse Pointe Public Library, Grosse Pointe Farms, MI – USA on design](#)

<http://grossepointemodernism.blogspot.de/2013/04/grosse-pointe-public-library-central.html>

The Grosse Pointe Public Library in Grosse Pointe Farms in Michigan is an exemplary work of modern architecture, designed by renowned 20<sup>th</sup> Century architect, Marcel Breuer (\*21.05.1902 Pécs /Fünfkirchen) Hungary – 01.07.1981 New York, NY USA). The library constructed in 1953, with its 17,000 Sqf. distributed on two stories enclosed in an unadorned, simple, brick facade and exposed steel elements, is the only Breuer building in the Detroit, Michigan region. designLAB architects, the winner of an international design charrette organized by the library Foundation to save the structure, has created a restoration and addition scheme for the Breuer library that will allow the GP library board to move forward with plans to keep the Modern treasure while still fulfilling their current & future needs. This project will set a precedent for the future of other modernist structures at risk of being destroyed.

<http://www.designlabarch.com/grosse-pointe-public-library/10/>

<http://archinect.com/features/article/57732/grosse-pointe-central-library-efforts-toward-conservation>

by John Gallagher

It looks as though a library designed by Marcel Breuer in Grosse Pointe Farms, Michigan, will be spared the wrecking ball. The local community library board met last night to evaluate an expansion plan designed by Boston-based designLAB architects. The scheme retains the original, 1953-vintage building and doubles its space with a sympathetic, Breuer-inspired addition. Although the

board is not scheduled to vote on the scheme until October 22, momentum has decisively shifted away from an earlier push to demolish Breuer's only Detroit-area building. Breuer was already famous for his furniture and residential designs by the early '50s when he crafted the library. It is a small but elegant structure, two stories tall, with a front facade of unadorned brick that echoes traditional building materials in Grosse Pointe. Generous fenestration allows daylight into a double-height main reading room that features exposed structural elements and beams. Members of the library board had recently complained that the 17,000-square-foot structure lacked adequate space for administration, computers, and children's activities—prompting discussions last year about whether or not it should be razed in favor of an all-new facility. But when Laura Bartell, the then-president of the board, stated publicly that Breuer's building was "pretty undistinguished" and not worth preserving, her remarks prompted a flood of e-mails and local protests. The library hired designLAB in June to develop a scheme for saving the building. ....Scott Slarsky of designLAB explained that his firm conducted extensive research in Breuer's archive at Syracuse University, trying to imagine how the celebrated architect would approach the project. He described the attempt to channel Breuer's spirit and signature style as "séance architecture." .....

### [Providence Public Library, Renovation, Providence, RI – USA 2013](#)

1900 – Stone, Carpenter, Willson

[http://en.wikipedia.org/wiki/Stone,\\_Carpenter,\\_and\\_Willson](http://en.wikipedia.org/wiki/Stone,_Carpenter,_and_Willson)

designLAB architects recently completed the renovation of the century-old wing of the Providence Public Library. Last year, the Library entered a partnership with Russell Morin Hospitality Solutions in a venture designed to raise revenues to support the Library's many free public programs. The Library is now able to rent its magnificent spaces for corporate meetings, exhibitions, weddings, receptions, and other community celebrations, adding to the draw of downtown Providence. designLAB worked closely with the Events Coordinator and Trustees to develop a design that uniquely fits their innovative and inviting plan for carrying out the Library's public service mission: to nurture and enhance the educational, historical, and cultural fabric of Rhode Island. The renovation not only enhances the building as a cultural asset but also leverages its appeal as an economic driver for the city and region.

### [Claire T. Carney Library, University of Massachusetts, Renovation, Dartmouth, MA – USA 2012](#)

Conceived in 1963 as a utopian campus community by the celebrated 20th century architect Paul Rudolph (\*23.10.1918 Elkton, KY (USA) - +08.08.1997 New York, NY (USA))

<http://www.archnewsnow.com/features/Feature391.htm>

<http://www.youtube.com/watch?v=7SGX5rCWC8A>

UMass Dartmouth is that kind of architecture. Theatrical, a little weird, a little grim. If you once saw it, you maybe loved it, you maybe hated it, but you probably didn't forget it.

Designed in the late 1960s by one of the most inventive architects in American history, Paul Rudolph — no, he wasn't a Satanist, at least as far as I know — the campus is a powerful, muscular pile of raw concrete. It's an example of an architectural style that's known, for better or worse, as Brutalism.

Now one of the major chunks of UMass Dartmouth is being transformed. That's the Claire T. Carney Library, which is being renovated and enlarged — redesigned, really, in many ways — by a talented Boston architecture firm that calls itself designLAB. The work isn't quite finished, but much of the new Carney is already in use by students, and it's clear that this is going to be one terrific piece of architecture. It's a lesson in mixing the old and the new and getting a result that's better than either.

Let's talk for a moment about Brutalism. It was a style that arose in France and Britain in the 1950s and '60s, led by the legendary French modernist Le Corbusier. The name comes from the French "béton brut," meaning raw concrete. It's just by chance that in English "brut" sounds like "brutal," but the name has stuck for good reason. Brutalist buildings tend to be, well, a little brutal. They're usually made of industrial materials, especially concrete, a substance most people associate with highway ramps or gun emplacements rather than great architecture.

What Brutalist architects loved was the fact that they could mold concrete into any shape. It gave them the freedom to be sculptors of architecture. Some of them, too, thought of the style as a political or moral statement, as a blue-collar aesthetic that wasn't dressy, that didn't cater to sentimental tastes. Some even delighted in having their work perceived as ugly. Maybe there's an analogy with the heavy metal music of the era.....

<http://www.bostonglobe.com/arts/2012/11/24/paul-rudolph-brutalism-reworked-umass-dartmouth/wso1ewaN4xxHr9Gddr0Q1K/story.html>

read more:

Paul Rudolph's library at UMass Dartmouth - renamed the Claire T. Carney Library in 2006 - is getting a \$43 million renovation and expansion.

Ground breaking for the library - designed by Paul Rudolph and Desmond and Lord - occurred on November 26, 1969 and the building was completed in 1972. On March 13, 1972 the building opened to students and the public. The adjacent amphitheater, known as the Vietnam Veterans Memorial Amphitheater, was dedicated on May 6, 1978 and is used for the university's graduation ceremonies.

According to a September 18, 2009 article in the Herald News, a local newspaper:

...the expansion of the 37-year-old library has already begun. The space, now open on the first floor with two floors of lecture rooms above, will become an enclosed entrance to the library, with a new circulation desk, cafe, state-of-the-art presentation space and areas for group studying.

The second component of the project, which was paid through private fundraising and state bonds, will be the renovation of the existing space. The first floor, which has already added a new computer lab, will have "learning commons" and a "grand reading room," said Catherine A. Fortier-Barnes, the assistant dean for library administrative services.

Architects have also made sure to keep with the Paul Rudolph-designed campus's signature modernist look, Fortier-Barnes said. No timeline has been set for completion, she said, but the renovation of the existing spaces will take place in phases so the library can remain open.

UMass Dartmouth, which was originally called Southeastern Massachusetts Technological Institute when Rudolph was hired to design the campus master plan in 1963, was known as "Smitty" in the office according to architect Der Scutt - who worked on the drawings in Rudolph's office at the time. A brief history of the project can be found on a website hosted by UMD's library:

In addition to the unique character of the buildings on the UMass Dartmouth campus, one of Rudolph's major achievements was the master plan. On over 600 acres of undeveloped land, he had the opportunity to incorporate his longstanding theories and ideas about large scale construction and human habitation.

All of the elements of the campus design had a particular interest and meaning to him, whether it be the function of Ring Road to the relationship of classrooms and stairways. No detail escaped his consideration.

That much of his work at UMass Dartmouth and his other similar projects are enigmatic at best to those who encounter them is the great paradox of his legacy. Critics acknowledge him as a great designer whose buildings are often difficult to appreciate or understand but are permeated with an extraordinary creative skill.

SMTI / UMass Dartmouth, then known as Southeastern Massachusetts University, bestowed an honorary degree in Fine Arts to the architect in 1970.

On another page of the library's website, the university's introduction to the building's program includes a description of the existing building:

The University Library is at the center of campus discourse, learning, and scholarship. With the addition of the space that connects the Library to Group II its welcoming presence is more humanized, more open. Although the basic concrete structure is there as Paul Rudolph designed it, the library is a beguiling mixture of action, color, and real life captured in the moment all visible as you approach either from the inner or outer campuses.

On the Charlton side, the roof swings upward like an awning giving a panoramic view of the interior. On the inner campus side, the roof is lower creating a more intimate space. Inside the changes in ceiling heights help to define meeting spaces, social, reading, and functional library spaces.

As you enter the library from either side it is evident that this is the University Library. There are books, of course, and a solid, serious aura that is unmistakable. At the same time there is a welcoming air of informality that includes café service, gallery/display space, and areas for collegial discourse. Signage and design lead the visitor seamlessly to the services and resources they need.

Phase I of the Claire T. Carney Library Renovation Project began August 4, 2009 and consisted of "the removal of all concrete located beneath the bridge and lecture halls (campus gateway) connecting the Science and Engineering Building to the Claire T. Carney Library." Plans for the renovation include enclosing the area that is currently an open breezeway

<http://paulrudolph.blogspot.de/2009/12/library-at-umass-dartmouth-getting.html>

Conceived in 1963 as a utopian campus community by the celebrated 20th century architect Paul Rudolph, the UMass Dartmouth campus remains a tour de force of late 20th century architectural exuberance and optimism. Completed in 1972, the cast in place concrete Claire T. Carney Library is the centerpiece of the concentric campus plan. designLAB architects has undertaken a \$30M renovation/addition to the 160,000 SF library that involves a complete upgrade of all systems and a 27,000 SF addition to accommodate a new entrance, group study spaces, a cafe, and a lecture space.

### [Clifton M. Miller Library, Washington College, Chestertown, MD – USA 2012](#)

The Miller Library project represents a new vision shared by many institutions of higher education: where the library goes beyond its traditional role as a repository of both printed and electronic information. The Re-Envisioned Miller Library created by designLAB transforms the library into a dynamic center for social interaction and intellectual discourse on the Washington College campus. The design features a gallery, cafe, seminar rooms, information commons, group studies, digital media labs, as well as a 24-hour study center, and a popular reading room.

<http://washingtoncollegenews.blogspot.de/2012/05/miller-library-to-close-may-12-for.html>

### [Skillmann Library, Lafayette College, Easton, PA – USA 2005](#)

Situated at the center of the pastoral Lafayette College campus this building was reconceived as a "studio for learning" rather than a traditional library. The original 1960's era Skillman Library presented uninviting concrete walls to the campus green. The challenge of the \$ 17.5 M project was to convert this existing library into an inviting landmark that would serve as an intellectual and social protagonist of campus life. The 110,000 sqf. addition and renovation project provides a café, formal and casual reading /information/ meeting areas, group study rooms, classrooms. Computer and media labs and an art gallery. Students work collaboratively in this open environment with learning resources that are convenient to work spaces. As a result, the library has become the most popular place on campus for both serious study and casual student gatherings. **In 2006, the building was awarded the AIA National Honor Award for Interior Architecture, as well as two AIA chapter awards.**

Robert J. Miklos FAIA design principal, Whitney M. Hudson and Scott Slarsky project designers while at Ann Beha Architects.

### [Boston Athenaeum, Boston, MA – USA 2002](#)

1849 Edward Clark Cabot (\*17.04.1818 Boston, MA USA – +05.01.1901 Brookline, MA USA), 1913-1914 Renovation Henry Forbes Bigelow (\*12.08.1867 Beverly Farms, MA USA - +12.05.1929, Clinton, MA USA)

Designed by architect Edward Clarke Cabot, who also built the Athenaeum, Gibson House was constructed in the Italian Renaissance style. Its lower two floors are made of brownstone while the upper levels are built of brick.

<http://www.bostonathenaeum.org/print/38>

In 1998, The Boston Athenaeum embarked on a \$25 million renovation to enhance its stewardship of the many rare books and manuscripts in its collection and to prepare the institution for its next century of public outreach. The Athenaeum, one of the oldest and most distinguished independent libraries in the United States, incorporated technical and functional innovations while maintaining the unique character and historic grandeur that has made it a nationally recognized institution.

The renovation included the development of new programmatic elements, including an events hall, catering facility, temporary exhibition gallery, conservation lab and children's library. In 2005 the project was awarded the Annual Preservation Award by the Boston Preservation Alliance as well as the Chicago Athenaeum American Architecture Award.

### [Dewberry, Fairfax, VA – USA](#)

<http://www.dewberry.com>

A library is one of the most significant buildings within a community. Every library is different and unique, and deserves an image reflective of the community's image and goals. Library design offers the challenge of accommodating high and varied usage types,

meeting the expectations of the community, and anticipating future technologies while being good stewards of the environment. The new library must provide something and someplace for everyone; it is the "Third Place" within the community. PSA-Dewberry is a library specialist, having completed over 220 libraries across the country. The library team is made up of LEED Accredited Professionals providing pre-design, planning, building design, interior design and thematic interiors for new construction, renovation/expansion and reimagining of existing facilities for clients throughout the country.

Dewberry, a privately held firm based in Fairfax, Virginia, has announced that as of March 1, 2009, Burnidge Cassell Associates (BCA) has become a Dewberry company, making it part of a 2,000-person, national, professional services practice. BCA will operate from its Elgin, Illinois, office under the name PSA-Dewberry/BCA, as part of PSA-Dewberry in Dewberry's architectural division. Established in 1967, BCA provided architectural, architectural interiors, landscape architecture, and planning services throughout Illinois for park districts, municipalities, school districts, library districts, college and universities, and the private sector. The firm's market segments closely aligned with PSA-Dewberry's current offerings, including educational, recreation, and municipal facilities, as well as a specialty in library design.

#### **Libraries:**

##### **[Schaumburg Township District Library, Teen Place , Schaumburg, IL – USA 2012](#)**

After months of hammering, sawing, wiring, and painting, the 6,000-square-foot Teen Place at the Schaumburg Township District Library (STDL) opened for business on Saturday, November 24, 2012. With local and state officials, library board members, student advisory trustees and patrons of all ages in attendance, the celebration kicked off with a ribbon cutting and capped off the library's fiftieth anniversary "jubilee" year. Staff demonstrated the advanced digital technology and welcomed visitors with gifts and guided tours. Nearly ten times larger than the former teen area, Teen Place was created with design input from the library's Teen Corps and serves the 11,000 junior and senior high school-aged students in the township. Boasting comfortable, high-tech collaboration areas, the space includes a seventy-eight-inch Smart Board; a bank of twenty-seven-inch MacBook Pros, iPads, and iPads; along with a 3D printer and 3D scanner. A large multipurpose program room with a stage, four gaming stations with forty-eight-inch monitors, a ceiling-mounted projector and screen, and a soundproof glass wall that unfolds from the ceiling when needed, rounds out the space. At the gaming stations, teens have access to PS3, X-Box 360 Kinect, and Wii consoles. The pièce de résistance is the Digital Production Studio. Inside there are three professional quality cameras, a Tricaster, and a green screen for students to use in producing music and videos, which can be edited on the MacBook Pros. Two "smart" discussion rooms each offer tables and seating for eight, along with a twelve-foot dry-erase white board and monitor. The silent reading room provides four comfortable chairs in which young people can read without distractions. All this and more is available to library visitors ages twelve to nineteen during the library's open hours, and occasionally after hours for "lock-ins" and other special programs. The discussion and reading rooms are also open to adults from 9:00 a.m. until 2:00 p.m. on weekdays. "Quite simply, STDL is setting a new national standard for library service to teens," said library director Stephanie Sarnoff. "This space incorporates state-of-the-art technology and abundant print resources in a comfortable and attractive environment for both academic and recreational activities. The success of Teen Place is a direct result of the vision and support of library staff, the library board, and the teen community,"

##### **[Willis Library, University of North Texas, Denton, TX – USA Master Plan 2011](#)**

At the start of the study, we defined a vision and set a path for the development of the newly expanded Willis Library at UNT's Denton campus. Updating a University Library System

Working closely with a committee comprised of students and campus faculty and staff, we assisted the University of North Texas (UNT) in developing a master plan for their library system. Changes to the system were necessary due to the rapidly growing student population, new technology since original construction, and changing needs of students and researchers. The university also aspired to gain top tier research institution status as defined by the Texas Higher Education Coordinating Board.

[http://www.dewberry.com/About/CaseStudy/Updating\\_a\\_University\\_Library\\_System](http://www.dewberry.com/About/CaseStudy/Updating_a_University_Library_System)

##### **[Presbyterian Theological Seminary Library, Austin, TX – USA 2014](#)**

27,000 sqf.

In order to accommodate the changing needs of students and faculty at the Austin Presbyterian Theological Seminary in Austin, Texas, we worked closely with Florence Mason & Associates to develop a plan for updating the current 27,000-SF Stitt Library into a dynamic modern facility. Our evaluation of the existing building—a 3-story, 1950s structure with a 1970s addition—and the library's location on campus, as well as current and future needs of the students were all taken into consideration during the planning process. We worked closely with the library task force, including students, faculty, and library staff, to establish various solutions for the library's renovation and expansion.

##### **[Centennial Library Midland County, Midland, TX – USA 2013](#)**

Dewberry, a privately held professional services firm, is designing the Centennial Library in Midland County, Texas. The 33,000-square-foot facility is expected to be completed in November 2012.

Design development began in January to transform a former Linens-N-Things® store into a public library. Due to Midland's challenging drought conditions, preservation of trees and water will be a highlighted feature of this project. A stream and steel trees will guide the path that takes patrons around the library.

Innovative technology is being incorporated through interactive floors and walls. Green screen technology, video projection, and a media lab are among other technological features that will be included in the library.

Mechanical/electrical engineering services will be provided by Agnew Associates, Inc., and Wrightson, Johnson, Haddon & Williams, Inc. will assist with technological support.

This \$4.6 million project is designed to provide a flexible, engaging space that will offer opportunities for all ages.

[http://www.dewberry.com/News/Article/12-07-16/Dewberry\\_to\\_Design\\_Centennial\\_Library](http://www.dewberry.com/News/Article/12-07-16/Dewberry_to_Design_Centennial_Library)

##### **[White Oak Library District, Romeoville Branch library, Romeoville, IL – USA 2012](#)**

Building: 46,000 square feet, Project Costs: \$9 million, Seating: 208 (not including meeting room), Collections: 100,000 (current); 150,000 capacity, Computers: 52, Architect: Dewberry, Engineers: Dewberry, Interiors: Dewberry, Construction: The Lombard Company

After failed referendum attempts in 2008 and 2009, the White Oak Library District passed a \$23 million referendum in February 2010. That funding led to the complete renovation of the Romeoville Branch, completed in June 2012, and will also fund the ongoing renovation/expansion of the Lockport Branch and construction of a completely new Crest Hill Branch, both to be completed by fall 2013. The new Romeoville Branch design utilizes the building's full basement, previously unused for library services, in essence doubling the size compared to its previous configuration. Two sunken courtyard areas at the far east and far west ends of the building allow natural light to stream into the lower level, something not often found in a basement-level space. The adult and teen areas share the lower level with the district's centralized services of administration, technical services, and information technology (IT).

The main floor houses the children's department, circulation, and the outreach department, as well as public meeting/program rooms. The largest of the public meeting spaces can accommodate up to 250 people, has a state of the art audiovisual package, and can project visual images onto any of three giant screens. The children's department is a colorful and enticing space with features that appeal to both very young and elementary school-aged children. A dedicated program/storytime room with a giant painter's palette built into the ceiling has corresponding "drips" of paint set into the flooring design below. The many windows in the children's room offer sweeping views of the outside world and serve to beckon visitors from downtown Romeoville. Technology was modernized and expanded throughout the building, with Internet service upgraded from two T1 lines to a fiber-optic connection. Computers for adult use grew from a previous total of twenty to thirty-two workstations. Twelve of these are located in a lab, where free computer classes are taught; when there is no class in session, the lab simply provides additional public-use computers. Computers in the children's department grew from eight to twenty with this renovation. The project was not slated to affect the exterior of the building; however, a grant from the Village of Romeoville funded construction of a grand new arched entryway and other architectural embellishments. These additions really transform

what looked and felt like a building built in 1973 into a sleek and modern building of 2012

### [Renner Academic Library and Learning Resources, Elgin Community College, Elgin IL – USA 2012](#)

Project Costs: \$21.5 million, Architect: Dewberry, Engineers: MEP/FP-KJWW Engineering, Interiors: Dewberry, Construction: IHC Construction

Standing in the beautiful Renner Academic Library and Learning Resources at Elgin Community College (ECC), it's hard to imagine that the college's old library was so small that three of them would fit inside the new facility. But that was something ECC officials became all too aware of after the former library was cited as "unsatisfactory for students' needs" during a 2006 accreditation visit by the Higher Learning Commission. That library, which opened in 1970 as part of the then new Elgin Community College campus, was designed to serve several thousand students, not the more than eleven thousand that were using the undersized facility more than thirty-five years later. "While our students were receiving high quality service from our librarians and staff, our library space wasn't providing an appropriate learning environment," says ECC President David Sam. "It was time for a change, and that's why we made a new library a top priority." Voters agreed, approving the \$178 million referendum in April 2009, which included \$26 million for the new library.

Construction began in March 2010 and the new facility opened in January 2012. The overall project cost \$21.5 million, coming in \$4.5 million under budget. Named for the college's first president, Gilbert I. Renner, the Renner Academic Library and Learning Resources is a 57,000-square-foot marvel of practical, convenient learning spaces, tasteful architecture, and thoughtful sustainable elements.

[http://www.dewberry.com/Libraries/Documents/Elgin\\_Community\\_College\\_ILA\\_Reporter.pdf](http://www.dewberry.com/Libraries/Documents/Elgin_Community_College_ILA_Reporter.pdf)

### [Daughters of the Republik of Texas Library, Renovation, San Antonio, TX – USA 2011](#)

Founded in 1891, The Daughters of The Republic of Texas is the oldest patriotic women's organization in Texas and one of the oldest in the nation.

DRT Library Built in 1950, The Daughters of The Republic of Texas Library is part of the Alamo complex in San Antonio, Texas. 2,800 sqf., Client: Daughters of the Republik Texas, Owner: State Texas

We recently conducted a space utilization study and provided interior renovations for the Daughters of the Republic of Texas Library at the Alamo in San Antonio. Housed in a circa 1949, 2,800-SF building, the facility also contains a 1,600-SF addition constructed in the early 1970's.

Our renovation increased collection storage capacity from 456 LF to approximately 900 LF, improved the use of available space within the existing structure, and created a quality research environment. The renovated research room provides better access to the library's special collections, as well as a more efficient workflow for registration and materials check-out.

### [Independence Park Library, Baton Rouge, Louisiana – USA 2011](#)

PSA-Dewberry as part of The Design Collaborative has been selected to design the 115,000-square-foot library for the City and Parish of East Baton Rouge. The library has been targeted for LEED Gold certification and is scheduled to open in late 2011. It will

include a meeting room that will accommodate up to 300 people, multiple conference rooms, special areas for children and teens, study rooms, a technology lab, and a quiet reading room. An adult collection area will also house a room for genealogical studies and local history. Services provided included master planning through design and construction documents. (Dewberry)

### [Keller Public Library, Keller, TX – USA 2010](#)

Originally constructed in 1990, our expansion of the Keller Public Library took the building from 12,500 SF to 22,500 SF. We used a one-desk concept for the library, which provides all patrons services from one central location. The expanded library creates a true community center with group study, quiet reading, and collaboration areas inside and outside of the library. Other new spaces include study rooms, a technology lab, a quiet study room, interior and exterior book drops for a future RFID sorting system, and staff areas.

### [Rockwall County Library, Rockwall, TX – USA 2008](#)

52,000 sqf., \$ 9,460,000 Owner/Client: Rockwall County, Texas

Set in the eastern Dallas metropolitan area, the new Rockwall County Library has been hailed as a “focus of community life and county pride.” The building is approximately five times the size of the previous facility, with spacious children’s and teen areas, an Internet café, a community meeting room, a literacy center, a technology lab, and a drive-through bookdrop. The lively interiors are warm and inviting, with extensive use of stone and glass throughout the building.

### [Thurmont Regional Library, Thurmond, MD – USA 2008](#)

Client Frederick County, Md., Square Footage 25,000 SF

#### **Awards:**

**2010 Award of Excellence for Best Institutional Facility | NAIOP, Maryland/D.C. Chapter**

The new, 25,000-square-foot Thurmont Regional Library in Frederick County, Maryland, takes its design inspiration from the rural community’s agricultural heritage and the area’s historic Catoctin Furnace.

Local materials, such as stone and wood, are used throughout. Where possible, the team selected sustainable alternatives such as hardy board, metal roofing, and other materials which do not require maintenance. Heavy timber roof trusses add warmth and drama to the interior.

### [Piqua Main Public Library, Piqua, OH – USA 2008](#)

Hotel Fort Piqua is located on the public square in Piqua, Ohio, USA. The 85,000 square foot building is an excellent example of Richardsonian Romanesque architecture and was built in 1891-92 by William P. Orr and Samuel K. Statler. Originally a hotel, (Orr-Statler-Block)

An inspired restoration of a downtown landmark, the transformation of the historic Fort Piqua Hotel into Piqua, Ohio’s, main public library has significantly increased visitation and programs. The hotel was built in 1891 and is listed on the National Register of Historic Places. The three-level library now offers expanded educational, cultural, and technology resources. The building also houses the Piqua Historical Museum, a banquet room, and two retail spaces. Designed in association with MKC Associates and Jeff Wray Associates, the adaptive reuse won multiple awards and was featured in Library Journal.

### [Harm Weber Library and Academic Center, Judson University, Elgin, IL – USA 2007](#)

The Harm Weber Library and Academic Center at Judson University in Elgin, Illinois, is one of the most sustainable libraries in North America. It houses a library and the school of architecture. The \$25 million, naturally ventilated building operates on approximately 50 percent of the energy required to run a typical, modern library building. Windows are deeply recessed into white openings designed to bounce natural light into the building interior. This “light harvesting” reduces the amount of power used for artificial lighting. From its inception, this 88,000-SF, LEED Gold building has served as a model for architectural design and sustainability.

[http://www.dewberry.com/About/CaseStudy/Living\\_Design](http://www.dewberry.com/About/CaseStudy/Living_Design)

Judson University, a private Christian liberal arts university in the northwest Chicago suburb of Elgin, IL has completed a sustainable building project that has drawn national attention. The Harm A. Weber Academic Center, designed by British architect and Cambridge University Professor C. Alan Short(see: <http://www.shortandassociates.co.uk>), features a fully integrated hybrid natural ventilation design, significant natural day lighting, a photovoltaic system integrated into the southern building envelope, and an extensive landscape improvement scheme. It has been designed to achieve a LEED Gold rating by the US Green Building Council, featuring a number of innovation credits.....

### [Henrico County Public Library, Henrico, VA – USA 2006](#)

<http://www.henricolibrary.org/tuckahoe/>

### [Ashburn Public Library, Ashburn, VA – USA 2003](#)

23.000 sqf., \$ 4.500.000, Client: Loudoun County

The Ashburn Library in Ashburn, Virginia, was recently recognized with a 2008 Signatures of Loudoun Design Excellence Award, which commends notable building projects throughout Loudoun County. Designed by PSA-Dewberry, the popular library's distinctive architecture and interior design were cited during the awards presentation.

The 23,000-square-foot library was designed to incorporate regional materials, including traditional brick, split-faced masonry, and a zinc-coated metal roof. The exterior features a metal panel skin that reflects a contemporary aesthetic in keeping with the area's focus on the high-technology market. An extensive use of glass along the façade allows for generous amounts of natural light within the building.

A carefully planned interior supports both traditional library and ambitious community programs, with meeting rooms as well as intimate reading areas. New landscaping and the restoration of a stormwater retention pond enable the site to be used as a community amenity, with walkways, an outdoor overlook, and a small performing arts area.

In addition to the Signatures of Loudoun award, the Ashburn Library earned a "Best New Building Award" from the Northern Virginia chapter of the National Association of Industrial and Office Parks (NAIOP) and has been featured in Inform, the magazine of the Virginia Society of the American Institute of Architects.

## [Diller Scofidio + Renfro, New York – USA](#)

<http://www.dsrm.com>

**Libraries:**

### [The Broad: Art Museum, Los Angeles, CA – USA 2013/2014](#)

Die Stadt Los Angeles hat ein großzügiges Geschenk erhalten: Die beiden Philanthropen und Kunstsammler Eli und Edythe Broad investieren 200 Millionen Dollar in ein neues Kunstmuseum. Der Neubau soll in Downtown Los Angeles entstehen und die Kunstsammlung der Broads, bestehend aus 2.000 Werken moderner und zeitgenössischer Kunst, beinhalten. Gestern stellte das beauftragte Büro Diller Scofidio + Renfro (New York) in L.A. die Pläne für den Museumsneubau vor. Die Broad Art Foundation wird sich auf der gegenüber liegenden Straßenseite der Walt Disney Concert Hall von Frank Gehry und des Museum of Contemporary Arts, kurz MOCA, auf der Grand Avenue im Herzen von L. A. erheben. Die Architekten beschreiben ihren Entwurf mit zwei Schlagworten: „the veil and the vault“, was so viel bedeutet wie „Schleier und Gewölbe“. Beim Betrachten der Renderings wird klar, wovon die Architekten sprechen. Beide Gestaltelemente verflechten die zwei vorgesehenen Nutzungen des Neubaus miteinander: Im Obergeschoss die weitläufigen Ausstellungsräume, die überdacht werden von einer transluzenten, aus Wabenformen bestehenden Deckenstruktur. Darunter ein sich auf zwei Geschossen ausbreitender, massiv wirkender und von Gängen und Kanälen durchzogener Gewölbekörper, in dem sich die Funktionsräume der auf Kunstbücher spezialisierten öffentlichen Bibliothek mit Archiv-, Magazin- und Büroräume sowie Lobby, Bookshop und Cafeteria befinden. „Unser Ziel war es“, so Elizabeth Diller, „neben der viel größeren, überschäumenden Architektur von Gehrys Concert Hall bestehen zu können. Im Gegensatz zu der glänzenden, reflektierenden Fassaden der Concert Hall wird „The Broad“ eher porig und löchrig wirken. Die schleierartige Fassade soll eine Rolle bei der Reurbanisierung der Grand Avenue spielen, indem sie Blicke zwischen Innen und Außen zulässt und sich eben nicht hermetisch von der Außenwelt abschirmt.“

[http://www.baunetz.de/meldungen/Meldungen-Diller\\_Scofidio\\_Renfro\\_planen\\_Museum\\_in\\_L.A.\\_1483813.html](http://www.baunetz.de/meldungen/Meldungen-Diller_Scofidio_Renfro_planen_Museum_in_L.A._1483813.html)

.....Located across the street from Walt Disney Concert Hall and the Museum of Contemporary Art, The Broad will also serve as the headquarters for the foundation's worldwide art lending library. In addition to paying for the building, the Broads are funding the museum with a \$200 million endowment – larger than the combined endowments of the Los Angeles County Museum of Art and MOCA. Joanne Heyler, the director/chief curator of The Broad Art Foundation, will also serve as director of the museum.....

<http://www.dezeen.com/2011/01/07/the-broad-by-diller-scofidio-renfro/>

Dubbed „the veil and the vault“, the museum's design merges the two key programs of the building: public exhibition space and the archive/storage that will support The Broad Art Foundation's lending activities. Rather than relegate the archive/storage to secondary status, „the vault“ plays a key role in shaping the museum experience from entry to exit. Its heavy opaque mass is always in view, hovering midway in the building. Its carved underside shapes the lobby below and public circulation routes. Its top surface is the floor of the exhibition space. The vault is enveloped on all sides by the “veil”, an airy, cellular exoskeleton structure that spans

across the block-long gallery and provides filtered natural daylight. The museums “veil” lifts at the corners, welcoming visitors into an active lobby with a bookshop and espresso bar. The public is then drawn upwards via escalator, tunneling through the archive, arriving onto an acre of column-free exhibition space bathed in diffuse light. This 24’ high space is fully flexible to be shaped into galleries according to curatorial needs. Departure from the exhibition space is a return trip through the vault via a winding stair that offers glimpses into the vast holdings of the collection. (Diller)

### [The Juilliard School, Renovation / Expansion, New York, NY – USA 2009](#)

The Juilliard School now includes 45,000 square feet of new facilities and 50,000 square feet of renovated spaces. The renovation and expansion reinterprets the identity of the original building while maintaining a clear distinction between the old and the new. The redesign of Juilliard turns the school inside-out. The activities within the halls, studios, and other education spaces are now revealed to the rest of the city; the once hidden practice rooms of Juilliard become performance spaces for passers-by on the street.

The structural limitations of the existing facility were used as an opportunity to create an identity with far greater visibility for Juilliard. Since the expansion could not be built above the school, it took the form of a three story volume that hovers over a public plaza along Broadway (building out instead of up; see image 1). The public spaces below the expansion now experience 24 hours of public life—people eat, lounge, play and are provided opportune moments to observe the inner workings of Juilliard (one of the dance studios protrudes into the public space—like a billboard—providing a rare glimpse into the practices of the school; see images 2 and 3). 1. A new three story volume “hovers” above a public plaza. 2. New dance studio can be seen from the street. 3. New dance studio. Specialized Spaces: Juilliard’s new interior spaces have highly technical needs for acoustic isolation and acoustic flexibility for a variety of sound requirements. They are both private education spaces and spaces for public performance, and walk the link between rough and ready and elegant and refined. In the black box theater (image 4), wall cladding is perforated plywood. An inexpensive and readily available material, the panels can be nailed and clamped to, repainted and replaced with ease. The perforations allow for acoustical absorption and are backlit, providing an elegant and consistent backdrop for performances that do not require a set. The walls of the Orchestra Rehearsal Space (image 5) are made of reversible panels with acoustically reflective material on one side and an absorptive material on the other. This allows the room to be tuned as needed. Some of the more specialized spaces include a manuscript reading room where rare manuscripts are displayed and studied by international scholars. The room is designed as an elegant treasure cabinet. The new music technology department brings together cutting edge A/V equipment with a suite of sound-isolated rooms where rehearsing, recording and mixing can all occur. 4. New black box theater, 5. New orchestra rehearsal space, 6. Rare manuscripts reading room, 7. New jazz rehearsal space, Social Spaces: Well-distributed “hang-out” spaces throughout Juilliard encourage the serendipitous encounters where creative and intellectual exchange often happen. The myriad of corridors throughout Juilliard were expanded and broadened into public spaces. Along 65th street, access is provided to Juilliard through a new grand lobby stair. The risers morph into couches and seats, providing a space for students to gather, 8. Informal gathering spaces, 9. New grand lobby stair, 10. Stairs morph into seats for students, faculty and visitors. Scale: 95 000 sqf, New and Renovated Spaces: Entrance lobby, Box office, Black box theater, Orchestra rehearsal space/recording studio, Jazz studios, Dance rehearsal studio, Library expansion, Rare music manuscripts archive, Rehearsal rooms, Classrooms

Administrative offices, Lounges.

About Diller Scofidio + Renfro

Diller Scofidio + Renfro is an interdisciplinary design studio that uniquely integrates architecture, the visual arts, and the performing arts. Elizabeth Diller and Ricardo Scofidio founded the practice in 1979; Charles Renfro was made Partner in 2004. In 1999-2004, the MacArthur Foundation presented Ms. Diller and Mr. Scofidio with the ‘genius’ award, the first awarded in the field of architecture. For their contribution to art and design, Ms. Diller and Mr. Scofidio were named amongst Time Magazine’s 100 Most Influential People of 2009. In early 2009, all three partners were featured in a one-hour segment with Charlie Rose. Recently, The New York Times, Los Angeles Times, and The New Yorker named Alice Tully Hall and the High Line among the most culturally significant projects of 2009. Among the various projects of Diller Scofidio + Renfro: Lincoln Center for the Performing Arts in New York, including the redesign of Alice Tully Hall and the renovation and expansion of The Juilliard School; the High Line, an urban park situated on an obsolete elevated railway stretching 1.5 miles long through New York City; the expansion of the School of American Ballet; the Institute of Contemporary Art on Boston’s waterfront; the Creative Arts Center currently under construction at Brown University; and the Museum of Image & Sound currently in design on Copacabana Beach in Rio de Janeiro, Brazil. Diller Scofidio + Renfro is currently collaborating with the Australian Dance Theatre on Be Your Self, a dance production for the Adelaide Festival of Arts in Australia.

### [DLR Group \(Dana Larson Roubal Associates\), Chicago, IL / Omaha, NE \(and other places\) – USA](#)

<http://www.dlrgroup.com>

**Libraries:**

#### [Udvar-Hazy Library and Learning Center, Chris & Stephan Embry-Riddle Aeronautical University, Prescott, AZ – USA 2008](#)

32,572 sqf., € 7.661.402

With about 1,650 students, Embry-Riddle Aeronautical University is the only accredited aviation university in the world. This new 32,500-square-foot Library and Learning Center is the first project in the university’s updated master plan. The design concept for the Udvar-Hazy library uses flight as a metaphor. The building is composed of metal and glass, and seems to above the ground. The building’s main entry is defined by an internally illuminated staircase that evokes the technological underpinnings of aeronautical education. The ascending staircase evokes flight, lifting students from the classrooms on the first floor to the resource center and commons on the second floor. The second level cantilevers in two directions; coupled with extensive glass, the space encourages informal learning surrounded by limitless views of the horizon.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3353](http://schooldesigns.com/Project-Details.aspx?Project_ID=3353)

#### [Century College, Science and Library Building, White Bear Lake, MN – USA 2008](#)

73,930 sqf., € 17,397,521

The new mantra for Century College is “learning-centered community,” and the Science and Library Building embodies this mission. The first new campus structure in 17 years, the Science and Library Building was designed to be a hub for academic and community engagement. Built-in window seats, a fireplace, coffee shop and alumni hall combine to create a relaxed and Libraries/Media Centers environment for students and faculty to lounge, study or quietly socialize. The Science and Library Building was situated strategically at the end of a skybridge that joins the East and West campuses. The result is increased foot traffic through social learning areas that encourage student, faculty and staff interaction. Housing 5,000 lineal feet of bookshelves, nine science labs and five science classrooms, the new building combines the West and East Campus libraries, and consolidates science instructional areas into one central location. The building is built to exceed state energy-efficiency standards by 30 percent and features a glass southern elevation that electronically shades to reduce the need for air conditioning in the summer.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3575](http://schooldesigns.com/Project-Details.aspx?Project_ID=3575)

### [Brokaw Early Learning Center, Oswego Community Schools, Oswego, IL – USA 2007](#)

39,800 sq.ft., € 9,075,082

Brokaw Early Learning Center is designed to meet the needs of young children, many with learning or physical disabilities. The facility features four small houses that pinwheel around a central core of shared facilities. Each house consists of five classrooms surrounding a light-filled living room, serving as the hub of the instructional program. From Portfoliostudent’s perspective, this reduces the scale of the school to just five classrooms and a living room. In-floor and ceiling heat provides thermal comfort in response to the activities on the classroom floor. The many attributes of the school give students a place where they, during the most critical development period of their lives, can learn how to learn—a trait necessary for life. Undulating gable roofs allow natural light to penetrate 100 percent of all classrooms and more than 85 percent of the total building area. Additional windows are raised just off the floor so students of all abilities can connect with the outdoors. A child-friendly scale throughout the facility is created with horizontal lines through color, materials and texture.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3248](http://schooldesigns.com/Project-Details.aspx?Project_ID=3248)

### [Elk River Library, Elk River, MN - USA 2007](#)

The LEED Gold Elk River Library is a component of the new Elk River Civic Complex, adjacent to an existing city hall and public safety building. The library embraces sustainable design features including extensive daylighting controls, geothermal heating/cooling system, displacement ventilation, and adjacent water gardens.

The open floor plan allows for efficient library staffing. Special areas are designed with specific user groups in mind, including an enhanced children’s area, a teen area, a reading room, quiet study rooms, and central fireplace. A large multi-purpose room is available for various public events and meetings. The library is placed on its site to maximize views of Orono Lake and is sustainably designed to allow for future expansion of double the existing 16,600 square footage.

<http://www.dlrgroup.com/?p=3.13.8>

[http://libraryarchitecture.wikispaces.com/Elk+River+Public+Library,+Great+River+Regional+Library,+Elk+River,+MN+\(building\)](http://libraryarchitecture.wikispaces.com/Elk+River+Public+Library,+Great+River+Regional+Library,+Elk+River,+MN+(building))

### [Chisago Lakes Area Library, Chisago, MN – USA 2005](#)

This 12,000 SF library is a collaboration between four cities and three townships. The library is designed with state-of-the-art technology and every library amenity.

The single level building is fully accessible to all users and staff. Large windows provide picturesque views of two nearby lakes. A large multi-purpose room provides meeting space that can be used by community groups outside of normal library hours. Pedestrian accesses, bike racks, ample parking and a bus drop make the library accessible to all.

Chisago Lakes Area Library has an open floor plan. Durable, low maintenance materials were selected for both the interior and exterior. The overall design allows for future expansion.

<http://www.dlrgroup.com/#/3.13.7/>

### [Tonopah Valley High School, Tonopah, AZ – USA 2005](#)

CLIENT : Saddle Mountain Unified School District, AREA 109,700 sq.ft., TOTAL COST \$14,600,000.00, COMPLETION DATE 9/2005

The design of this master-planned campus responds to the district’s objective of creating an educational village that serves all school-age groups and the public. Tonopah Valley High School, a district office and bus maintenance facility are adjacent to the elementary and middle school buildings.

Tonopah Valley offers an interactive and diverse curriculum focused on students’ needs. For example, the vocational-education building offers several career technical educational programs for high school and middle school students.

The campus’ efficient organization, developed through a community-based process, facilitates shared inter-campus functions. All student groups use the central kitchen, performing-arts area and vocational education. The public has access to the district office, athletic facilities, library and auditorium.

Inspiration for the exterior color and material palette came from the area’s ancient petroglyphs. Large shapes are cut out of gray metal panels mounted over areas of tan, smooth-faced concrete masonry, replicating petroglyphs carved into the ancient basalt by Native Americans who settled in the Tonopah Valley. These Native American symbols also help facilitate wayfinding.

Energy-saving features include locally produced and recycled materials, high-performance glass, decomposed granite, native trees, synthetic grass turf (Arizona’s first) and xeriscaping, daylighting, window-shading devices, air monitors, air-side economizers, programmable thermostats, occupancy sensors and efficient lamping.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=2952](http://schooldesigns.com/Project-Details.aspx?Project_ID=2952)

### [Rosemont High School, Sacramento, CA – USA 2004](#)

CLIENT Sacramento City Unified School District, AREA 273,796 sq.ft., TOTAL COST, \$66,000,000.00, COMPLETION DATE 7/2004

Providing the ultimate in educational flexibility, Rosemont offers four classroom clusters that revolve around a central flex-lab—an open space designed for a variety of project-based or collaborative learning opportunities across disciplines. Classroom clusters can be organized departmentally, in a grade-level configuration, or into smaller learning communities. story of the classroom building typically contains 12 to 14 multipurpose classrooms, a centrally situated flex-lab and a teacher-planning center.

This multiple-building campus plan maximizes natural light in classroom areas, reduces the scale of the facility, and provides access to outdoor teaching and gathering areas. Rosemont's six academic buildings are organized around a pedestrian street and central courtyard that serves as the campus hub, and contains a multipurpose amphitheater and outdoor dining area.

The initial phase of construction includes the administration building, two two-story classroom buildings, the library/media center and laboratory building, the student commons/physical-education and athletics building, and the music and arts portion of the fine-arts building. The second phase includes the fourth classroom house, an auditorium and a swimming pool.

### [Creighton Preparatory School, Instructional Media Center Library, Omaha, NE – USA 2004](#)

6.000 sqf., \$ 450.000

The transformative renovation of Creighton Preparatory School's media center has been received so well that one student said it felt like a "new-age club." Each piece fits perfectly, like books stacked and racked on the shelves. The design plays to users' visual senses with each archway, serpentine table and pathway intended to facilitate student movement and study with Interior Renovation and style.

Elements that were identified to enhance the library's appeal:

- Adding a new main entry.
- Replacing all furniture and shelving.
- Offering a variety of student workspace.
- Changing the lighting and ceiling.
- Applying eye-catching signage.

Furnishings are the main attraction. Custom tables provide laptop access and security. New laptops that remain in the classroom were relocated to provide complete visibility of students with a designated area for collaboration in the workroom. Indirect lighting and a stunning ceiling design provide balance.

Student workspace offers flexibility so a classroom can serve as an instruction lab, computer lab, meeting room, theater or lecture hall. This space shows impeccable style and functionality.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=2526](http://schooldesigns.com/Project-Details.aspx?Project_ID=2526)

### [Pine Creek High School, Colorado Springs, CO – USA 1998](#)

Client : Academy School District 20, 265.000 sqf., \$ 15.870.000

City and state officials, as well as the high-tech industry, combined their efforts with the principal of the high school to create a technology magnet facility. This school prepares students for college or employment in regional business and provides them with a sense of community. The city of Colorado Springs expedited utilities, and the state designed a highway several months ahead of schedule to help build Pine Creek High School on 42 acres of developer-donated land.

Designers helped to realize the principal's vision of a school that could deliver a state-of-the-art technological curriculum in a nurturing environment.

Eight individual classrooms form the periphery of each of four housing pods. A "technological commons" is the nucleus of each pod, where teachers can bring individual classes for computer work or join other groups for guest speakers. Eight science classrooms, with several safety features, are clustered between the four pods.

The main entranceway reflects the community use of the school. Separate entrances to the library, gymnasium and auditorium enable public access to those facilities.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=385](http://schooldesigns.com/Project-Details.aspx?Project_ID=385)

### [Moon Mountain Elementary School, Phoenix, AZ – USA 1998](#)

Client : Washington Elementary School District, 73.000 sqf., \$ 8.660.000

Moon Mountain Elementary School is a new 108,000-square-foot, two-story K-6 school. Working with administrators, teachers, custodians, parents and students, the following concerns were addressed in the school's design: identifiable and single point-of-entry; natural light for all classrooms; natural materials to match the surrounding neighborhood; separation of age and public functions from classrooms; easily traversed circulation; media center serves as the school's core hub; playgrounds zoned for appropriate age groups.

Using these issues as a baseline, the design team developed a spoked floor plan with classroom wings radiating from the media center, which allows for three classroom wings and a public wing. The public wing contains common classrooms, such as the band room, music rooms, art room and multipurpose room. Adjacent to the library are an amphitheater and quiet outdoor teaching zone.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=321](http://schooldesigns.com/Project-Details.aspx?Project_ID=321)

### [Desert Canyon Middle School, Scottsdale, AZ – USA 1996](#)

Client : Scottsdale Unified School District No. 48, 147.000 sqf., \$ 15.300.000

Desert Canyon Middle School is part of a master-planned multiple-use project involving the school district and city of Scottsdale. The master plan includes the middle school, an elementary school, city administrative and police offices, community recreation areas and a public library.

Second-phase construction, currently underway, includes the elementary house. Future phases include the expansion of the library and gym to include a public fitness center and development of additional recreation facilities.

The 1,200-student middle school is composed of eight 150-student academic classroom houses. Specialized classroom buildings offer music, art, physical education and technology. Core shared-use facilities, such as administration, band, art, the library and food service, are sited between the two schools, allowing for separation and easy access.

The cafeteria/auditorium divides into three areas, each with access to the kitchen, which serves elementary students in a speed line and middle-school students with a food court. The facility can be leased for banquet and formal events.

### [Durrant, Dubuque, IA – USA](#)

Posted: Friday, April 20, 2012 2:00 pm | Updated: 3:31 pm, Fri Apr 20, 2012.

BY MARY NEVANS-PEDERSON TH STAFF WRITER MNPEDERSON@WCINET.COM | 0 comments

After nearly 80 years, Durrant Group Inc. ceased operations at midnight Thursday after last-minute negotiations with potential buyers fell through.

The Dubuque-based architecture firm filed for Chapter 11 bankruptcy protection late last year. Leadership hoped to sell the firm to another company to continue "business as usual."

Durrant CEO Charles Marsden held a teleconference with the firm's four locations Thursday to tell them the news. The company's 60 employees were working on about 65 projects across the country, all of which will "stop immediately" Marsden said.

Today, Durrant's headquarters in the Port of Dubuque were locked up and the parking lot empty.

[http://www.thonline.com/news/breaking/article\\_2c08b74e-8b1b-11e1-b141-0019bb30f31a.html](http://www.thonline.com/news/breaking/article_2c08b74e-8b1b-11e1-b141-0019bb30f31a.html)

#### **Libraries :**

#### **[Edith Abbott Memorial Library \(expanded and renovated\), Grand Island, NE – USA 2007](#)**

Durrant provided architectural design, interior design, furnishings, and information systems engineering for this design-build project. Teamed with local architect Cannon Moss Brigger Associates and Mid-Plains Construction Company, this project includes a 25,000 SF addition as well as remodeling the existing 25,000 SF. The program for the library includes public meeting rooms with seating for 160 people, a large children's/family place designed to provide library materials and programs for children, young adult services including a homework center and computer stations, a local history/multicultural center, and a growing audio/visual collection. The library also includes the Friends Bookstore/Cafe/Coffee Shop/Gift Shop. The design team utilized a design workshop approach to develop responsive solutions in a short time frame. (Durrant)

<http://www.gilibrary.com/oldfiles/abbottsinfo.html>

#### **[Arizona School of Health Sciences, Mesa, AR – USA 2001](#)**

100.000 sqf., \$ 11.200.000

A division of the Kirksville College of Osteopathic medicine, the facility offers postgraduate two- and three-year professional specialty healthcare degrees. A curving 55-foot-tall sandstone wall sweeps through the splayed building geometry, providing a backdrop to the northern building entry and the southern outdoor plaza and water feature. Providing a distinct identity and framing the space between the two building wings, the sandstone wall also is used as a backdrop to the two-story indoor lobby. Deep overhangs, steel shade structures and deepened window mullions are used to shade large expanses of glass. The building geometry organizes the space program between east and west for the library, auditorium, tiered lecture rooms and classrooms on the ground floor. Laboratories and faculty offices are on the second floor. Ground concrete floors in the lobby and circulation space provide continuity from the exposed aggregate exterior walkways. The outdoor spaces are developed with shaded areas for socialization and dining, while green lawn areas encourage outdoor recreation.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=1374](http://schooldesigns.com/Project-Details.aspx?Project_ID=1374)

#### **[Cochise College, Benson Center, Benson, AR – USA 2000](#)**

12.500 sqf., \$ 1.860.000

This project, which showcases the vista to the north, includes a media center, distance-learning classrooms, offices and parking for 150 automobiles. The classrooms were organized for maximum flexibility. The rooms can be opened up completely to create a large meeting area, or they can be partitioned into smaller spaces. The college make the facility available hours to local community groups for meetings, conferences, open houses and receptions. The project incorporates a large palette of materials (colored concrete, CMU, painted metal, rusted steel, corrugated metal, aluminum and stone) to achieve rhythms, patterns, textures and colors that relate to the surrounding desert environment and to the human scale. Future phases of the campus will total 100,000 square feet of buildings with parking for an additional 500 automobiles.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=1059](http://schooldesigns.com/Project-Details.aspx?Project_ID=1059)

#### **[Wartburg College, Robert & Sally Vogel Library, Waverly, IA – USA 1999](#)**

72.180 sqf., \$ 4.550.000

Wartburg College began a study of library needs in the early 1990s in response to student and faculty concerns about the aging library. Concerns included the need for updated and additional technical space to support information-literacy instruction in a variety of learning styles and purposes; space to house an expanding collection; handicapped accessibility; and the to address failing mechanical and electrical systems. In response to these challenges, designers recommended a three-level facility, which included 44,000 square feet of renovation; 28,180 square feet of new space; new mechanical and electrical systems; and an elevator for handicapped accessibility. Careful attention was paid to the library's exterior, focusing on aesthetics and the use of masonry materials similar to surrounding buildings. The library's unique design accommodates learners with varied learning styles and purposes. These spaces include a comprehensive advising center, information laboratory, reference collection, 67 computer workstations, center for faculty learning, classrooms, a curriculum wing, video/audio rooms, group-study areas, climate-controlled archives with extra space and a coffee shop. Classrooms provide space for information-literacy instruction.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=807](http://schooldesigns.com/Project-Details.aspx?Project_ID=807)

#### **[Phoenix College, Fannin Library, Phoenix, AR – 1998](#)**

66.000 sqf., \$ 5.384.000

Fannin Library is a powerful addition to the Phoenix College campus. The integration of old and new structures, the accommodation of the program within the budget, and the creation of grand and intimate spaces reinforce the small-school atmosphere beloved by the students attending the college. The original structure is clad in brick with a concrete frame and has designed to blend in with the 1930s-era structures surrounding the library. It was natural, then, that red-brick masonry and cast-in-place concrete were the uncontested materials of choice. Interior spaces are refined in detail with punctuations of red brick at the entrance and stairs. A two-story atrium connects the main level with the upstairs reading and stack areas, and is ringed with delicate aluminum trim and glass railings. The atrium is topped with a north-facing skylight. The library addition fits perfectly with the mission of the college—to provide a quality educational atmosphere, elegant and comfortable, linking the past with a vision to the future.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=747](http://schooldesigns.com/Project-Details.aspx?Project_ID=747)

#### **[Marantha Baptist Bible College, Cederholm Library and Resource Center, Watertown, WI – USA 1996](#)**

24.700 sqf., \$ 2.023.000

Marantha Baptist Bible College wanted a centrally located cultural learning center. The program included a library, computer lab, classroom, special collections and board room. The 24,700-square-foot, two-story library is the second building in a series to handle

the projected growth of the college from 700 to 1,400 students. The Library exhibits a new direction of the historic character of the campus into a new quality of permanent structures, enhancing the image of the college while addressing the growing space needs. To support the campus' new image, the wall of existing coniferous trees were removed and a boulevard-type entrance was constructed, focusing on the library. The character of this building reflects the integration of the cream-colored masonry of the past with the educational technology of the future. Economical materials were still used; however, the warmth of the past was brought out in the carpet, wood, brass and paint, with small accents of stone. The library is the first major new building to flank what is to be a campus quadrangle and is located on a sloping site at the terminus of the new entrance drive. Parking and vehicular circulation in front of the library were reconfigured as part of site development.

## **DWL Architects + Planners, Inc., Phoenix, AZ – USA**

<http://www.dwlarchitects.com>

### **Libraries:**

#### **[White Tank Branch Library & Nature Center, Maricopa County Library District, Waddell, AZ - USA 2010](#)**

The 29,000 SF White Tank Library is a truly unique facility. It is being constructed in a mountain preserve site and includes a Nature Center. Its wrap-around mountain view provided an additional challenge: western exposures that led to extensive shade walls, trellises and blinds as a solution. White Tank's tilt-up concrete and steel structure is part of the reason this is one of the least expensive libraries in the Phoenix metro area. The concrete panels are scored in a pattern similar to nearby rock formations and are lightly-stained three shades of desert green to blend into the site. DWL also helped write a grant that added a 53.2 KW photovoltaic array to the roof, which will meet 27.8% of the building's power needs—part of a total 47.8% electrical savings that will result in a LEED® Gold rating. New technology introduced to library operations include RF (radio frequency) scanning, which will allow staff to automatically sort returned media. This project demonstrates what can be dramatically produced on a low budget and how a library can share a building with other uses—the facility also houses a 4,000 SF interpretive center, operated by Maricopa County Park District staff, which includes animal displays and exhibits designed to educate visitors and provide them a better experience as they explore the 30,000 acre regional park.

2010 Environmental Design + Construction (ED+C) Excellence in Design Award – Government Honorable Mention

2010 Building of America Award - Gold Medal Winner and Featured Case Study

### **References:**

Feb. 2010 Metal Architecture magazine

Designed in collaboration with **Douglas Sydnor Architect and Associates**, the Appaloosa Branch Library design theme celebrates the environment in a protected desert setting. Building finishes play with light like a mirage in northern Scottsdale's upper Sonoran Desert. The library's central location in a new community will establish itself as a cultural focal point for new and old residents alike. Rising from a very functional plan, the 21,500 s.f. library concentrates its interior drama in a single large Reading Room that is 70 feet wide and 130 feet long. The space is naturally lit with indirect light that changes during the day but rarely enters the room directly. Sunsets will color the whole room with changing shades of pink and orange, while thunderstorms will be visible wherever they occur. The Reading Room is separated from staff spaces and meeting rooms by a massive geologically-layered concrete wall. Rooms along the south side are wrapped in iridescent metal and float a few feet above the arroyo. At the west end, the building digs into the earth, but at the east end it opens onto a patio with filtered views of the McDowell Mountains.

#### **[Yavapai College Prescott Campus, Boyd Tenney Library/Computer Commons, Prescott, AZ – USA 2005](#)**

Project Type: Renovation/Modernization, Completion Date: Multiple Phases, Gross Area: 150,000 sq.ft., Site size: 90 acres

Total project cost: \$37,000,000

.....The year 2001 marked a time for radical change for Yavapai College. Burdened with an outdated mid-60s-era master plan, Yavapai College resolved to do better for their flagship campus. A series of interactive, interdisciplinary work sessions led by the DLR design team produced the New Campus Plan that profoundly redefines entry, movement and image.

It is difficult to over-emphasize the psychological and emotional distance the New Campus puts between itself and the former layout, as it completely transforms the way the school presents and understands itself. Boldly replacing a straight-lined access road, the dramatically redrawn serpentine entry drive crests mid-arc with a sweeping 360-degree view of the entire campus, giving immediate understanding of the buildings, parking and other important points. Its terminus places the visitor directly at the Main Plaza, at the heart of the campus, the nexus of all ceremonial and circulatory routes, and focuses on an up-close and powerful view of the exciting New Library and Computer Commons.

Providing a grand stage for the Library, the Main Plaza corresponds to the piazza or the town square in traditional planning, and so it is fitting that the culmination of the entry sequence and the Library are both here. The two-story Library is the jewel set on the Plaza, at the midpoint of an expansive bracelet of newly-defined pedestrian landscaped space that connects all campus learning facilities. This academic greenbelt marks an important change from its precedent, which isolated buildings from one another with treeless parking lots.

The first floor Library and upper level Computer Commons are both accessed by a common, transparent lobby space which overlooks the Plaza. Just outside this glassed space, piercing the monoplane Library roof, is a symbolic spire marking the entry to the building, the grand public space, and the heart of the New Campus.....

### [Burton Barr, Central Library Phoenix, Phoenix, AZ – USA 2004](#)

#### **Awards:**

1997 AIA Excellence for Library Architecture  
1996 Benedictus Award for Ingenuity in the Use of Glass Presented by DuPont in Association with the AIA  
1995 AIA Western Mountain Region Honor Award  
1995 AIA Central Arizona Chapter  
1995 Valley Forward Association Environmental Excellence Award: Public Assembly Buildings & Structures  
1995 Library Association Award

The Burton Barr Library demonstrates an award-winning collaboration with Will Bruder (see: <http://willbruder.com>) that successfully responds to site, program and budget considerations, while creating a symbolic destination for downtown Phoenix. Innovation abounds in this design: a tension structure suspends the roof above the building's columns and side walls; sensors regulate a computerized louver system on the building's glazed south side, reducing solar heat gain; and the building's five-story atrium is topped by 22 skylights, which track the sun's movement and ensure constant natural daylight. All this is augmented by a modular lighting system so efficient it received the largest energy conservation rebate ever awarded by the local utility company, Arizona Public Service.

### [Paul A. Elsner Library and High Technology Complex, Mesa Community College, Mesa, AZ – USA 2000](#)

The 94,000 SF Paul A. Elsner Library and High Technology Complex's three stories of flexible space combine traditional library functions with computer and multimedia commons, mediated classrooms, video communications network studios, administrative offices and student services. The support spaces are on the perimeter, so internal flexibility is maximized, while a dramatic stairway ties all levels together. Glass-walled collaborative study rooms face an open garden, enabling faculty and students to interact more freely. The building is accentuated with turquoise colored heat-resistant glass, metallic trim and sun shading—all elements sensitive to the building's desert locale. A skylight brings natural light to the middle of the building, while the third floor's two large outdoor reading decks expand usable library space to take advantage of the climate. This project also included a complete renovation of the existing library and the addition of a cyber café, which was designed with the participation of Mesa Community College interior design students.

### [Glendale Foothills Library, Glendale, AZ – USA 1999](#)

#### **Awards:**

2000 Valley Forward Association Environmental Excellence Merit Award  
2000 Metal Architecture Interior Honor Award  
1999 Arizona Masonry Guild – Excellence in Masonry Award

DWL designed the library's curved floor plan in response to the constraints of its site. With approximately five acres to accommodate the building and required site elements, the curve prevented the library from appearing cramped between its access road and the neighboring park. The primary design goal for this project was to eliminate damaging direct sunlight. North-facing window walls admit indirect light, and the east and west walls feature "lizard eyes"—protruding wall sections housing north-facing windows. Internally, the curved walls create the illusion that there is always something more to see around the bend. Floor patterns, furnishings and artwork echo this free-formed theme. Through its use of indigenous materials, such as copper and brickwork laid in a Native American basket weave pattern, the library's exterior exemplifies a new Southwestern regionalism. The tri-color pattern integrates the building into its desert environment, matching the colors of nearby hills, rocks and grasses. Spectacular mountain views and desert landscape integrate the form of the building with its surrounding area.

### [Ensworth Middle School, The Hortense Bigelow Ingram Library, Nashville, TN – USA 2003](#)

CLIENT The Ensworth School, AREA 64,000 sq.ft., TOTAL COST \$9,645,000.00, COMPLETION DATE 8/2003

A significant portion of the new two-story middle school campus is the Ingram Library, which is designed for use by both the lower and middle schools. Study rooms, a classroom, conference space, a reading room for the lower school, and an outdoor reading patio are included in the library's program. Unique design features include a monumental stone fireplace and ADDITIONAL

#### INTERIOR CATEGORY

Libraries/Media Centers seats. A combination of carrels and tables, as well as soft seating, is available. A two-story space includes an open balcony and a wooden truss ceiling.

The library holds more than 20,000 volumes housed in three areas. Double stack spaces are provided along with technology. This new structure allows several classes to use spaces concurrently—something not possible before.

The architectural design follows the existing Tudor style of the campus that dates back to the site's original house, called Red Gables. The building is designed with box and bay windows, diamond-shaped window lights and dormers, and EIFS with batten exterior trim.

The building materials, color, furniture, and use of light and space create an atmosphere that is conducive to learning.

"Waggoner Library and Center for Instructional Technology." *2001 Tennessee Construction Review* (2001).

The Waggoner Library was opened in 2000 to much acclaim by Trevecca Nazarene University and the architectural community in Nashville. Designed by Wendell D. Brown and the Earl Swensson Associates, Inc., the building takes its cues from the original campus architectural palette and also a renewal project of 1995 that included a master plan by Al Raby of RM Plan Group, Nashville, TN. The building is named for Don and Zelma Waggoner of Greenville, SC, generous benefactors of the university whose gifts in 1998 also funded the new campus entryway.

The building's exterior is covered with a man-made version of the limestone (Arriscraft), the look of which distinguished the campus' first wave of buildings between 1939 and 1962. The design features two signature elements: a two-story curtain wall rotunda which faces the entrance to the campus and serves as a welcoming beacon for visitors, and a colonnaded main entrance on the west side of the building whose porch offers a spectacular view of downtown Nashville. The drum of the rotunda is anchored by a set of four windows that relate to the university's Christian mission. The colonnade similarly features a series of four matched, double columns, sitting on stone pedestals with a single matching pilaster near the main entrance. On the east elevation, the university seal with a cross, Bible, globe, and school motto "esse quam videri (To be rather than to seem)" is set in a large concrete relief.

The interior of the building has more than 60,000 square feet of study space with an 80-seat, state of the art technology/conference room, several computer labs, group study rooms, library offices, and a television studio. The main reading room is located in the double height, glass-enclosed rotunda, which provides lots of natural light and beautiful views of the campus. Signature circle-T handrails throughout the building emphasize the university's name in the stairwells and on the upstairs balcony overlooking the rotunda's interior.

The library has been featured in a number of publications and its design was selected for display at the meeting of the Exhibition of School Architecture (2001) held by the National School Boards Association and the American Institute of Architects.

<http://www.edge-studio.com>

#### Libraries:

### [East Liberty Branch Library, Pittsburg, PA – USA 2010](#)

Client : Carnegie Library of Pittsburgh, LEED™ Silver Certification

## Awards:

The project received a 2011 AIA Pittsburgh chapter award

The design team worked with the Carnegie Library of Pittsburgh to fully renovate the existing 33,000 sf, 1967 facility and provide a 9,000 sf addition which facilitates a complete reorganization of library services.

The existing building was completely transformed by removing its uninsulated, single glazed envelope and expanding the structure to enlarge the facility and to give shape to a building which would have a greater visual presence when approached from all nearby streets. The new exterior wall assembly helps to provide for a highly sustainable building with a thermally superior envelope.

At the interior, the space was reorganized to locate all of the main library services, including adult, teen and children's department services on a single floor with maximum staff sight lines to minimize staffing requirements. Accessibility, both physical and visual, is important to the visitor experience. That the library is welcoming to its diverse customer base, and that all visitors can orient themselves to the space immediately upon entry ensures that services are readily perceived. An atrium connects the first floor to the second floor. At the second floor, four meeting rooms, two which can be combined by way of a folding acoustic partition into one large room, were provided along with open office space for central library operations. (EDGE)

The expansion/remodel of the East Liberty Branch of the Carnegie Library of Pittsburgh (CLP) added a two-story 9000 square foot space that includes meeting rooms and enhanced services for patrons of all ages. The upper floor projects the structure into the access corridors of three major streets, providing the library with a more prominent footprint. The lower level now houses the CLP Heritage Collection.

## Carnegie Library of Pittsburgh, Main Facility, Pittsburgh, PA – USA 2004

Opened: 1895

Longfellow, Alden & Harlow (later Alden & Harlow), of Boston, Massachusetts, and Pittsburgh, Pennsylvania,[1] was the architectural firm of Alexander Wadsworth Longfellow, Jr. (1854–1934), Frank Ellis Alden (1859–1908), and Alfred Branch Harlow (1857–1927). The firm, successors to H. H. Richardson, continued to provide structures in the Romanesque revival style established by Richardson that is often referred to as Richardsonian Romanesque.

Officially, the firm was Longfellow & Harlow from 1886 until March 1887, with Alden participating as its agent.[1] Then, it was Longfellow, Alden & Harlow, until 1896, when it became Alden & Harlow.

1890: Andrew Carnegie offered the City of Pittsburgh \$1 million to build and equip the Main Library and five branches.

Client : Carnegie Library of Pittsburgh Project : Expansion and renovation of Main Facility Date of Completion : 2004

## Awards:

This project won a Pittsburgh Chapter AIA Award in 2005 and a Info Comm/Archi-Tech Magazine Grand Prize Award in 2006.

EDGE studio provided architectural services for the renovation of the Carnegie Main Library of Pittsburgh, the first free public library in the United States. The library established three goals for the project: to make the library a destination, increase user-base, and make information more accessible to users.

Meeting these goals required an investigation into 1) the customers who use the library and 2) the way they search for information. From this information, EDGE developed a plan for an efficient, user-based facility that would assimilate the library's digital, physical and human resources, allowing users to locate useful information quickly.

This design employs a system of glass panels as a technological platform for the display of current events, resources and relevant items from the library's collection in response to each user's search. Gracefully assimilated with the historic architecture of the existing building, the panels reveal new possibilities for discovery while allowing advanced resources and groundbreaking user technologies to coexist with the timehonored sophistication of the nation's first free public library. (EDGE)

## EHDD Architecture ( Esherick Homsey Dodge Davis), San Francisco, California – USA

<http://www.ehdd.com>

### Libraries:

[Moffitt Undergraduate Library Renovation, University of California, Berkely, CA – USA on design](#)

Size : 134,000 sq. ft.

The renovation of this undergraduate library, standing at the heart of the campus, will reflect student needs and modes of learning that have evolved greatly since the building first opened in 1970 on the University of California, Berkeley campus. Challenged to efficiently meet sustainability and programmatic goals, Moffitt's transformation relies on a precise economy of moves to achieve meaningful change. A new atrium will draw daylight deep into the space and improve navigation and interconnectedness between floors and uses. A gracious entry gallery for hosting events and exhibitions of university research will precede the secure space of the library. The gallery's direct connection to the adjacent Gardner Stacks (also designed by EHDD) allows the removal of Moffitt's duplicative print collection, opening space for vital new programs and uses.

## City College of San Francisco Chinatown, North Beach Campus – USA 2012

193,032 sqf.

"Vertical" college campus provides gateway to the future

EHDD's design of the new Chinatown/North Beach campus for City College of San Francisco exemplifies our firm's strengths: innovative design that makes the most of its location, while respecting the interests of our client, the users, and the community.

The project is a result of over 30 years of grass-roots community activism to bring a college campus to a traditionally under-served community. The design process required ten years of stakeholder buy-in from wide ranging interests such as the San Francisco political community, historic preservationists, and educators. The goal of the project was to find a balance in creating a building that

fits into the nearby Financial District, Chinatown and the Jackson Square Historic District, while simultaneously incorporating 21st century teaching, technology and innovation. The building provides 39 classrooms and laboratories, administrative offices, library and a community room which opens up into a terrace overlooking Portsmouth Square. (A 4-story annex houses the culinary program which includes a teaching kitchen, a community auditorium, four classrooms and a public café.) The result is an artful combination of technology and transparency resulting in a compact (.25 acres), open and dynamic 14-story “vertical” campus serving over 4,000 students a day in the heart of the Chinatown community.

Taking full advantage of its urban site, the project is located within close proximity to an extensive public transportation network. Bike racks and showers are provided as an additional option for urban commuters. Almost all of the students live, work, or do business in Chinatown and nearby neighborhoods and attend college programs during the course of their busy days in the community. More than 90% of students walk or ride public transportation to class.

The project is slated for LEED® Gold certification, and creates a transparency that makes clear to passersby the building’s academic purpose. In the context of a project that required the buy-in of a wide variety of interests, the ambitious green goals have been key in winning public support and creating a building that will serve as an anchor for the community.

### [Tanimura and Antle Family Memorial Library, California State University, Monterey Bay, Monterey, CA – USA 2009](#)

150,000 sqf., \$ 54,000,000,

#### **Awards:**

**2010 LEED-NC Silver U.S. Green Building Council  
National Technology Award, 2nd Place**

This new campus centerpiece will be at the hub of academic activities and anchor the campus quadrangle. The program includes book stacks, 1,600 study nooks, 350 computer stations, a 24-hour computer/study room, a 200-seat auditorium, a 100-seat classroom, five small classrooms, 24 collaborative study rooms, offices, and a ground floor café. The library will also serve the community as a public library. The open 2,200 square foot reading room with adjoining catering kitchen and balcony can be used for community and campus events, special lectures, and exhibitions. Our energy analysis influenced design of the building envelope and glazing systems for optimum energy-efficiency. Mechanical systems feature an underfloor air distribution system throughout, as well as an energy efficient central plant providing the building with its own chilled water utilizing a high-efficiency VFD chiller. Our design exceeds California’s 2001 energy code by 30%. LEED Registered, the building is designed to achieve a LEED Silver rating from the U.S. Green Building Council, and is enrolled in PG&E’s Savings By Design program.

<http://www.gb-eng.com/projects/detail/232>

The new campus library serves as the centerpiece for the University’s emerging campus. An attractive circular plaza defines the building’s entry, and a sweeping three-story atrium running the length of the building brings daylight into the Library’s interior. Reading spaces are located along the atrium and in the daylight zones along the window walls, while the library stacks are located on the interior. To serve as the social and intellectual hub of California State University, Monterey Bay, the library includes fully wired classrooms, a 24-hour computer facility and café, auditoriums, and a state-of-the-art distance learning facility. The Library is certified LEED Silver and features a range of sustainable design strategies from daylighting and low-energy use to healthy carpets, water conservation, and high-recycled content materials.

<http://www.ehdd.com/4862>

### [San Mateo Public Library, San Mateo, CA - USA 2006](#)

90,000 sqf.

#### **Awards:**

**LEED Gold U.S.Green Building Council  
2007 Green Building Award Sustainable San Mateo County  
2006 Merit Award for Green Building California Construction “Best of 2006”  
2006 Merit Award for Civic Building California Construction “Best of 2006”**

The San Mateo Public Library’s design evolved out of an extensive public workshop process that solicited input from the community about the building’s massing, the quality of interior and exterior spaces, and the community’s concern about noise levels. The library’s design satisfies community desires while presenting a strong civic image and establishing a new landmark in downtown San Mateo. As a resource center for literacy and lifelong learning, the library features 100 public internet terminals, expanded reading and study areas for children and teens, and a sustainable, energy-efficient design. An airy two-story lobby, transparent to the street, serves as a welcoming orientation hub. Entering patrons can see through to all levels of the building; an information booth supplements any orientation needs. The building undulates inward to preserve an existing redwood grove, and a mezzanine level opens to the grove with tall windows. On the second floor, a two-story central reading room further aids in ease of orientation and brings daylight into the building’s center from high clerestory windows, offering a comfortable space to visitors. Lighting and window shades are photocell activated for daylight control. Solar heat gain is controlled with sunshades and high performance glazing. The three-story building has two levels of underground parking. The architects, EHDD Architecture, used the latest technologies, including raised-access floors, a mechanized book storage system, electronic checkout, and wireless technology to accommodate the patrons. The library embraced several energy, material, and water conservation strategies. It is the first of a new generation of EHDD under-floor air projects and is full of interconnected multi-story spaces with natural ventilation and daylight. The library has quickly become San Mateo’s premier civic building and a well-liked public destination.

### [Merril-Cazier Library, Utah State University, Logan – USA 2006](#)

Size : 189,000 sq. ft.

#### **Awards:**

**Merit Award Excellence in Interior Architecture /AIA San Francisco 2007  
Honorable Mention IIDA Northern California Chapter**

A hub of campus life, the Merrill-Cazier Library is a warm, light-filled place to study and to socialize, a place where students and faculty come together as a community. It anchors a new quadrangle, forming a new academic core for the Utah State University campus. It updates and expands an existing science library, remedying deficiencies and incorporating the latest technologies, while

respecting both the original building and the scale of the existing campus. On each floor, reading, study, and staff spaces face east to capture magnificent views of the Rocky Mountains, as well as carefully controlled natural light.

<http://www.ehdd.com/work/merrill-cazier-library>

Library services at Utah State University are provided in the Merrill-Cazier Library, a newly constructed facility that combines collections that were formerly housed in two buildings. Merrill-Cazier Library opened in September 2005 and houses materials in the arts, humanities, social sciences, agriculture, life and physical sciences, medicine, and engineering. The new library building (305,000 sq. ft.) was constructed from the existing Cazier Science and Technology Library, expanding the original building of 116,000 sq. ft. with an additional 189,000 sq. ft., thus replacing the 202,000 square feet of the Merrill Library building. Despite having slightly less total space, several technological innovations make the new library a much more functional building. An automated storage and retrieval system (ASRS) has capacity for over 1.5 million new volumes, allowing for approximately 20 years of collection growth. In keeping with the University's land-grant mission the Library has named the automated storage and retrieval system the BARN (Borrowers Automated Retrieval Network). Lesser-used books and all bound volumes of periodicals are stored and retrieved on demand from the BARN. Library users may use the Library Online Catalog from their offices, homes, or any computer with network access to request materials from the BARN. The materials are retrieved and made available at a service desk in the library within minutes of the request. The new library makes extensive use of computer technology for staff and library users as well. An Information Commons will offer over 150 workstations from which USU students and faculty will be able to use a wide variety of productivity software, such as word processing, spreadsheets, digital image manipulation, and statistical packages. Librarians and computer support staff work in tandem to provide technological training and research assistance to customers in the Information Commons. The Merrill-Cazier Library provides extensive service hours during the day, and is accessible to the USU community and the general public throughout the year (except during designated University closings). The new building has 305,000 total square feet, with a seating capacity of over 2,000.

<https://library.usu.edu/portrait/>

### [Christopher Center for Library and Information Resources, Valparaiso University, Valparaiso, IN – USA 2004](#)

Size : 180,000 sq. ft.

#### **Awards:**

Merit Award for Architecture. AIA Colifornia Council 2008

Library Interior Design Honor Award 2006

International Interior Design Association / American Library Association 2005 Distinguished Building Award

AIA Chicago 2005 Excellence in Architecture Award

AIA San Francisco 2005 Regional Award for Interior Lighting Design International Interior Design Association / American Library Association 2006

Comprising 105,000 square feet (9,800 m<sup>2</sup>) of space, the building was designed by Esherick Homsey Dodge & Davis of Chicago, which sought to "break the mold" of institutional libraries. Part of a \$33 million project, the Christopher Center was made possible through gifts from alumni and friends, including a \$16 million gift from Jay Christopher and his wife Doris. Support of the University's Three Goals, One Promise campaign made construction of the building possible. Among the major donors to the building project are those whose gifts are recognized in special areas of the building. The grid-like structure flanking the south and east sides of the building's exterior provides an interesting appearance for the building while serving as a valuable sun screen. This protects the books from harmful, constant exposure to sun rays and helps soften the sunlight entering the two-story reading room overlooking Resurrection Meadow south of the chapel. At the same time, spaces throughout the facility are bathed in natural light.

#### **Building features**

The wireless building accommodates current study preferences by replacing study carrels with soft furniture in "living room" settings, several complete with fireplaces. Food and beverages are available at a café on the premises. There are some 2,400 data ports and 88 wireless access points in the building, all connected by 42 miles (68 km) of data cable. Computer clusters are located amply throughout the building, totaling over 250 individual computers available for student use. Sunshades also automatically lower when too much sunlight is entering the building, and raise when it is dark outside. Books and other traditional information resources mix with computers and access to the Internet on every floor. The computer-driven, robotic Automated Storage and Retrieval System uses space efficiently and allowed the overall shelving capacity in the center to increase to 600,000 volumes without having to increase the size of the building.

#### **Automated Storage and Retrieval System**

Perhaps the best representation of Christopher Center's integration of traditional library services with current technology is the Automated Storage and Retrieval System (ASRS). This combination of robotics and computer system has the capacity to store 300,000 files. Two stories high, the system features bins stacked along two aisles. Materials that are used infrequently by students or faculty are maintained in this location. When one of the 60,000 items is requested, the robotic system locates and retrieves the publication in about 15 seconds. Using a bar code logged into it, the management computer system runs the robot and simultaneously registers the volume's current location in the one of its 1,872 bins. Designed like a combination car-jack and fork lift, the computer-controlled cranes move along the aisles and up or down the stacks of bins to retrieve the requested material and place it on a tray desk in the main circulation area. Provided by a gift from alumnus Herbert F. Stride, this automated storage and retrieval system is one of the first five installed for use in libraries in the nation.

[http://en.wikipedia.org/wiki/Christopher\\_Center](http://en.wikipedia.org/wiki/Christopher_Center)

#### **The heart of today's modern campus**

Today's academic library is both a repository of inherited wisdom and a gateway to the information superhighway. The Christopher Center's role is even more profound: with the Resurrection Chapel, the Center for the Arts, and the Harre Union, it forms the social, intellectual, and spiritual heart of the campus.

The library accommodates all studying styles in large reading areas with lots of activity; small, quieter spaces; a café; and informal reading rooms with meadow views. The building's carefully modeled forms meld seamlessly into the prairie campus. Its monumental masonry screen-wall, a balanced counterpoint to the soaring chapel, modulates natural light, provides solar control, and reduces glare.

Following the campus tradition of low-rise masonry structures, the library was designed from the inside out so that interior spaces provide a selective panorama of the expansive, serene surroundings. An automated retrieval system—originally developed for industrial applications—provides high-density book storage and allows for future collection growth within a smaller building footprint.

The library embraces contemporary campus life, facilitating student study habits, while fulfilling the dean's wish to lead the trend in promoting a new academic library typology. It contributes to the societal advancement of campus and community by combining the

functions of library, classroom and student union into one facility. Library usage in the first year of operation went up 433% from the previous library and has remained steady since the opening.

<http://www.ehdd.com/work/christopher-center-for-library-and-information-resources>

### [Dorrene Zief Law Library, University of San Francisco, California – USA 2003](#)

60,000 sqf.

The Dorrene Zief Law Library extends USF'S existing Kendrick Hall Law School, whose old library paces, approximately 20,000 sqf. on two floors, was vacated and renovated. There was no surge space on the campus, requiring the Law School to stay in operation throughout the complex construction process. The entire building was reorganized, renovated, and brought up to code, and the infrastructure was upgraded and modernized. Completed 2003, it comprises classrooms, lecture halls, seminar and conference rooms, a new moot court, student lounge, clinic, faculty and administrative offices, and student service facilities, as well as underground parking.

### [Montain View Public Library, Montain View, California – USA 1997](#)

60,000 sqf.

Two distinctive built contexts informed the design of this library: On one side, the library joins with City Hall and the Performing Arts building to complete the Civic Center complex; on the other, the library blends into a residential neighborhood with traditional California. Entrances from each side open onto a grand, central lobby, surrounded by collections and support services that require easy access. An elliptical staircase rises to the vaulted spaces of the main collection. Both floors maximize natural light for reaching, take advantage of park views, and offer a rich variety of spaces for patrons to discover, such as the reading rooms, set in octagonal towers. (EHDD)

### [Main Library Complex, Doe Library and Moffitt Library Renovation, University of California, Berkeley, Berkeley, CA – USA 1995](#)

The Doe Memorial Library is the main library of the UC Berkeley Library System on the UC Berkeley campus. The library is named after its benefactor, Charles Franklin Doe, who was persuaded by the then President of the University of California, Benjamin Ide Wheeler, in 1904 to bequeath funds for its construction. It is located adjacent to the Bancroft Library. In 1900, Emile Benard (\*23.06.1844 Godeville (France) - + 15.10.1929 Paris (France) won an architectural competition for the design of the library, and the Classical Revival style library was completed in 1911. The Doe Library houses both the Undergraduate and Gardner (Main) Stacks collections.

Bénard was the winner of The Phoebe Hearst International Architectural Competition and the Berkeley Campus in 1899 with his project "Roma." The competition and his design led to the current University of California, Berkeley Campus Architecture.

#### **Awards:**

**Design Award / AIA East Bay 1996**

EHDD Architecture, a San Francisco-based firm that has designed dozens of academic and public libraries, has been awarded the Moffitt Revitalization Project. Construction is expected to begin when fundraising for the \$50 million project is completed. The firm designed and completed the David P. Gardner Stacks in Doe Library in the mid-1990s. This award-winning, 180,000 square foot underground addition provided a new home for the millions of volumes previously housed in the Doe core, making the collections open for browsing by library users. The addition also linked Doe to Moffitt via an underground passage. EHDD's history of work with UC Berkeley stretches back forty years. Other projects include renovations of the Environmental Design Library in Wurster Hall, a residence hall, and two phases of the Northern Regional Library Facility in Richmond, among others. The firm is known for creative approaches in designing for sustainability. Lead architects for the Moffitt Revitalization Project include Charles Davis, who directed the Gardner Stacks project, and Jennifer Devlin. In a July 5, 2009 profile in the San Francisco Chronicle, Devlin described a recent visit to Amsterdam's new public library, saying "Wherever I go, I go to libraries." She comments that the plans for Moffitt will meet the needs of today's students, who are "more collaborative, with more technology, in more ways than ever before." To read the article on SFGate, "Jennifer Devlin – pillar of design," go <http://tinurl.com/nwxpj2>  
<http://www.lib.berkeley.edu/give/fiatlux/fiatlux13.pdf>

The Main Library Complex project seismically strengthened Doe Library - a 1912 classic Beaux-Arts granite building listed on the National Register of Historic Structures - and Moffitt Library - a 1968 modernist concrete structure - removing the main collection from the unsafe central core of Doe and adding an 180,000 square-foot stack facility. Faced with the challenge of a sensitive site next to an historic structure, we proposed an underground addition linking Doe and Moffitt, forming a large, central public space that fulfills an early campus plan for the University of California, Berkeley. A generous, light-filled atrium with a central staircase, coupled with skylights and openings between floors, mitigates the sense of being underground.

This new state-of-the-art facility is located in downtown Phoenix. Strategically situated at the corner of Central Avenue and Taylor Street Mall, it is an integral part of the fabric of ASU's downtown campus. The six-story, 220,000 sq. ft., 110-foot tall building is taking cues from and energizes the community in which it resides.

The complex has ground floor retail spaces. Ample shaded arcades under the building's perimeter foster outdoor seating and cafe' life. The main entrance to the structure is under a three-story high "front porch" facing the civic space. This covered portal is an urban gesture toward Central Avenue, the civic space and the Taylor Street Mall. Many of the School of Journalism functions on upper levels are oriented toward and have open terraces overlooking Central Avenue. The design pays special attention to visibility to and from the school's busy newsrooms and Central Avenue and the civic space.

## **Los Angeles Public Library, Westwood Branch Library, Los Angeles, CA – USA 2005**

Owner: City of Los Angeles, Completion Date: Thu, Feb 17th, 2005

Ehrlich Architects was awarded both the master planning and design commission for the new Westwood Branch Library, the third branch library for the City of Los Angeles designed by the firm. Located near Westwood Village and the UCLA Campus, the library will include two levels of underground parking and 12,500 square feet of community-focused space. Due in part to its proximity to the University and affluent neighborhoods, it is one of the most politically charged projects within the library bond initiative.

The immediate neighborhood context is the quintessential Los Angeles mix; high-rises along Wilshire to the north, two- and three-story commercial uses along Westwood Boulevard to the west, and one and two-story residences to the south. The design approach raises the primary library space to the second level, provides parking and the entry below, and frames views to the neighboring greenspace. The site's tiny size, a factor of land values in this part of Los Angeles, posed special challenges regarding access and parking.

## **SBVC – San Bernadino Valley College – Library, San Bernadino, CA – USA 2005**

### **Awards:**

American Institute of Steel Construction – Presidential Award 2006

American Association of School Administrators / American Institute of Architects / Council of Educational Facility Planners International Citation Award 2006

The two-story open reading room of the 40,000-square-foot library is a glass and corrugated-metal prism supporting a multifaceted metal roof; like a giant origami, the roof folds down to form a protected entrance court. Service and support areas occupy a rectangular stucco box with punched windows. The elements interlock and overlap throughout the length of the building, highlighting public versus private spaces. A stained concrete floor serves as the finished floor and structural slab.

<http://www.s-ehrllich.com/project.php?gallery=EDUCATIONAL&title=SBVC-LIBRARY>

## **Los Angeles Public Library, Encino – Tarzana Branch Library, Tarzana, Los Angeles, CA – USA 2003**

12,000 sqf., \$ 4,750,000

Located on Ventura Boulevard in Tarzana, CA the new Encino-Tarzana Branch Library sits at the intersection of a small residential neighborhood and the wider world, both physically and programmatically. As such it is a portal from the intimacy of home and neighborhood to the wider world of knowledge and infinite possibilities.

The footprint of the building evolved directly from programmatic necessities and confines of the site. An adjacent flood control channel and parking requirements for this 12,000 sf community facility influenced an entrance orientation that faces the on-site

parking yet invites pedestrians from all directions. The simple trapezoid plan was extruded into folding roof planes, presenting an ever-changing form to visitors and observers with dynamic geometries of roof that move up and out yet also slope gently down to provide shelter at the entrance. A prow-like form at the corner is opened with a large expanse of glass allowing exterior and interior views. Inside, the simplicity of the space is expressed as a great room with exposed glue laminated wood beams and a natural Tectum ceiling to warm the interior.

<http://www.s-ehrllich.com/project.php?gallery=CIVIC&title=ENCINO-TARZANA-BRANCH-LIBRARY>

### [Biblioteca Latinoamericana and Washington United Youth Center, San José, CA – USA 1999](#)

Located one mile south of Downtown San Jose, the Biblioteca Latinoamericana and Washington United Youth Center anchors a 75,000 sf T-shaped site surrounded by commercial, educational and residential neighborhoods. Responding to the urban context and residential neighborhoods, a shaded courtyard invites pedestrians through two different entrances via trellis pathways. This outdoor plaza, complete with a stage, becomes a neighborhood focal gathering place for everyday casual use as well as special occasions and a cultural landmark for the community. Organized around the courtyard, the two buildings share a relationship of similar materials and forms; tall masonry masses formed by concrete block and brick, linked together by a lower, metal and glass clad "glue-like" elements.

The Biblioteca is an important Spanish language resource in the region, housing special collections of both Spanish and English literature. The Youth Center provides a gymnasium, boxing, weightlifting, counseling services by Catholic Charities, and a program/community room where both Library and Youth Center group programs can be planned and community meetings occur. For the project, Garcia Teague of San Jose served as the Executive Architect. (Ehrllich)

<http://www.s-ehrllich.com/project.php?gallery=CIVIC&title=BIBLIOTECA-LATINOAMERICANA>

### [Los Angeles Public Library, Robertson Branch, Los Angeles, CA – USA 1997](#)

#### **Awards:**

Arc space May 28, 2008

AIA / ALA Award 2001

California AIA, Biblioteca Latinoamericana Merit Award 2002

The Robertson Branch Library is situated on a busy Los Angeles strip, where apartments, billboards and commercial structures clamor for attention. The design for this 11, 000 sf community facility breaks the monotony of an efficient rectangular footprint with a bold pre-weathered copper element that soars above the otherwise modest two-story structure. From the exterior the component acts as a marketing device – announcing the library's presence, increasing attendance and inviting patrons to read and gather. Inside, the dramatic two-story volume serves as the central organizing element and contains a curving stairway of steel and stone that draws visitors up to the second floor. Located on a tight site, approximately three-quarters of the ground plane was allocated for surface parking and vehicular access. As a result the majority of the library's programmatic spaces are elevated. Public zones are located on the second floor and radiate from the central staircase. This synergy enlivens the simple reading rooms and physically connects the library to the ground place, sidewalk and local community.

<http://www.s-ehrllich.com/project.php?gallery=CIVIC&title=ROBERTSON-BRANCH-LIBRARY>

### [Library Paul Cummings, Santa Monica, Los Angeles, CA – USA 1996](#)

#### **Awards:**

AIA / ALA Award 1997

Set among an assortment of converted warehouses and industrial structures, the Paul Cummins Library is an offering to an alternative campus that symbolizes the Library's greater importance within the learning environment. The 12,000 square foot facility is contained by a series of folded planes of exterior blue plaster, which descend in elevation along a busy urban street down to the pedestrian alley of the campus. The two-story periodical reading room penetrates into the "campus quad" (an alley), and supports a steel canopy that offers a shaded gathering place and leads into the double height entry volume. Vibrant yellow exposed structural steel framing supports the structure and inclined wall. Book stacks and administrative support facilities are positioned under flanking low roofs that serve reading and study areas. They are centrally located within a two-story volume vaulting toward north-facing clerestory windows. The windows allow natural lighting during the day and save energy.

### [Eisenman Architects, New York, NY – USA](#)

<http://www.eisenmanarchitects.com>

#### **Libraries:**

[Staten Island Institute of Arts and Sciences, New York, NY – USA 1997 on progress](#)

### [Aronoff Center for Design and Art, University of Cincinnati, Cincinnati, OH – USA 1988 – 1996](#)

Peter Eisenman's program here was to re-organize 13,400 square meters of existing space and add 12,000 square meters of new space, including a library, theater, exhibition space, studio space, and office space. This was to unify the University of Cincinnati's schools of Design, Art, Architecture and Planning. Eisenman's work is part of an ambitious campus master plan with work (some in progress) by Frank Gehry, Michael Graves, Pei Cobb Freed, and Venturi Scott Brown. Eisenman came to public notice as part of the "New York Five" (Meier, Hejduk, Graves, Gwathmey, and Eisenman) of the 1970s. Known primarily for being a theorist, Eisenman's later forays into the built world have been greeted with a rather wide variety of opinion. Ohio seems to love him, commissioning work in Columbus and Cincinnati at a generous rate. However, were you to come of age looking at nothing but heavy, gridded, often oppressive and bleakly-toned sandstone, you might love someone who tilts a grid and paints it pastel, too. People often complain of the "disorienting" sensation of his tilted planes, to which Eisenman responds: That is what I have always been trying to do--to displace the subject--to oblige the subject to reconceptualize architecture. We have actually to change the relationship of the body to architecture. The body has to send messages to the brain saying 'wait a minute, something that I need to adjust to, something that I need to understand is happening to me.' Eisenman's "displacement" is particularly acute in the Aronoff center. I had no organizational understanding of the building, and wandered around like a confused freshman, looking for any orienting or central area. Since I visited in the summer, I did not have a chance to see how it was used by throngs of adventurous students. Of the forms of the Aronoff Center, Eisenman notes that his "vocabulary derives from the curves of the land forms and the chevron forms of the existing building; the dynamic relationship between these two forms organize the space between them." I found this "attention to the curves of the land" to be more notable in the landscape architecture (by Hargreaves Associates) of the site, especially on the rear side of the building. The most intriguing view of the center is of it nestled behind sensuous land forms and elegant trees--a responsive design to the University of Cincinnati's precarious hilltop site. (Christy Rogers) <http://www.galisky.com>

## Wexner Center for the Visual Arts and Fine Arts Library, Columbus, OH – USA 1998

Since opening in 1989, the Wexner Center has attracted international acclaim for its innovative architecture and well-equipped facilities, as well as its bold artistic programs. Designed by architects Peter Eisenman and Richard Trott, the Wexner Center building houses four exhibition galleries (totaling approximately 13,000 square feet), an intimate video exhibition space called "The Box"; the Film/Video Theater; and the Performance Space, a "black box" theater with flexible seating. Also on site are Wexner Center offices and the Art & Technology facility, a state-of-the-art video postproduction studio.

Mershon Auditorium, adjacent to the Wexner Center building, features a large multipurpose auditorium/theater, as well as complete front-of-house and back-of-house facilities and administrative spaces.

The Wexner Center also presents events at several other venues on campus. These include Weigel Auditorium, a 800-seat concert hall administered by Ohio State's School of Music, and Thurber Theatre at Drake Performance and Event Center, a mid-sized proscenium theater administered by Ohio State's Department of Theatre.

Ohio State's Fine Arts Library and Cartoon Research Library are located on the lower level of the Wexner Center building. The entrance to both libraries is from the outdoor walkway under the Wexner Center's grid and can be found just south of the 17th Avenue Plaza. (<http://www.wexarts.org>)

## City of Culture of Galicia Archive and Library, Santiago de Compostela – Spain 2011

Masonry: Iberdouro, Metal doors: Lama, Built-up roofing: Pavimentos de Tudela

The evocative title of the exhibition *Cities of Artificial Excavation: The Work of Peter Eisenman, 1978–1988* at the Canadian Centre for Architecture in Montreal in 1994 turns out to be an oracular description of the architect's City of Culture of Galicia in northwest Spain. Eisenman's project of a lifetime, now 12 years in design and construction, has involved serious digging and earthmoving to create topographical man-made structures that blur figure and ground. With two buildings just open, the complex's raw state presents an artificial landscape of thrashing, gnashing stone creatures restlessly rising up from the earth before subsiding into calm ripples.

Eisenman won the competition for the City of Culture in 1999 at the right time economically, and in the right country architecturally. Since the end of Franco's reign in 1975, Spanish architects have been turning out high-quality Modernist design in a country also receptive to the tours de force of internationally known architects. After Frank Gehry's Guggenheim Museum in Bilbao opened in 1997, Manuel Fraga Iribarne, the president of the Xunta of Galicia, initiated the 1 million-square-foot research, study, and arts center for his own region. The brief for the City of Culture ambitiously called for a periodicals archive, library, museum, music theater, central services and administration building, and international arts center with a budget of around \$145 million.

Eisenman's winning scheme, folded into the earth and seductively represented by a molded wood model, beat out varied proposals by ten finalists: Steven Holl Architects, OMA/Rem Koolhaas, Ateliers Jean Nouvel, Gigon Guyer Architects, Dominique Perrault Architecture, Studio Daniel Libeskind, Juan Navarro Baldeweg, César Portela, Ricardo Bofill/Taller de Arquitectura, and José Manuel Gallego Jorroto.

The 173-acre site on Mount Gaiás can be glimpsed from nearby Santiago de Compostela where the cathedral houses the remains of the apostle St. James, brought to Spain from Jerusalem after his death in AD 44. Since the eighth century, pilgrims have trekked to the medieval town to pay homage to his shrine.

Although Eisenman's proposal indicated eight buildings, today it's down to six. Two of the buildings, the 155,205-square-foot Archive of Galicia and the 186,990-square-foot Library of Galicia, opened in January. The 223,889-square-foot Museum of Galicia and the 80,729-square-foot Central Services Building are expected to be completed by late fall, although the museum won't be installed until next spring. It is easy to see that the scale is daunting. When all six structures are finished, the City of Culture could almost function as a small international airport (except, of course, the planes' pilots might mistake the buildings for runways). But the projected space needs were not determined by the architects.

The program, conceived at the cusp of the digital age and during the halcyon years of economic prosperity, got caught in a programmatic and financial time warp. And the government changed in 2005. The archive was slated to be a periodicals library with a large reading room. When it morphed into an archive for storing regional documents, the large space for a reading room was turned over to the exhibition of rare documents. But because of the presence of an expansive south-facing glazed wall, temporary polygonal structures enclose the fragile artifacts. As for the library, the original plan to house 250,000 books grew to a million under the wishes of the Galician administration. Now, while rare books occupy a central glazed core, the ongoing digitization of library collections generally raises a question about future space requirements. It doesn't mean that these buildings can't undergo adaptive reuse. But the weak link to the program certainly turns the formal qualities of the architecture into the main event. As if anticipating such questions, the City of Culture has mounted its own exhibition in the archive featuring a video of Eisenman explaining how he arrived at these striated forms.

Eisenman began with the outline and street plan of the medieval city of Santiago de Compostela based on the shape and ridges of a scallop, the emblem for the shrine. He then placed a similar street pattern on the top of Mount Gaiás to separate the original eight buildings and let the site's topography mold this medieval pattern. Then he overlaid the plan with a Cartesian grid while finally digitally warping the result with a computer-modeling wire frame to generate, he says, "dimension and direction."

Overlays and interplays of these grids are called out in stonework, mullions, aluminum channels, and glazing, as well as contoured drywall soffits and walls inside the buildings. Lay people might find this flow and deformation a bit obsessive. A different matter is the dynamism of the actual shapes and the surface textures of the swelling and heaving structures. You don't need to climb all the contours of these convulsing carapaces (as some do) to know you have entered an experientially based landscape where kinesthetic and haptic, as well as visual, perceptions dominate. Even inside, where interior surfaces assume quite different shapes, contracting and expanding spaces heighten the temporal experience of architecture.

Executing these leviathan structures should ultimately cost an estimated \$581 million for the six buildings. But the economy has slowed down the construction schedule to a point where no one is talking about the completion date for the last two buildings, one of which is the opera, the other, now slated for a new technologies center.

Originally the design team wanted grass roofs, but found that grass was heavier and harder to maintain than stone. Nevertheless, the local quartzite (in brown, rose, and off-white hues and varied textures) that clads the roofs and walls proved to be hard for the local quarry to supply on time. Stone also came from Brazil.

The hand-quarried stone, cut by machine in 20-inch square blocks (with blocks at the edges specially trimmed), is mounted on a steel armature of curved box beams (or steel girders in the archive) plus steel cross-bracing. The ventilated chunky roof surges over an under layer of concrete deck, waterproofing, and protective insulation. (The interstitial space between the two layers also houses mechanical equipment.) The side walls of mortarless quartzite panels with stainless steel reveals stand out from the buildings like a rainscreen against galvanized aluminum. But while the steel and stone do a lot of work, the actual structure of the buildings is reinforced concrete: the megacolumns are placed on a 53-by-66-foot grid, while a secondary 26-by-26-foot grid of round concrete columns is rotated 7 degrees from the main one.

The glazing posed its own challenge; where a double curvature is called for, flat transparent, reflective, and opaque glass is angled in layers to produce the contour. Since the library's glass wall soars to a 98-foot height, cable-stayed vertical trusses were needed for wind loads. They are plentiful: It seems even the trusses have trusses. Eisenman wanted (and thought he was getting) gray glass, but it turns bluish and greenish under different lighting. Oddly, the glass sometimes overpowers the stone, and the thick grid of variously sized mullions sometimes overpowers the glass.

This isn't a work of architecture where you are overawed by the elegant detailing of the mullions: the strength actually emanates from the skillful craftsmanship of the stonework. Eisenman gives much credit for the execution to architect of record Andrés Perea Ortega, plus Antonio Maroño, the architect for the Foundation of the City of Culture of Galicia, who has been on-site since 2001.

Although it is too early to fully evaluate a complex still very much under construction, already it has become a lightning rod for debate regarding its high cost, excessive space, and ambiguous program. At least the current government officials in charge appear to be fully behind it: Perhaps the perfect fit of program to form will evolve in time. As it ages, it will no doubt lose its rawness, but probably keep its brute energy. The gesture is so defiant. Its brazen monumentality and unsettling scale ravenously explore the difference between artifice and nature. Time will reveal its significance.

## **Cedarburg Public Library, Cedarburg, WI – USA 2014**

The Cedarburg Public Library Board invited the community to celebrate the groundbreaking for the new Cedarburg Public Library on May 31, 2013 at the construction site just north of the existing library. Construction is scheduled for completion in June 2014.

Over the past decade, Engberg Anderson has worked with Cedarburg Public Library to develop the best option for meeting the community's library needs. After evaluating multiple sites and concept designs, the City selected the site of the former police station adjacent to the existing library building and one block from the vibrant downtown shopping district.

The new 22,500 sf library will be on two levels, with a drive through book return. It will feature a spacious lobby with an operable glass wall that opens to connect the Community Room to accommodate large events, a generous Children's area and an upper level Adult Services area.

## **East Library, The Standard, Milwaukee, WI – USA 2014**

Engberg Anderson, in partnership with HSI Properties and WiRED Properties, is designing and building a new mixed-use building for the East Library, located within one of Milwaukee's trendiest neighborhoods. To satisfy the Library's requirements and create a development that would benefit the City, our team has designed a five-story building, with a 16,000 sf library on the first floor and four levels of housing above. The building will offer 75 one bedroom, 19 two bedroom, and four three-bedroom units with underground parking for 118 stalls in addition to 38 stall surface lot parking.

<http://www.engberganderson.com/#/portfolio/ontheboards/139/>

On July 30, 2013, HSI Properties and the Milwaukee Public Library invited the community to a groundbreaking for a new mixed-use development on Milwaukee's East Side. The five-story building designed by Engberg Anderson includes apartments, retail space and a branch of the library. Get a peek at what we have on the boards .

See coverage of the groundbreaking in the Milwaukee BizTimes.

## **Homer Township, Will County, Homer Township, IL – USA 2013**

Homer Township is raving about the recent addition and renovations to their public library. Our favorite quotes come from two patrons:

"I just love these beautiful colors throughout." - Lora Sinko

"It is so nice. I am sitting here and just enjoying it. The whole library is so pretty." - Jeannine Shenoha

<http://www.engberganderson.com/#/news/press/71/>

The Homer Township Public Library re-opened in early July after completion of its newly-expanded section, while construction continues on the rest of the library.

The \$4.5 million renovation project increased the size of the library from its original 14,000 square feet to a spacious 24,000 square feet and, according to library officials, it's not costing the taxpayers a dime.

"All money for the renovation and expansion was secured mostly through \$1.5 million in government grants, along with some local private donations," said Sheree Kozel-La Ha, executive director for the past 13 years. The remaining \$3 million is covered by a bond issue, which the library will pay back through its operating revenue, according to information on the library's website.....

## **Villard Square Branch Library, Milwaukee, WI – USA 2011**

As part of their "Rethinking Libraries for the 21st Century" plan to review service models for the Milwaukee Public Library system, the new Villard Square branch is the first library built as part of a mixed-use building, with three floors of affordable housing above. Built as a separate condo at the ground floor, the new branch features expanded children's and teen areas, greatly expanded technology with RFID and autosort, laptops, a meeting room that converts to additional browsing and seating when not used for programming, and a central hearth to draw the community together.

### **Fitchburg Public Library, Fitchburg, WI – USA 2011**

Located within a growing civic campus, this new 36,000 sf library will become the first home of the Fitchburg Public Library. The project balances accommodating the current trends in library service with the flexibility to adapt as requirements evolve. Careful consideration was given to minimizing the operational costs of this public facility through the incorporation of sustainable energy solutions, including geothermal heating and cooling. The project is registered with the U.S. Green Building Council and anticipates becoming LEED Gold certified.

<http://www.engberganderson.com/#/portfolio/projecttype/6/131/>

<http://www.city.fitchburg.wi.us/departments/library/aboutus.php>

### **Goodman South Madison Branch, Madison Public Library, Madison, WI – USA 2010**

This new 12,000 sf library is located within a mixed-use commercial building redevelopment. The space has been designed for maximum flexibility and adaptability. Seating neighborhoods, a computer café, fun areas for teens and children, and self-service checkout stations complement the library's resources and group activity venues. With sliding glass doors, the largest meeting room can open to the main library area and become a reading room when formal activities are not in session. The project features sustainable materials, prioritizes occupant comfort and energy efficiency, and is LEED®-CI registered, with silver certification anticipated.

### **Waukesha Public Library (2005), Children's Area, Waukesha, WI – USA 2010**

This project involved a complete remodeling and expansion of the library's existing 9,000 sf second-level Children's Services area into a new bright and vibrant expanded department. Improvements include a new multi-function story and program room for 75 children, expanded computer facilities, additional seating and study options and new large windows allowing more natural light into the space. The new layout extends the sense of entry out onto a bridge over the reference area and down the stairs, inviting kids to come and explore. Window seats pop out of the walls above, allowing children to overlook the rest of the library. Colorful graphics invoke the first lines of many famous children's and pre-teen stories, inviting users to explore the world of reading and "write their own endings."

<http://www.engberganderson.com/#/portfolio/projecttype/6/125/>

<http://www.engberganderson.com/#/portfolio/projecttype/6/125/>

### **Davenport Public Library, Eastern Avenue Branch, Davenport, IA – USA 2010**

As the newest branch of the Davenport Public Library system, this new 27,000 sf branch library in north central Davenport makes sustainability a priority. The library is intended to be a demonstrative model of energy efficiency and environmental responsibility to the community. Among the "green" technologies being explored are cool daylighting, water management and geo-exchange. Recognizing the library's role as a community center, the facility features elements that create a destination, including two community rooms, and a Friends of the Library bookstore with café. Exterior amenities include a Children's Garden and on-site city bus access to the library. The library is in a 14 acre park designed to include bike and walking trails and an outdoor event area. The project has achieved LEED Gold certification.

<http://www.engberganderson.com/#/portfolio/projecttype/6/100/>

### **Gail Borden, Rakow Branch Library, Elgin, IL – USA 2009**

Status: Completed August, 2009, Square Feet: 10,000 sf, Construction Cost: \$3,400,000

Optimum planning allows the library to operate this branch with a minimum number of staff; emphasizing customer interaction over material handling as the primary staff function will maintain the desired quality of library service. "Floating" librarians, express check, digital reference and, ultimately, automated sorting are all accommodated at the Rakow Public Library.

Using the LEED Rating System as a template, Engberg Anderson has integrated three crucial sustainable strategies in order to "achieve" a certification. The combination of cool daylighting, energy efficiency, and stormwater management has a compounding effect on the project that each would not have by itself. Together these strategies are a reasonable, civic-minded, and contemporary response to firmity, utility, and venustas.

The project has been registered with the U.S. Green Building

<http://www.engberganderson.com/#/portfolio/project/39/>

### **Sequoia Branch, Madison Public Library, Madison, WI – USA 2008**

As part of a larger urban mixed-use development, the 20,000 sf Sequoia Branch is registered to attain LEED - CI (Commercial Interiors) Silver Certification through incorporating energy efficiency, natural daylighting and the use of sustainable materials. The facility provides a full range of print and electronic resources, group and quiet study areas, and serves as a major community meeting venue.

<http://www.engberganderson.com/#/portfolio/projecttype/6/42/>

### **Beloit Public Library, Beloit, WI – USA 2007**

## **Awards:**

**2009-2010 ASID Gold Design Award**

**Designer: Cynthia Gall, Engberg Anderson, Inc.**

**Category: Educational / Institutional**

**Wisconsin Builder 2009 Top Projects Award**

Top Projects recognizes the developments that have made a difference in their communities, triumphed despite tricky circumstances or introduced a new technique to the industry, among other reasons.

**Spring 2010 Community Asset Builder Award**

This program sponsors and honors local organizations in the community that build assets in our kids

**American Libraries Building Get Greener Recognition**

From 1996 to 2007, Engberg Anderson provided design services for on-going projects at Beloit public Library. It was then decided that the library would relocate to the former JC Penney store at the Beloit Mall. The 58,000 sf renovated space contains all public functions on the first floor, and offices on the second. Features include expanded collections, a flexible computer training center, a divisible public meeting room, a children's program room and a two-story glazed entry lobby.

## **Charlevoix Public Library, Charlevoix, MI – USA 2006**

Square Feet: 34,000 sf , Construction Cost: Building - \$6,001,675

Previously a 1920's era elementary school, this library is now a 34,000 sf facility that features a children's activity room and community room. The old gymnasium is transformed into the adult reading room and features the original ceiling structure. New gardens lead from the parking lot to the library entrance and contain public art pieces that reflect the maritime history of Charlevoix. EA was Architect-of-Record, in association with Architecture Artistry Interiors of Traverse City, MI. Alice Remenschneider Design provided interior design services.

## **Alice and Jack Wirt Public Library, Bay City, MI – USA 2006**

Status: Completed 2006, Square Feet: 63,000 sf, Construction Cost: \$10,820,208

As the central library of the Bay County Library System, this new two-story facility accommodates a wide variety of uses, including local history and genealogy collections, system-wide administrative offices, public meeting rooms and a coffee shop. The exterior of the building pays homage to other significant downtown landmarks with its stylish use of stone, brick, and glass. EA was the lead designer in association with FTC&H for all five libraries in the Bay County Library System.

## **Cromaine District Library, Crossroads Branch, Howell, MI – USA 2005**

### **Awards:**

**Wisconsin Chapter ASID Gold Design Award 2006**

In 2005, in response to the great growth of the Hartland area, the 3,400-square-foot Crossroads branch opened in Hartland Town Center on Old US-23, just south of M-59. The branch's specific service mission is convenience and popular materials. Here, there are lockers in the lobby which permit 24 hour/7 days per week pick-up of items held for patrons. Ten public computers with access to the Internet, a small meeting room, reading lounge, and children's area provide a pleasant place for quick respite. Wireless access is also available inside and outside the branch.

## **Palos Heights Public Library, Palos Heights, IL – USA 2004**

Status: Completed 2004, Square Feet: 31,500 sf, Construction Cost: \$3,945,000

### **References:**

Featured in "Fast Track Building Projects", presented by EA, Palos Heights Public Library and Library Building Consultant Frederick Schlipf at the 2005 Illinois Library Association Conference

The 1972 wing of the existing building was replaced with a new two-story wrap around addition. Architectural elements include sloped roof forms, reading bays, a central hearth and outdoor reading areas that all serve to root the design in the residential character of the community.

<http://www.engberganderson.com/#/portfolio/projecttype/6/43/>

## **Iowa City Public Library, Iowa City, IA – USA 2004**

Status: Completed 2004, Square Feet: 107,000 sf (59,500 sf new - 47,500 sf remodel)

### **Awards:**

**2001 International Congress of Energy Environmental Building Association. Emblem of the best design strategies for an energy conscious approach to building design**

As an integral part of Iowa City's downtown pedestrian mall, the library has been designed to balance civic, commercial and recreation site demands with the needs of a growing electronic library. The project transformed the building from an introverted brick box into a transparent, welcoming facility.

Recognition: Featured at the 2001 International Congress of Energy & Environmental Building Association as an example of the best design strategies for an energy conscious approach to building design.

Located on a civic boulevard in downtown, the library includes special features such as a children's READ center with interactive displays, a local history section, a café with attached courtyard and underground parking. EA worked in association with Veazey, Parrott, Durkin & Shoulders.

<http://www.engberganderson.com/#/portfolio/project/30/>

The desire to create a prominent architectural statement for this 147,000 sf public library, located on a civic boulevard in downtown Evansville, inspired an elongated "L" shaped plan. The library includes special features such as a children's ReAd center with interactive displays, a local history reading room, a café with attached courtyard and underground parking. Distinct environments reflect the nature of materials displayed and significant amounts of glass bring in natural light and make these environments visible from the exterior. Engberg Anderson worked in association with Vps Architecture.

Status: Site Infrastructure and library completed Spring 2003

Master plan addresses mixed-use development of a four-block area. Includes multi-family housing with townhouses, condominiums and apartments, commercial and institutional facilities, and a future transit stop. Street grids were altered and public parking was accommodated in this new village center which reinforces the downtown's main street. The first phase of development has been completed and includes the library and townhouse component.

### [Shorewood Public Library, Shorewood, WI – USA 2002](#)

This expanded library serves at the base for a new village center

#### **Awards:**

Wisconsin Chapter ASID Bronze Design Award 2004

International Institute of Masonry Design Award Honorable Mention 2004

Library service in Shorewood dates back to 1903, when the Village Board of East Milwaukee (as Shorewood was known as at that time) appropriated funds, appointed a Library Board and hired the first librarian. Over the next half century, the library served residents at various rented storefront locations and at the Village Hall. In 1965, the library opened its first permanent building at Shorewood Blvd. and Cramer St. In the fall of 2001, the library moved to a temporary location in the River Club in Hubbard Park while the original building was renovated and expanded. The current Library and Village Center opened to the public in December of 2002. -

### [Farr Branch Library, Weld District, Greeley, CO – USA 2002](#)

Square Feet: 37,000 sf, Construction Cost: \$5,860,000

Located in a growing area of Weld County, the new resource library echoes the forms of its surroundings -- the front range of the Rocky Mountains. Features include a children's department with a storytelling area, a walk-out children's garden and integrated public art. EA served as Design Architect in association with Architect-of-Record Klipp Colussy Jenks DuBois Architects of Denver, CO.

<http://www.engberganderson.com/#/portfolio/projecttype/6/40/>

### [Urbandale Public Library, Urbandale, IA – USA 2000](#)

.....Public meetings in 1997 were conducted to gather input from community residents. Finally, voters in September, 1998, approved by a large margin a bond referendum for a new library building. Construction began almost immediately, and Urbandale's library for the 21st Century opened in July, 2000. Engberg Anderson of Milwaukee, Wisconsin was the architectural firm of the new building and FEH of Des Moines, Iowa was the local architectural firm.

<http://www.urbandalelibrary.org/about-the-library/history/library-history/>

The library features three towers including 40 foot ceilings, slate floors, a 35-foot tall brick/stone fireplace, octagonal construction and over 400 tons of structural steel. The exterior of the building is a limestone and brick veneer, custom exterior insulated window systems and an aluminum, standing-seam roof completes the building. The mechanical system is a central plant system with a chiller, boiler, and air-handling units with DDC controls. The electrical system features an under-floor duct system to provide data/power to the open circulation areas of the library.

The library was completed over three months ahead of schedule and received the American Libraries annual "Room to Grow" award, showcasing new library construction efforts throughout the United States.

<http://www.arrowhead.org/Urbandale-Public-Library.php>

### [Weyers Hilliard Branch Library, Brown County, Howard, WI – USA 2000](#)

EA and Crystal Lake Public Library are working with the City of Crystal Lake to evaluate various sites and determine the best long term approach to solving the Library's critical space needs. Nearing its 100th anniversary, the Library has long been a center of education, recreation, and engagement. Building on this tradition and engaging the future requires a new building, one that is large, open, flexible and technology rich, as well as inviting and inspiring. We look forward to continuing our work with the Library as it looks forward to the next century of service to its community.

P/A Progressive Architecture 1994

With the recent approval of the Madison City Council, Eppstein Uhen Architects (EUA) is moving ahead with the design of the City of Madison's new Central Library. This will be the second largest project in City of Madison's history, budgeted at \$37 million total cost. The Central Library will be built by a joint venture of Fiore Companies and Irgens Development Partners. Fiore Irgens Venture I, LLC, partnered with EUA to design the building and J.H. Findorff & Son to construct it. The Fiore-Irgens development proposal includes a whole-block redevelopment in the shadow of the State Capitol. Once the Library is relocated to its new location in 2011, design will begin on a 10-story mixed-use building in its place. This development is anticipated to include a parking structure for 400 cars, a 150-room hotel, 30,000 square feet of sidewalk-level retail, and an 80,000-square-foot office building. Over 100 laborers, carpenters, ironworkers and tradespeople spoke at the budget hearing on November 10. The construction trades are facing record unemployment and urged the Council to approve this project in order to create over 200 jobs. "This project is a rare and exciting opportunity for people who enjoy being Downtown in Madison," said Steve Holzhauser, Managing Principal of EUA's Madison Office. "We are privileged to create a landmark facility that will serve and inspire people for generations and will make downtown a better place visit, work and live. We are thrilled to be part of this renaissance." Construction is scheduled to begin in 2010. The project is certain to become a landmark in the shadow of the State Capitol. For more information go to

[www.fiorecompanies.com](http://www.fiorecompanies.com).

As the largest new library in the revival of all Bay County Library system libraries, the new 62,980 sf central Alice and Jack Wirt public library facility was constructed on a primary downtown intersection in Bay City. The two-story library accommodates a wide variety of uses, including child, young adult, and adult library services; computer lab; local history and genealogy collections; systemwide administrative offices; public meeting rooms; and a coffee shop. The exterior of the building pays homage to other significant downtown landmarks with its stylish use of stone, brick, and glass. Engberg Anderson worked in association with ftC&H. ### **Libraries:**

#### **Asheville Art Museum, Asheville, NC – USA 2010**

50.000 sqft., Program: permanent and temporary exhibit galleries, gift shop, lecture hall, rooftop café, sculpture terrace, library, education center, administrative and curatorial offices, public plaza.

The design for the expansion and renovation of the Asheville Art Museum creates a powerful new contemporary Center for the Arts at the center of Asheville's historic downtown district. The expansion carefully balances old and new with the preservation of the historic limestone library building (in 1925, New York architect Edward L. Tilton designed the former Pack Memorial Library in the Renaissance Revival style) juxtaposed with a new addition of glass and stone. The arts are revealed to the city through a transparent north-facing glass wall: a permanent collection gallery is visually suspended within the dramatic, light-filled new entryway volume. Clad in terracotta, this form makes direct reference to the material's use throughout the historic fabric of the city. The library building, which currently houses the museum, will be renovated to accommodate education, library and administrative space; the new construction will define the public experience and create additional galleries to highlight the permanent collection. Highly flexible temporary exhibit galleries will complete the public experience, located on two levels directly adjacent to the main museum entry. The design will more than double the size of the existing museum, reinforcing the importance of the arts to the city and surrounding region.

#### **University of North Texas, Business Leadership Building, Denton TX – USA 2011**

180.000 sqft., Program: classrooms, auditorium, computer labs, library, conference rooms, faculty offices, lounge and study rooms, café.

This new Business Leadership Building on the University of North Texas Denton Campus accommodates approximately 6,000 undergraduate students, a growing graduate school program and continuing education programs to prepare business leaders for the 21<sup>st</sup> century's global economy. To address the vast scale of the school and to create a central gathering place where students, faculty, and professionals can meet and interact the project was conceived as a series of discreet buildings surrounding a public square. The facility incorporates the most advanced technology and is flexibly designed to adapt to changes in the field and future growth. The building was designed to a minimum of LEED Silver certification standards and will new students, faculty, and business partners to the University.

#### **National Museum of American Jewish History, Philadelphia, PA – USA 2010**

##### **Awards:**

Award of Excellence, Society of American Registered Architects, New York Council 2011

Society of American Registered Architects, National Design Award 2011

Award of Merit, ENR New York 2011

Distinguished Building Award Society of American Registered Architects 2010

Two interdependent volumes define the exterior envelope of this building. The more prominent – a diaphanous glass prism on Fifth Street facing Independence Mall – is intended to express the museum's accessibility and generosity. The translucency is a metaphor for the open door that greeted those finding sanctuary in America, but the glass also represents the fragility of the democracy that guarantees the freedoms that have made this country so desirable a destination. In contrast to the translucent form facing the Mall is a terra cotta-clad volume: a repository for the Museum's collection and principal exhibition spaces, in solidity is an analogue for the liberties that protect all Americans. An eighty-five foot high light-filled atrium spatially connects the entry level to the education center and auditorium below and to the exhibition floor above organizes the interior space. This openness and the unambiguous entry sequences encourage people understand that they have the freedom to cross boundaries.

#### **William J. Clinton Presidential Center, Little Rock, AR – USA 2004**

167.000 sqft., Program: 28-acre public park; museum: orientation theatre, permanent and temporary exhibit spaces, a great hall, café, classrooms, replica oval office, and executive apartment; archive: National Archives and Records Administration (NARA) research and storage facilities;

<http://ennead.com/#/projects/clinton-presidential-center>

#### **Smith College. Brown Fine Arts Center, Northampton, MA – USA 2002**

Total area: 164,000 gross square feet, Project cost: \$35 million, <http://www.smithedu/bfac/building.php>

Smith College's renowned Museum of Art, art library and art department have a distinguished new home -- the newly named Brown Fine Arts Center -- thanks to the completion of a two-year, \$35-million building renovation and expansion. At its outset, the renovation was the largest capital project in the college's 122-year history.

Led by New York City-based Polshek Partnership Architects, the renovation stripped the former 1972 complex down to its steel girders and then rebuilt it entirely, transforming its architecture and infrastructure. The art library and department opened in September, 2002; the center's other key occupant, the Smith College Museum of Art, opened in April, 2003.

New features of the 164,000-gross-square-foot facility include a cutting-edge digital imaging center, updated ventilation and environmental controls and improved galleries and art studios. The Hillyer Art Library, regarded as among the best art libraries at American undergraduate institutions, was significantly redesigned. The new building features a greatly expanded technological infrastructure, a dramatic aesthetic overhaul and improved amenities for students, staff and visitors. (Ennead)

## [New York Public Library for the Performing Arts, Dorothy and Lewis B. Cullman Center, New York, NY – USA 2001](#)

While it may look familiar from the outside, visitors to The New York Public Library for the Performing Arts will find it dramatically transformed when the Library reopens at Lincoln Center after a major renovation. After operating from temporary quarters during the three-year construction period, the Library reopens for regular public service with expanded hours on Monday, October 29. A free public open house will be held Saturday, October 13. The \$37 million project, designed by Polshek Partnership Architects, reflects the vast changes in the needs of users, and in methods of documenting the arts, that have developed since the Library was established in 1965.

"This redesign of one of the world's most popular research libraries is a response to the enormous increase in its collections and usership, the extraordinary advances in information technology, and the development of large multimedia collections that document live performances," said New York Public Library President Paul LeClerc. "We've made the collections more accessible, created inviting reading rooms and galleries, and added the latest technology to improve the environment for the public, the staff, and the collections."

When the building reopens to the public, it will also have a new name -- the Dorothy and Lewis B. Cullman Center -- in honor of the couple whose generous contribution to the Library made the new state-of-the-art facility possible. "The Cullmans' support will enable the Library to enhance greatly its ability to document the performing arts and provide broad public access to the materials in its collections," said Samuel C. Butler, Chairman of the Library's Board of Trustees. Major support for the renovation was also provided by the family of Donald and Mary Oenslager. The City of New York, under the leadership of Mayor Rudolph W. Giuliani and City Council Speaker Peter F. Vallone, has contributed more than \$20 million to the renovation of the Library for the Performing Arts. The Library will formally express its gratitude to all the contributors to this project at an opening ribbon-cutting ceremony on October 11.

"The list of improvements to the Library is impressive," said William D. Walker, Senior Vice President and Andrew W. Mellon Director of The Research Libraries. "They include a grand, light-filled reading room, spectacular loft-like exhibition galleries, new audiovisual stations, a vastly more efficient centralized retrieval system, expanded storage, an enhanced preservation lab, a four-fold increase in public-access computers, and a massive number of networked databases." He added that "an automated system will control temperatures where delicate materials are stored."

The New York Public Library for the Performing Arts

The Library for the Performing Arts, one of four major research centers of The New York Public Library, serves more than 425,000 visitors a year and houses the world's most extensive combination of circulating, research, and rare archival collections in its field. The materials are available free of charge, along with a wide range of exhibitions, seminars, and performances. Approximately 30 percent of the Library's holdings are books, but it is known particularly for its prodigious collections of non-book materials such as historic recordings, videotapes, autograph manuscripts, correspondence, sheet music, stage designs, press clippings, programs, posters, and photographs. The Library's Research Collections are the Billy Rose Theatre Collection, the Jerome Robbins Dance Division, the Music Division, and the Rodgers & Hammerstein Archives of Recorded Sound. It also features extensive Circulating Collections with materials in music, dance, drama, film, and arts administration, including large collections of circulating audio and video recordings.

"This marks the first major renovation of the Library since it opened in 1965," said Jacqueline Z. Davis, The Barbara G. and Lawrence A. Fleischman Executive Director of The New York Public Library for the Performing Arts. "The Library's collections have grown exponentially since then to nine million items that require more than seventeen and a half miles of shelves. In addition," Davis said, "technology has completely changed the way materials are stored and accessed. The reconfigured space will allow us to provide better service in a more pleasing environment that can comfortably accommodate continued collection processing and preservation work. It also gives us the opportunity to make significant improvements to our staff work areas."

<http://independentpublisher.com/article.php?page=446>

## [Bard Graduate Center for Studies in the Decorative Arts, Design and Culture, Academic Building and Library, New York, NY – USA 2000](#)

The renovation of 36 West 86th Street, a 1905 residential building located in Manhattan's Upper West Side Historic District, completes the second phase of work for the Bard Graduate Center's academic facility. Completed in 2000, the first phase at 38 West 86th Street entailed the restoration of the historic townhouse and two additional floors and an expansion into the rear yard to accommodate a 75-seat lecture hall, library, and digital imaging center, classrooms, lounges, and offices. Combining the adjacent townhouses ("36" and "38") allows significant expansion. More than doubling the space available for its programs, the new facility reinforces the BGC's identity as a leading graduate research institution for the study of decorative arts, design history, and material culture. Achieving a principal goal of the renovation to fully integrate the library program and teaching spaces, library collections are distributed throughout the floors. A new lower-level study, conveniently situated near expanded stacks, offers quiet views onto a landscaped rear yard. Other more informal seating areas provide a variety of study and meeting spaces in addition to the existing second floor reading room. The academic facilities also include additional classroom and seminar spaces, as well as faculty offices and student lounge areas. The addition of a modern teaching media laboratory and conference center will afford the BGC the opportunity to accommodate expanded curriculum and to meet the needs of the institution as it takes its place among the preeminent centers for research in material culture. The entry sequence defined in the first phase is retained in the combined building but enhanced: the lobby on the first floor of the 38 building is unified with the adjacent space in the 36 building, which is transformed into a state-of-the-art lecture/public programs facility. A large opening from the lobby provides views into a rich, wood-paneled room with gently curved recesses lined with a horizontal wood screening that accommodates lighting, air outlets and acoustical material. The lobby also serves as a connector to the existing lecture hall and general building circulation. Taking advantage of the expanded floor plate and providing seamless transitions, openings in the original structural party wall connect the two buildings on all floors. A vertical maple-clad plane extending from the lobby to the upper floors references the original demarcation of the two buildings, acknowledges their domestic scale and organizes vertical circulation between floors. Two new communicating stairs – a dramatic steel and glass stair connecting the two primary library floors and a natural wood and steel stair connecting the two floors that house the Center's faculty and staff – augment existing circulation. Large expanses of glass and new exterior terraces link interior and exterior, expanding the building perceptually. Open spaces extending north/south through the building and doubleheight spaces take advantage of natural light to choreograph movement. The careful insertion of the expanded structure into this historic framework has transformed the interiors into an open, light-filled public environment. With new and renovated facades, the building reinforces its presence as a vital civic institution within the urban fabric of the city. Physical Description:

Approximately 17,000sf (net) in the combined facility,

Innovative Design and Excellence in Architecture with Steel Award, AIA / American Institute of Steel Construction 1999

The design for this museum and research center creates a powerful architectural identity for the tribal nation. The design responded to the tribal mandate to create a building and environment that celebrates the history of the Mashantucket Pequot nation. The concept was inspired by the ecological and archeological value of the site, the tribe's historic dependence on inland agricultural and aquatic zones; and the plan of the original Mystic Fort, site of the 1637 massacre, to create a symbol of the rebirth of the Mashantucket Pequot nation. The massing of the building directly reflects the institution's primary program elements: the gathering space, museum and research center. The overall geometrical composition unifies the circular form of the gathering space, the organic contoured shape of the museum's exhibits and the linear bar of the research center into a vital and cohesive whole. A 200-foot tower counterbalances the horizontal expanse of the building, marks the entry, identifies the facility from a distance and provides panoramic views of the entire reservation from its viewing platform.

The Queens Borough Public Library, located on a triangular site the intersection of Kissena Boulevard and Main Street, is the largest branch library in New York City. The current building, designed by Polshek Partnership Architects, is the third to be built on the site--the first was a gift of Andrew Carnegie. Metaphorically, the transparent façade, which faces a commercial thoroughfare, advertises learning: the glass membrane allows the facility's collections and functional organization to be visually accessible from the street. The opposite façade is rendered with stone, its articulation alluding to the book stacks within and its opacity allowing perimeter shelving to be maximized. Other program spaces include: a 227-seat auditorium, a multi-purpose room for 150, conference rooms, exhibition areas, an Adult Learning Center and an International Resource Center. The Queens Borough Public Library, or Queens Library, as it refers to itself today, is the public library for the Borough of Queens and one of three library systems serving New York City, comprising some 63 branches throughout the borough. Since 1994, it has had high annual circulation, and it is the second largest library in the country in terms of the size of its collection. The first library in Queens was founded here, in Flushing, in 1858 as a subscription service. It became a free circulation library in 1869. In 1901, shortly after the consolidation of Queens into New York City, the city government proposed a new charter joining all libraries in Queens into the Queens Borough Public Library. All of the public libraries signed on, except for Flushing, which remained independent until 1903.

## [Columbia University Law School, Jerome L. Greene Hall, New York, NY – USA 1996](#)

Columbia Law School's main building, Jerome L. Greene Hall (or simply "the Law School"), was designed by Wallace Harrison and Max Abramovitz, architects of the United Nations Headquarters and Lincoln Center for the Performing Arts (which for many years served as the site of Columbia Law School's graduation ceremonies). It is located at the intersection of Amsterdam Avenue and West 116th Street. One of the building's defining features is its frontal sculpture, Bellerophon Taming Pegasus, designed by Jacques Lipchitz, symbolizing man's struggle over (his own) wild side/unreason.

In 1996, the Law School was extensively renovated, including the addition of a new entrance façade and three story skylit lobby, as well as the expansion of existing space to include an upper level students' commons, lounge areas, and a café. In the summer of 2008, construction of a new floor in Jerome Greene Hall was completed providing 38 new faculty offices. Other Columbia Law School buildings include William and June Warren Hall, the Jerome Greene Learning Annex (which Jerome Greene's representatives politely declined to have renamed after the building of Jerome Greene Hall), and William C. Warren Hall (or "Little Warren").

## [Enteros Design, Petersburg VA – USA](#)

### **Libraries:**

#### [Charles City County Library, Charles City, VA –USA on design](#)

Enteros Design recently completed the design and construction documents for the new 16,000 SF Charles City County Library which will be built on the south end of the Courthouse Complex. The facility includes a 100 seat meeting room, gallery, computer lab, study rooms, a children's program room, and a café. The Center for Local History, a research organization that records and maintains historical documents and genealogical information for the area, will also be housed in the new library. A museum quality archival space was designed to help protect the County's rare documents.

The design is inspired by the culture and heritage of Charles City County. The County's rich heritage is heavily influenced by its "three cultures and four centuries." Three pronounced hipped roof volumes march across the front of the building representing

the three cultures: the Europeans, the African Americans, and the American Indians. Triangular patterns are found in the floor plan and building elevations expressing artwork found in American Indian artwork. Murals reflecting the history of the County are portrayed on the walls of the Children's Library. A ceremonial plaza space located in front of the building incorporates symbolism of the two rivers surrounding the County. A special children's garden located in the rear of the building will encourage interactive learning opportunities and education on the regions ecosystems. The building is designed to be LEED Silver, and focuses on highlighting sustainable design principles.

### [East End Library, Richmond, VA – USA 2013](#)

Through "Storefront for Community Design", Enteros Design provided consultation on the renovation plans for the East End Library in Richmond, Virginia. Our design efforts focused on creating a more inviting and vibrant entrance for the 1960's library located in a community undergoing revitalization. Bold signage, an entrance canopy, and landscape/streetscape improvements were proposed.

For more information on Storefront for Community Design and how to get involved, visit <http://www.storefrontrichmond.org/>

<http://www.enterosdesign.com/projects/east-end-library/>

### [Petersburg Public Library, Petersburg, VA – USA 2013](#)

The new 56,000 square foot Petersburg Public Library is designed to provide a full range of services to a diverse community of residents with a considerable array of needs. The new building will be located in the center downtown Petersburg, and it will serve as a cultural center for the community as well as a catalyst for further revitalization of the downtown.

In 2007, Enteros Design was hired as architect for the new library and led a project team to verify the program needs, design the interior and exterior, and achieve LEED certification. The library integrates cutting edge technology and creates an environment for education, cultural enhancement, and entertainment for future generations. The plan includes a café, gallery, extensive meeting space, study rooms, extensive public computers, a computer training lab, and separate uniquely designed children and young adults spaces. The Children's Library is designed with architectural elements, finishes, and furnishings that are provocative and engaging to the children. Enteros Design integrated child size window cubes into the story time area to create unique environments where children can explore and learn. Stepped seating and a curved platform define the space for story time activities.

The new building architecture will have a monumental civic scale to be compatible with the adjacent historic churches. Natural materials such as wood, brick and stone will compliment the rich building fabric of Petersburg and create a warm and inviting interior. Large windows and a glass atrium space in the heart of the building will allow natural light to fill the interior during the day, and be lit at night from within to encourage views into the building from the exterior.

<http://www.enterosdesign.com/projects/petersburg-public-library/>

### [Prince George Public Library, Prince George, VA – USA 2011](#)

Enteros Design's new Prince George Public Library is situated at the northern end of the County's government complex and acts as a local cultural center with meeting rooms, a wi-fi café, library stacks, and outdoor terraces extending into the existing wooded landscape. The building is designed to recall the rural vernacular architecture of the region and the County's transition towards technology and industry. A heavy timber roof structure spans the axis of the library leading to an interpreted silo for the Children's story time area. Natural materials and transparent views merge the building with the landscape. The new 12,000 square foot library is operated by the Appomattox Regional Library System.

The interior of the facility is open with few partitions to aid in staff's visibility of all floor areas. The circulation desk is located adjacent to the entrance with a clear view of the entire collection. Self-checkout stations and RFID technology were included for the ease of both staff and patrons. Staff areas are located behind circulation to add to staff efficiency.

<http://www.eskewdumezripple.com>

### **Libraries:**

#### [Rosa Keller Library, New Orleans, LA – USA 2012](#)

Originally built in 1917 as the home of civil rights advocate and New Orleans Public Library pioneer, Rosa Freeman Keller, the house was given to the city after her death. In 1993, officials honored her leadership in the public library system by dedicating the structure for use as Broadmoor's public library branch. Modifications were made to the original home which included a brick addition with a concrete slab-on grade foundation. Though the library was conceived to include both the original home and the new structure, the two sections were physically separated by fire doors and service areas, isolating the house and leading the addition to become the sole functioning area. The home was subject to subsidence and foundation problems and gradually vacated. Without usage, the structure fell into disrepair. Both the house and extension were badly flooded during Hurricane Katrina in 2005.

### **Literature:**

Associated Press & Publications:

Metropolis, July 2012

This New Orleans neighborhood library is comprised of two buildings joined together with the intention that they function as a whole. One building is a historically significant bungalow built as a residence in 1917, sited prominently on the corner of South Broad Street and Napoleon Avenue. The other building, built in 1993 specifically to function as a library, was home to the main reading room and stock areas. Both buildings were severely flooded by levee breaks attributed to Hurricane Katrina. The bungalow was salvaged and raised for future flood prevention, but the modern addition was deemed necessary for replacement by the Federal Emergency Management Administration (FEMA).

The new 10,000 square foot combined library and community center serves the Broadmoor community by providing residents with an innovative 21st century library, community center, gathering space, and valuable educational resource. A visually open connection is maintained between the Historic House and Library Addition in order to create spatial relief as the two buildings touch. This "spine" allows for a clear line of sight to the playground across Broad Street and provides a clear entry sequence into the library. The new addition primarily houses book shelving, computer stations, and other core elements of the library function, while the historic house operates primarily as the community meeting center and home to a small café.

### [L.B. Landry High School, New Orleans, LA – USA 2010](#)

CLIENT State of Louisiana, Department of Education, Recovery School District, AREA 236,000 sq.ft., TOTAL COST \$5,480,000.00, COMPLETION DATE 8/2010, ASSOCIATED FIRM SHW Group

In August 2005, Hurricane Katrina struck New Orleans, flooding 80 percent of the city and essentially destroying the public school system. This new high school for the Louisiana Department of Education was part of a post-Katrina "quick start" construction program to accelerate the replacement of five damaged schools. It had an extremely timeline (six months for design and 20 months for construction) while a comprehensive master plan for the New Orleans school system was underway.

The 236,000-square-foot building serves a student population of more than 900 students and contains a 1,000-seat competition gymnasium, a 250-seat auxiliary gym and a 650-seat auditorium. Additional performing-arts spaces include classroom and rehearsal spaces for dance, choir, band and art, as well as a black-box theater.

The design establishes academic houses for each grade level provided within two classroom wings. The organization of these wings creates a central courtyard for outdoor gatherings space focused around a mature magnolia tree that existed on the site of the previous school. The program also includes a media center/library as well as a health clinic, both of which are designed to provide after-hours access to the general public for use as a community resource.

The building incorporates numerous sustainable design strategies, with LEED for Schools silver certification anticipated. The exterior skin utilizes storm-resistant materials—masonry, insulated metal panels, impact-resistant glazing—that also contribute to energy efficiency.

Locally sourced interior materials such as terrazzo flooring and glazed masonry units were selected for durability, low emissions and high recycled content. Partitions and mechanical equipment respond to best practices for speech recognition and acoustics in learning spaces.

Daylighting is employed significantly in classrooms and common areas. Stormwater harvesting, efficient plumbing fixtures and native landscaping yield a 20 percent reduction in water consumption. Overall energy use models at 32 percent below baseline.

"A very sophisticated and upbeat response to the need for transforming a community. We like the way they integrated sustainability in a very architectural way. The orientation sets the building up for success. The wall treatments are thought of in a way that pulls together the ceilings—sophisticated and composed."--2011 jury

### **EYP – Einhorn Yaffee Prescott Architecture & Engineering P.C., Albany, NY - USA**

<http://www.evpaedesign.com>

**Libraries:**

#### [Harry Elkins Widener Memorial Library, Cambridge, MA – USA 2004](#)

320,000 sqf. , Owner: Harvard University [www.harvard.edu](http://www.harvard.edu), \$ 92,000,000

The Harry Elkins Widener Memorial Library, designed by Horace Trumbauer and constructed in 1915, is located at the geographical and intellectual heart of Harvard University. In renewing the building for the 21st century, the school sought a restoration that would redefine the library in programmatic and technical terms, without losing the structure's aura, comfort, and connection to tradition. The renovation involved 27 construction stages stretched over six years. Phases were planned and timed to ensure the continuous operation of the library and maintain the availability of its collections. The early rehabilitation phases upgraded and modernized the building systems infrastructure, the 10-floor self-supporting stack structure, and various library support spaces. This work included updating climate control and life safety systems as well as improving public access. The architects also created new "found" space within two large light wells at the center of the building that house new mechanical space, staff work areas, and two new skylit reading rooms. These reading rooms symbolize a subtle proclamation of Widener's continued relevance at the core of Harvard's present and future intellectual life. Later construction phases involved restoring the historic public and reading spaces. Wherever possible, the team preserved existing features and room finishes while infusing the building with information technology and comfort standards necessary to meet the library's 21st century requirements. Where interventions were necessary, the architect designed them in a manner that creates a subtle dialogue with the 1915 structure: enhancing the character of the original building but expressing their own distinctiveness and design integrity as contemporary work. (EYP) "It has been a fascinating five years," said William C. Kirby, dean of the Faculty of Arts and Sciences, in brief remarks at the ceremony. "Those who study and work in this University have witnessed extraordinary feats of construction and reconstruction. We have marveled at the trucks and trusses and certainly that enormous crane lifting glass and steel to rather nerve-racking heights. Not to mention the daily symphony of hammering, drilling, pounding, sawing, and ringing."

The first phase of the project brought modern heating, ventilation, air-conditioning, humidity-control, electrical, lighting, fire-detection-and-suppression, and security systems to the 10 floors of stacks. Staff moved, cleaned, and reshelfed all 3.5 million books. Workers from contractors Lee Kennedy built a staff workspace and two new reading rooms, to the design of architects Einhorn Yaffee Prescott, in what had been the two interior lightcourts of the library. In phase two of the project, attention shifted to the front half of the building. The great reading room regained its original size, splendor, and serenity, while noisy, interactive library services moved to refurbished or newly constructed spaces.

Workers lifted 191 tons of steel into lightcourts; removed 92 tons of demolition debris from the nether regions of D-Level and 150 tons of ductwork and cast-iron debris from the attic; installed 55 miles of electrical cable, 15 miles of fire-alarm cable, 18 miles of electrical conduit, and 11 miles of "tel/data" cable; placed 5 miles of sprinkler piping, with 5,000 sprinkler heads; applied 2,000 gallons of paint; replaced 4,000 light fixtures and 1,000 switches in the stacks; cleaned, refinished, and sealed 120,000 square feet of marble flooring; and much more.

"I also want to offer my deepest gratitude," said Kirby, "to Widener's librarians and staff, who never flinched from their commitment to keeping this library fully operational through-out the renovation. They called it — 'orchestrated chaos.' I call it courage.

"That's not, however, unusual for this library or for this University," Kirby continued. "In the midst of an era of grave international uncertainty, Harvard persevered in its quest to advance human knowledge by building Widener Library. As they did in 1915, we

gather on these steps during challenging times and once again we dedicate this place — we dedicate ourselves — to the proposition that learning is the only path to enlightenment and that from enlightenment springs permanent improvement in the human condition."

Larsen librarian of Harvard College Nancy M. Cline and President Lawrence H. Summers also spoke. A throng of modest size viewed the proceedings, to which the library invited all members of the Harvard community; at their conclusion, cookies and cider were dispensed in a tent in Tercentenary Theatre. Later, library benefactors attended seminars on teaching with Widener's global collections. In the evening, they gathered with senior administrators for a formal dinner in the Loker Reading Room.

This signal moment in the life of the library will be marked in November by publication of *Widener: Biography of a Library*, by Matthew Battles, coordinating editor of the *Harvard Library Bulletin* (distributed by Harvard University Press, \$50). A lively and wide-ranging narrative, it is an estimable addition to the shelves.

<http://harvardmagazine.com/2004/11/widener-reborn.html>

**Harry Elkins Widener Memorial Library Renovation**

Modernizing this historic structure required complex infrastructure and design interventions. The first phase encompassed upgrading the existing ten-floor, self-supporting stack block. New cores and building systems were threaded through the stacks to provide climate control for materials storage; improve building circulation; and provide state-of-the-art work spaces for staff. The second phase focused on completing the restoration aspects of the project. The design strategy also created new "found" space within two large light wells at the center of the 320,000-square-foot building to create two sky-lit reading rooms, staff work areas, and new mechanical space. These infill spaces give Harvard critically needed expansion room in a building where, as a condition of the donor bequest, the building envelope could not be expanded.

**Two Libraries. Designed by Harrison & Abramovitz, in: *Architectural Record*, 1967, May, pp. 151-158**

[http://www.google.de/imgres?imgurl=http://upload.wikimedia.org/wikipedia/commons/a/a1/Hilles\\_Library,\\_Radcliffe\\_Quadrangle\\_-\\_IMG\\_1696.jpg&imgrefurl=http://commons.wikimedia.org/wiki/File:Hilles\\_Library,\\_Radcliffe\\_Quadrangle\\_-\\_IMG\\_1696.jpg&h=2448&w=3264&tbnid=NzUeZIC2L1OHtM:&zoom=1&tbnh=137&tbnw=183&usq= xZ2cjYjX5z\\_NH5DXO842fymZSh0=&docid=frjifJLSx7HL4XM&hl=de&sa=X&ei=ovkuVNy4EoPAPiFdgfAG&ved=0CC4Q9QEwAg&dur=7117](http://www.google.de/imgres?imgurl=http://upload.wikimedia.org/wikipedia/commons/a/a1/Hilles_Library,_Radcliffe_Quadrangle_-_IMG_1696.jpg&imgrefurl=http://commons.wikimedia.org/wiki/File:Hilles_Library,_Radcliffe_Quadrangle_-_IMG_1696.jpg&h=2448&w=3264&tbnid=NzUeZIC2L1OHtM:&zoom=1&tbnh=137&tbnw=183&usq= xZ2cjYjX5z_NH5DXO842fymZSh0=&docid=frjifJLSx7HL4XM&hl=de&sa=X&ei=ovkuVNy4EoPAPiFdgfAG&ved=0CC4Q9QEwAg&dur=7117)

Our challenge was to maintain and enhance the existing character of this 1965 Harrison & Abramovitz design while creating a new reading room and administrative boardroom. Renovation focused on increasing building efficiency while artfully integrating code upgrades, new technology, and building systems into an inflexible reinforced-concrete structure. The project has been cited by Harvard, the Cambridge Historical Commission, and DOCOMOMO International for contributing to the dialogue on sustaining the legacy of mid-century modernism.

<http://libraryvisit.org/trilakes.aspx>

By Janet S. Loew

Communications/Public Relations Director

Watch us grow, from the ground up! Many area residents, and even some very enthusiastic cheerleaders, turned out to support the Library as ground was broken to mark the launch of construction on July 30.

Excitement is building as the project begins to take form. If you're driving by on Mahoning Avenue, you can see the progress. The site has been prepared and electrical and data conduit has been laid in preparation for laying the foundation. Before you know it, walls will go up. If the project continues to be on-schedule, the building will be under roof well before winter begins.

New Library Director Heidi Daniel attended the groundbreaking and expressed her thanks to the community: "The support of the community has been gratifying. It is my sincere belief that this new library building will be with the activities, resources, and dreams of the residents who use it."

The new 6,650-square-foot branch library is being built on Mahoning Avenue near the Jackson-Milton High School/Middle School complex. A fundraising campaign with a goal of \$250,000 is currently underway for this branch. If you're interested in donating, please call 330.740.6086.

Construction on the \$1.712 million project is expected to take about 8-9 months. Barring delays, it is hoped that the new branch will open in March or April of 2013.

Project architect is Ronald Cornell Faniro and the general contractor is DSV Builders, Inc.

#### **Libraries:**

### Jacobs Family Library (LJCD – La Jolla Country Day School)/ Academic Center, La Jolla, CA – USA 2007

In 2001, Country Day leaders began to envision a new campus - one that would meet the growing needs of our student body as they inquire, explore, and investigate the world around them. The campus had not had a 'face-lift' in almost 40 years, with bungalows still in operation that were originally built when the school moved to our current site in 1961.

Through the generosity of the school community, the "Building on Excellence" campaign began and has raised more than \$16 million so far to create a campus commensurate with the future needs of our students. Combined with tax exempt bond financing, a total of \$40 million has been invested in our 24-acre campus to ensure that our students and teachers have the best possible environment for learning.

Building on the momentum created in 2005, when new Upper School classrooms and improvements of synthetic turf and lights were added on the main athletic field, a new Middle School was completed in 2006.

This wonderful facility for Grades 5-8 houses new labs for science and computers, classrooms for English, math, world languages, and social studies, as well as a dedicated dance studio, orchestra and band rehearsal and performance spaces. Most recently, a digital recording studio was added, enabling students to compose and record their own original music.

Now the hallmark of our campus life and activities, the Jacobs Family Library/Academic Center opened in 2007. This outstanding facility included Lower, Middle/ Upper School libraries, a fine arts gallery, the Learning Resource Center, the Office of Admission, a multipurpose room and administrative offices.

### Harold B. Lee Library Addition and Remodel, Brigham Young University, Provo, UT – USA 2000

Size 235,000 sf new construction; 80,000 sf remodel, Client Brigham Young University

The addition and remodel of the Harold B. Lee Library consisted of a three-level, underground addition to the main campus library. Landscaping and walkways cover most of the addition, maintaining the preconstruction character of the major campus quadrangle above.

The first underground level comprises classrooms, book stacks, and study areas, while the second level below houses book stacks and study spaces, a 200-seat auditorium, and a Special Collections section with exhibits and archival storage areas. The third and lowest level contains mechanical and electrical equipment. At grade level, a glass-encased entry links the original library building to the underground addition.

### FGM Frye Gillan Molinaro Architects, Chicago, IL – USA

Now:

### FGM Architects, Oak Brook, IL - USA

<http://www.fgmarchitects.com>

As of September 1, 2012, Frye Gillan Molinaro regretfully announces that our firm principals have decided to discontinue our services. Both AJ and Lonn are moving on to different opportunities in their careers, and will no longer be available for commissions in this endeavor. We realize that this may have some implications for our past and current projects, and we apologize in advance if our decision will pose any inconvenience.

We would like to explicitly thank each of our clients for believing in, and for supporting our firm for the 29 years it has existed. We could have never accomplished what we did without such an amazing support base. The library world, in particular, gave us exceptional opportunities along with exceptional rewards.

Additionally, we want to thank our high quality consultants and staff that we have collaborated with. Our designs were enhanced by your professionalism.

Finally, we want to express gratitude to members of the press and the publications that helped breathe additional life into our projects. We are immensely grateful for the accolades that we were given for our work.

Thank you for allowing us to contribute and express our ideas with you. It has truly been a pleasure.

Sincerely,

Lonn L. Frye, FAIA

#### **Libraries:**

### Wheaton College, Nicholas Buswell Library & Café, Renovation, Wheaton, IL – USA 2012

As part of its strategic mission to serve students, faculty, and staff of Wheaton College, Buswell Library's vision statement includes a pledge to "promote community and collaboration by cultivating relationships across campus through sponsoring and participating in campus-wide activities, creative use of the library's physical and virtual spaces, service excellence, and dynamic teamwork among library staff to achieve unprecedented integration and flexibility." As part of this effort to promote community and collaboration, FGM worked with the College to incorporate a new café within the existing library, adjacent to the main entrance. The project

began with a feasibility study in which the College's goals and objectives were identified and initial design concepts tested. The final result is a 1,300 sf café, with table and counter seating for up to 40 visitors, one wall of which is given over to the display of various examples of artwork. The café offers a variety of beverages and snacks and provides a comfortable and inviting place where students can relax, prepare for the next class, or engage in conversation with fellow classmates or professors.

### **Northwestern University, Seeley G. Mudd Library, Renovation, Evanston, IL – USA 2011**

Seeley G. Mudd Library, located on Northwestern's Evanston campus, contains over 345,000 books and bound journal volumes covering the fields of science and engineering. The Library administration envisioned the creation of student collaboration space within the existing facility, a high-ceilinged, open area that could take advantage of the natural light and views to the campus and Lake Michigan beyond. FGM Architects was engaged to develop a design that encouraged student interaction and would be flexible and adaptable to changing needs. The 18,000 sf renovated space features two community spaces, group study zones, and a multipurpose group presentation area. Movable furnishings are provided throughout, allowing students to quickly re-arrange the space to accommodate different-sized groups in multiple settings.

### **Carol Stream Public Library, Addition and Renovation, Carol Stream, IL – USA 2010**

The library had a very large wish list of needed improvements for their library. We were first engaged to help them prioritize their wishes and provide conceptual budgets for many different items. Once a direction was established, we provided conceptual designs for several different ideas and further refined the budgets. The library then chose what they felt offered the best value.

The library had long ago run out of space to provide additional services to their users. The implementation recaptured underutilized space, reconfigured existing space, and provided a modest addition. The circulation desk was relocated into the existing main lobby, which was a dark, underutilized space. The remodeled lobby along with a new entry addition provides a bright and inviting entryway and allowed for space to be gained within the library. This gained space was used to provide a much needed computer center. Areas that were reconfigured for greater use included the multipurpose room which was enlarged by recapturing corridor space and made even more multipurpose by the addition of a moveable wall which allows the library to divide the space.

Renovations to the Young Adults Area, Children's Area, and Administration Office were also part of the scope of the project.

The Carol Stream Public Library valued sustainable design. Their existing building was older, but they wanted to include as many green features as possible in this project. Many ideas were explored in conjunction with the library. The design work highlights the existing skylights in the lobby, which were relatively obscure, to provide natural lighting. Many of the material choices included recycled materials and energy efficient fixtures

### **Grayslake Area Public Library, Grayslake, IL – USA 2010**

The Grayslake Public Library was originally designed by SRBL in 1996 with much participation from the Library District. However, since then, the children's area has become space deficient through an increased demand and the computer workstations are no longer meeting the needs of the patrons. Meeting these growing needs in a cost-effective manner was the goal for the renovation project.

The team's renovation solution was to infill an open-to-below area in the existing Children's area which increased the space available for stacks. This extra room also allowed for an expanded computer area. A major success was that the project was completed while the Library remained operational.

<http://www.fgmarchitects.com/practice-areas/projects/civic/grayslake-area-public-library/>

Cost of Construction: Original: \$3,577,233, Renovation: \$100,000, Size: Original: 34,305 SF, Renovation: 300 SF

Status: Original: December 1996, Renovation: March 2010

Challenge/Goal: SRBL originally designed the library in 1996 with much participation from the Library District. Since then, the children's area became space deficient through an increased demand and computer workstations no longer met patron needs.

Solution: SRBL's renovation solution was to infill an open-to-below area in the existing Children's area which increased the space available for stacks. This extra room also allowed for an expanded computer area. The project was completed while the Library remained operational – an additional success story.

Library Journal, Dezember 2009

Architects: Frye Gillan Molinaro Architects

In the western suburbs of Chicago, a dramatic transformation was propelled by merging an existing brutalist-inspired Library with a fluid new addition. After a 2½ year design and construction phase, it emerged as a contemporary structure with a green mindset and a sharp focus on technology. An entirely new image from Park Avenue features a facade enhanced by a canted glass tower. Soft light from the ramp handrails and the tower add a sense of mystery to the composition, drawing the eye to the entry. The original building, partly recessed below grade and glazed with smoky panes of glass, was far less transparent and attention-grabbing. With energy-efficient low-E clear glass, the new facade entices passers-by.

A sculpted facade features two distinct architectural zones. The administrative wing on the mezzanine level uses geometric light boxes to give the long facade relief and interest. Each light box connects to a separate room behind the facade. The board meeting room is the light box that protrudes outward; its shape is expressed internally, as well. On the main level, a clear glass facade greets patrons and entices them with the bright colors used in the Young Adults department. Visual connection between the street and the

library's interior was a major goal for the renovation. Solar control at this part of the building is achieved by motorized shades that retract into the ceiling.

Over 15,000 square feet of green roof was integrated into the design. Lightweight sedum was used in conjunction with a tray system to capture and slow down the rate of flow and diffuse environmental pollutants. The green roof also insulates during the winter, prevents heat gain during the summer, and shields the roofing membrane from UV rays, extending the life of the roof.

The integration of a bio-swale along with roof scuppers provided an additional landscaping concept for the site. The bioswale is not a "wetland" area, per say, but an area that would allow quick filtration and release. Native Landscaping was used around the site to minimize lawns, which are not only maintenance intensive, but also create chemical runoff.

The existing building's architecture perhaps took some inspiration from Louis Kahn's Exeter Library, with a brutalist take on exposed concrete and wood beams. This reading room was transformed not only by the hanging light fixtures, but by the redesign of the mechanical layout to eliminate air ducts from protruding into the center of the space. The existing rounded windows were upgraded to double-pane, low-E glass. Shelves holding New Fiction complete the space, which encourages casual browsing and comfortable seating in a light-filled room.

A complex tubular structural geometry was employed for the interior of the west entrance glass tower. Diagonal and cross bracing provides lateral support and wind-load transfer. Round, hanging lights dance here, and throughout the building. Some are translucent, while others have exposed, energy-efficient lamping. The entrance also features an all-glass revolving door and an RFID security gate system. Flanking it is a large, four-panel video screen for slide shows, live cable TV feeds or other multimedia presentations.

Just beyond the intersection of two main hallways is the "Amoeba" space, so named because of a curvaceous platform that floats in the middle of the floor plan. This part of the library houses digital media as well as the Periodicals collection and is the project's signature architectural expression. The amoeba platform is pulled away from all sides of the building, allowing natural light to pass into the lower level. Atop the amoeba are light "scoops" that capture outside light and reflect it into the space. Each scoop was designed to take advantage of various sun angles in summer and winter to help with heat gain and light transfer.

As patrons descend to the lower level via the main stair, they encounter one of the building's several "technology nodes." Interplay of the orange amoeba edge, the burst of natural light from the skylight and the accent energy of the "light wall" is compelling. The light wall was envisioned as a "mirror" to the skylight above it, but also is an active artistic element. Most often, the light wall has a soft, white glow that provides pleasing illumination during overcast days or evening hours. But it can be made striking with colors, too. And it powers up and down with a special presentation at the start and end of each day, either greeting patrons or alerting them that the library is about to close.

The hustle and bustle of the main stair is expressed in the forms that surround it. The canted edge of the amoeba and the main stair are a unifying element that helps the form wind down to the lower level. A yin-yang statement is made where the two forms nearly touch, reminiscent of shapes championed by sculptor Richard Serra. The graceful arcs embody the movement of the patrons.

Teenagers were made a priority with a new 5,000-square-foot space that is their own special zone. Colorful patterns and whimsical furniture provide a youthful focus, while varying ceiling textures and lighting patterns make the space exciting.

The library's most daring idea probably is the "Green Zone," a connective hallway between the adult and children's departments that also doubles as a tech node. The spatially abstract space is also visually absorbing. As another technology hub of the library, it has WI-FI and a long row of computers opposite study counters. The walls feature a textural striped paint pattern to reflect light from the illuminated panels. A fiber-optic sculptural "dragon" hangs in the space, its head and neck serving as official gateway to the children's department.

This renovation of an existing space houses the grade school collection along with plenty of tables and private study rooms. A technology hub is nearby, giving older children their own computer center. The ceiling has round gypsum soffits placed concentrically on exposed concrete columns. Light fixtures were mounted to the columns and shine upward on the discs, providing an indirect light that softens the space. A self-check and search catalog "pod" reinforces the goal of using integrated technology to enhance the library experience.

This room formerly housed the entire children's department, and was quite stark. Sheer walls of concrete and masonry were transformed with colorful panels to brighten the space and provide some acoustic tempering. New carpet patterns and a playful book stack layout accentuate the space, while above, ductwork once painted red, yellow and blue was changed to black to reduce its prominence. New lighting gives a warmer, more even feel to the space. In a dramatic change, a concrete walkway that once was the department's entry point was removed, allowing a previously blocked skylight to flood the area with natural light.

On a more utilitarian note, the replacement of the original building's single-pane glazing with modern low-E insulated glazing will dramatically increase the efficiency of heating and cooling the building as well.

The library utilizes high efficiency boilers, water heaters, and chillers with non-global warming refrigerants. Electronic temperature controls with energy conservation features were also implemented. Occupancy sensors were included in tandem with the lighting control system to reduce the amount of power usage for the facility. Low-flow plumbing fixtures and lavatories were used in all the bathrooms in the facility, in conjunction with dual flushometers for enhanced water savings.

LED fixtures were also used for task and accent lighting to provide high efficiency light sources. The inclusion of the LED "light wall" helped this technology not only illuminate the space in a creative way, but also infuse art into the space.

Low VOC emitting finishes were used whenever possible, including paints and flooring. For the majority of flooring, FGMarch specified recycled rubber flooring made from 72.8% post-consumer recycled tires. Any carpeting that was specified also certified compliant with green industry standards for recycled content, including PVC-free backing and padding, where applicable.

### [Bensenville Library, Bensenville, IL – USA 2009](#)

This project was a joint effort between the library and school district and shows how a building addition can be extremely sensitive to the existing building. It is a large learning center addition which is attached to the existing library. One of the main goals of the library was to make sure the addition matched the distinctive nature of the existing library, which is rustic in character. Other goals included minimizing disruption during construction, no small feat as this was a sizeable addition – over 16,800 square feet.

Communication was of critical importance as there were two clients to coordinate with.

This project was extremely well received by the public as it was a collaborative project between two taxing bodies which maximized the "bang for the buck" for both the library and school district. It was a win-win for both. The library added needed program space and the school district gained a learning center attached to the resources of the library. The addition included heavy timber beams and Wisconsin Fieldstone to match the existing library. The later renovation sought to improve the entrance and lobby as well as provide universal access for the patrons, the renovation captured the spirit of the craftsman style of the existing building to create a new branded look. Complete with tile work that has literary references and fine wood detailing, the renovation brought the building up to new codes, but also created a "branded" experience for the entrance.

<http://www.fgmarchitects.com/practice-areas/projects/civic/bensenville-library/>

Cost of Construction: Addition: \$42,279,389, Renovation: \$173,000, Size: Addition: 16,888 SF, Renovation, 600 SF  
Status: Addition Completed 1999. Renovation Completed May 2009

**Challenge/Goal:** SRBL had to design the library addition to blend with the original construction. The later renovation of the Lobby and Restrooms, funded by an American with Disabilities (ADA) grant, presented the same challenge- maintain the appearance of the craftsman style in the building.

**Solution:** Heavy timber beams and Wisconsin Fieldstone match the existing library. The later renovation sought to improve the entrance and lobby as well as provide universal access for the patrons. Tile work has literary references and fine wood detailing create a “branded” entrance.

### [Oak Park Library, Maze Branch, Oak Park, IL – USA 2007](#)

The Adele H. Maze branch of the Oak Park Public Library is a handsomely renovated 7,632 square foot building in south Oak Park. Originally dubbed the South Branch, the library debuted in 1915 in a Harrison Street storefront and later moved to its current location. Now named after the late librarian Adele Maze, the facility offers a wide range of programs from children's summer reading sessions to adult book discussions.

### [Ela Area Public Library District, Lake Zurich, IL – USA 2002](#)

Named for George Ela, the area's first postmaster, the Library collection was first maintained by the Lake Zurich Woman's Club. In 1972, the Library opened its doors in the basement of Lake Zurich's St. Francis de Sales Church. The Library occupied 3,000 square feet, and the North Suburban Library System provided a field librarian, legal counsel, basic materials and expenses to launch a referendum.

Working with multiple governmental agencies on the site, a diverse library board, and a tight budget were some of the challenges on this project. It was universally agreed upon that the new 71,600 sf library had to be warm and inviting as it was also serving as a community center.

Familiar materials such as brick and stone were used to evoke a warm and familiar feeling with the community. Spaces were laid out to accommodate the greatest use of the library. Popular materials, youth, and young adult areas are on the first floor, while quieter, more intimate space for adult collections and reference materials are on the second floor.

Library Renovation 2000-2002

The first plans for renovating the library, originally opened in 1970, began in 1994. As time passed it became apparent that a more extensive renovation than first envisioned was appropriate. The final design resulted in an eight million dollar project that called for completely redoing the library. The plan was to re-develop the library, restoring it to the center of student life. The goal has been to change the academic landscape of the campus by combining social and intellectual activities in a building combining technology with

teaching, creating a model for the small academic library. The new design created a more open environment, with greater accessibility between the library and the campus-at-large. Students are now able to enter and exit freely on each of the library's three floors, providing ready access to classrooms in the adjoining building. This development makes the library a more integral part of Dominican academics, and presents a wonderful opportunity to interact more often with students.

Improving this physical and intellectual space required a new level of technological capability never dreamed of thirty years ago. Installing an adequate technology infrastructure put the university in a strong position to improve classrooms. All colleges and universities face the problems of aging classrooms. It is a struggle to provide teaching and learning technology to our buildings, some of which are 80 years old. Now, with the library renovation, we had the golden opportunity to add the technological infrastructure necessary to support high-end equipment - now and in the future. To this end, the renovated library houses a series of high-tech classrooms. They include:

Five enhanced classrooms on the third floor, networked for resident teacher PCs. Each classroom also contains a mounted projector, VCR and DVD player, document camera, and sound system. One classroom houses a total of 25 PCs for student use. One large tiered classroom seats 45 students, with all desks wired for PCs. Two of these classrooms have satellite capability.

Some years ago the university installed three similarly equipped rooms in Lewis Hall. Library media services delivers equipment to other classrooms, all of which are networked. Virtually all classrooms are equipped with resident VCRs. In 2005, the library purchased three "enhanced classrooms on a cart," including networked PCs, projectors, VCR/DVDs and document cameras. Three additional such units were added at the start of the 2006 fiscal year.

On the second floor, a multimedia production classroom room houses 18 PCs, a Macintosh lab, all the equipment of the enhanced classrooms as well as scanners, printers, and video and digital cameras. Students have the ability to burn their own CD's. A training room on the first floor is available for information literacy instruction. This training room has a satellite receiver, the enhanced classroom equipment and 24 PCs for student use.

Two meeting rooms on the lower level are equipped with the enhanced classroom set-ups, and are satellite capable.

The addition of the cyber café on the lower level has served to enliven the library. Anticipated problems with food and drink have not materialized. Undergraduates, faculty and staff are attracted to this café; students then proceed to the nearby PCs with their coffee. Faculty often stop for a word with the librarian at the reference desk, now located in the lower level very near the cyber café. Noise is occasionally a problem, but the university has succeeded in transforming the library into a social as well as intellectual hub and quiet study areas have been established in the Noonan Reading Room and group study rooms on the second floor. A major improvement, possible because of the expanded infrastructure, is the increase in student work stations. The library now houses sixty desktop PCs, network connections on all floors for students' own laptops, and wireless capability on all floors of the library. The renovation has proven so successful, that the library expanded its hours to accommodate student needs.

### [Summit Public Library, Summit, IL – USA 1999](#)

The Summit Public Library has moved into its new modern facilities which tripled its size. Public funds supported construction of a new 18,190 SF library, which replaces an out of date facility. Located on an important corner in the downtown area, the new library has become the village focal point and has generated public pride and economic growth for the merchants. The Summit Public Library has a diverse collection made up of Spanish texts, Adult Fiction, Non-fiction, Children's and Multimedia items. FGMarch has worked to house this collection with a mix of different types of community spaces. Features include an expanded Children's area with an exciting story hour room, a Quiet Reading room with comfortable seating, and a Public Meeting room, which fulfills the needs of community groups and organizations and provides library program space, which was missing from the original building. The new library has increased technological capabilities. In addition to Internet stations for children and adults, the library also provides an expanded multimedia department with books on tape, videos, CD's and DVD's. A drive-up book drop facilitates the convenience of using the new library. Most importantly the library has become an important civic presence for the community of Summit. Improved street lighting, sidewalks and an outdoor public space brightens the neighborhood and encourage growth in the surrounding areas. The entrance to the library has been moved away from the busy street, creating a safe point for arrival of families and library patrons. The result is a dramatic civic building for the community, contemporary library services for patrons, and accommodation of the needs of future expansion, providing community service for years to come. <http://www.fieldpaoli.com>

**Libraries:**

### [Millbrae Library, CA – USA 2008](#)

The double height entry lobby at Millbrae's new 26,000 square foot library opens into light-filled reading and study areas. Expansive north windows look out onto tall willow and sycamore trees. As part of the planning process, Field Paoli also created Constitution

Plaza at the center of the site, providing a shared civic center surrounded by the library, City Hall, a large community meeting room, and the town's relocated Historical Museum.

<http://www.fieldpaoli.com/en/>

### [Tustin Library, CA – USA 2008](#)

Tustin Library is an innovative, green building, located in the existing Tustin Civic Center. The design features daylighting controls, under floor air distribution, large north facing windows, and extensive use of recycled materials. It is also configured so that it can accommodate a large field of photo-voltaic panels on the roof in the future. The library features a great children's area with an enclosed homework center, wireless access throughout, a new self check system, and a public literacy center. In addition to the new building, the project includes creation of a new central Civic Plaza with defined children's outdoor reading areas, a poetry corner, and the capacity to house large public events. The building also encloses three distinct courtyards with public access.

### [Marina Branch Library, San Francisco, CA – USA 2007](#)

The original Marina Branch library opened in San Francisco in 1954. Now, as part of a city-wide program of library renovation and modernization, the building was totally renovated and expanded to meet the current needs of the community. The scope of work included upgrades for seismic, mechanical, electrical and accessibility, as well as a reconfiguration of the spaces to better meet current needs including current technology. Field Paoli are architects for this project in association with Tom Eliot Fisch.

<http://www.fieldpaoli.com/en/>

### [Almaden Library / Community Center, San José, CA – USA 2006](#)

Funds from two local bond measures were combined to create a new joint use library and community center set in an existing city park. The building's three wings accommodate a full service library; community room, gymnasium and fitness facilities; and dedicated activity rooms for children, seniors and teens. The 65,000 square foot building was carefully sited to wrap around a group of mature redwood trees and focus views to nearby park lands. Murals and a hanging glass sculpture by local artists are prominently displayed in the new space. Sustainable features include green building materials, permeable paving, high efficiency lighting, and maximum daylighting through clerestories and expansive courtyard windows.

<http://www.fieldpaoli.com/en/>

### [Belmont Ruth Falkner Library, Belmont, CA – USA 2006](#)

The new Belmont Library was designed to wrap around heritage oak trees in a three-acre neighborhood park. Expansive window walls in the adult and children's reading rooms face the park, providing ample north light and creating a magical space for reading and study. Amenities include self-checkout, a café and small outdoor amphitheater, custom rosewood furnishings, homework lab, and computer capacity to serve projected city needs for the next two decades.

### **Libraries:**

#### [Firestone Library, Princeton University, Princeton, NJ - USA phased to 2020](#)

<http://library.princeton.edu/about/history>

400,000 SF; \$250 million

Firestone Library has been the academic heart of Princeton University since its completion in 1948 (Architects: Robert Barnard O'Connor (\*21.11.1886 Manhasset, NY - + Nov.1993, Mount Kisco, NY) and Walter Harrington Kilham (\*30.08.1868 Beverly, MA – +11.09.1948 Boston, MA), . FFP was entrusted with its redesign following the success of the firm's Sherrerd Hall in 2008. With its Collegiate Gothic Revival exterior, Moderne interior, and numerous additions, Firestone required a sensitive integration of design rhetoric from different eras. The massive library—which reflected state-of-the-art flexible planning and open-stack design when built—will be completely remodeled by FFP as designer in partnership with Shepley Bulfinch as project architect. All signature spaces and interiors will be strategically renovated to preserve the integrity of the original building, while modernizing its systems and operations. Study carrels and furniture will also be designed by FFP. In addition to a building wide art installation program, there will be a Rare Book/Special Collections exhibit gallery on the ground floor. This long-term, phased project will integrate today's technologies with flexibility for future systems to make Princeton's main library a cutting-edge resource for student and faculty scholars for decades to come.

<http://www.fisherpartners.net/work/in-progress/firestone/>

#### [Science Education & Research Facility, Crossroads School for Arts and Sciences, Santa Monica, CA – USA 2015](#)

25 000 sq.

FFP has designed a new state of the art science building for Crossroads School for Arts & Sciences in Santa Monica. The Science Education & Research Facility will serve Upper and Middle School. The project's campus perimeter location, relationship to an adjacent freeway, and essential role in the school's educational mission will make the building an icon for the school. The 2-story, 25,000 sf facility will include 12 classrooms, fume-hood lab, study room, faculty preparation spaces, and a Special Projects Pavilion

with rooftop laboratory. Merging of indoor/outdoor spaces will encourage hands-on discovery and provide flexibly for the unforeseen future of science education. Exterior circulation space large enough for social interaction for students and faculty, exposed concrete structure, mechanical systems and glass facades make the building itself a teaching tool. A site specific wind and gravity activated kinetic sculpture by artist Ned Kahn crowns the Special Projects Pavilion, marrying science with art. This project is currently in construction.

### [The Walter and Leonore Annenberg Center for Information Science and Technology, Caltech, Pasadena, CA - USA 2009](#)

46,000 SF; \$20.2 million; LEED Gold

#### **Awards:**

AIA/Pasadena-Foothill; Southern California Development Forum

This home for pioneering interdisciplinary research into information technologies fosters collaboration and interaction among professors and students, who migrate to the new facility from different parts of the California Institute of Technology (Caltech) campus. Group-learning spaces, conference areas, research center, lounges, studios, auditorium, and light-filled atrium promote casual and serendipitous meetings to generate and share ideas and continue collaborations. Glass walls, inside and outside, express and encourage intellectual transparency. Working within the historic Caltech campus, FFP used the Modern idiom of colored glass and steel to both honor the campus and express the ethos of the new interdisciplinary initiative. Literally thinking outside-the-box, FFP placed wide stairways—simultaneously sculptural and functional—along east and west façades connecting all levels with active social circulation. Green materials and fixtures, photovoltaic and white roof systems, storm water controls, radiant cooling, operable windows, and individual controls contribute to a sustainable building, whose “innovative design inspires its residents,” according to a Caltech professor.

[Salem High School, Salem, MA – USA 2008](#)

Renovation

Flansburgh Architects designed the phased renovation of Salem High School, a 1970s, 430,000 square foot facility serving a 1,500-student population. The scope included roof replacement, resolution of ADA accessibility, exterior envelope improvements, new interior finishes, HVAC, plumbing, and data/electrical upgrades. To bring the high school’s existing layout up to current educational standards, Flansburgh reconfigured and modified large, open-plan areas into specialized functions for music, arts, a state-of-the-art library/media center, and science labs. Salem High School was the first public school in Massachusetts to utilize the new state-approved CM-at-Risk process, which brought the project in on time and within budget. This project earned the 2010 Renovation & Modernization Award from the New Chapter of Construction Managers Association of America.

### [Lawrence High School - Lawrence, MA – USA 2007](#)

New High School

This award-winning 565,000 square foot high school for 3,000 students offers college-level facilities including a 35,000 square foot field house, 20,000 square foot library, 1,200-seat performing arts center, and 10,000 square foot dining commons in a comprehensive facility. A second-level promenade connects six academies that encircle these common spaces, fostering a sense of campus. Inspired by the traditions of mill buildings in Lawrence, the narrow academies are constructed of bearing walls and concrete plank. They have proved cost effective and quick to build.

### [Auburn High School, Auburn, MA – USA 2006](#)

#### **Awards:**

Winner of the 2007 Award for Design Excellence from the Boston Society of Architects

URS provided project management, construction management and commissioning services for a new, \$39.5 million high school in Auburn, Massachusetts. The 175,000 square foot facility—including athletic fields—was built to serve 800 students. The building’s architectural elements include an innovative terracotta rain-screen cladding system with aluminum sun shades to control daylight into the classrooms, an atrium with continuous clerestory and circular skylights, and a dramatic arc of classrooms which open to the dining commons. The athletic complex is comprised of three infill turf fields—football/soccer with track, lacrosse/field hockey and baseball, and a natural-surface softball field. The project is adjacent to a brook, which made attention to conservation issues critical. URS’ early involvement contributed to the project’s success. The company conducted constructability reviews during the design phase and contributed to post-bid value engineering following an increase in steel prices. ( URS )

The overall program for the new 800-student high school project was vast and encompassing. The town was interested in openness, daylighting and technology for both the classrooms and the building as a whole. The central atrium is the heart of the school, linking the various academic spaces. Continuous clerestory glazing floods this area with daylight, and a copper wall reflects this incoming daylight. When daylight levels drop, sensors in this space switch on the ceiling lights. The projecting balconies, situated along the east wall of the atrium, provide an ideal spot for student observation, and teachers can see the entire length of the building from this vantage point. The new high school is a technologically rich environment. Several classrooms are equipped with interactive

whiteboards. This technology is gradually being worked into the educational program throughout the high school. In addition to several computer labs, the project included seven laptop carts, which remain charged and can be checked out by any teacher, essentially making any classroom an interactive computer lab.

### [Fairhaven High School, Fairhaven, MA – USA 2001](#)

#### Addition and Restoration

Given as a gift to the City of Fairhaven by Henry Huttleston Rogers in 1906, the existing Fairhaven High School is an historic landmark. The restoration work included converting the existing gymnasium into a library, painstakingly reusing and reconfiguring existing materials, and replicating historic fixtures. Set back from the existing building to minimize its impact and composed of simple, strong plutonic solids, the 85,000 square foot addition includes a new gymnasium, auditorium, arts classrooms, and science labs.

<http://www.flansburgh.com/projects/fairhaven-high-school-p27/>

read more:

Moving off Cape into Southeastern Massachusetts, a restoration effort is underway at Fairhaven High School to restore the building's historic exterior. Similar to Highfield Hall, a comprehensive survey and structural evaluation was needed before restoration activities got underway. In doing so, the walls "spoke for themselves" in that they revealed history, architectural styles, and construction techniques of the day.

Described as Tudor-gothic in style with masonry construction including granite, brick, and Indiana limestone, this structure has many outstanding decorative features representative of early 20th century architecture. Also noteworthy is the excellent workmanship of the structural support including state-of-the-art (at that time) lattice work, (rivet plate) girders, (lintel) beams, and structural framework. Gustavino tiles Some imprints on the structural beams indicate Carina and McLellan, who were structural steel fabricators during the school's construction, which also indicated there may have been several fabrication shops involved in the project at the same time.

Inside the historic section of the high school and deserving a special mention are the Guastavino tile-vaulted porticos and floor supporting structural systems. Rafael Guastavino was a late 19th, early 20th century architect and builder. He is known for creating a tiling technique that constructs robust, self-supporting arches and architectural vaults using interlocking terracotta tiles and layers of mortar. In this style, the tiles follow the curve of the roof as opposed to running horizontally, vertically, or perpendicular to the curve. Guastavino's tile vaults are aesthetically pleasing and effective in the strength of their structural support. Visit the Guastavino Project at the Massachusetts Institute of Technology.

[http://www.fleischmangarcia.com/portfolio/1\\_civic/project4.html](http://www.fleischmangarcia.com/portfolio/1_civic/project4.html)

Seminole Heights is one of Tampa's oldest residential areas and home to two nationally designated historical districts -- Seminole Heights and Hampton Terrace. Most buildings were constructed in the early 20th century, and many homes are classic bungalows. The Seminole Heights Branch Library is nestled in this historic community on the corner of Central Avenue and Osborne Avenue. The library serves the needs of a diverse clientele, including students from nearby schools (Hillsborough High School and Memorial Middle School are right across the street) and the many families that live in the neighborhood.

Founded in 1927 as one of seven city libraries, the Seminole Heights Branch has grown into a heavily utilized neighborhood branch of the Hillsborough County Library System. The library went through a series of relocations over the years, and a \$69,000 facility was built at the current location on April 25, 1965, by Architect George M. Gutierrez of Tampa. That facility has since been replaced by a 22,000-square-foot library funded through the Capital Improvement Program at \$3,878,080. The current facility will be dedicated in March of 2014.

#### [North Tampa Branch Library, Tampa, FL – USA 2009](#)

[http://www.fleischmangarcia.com/portfolio/1\\_civic/project2.html](http://www.fleischmangarcia.com/portfolio/1_civic/project2.html)

The North Tampa Branch Library opened in a new building on September 18, 2009 at the same location as the old building. The new building is 24,000 square feet and includes a large community room, a children's room, a teen room, a quiet study room, a computer lab, and other meeting rooms. Across the street from Chamberlain High School, this library offers many programs for teens, including a Teen Advisory Board as well as children's programs, computer classes and other programs for adults, including Master Gardener.

History

The North Tampa Library opened on January 13, 1964 in a 3500 square foot building. It was expanded twice, to 7,000 square feet in 1967 and to 10,500 square feet in 1977. On August 14, 2008 a groundbreaking was held for the new building.

### **Seffner-Mango Branch Public Library, Seffner, FL – USA 2008**

[http://www.fleischmangarcia.com/portfolio/1\\_civic/project3.html](http://www.fleischmangarcia.com/portfolio/1_civic/project3.html)

Located between the communities of Seffner and Mango in eastern Hillsborough County, Seffner-Mango Branch Library celebrated its grand opening on January 15, 2009.

The original Seffner-Mango Branch Library was located in rental space next to the Walmart in Mango Plaza on E. Dr. Martin Luther King, Jr. Blvd. from 1998 until the opening of the current building in 2009.

<http://www.hcplc.org/hcplc/locations/smb/>

### **Upper Tampa Bay Regional Library, Tampa, FL. - USA 2005, Extension 2014**

[http://www.fleischmangarcia.com/portfolio/1\\_civic/project5.html](http://www.fleischmangarcia.com/portfolio/1_civic/project5.html)

The Upper Tampa Bay Regional Public Library was dedicated and opened to the public January 8, 2005. The 26,000 square foot facility offers a full range of services including books, magazines, DVDs, music, Internet access, a variety of programs and activities for children and adults, a large community room for meetings and a beautiful gazebo.

The Upper Tampa Bay Regional Public Library, located on Countryway Drive just east of Racetrack Road, was dedicated on January 8, 2005. Construction of the \$4.5 million building was funded by the Hillsborough County Board of County Commissioners and a grant from the Florida Department of State, Division of Library Services.

### **Historic West Tampa Public Library, Tampa, FL – USA 2003 / 2004**

[http://www.fleischmangarcia.com/portfolio/1\\_civic/project6.html](http://www.fleischmangarcia.com/portfolio/1_civic/project6.html)

As one of only ten public libraries in Florida funded by philanthropist Andrew Carnegie, the Carnegie Library on Howard Avenue was constructed in 1913 in Neo-Classical Revival architectural style. Land for the building was donated by Angel Cuesta, a prominent cigar factory owner. The City of Tampa annexed West Tampa in 1925 and today the original library building continues to serve as the West Tampa community library.

An additional 5,000 square feet were added to this historic building to make it accessible to the disabled, allowing for additional library materials and computers, and providing meeting room space for the public. The groundbreaking ceremony for the expansion of the West Tampa Library was in September 2002 and construction was completed in September 2003. Refurbishment of the original building was completed in April 2004.

### **Fougeron Architecture, San Francisco, CA – USA**

<http://www.fougeron.com>

**Libraries:**

**Ingleside Branch Public Library, San Francisco, CA – USA 2009**

**Awards:**

2011 Italy Design Competition- Honorable Mention

2011 The Kirby Ward Fitzpatrick Prize for the best new building in SF by Architectural Foundation San Francisco

2010 Educational Interiors Showcase Special Citation by American School & University Magazine

2003 First Prize and Commission for a New Branch LibraryPress:

2009/09 SF CHRONICLE2011/02 ARCHITECTURAL RECORD next

The Ingleside Branch Library in San Francisco was designed by Fougeron Architecture / Group 4 Architecture who won the national competition held by the San Francisco Public Library in 2002. The floor plan follows the urban grid and brings the consequence of L-shaped scheme. This scheme allows the egg-shaped reading room and community areas enclose the inner courtyard. The strong and light-filled design which is combined with sustainable design in this public building creates a welcoming gathering space to everyone.

The Challenge. To make an art sanctuary 75 feet in the air that references the city below it, the great cultural institution inspiring it, and the magnificent sculpture within it. To integrate the disparate forces of the museum itself, the site, and the neighboring urban context. To create an architecture of order and repose that animates, without overwhelming, the art it serves.

Winner of a national competition, our design uplifts the community library's traditional role as a temple of knowledge while modernizing its personality as a digital-age center of independent learning. A gathering place for the diverse population of San Francisco's Ingleside neighborhood, the library's animated facade announces the vibrant community life within.

Facing a heavily commercial street, the L-shaped building adheres to the urban grid. Two large, independently floating forms frame its main entry: the boxy volume of the library's program room and the egg shape of the children's reading room-the composition's focal point. The reading room's bay window-a glowing beacon of glass-advertises the value and accessibility of literacy for all.

A high canopy roof, hovering twenty feet above the entrance, creates an iconic profile for the one-story structure, establishing its civic presence and distinction on the street as a public building. The canopy's blue underside, a virtual second sky, is uplit at night, subtly communicating the library's message of ambition and aspiration.

Within are four distinct groups of spaces. In addition to the children's reading room, the main reading room is a grand-scale public hall that speaks to the classical model of libraries. Its sculpted ceiling pours in light from above through dramatic skylights. Quiet, intimate carrels for reading, relaxing, and computer use face a rear courtyard and garden, allowing both indoor/outdoor flow and flexibility for the library's potential expansion. Diffuse light filtered through the wood and glass ceiling and through sun-shaded windows-creates a quiet ambiance. Finally, the services gallery (consisting of the workroom, manager's office, and staff lounge) essentially forms a separate wing facing a residential street. This placement buffers the learning spaces and provides professional, private workspaces for the staff.

Throughout, durable eco-friendly materials lower maintenance costs while providing visual and tactile delights. Metal louvers and sunshades, mahogany-framed study nooks, tile, and glass all give the library a beauty appropriate to its high civic purpose.

### [Sunset Branch Public Library, Renovation, San Francisco, CA – USA 2007](#)

The project involves the renovation of a historic Carnegie library built in 1918. Work includes the complete renovation of both levels of the 9,500 square foot structure and the restoration of the exterior terra cotta and terrazzo. On the lower level, work included new public restrooms, a new program room and the complete reconfiguration of the Children's Room. Responsibilities also include selection of new lighting, shelving and all furnishings. The project required an extensive review and approvals process with the Landmark Preservation Board, the Mayor's office on Disability, the neighborhood community, and various user groups.

RELEVANCE TO BERKELEY PUBLIC LIBRARY:

- REHABILITATION OF EXISTING BUILDING
- HISTORIC PRESERVATION
- ACCESSIBILITY UPGRADES
- FURNITURE DESIGN
- IMPROVED & UPDATED BUILDING SYSTEMS

**Libraries:**

#### [Bierce Library Learning Commons, The University of Akron, Akron, OH – USA 2011](#)

40,000 sqf., € 2,000,000

The renovation creates a contemporary library atmosphere by removing most of the print material from the 40,000 s.f. first floor and developing this space into a learning commons, based around digital technology. Integration of new furniture with the existing furniture further creates group and private study areas. New private group study rooms and an informal learning studio are also included. New casework was designed by Four Points for the Circulation Desk, MediaTech Services and User Support Services. The designs for each take into account the functionality and workflow of the spaces for both the employees and guests. New flooring materials were selected for the entire space that creates patterns that reinforce the functions and circulation patterns throughout the space. New furniture selections, textiles, materials and colors for cushioned chairs, task chairs, cafe furniture, and multimedia desks were also included in the scope. Four Points was the lead Architect, working with DesignGroup as the library design consultant. The first phase of the project included renovation of 9,500 s.f. of offices on the 2nd and 3rd floors. The project also included an 825 s.f. Einstein Bagels location.

The renovation creates a contemporary library atmosphere by removing most of the print material from the 40,000 s.f. first floor and developing this space into a learning commons, based around digital technology. Integration of new furniture with the existing furniture further creates group and private study areas. New private group study rooms and an informal learning studio are also included.

Featured in the 2012 annual Design Showcase by Amercian Libraries.

### [The Freelon Group: Design, Technology, Research Triangle Park, NC – USA](#)

Philip G. Freelon, Timothy F. Winstead, Lewis H. Myers

<http://www.freelon.com>

**Libraries:**

Libraries are no longer mere repositories of the printed word. They have undergone a striking transformation, utilizing new technologies and thoroughly redefining the scope of their public mission. While much of the traditional library remains relevant and even essential - circulation, reference and periodicals - there are now new capabilities and innovative approaches that are driving the library of today and the future. In charting this new path, libraries have drawn inspiration from the business, retailing and hospitality sectors. Nimble, digitally-capable environments are now the norm - facilities where the quality of the patron experience is as important as a well-organized card catalog. At Freelon, we understand these changes have positioned the library as an ever more vital component in the fabric of the communities they serve. For two decades, we have been active participants in the ongoing evolution of the library. Our expertise and portfolio of work exemplify the public library's marked transformation.

<http://www.freelon.com/projects/library.php>

## [Martin Luther King Jr. Memorial Library, District of Columbia, Washington DC – USA on design](#)

In 2012, DC Public Libraries commissioned the Freelon Group to envision a future central library within the framework of an iconic Mies van der Rohe building in our nation's capital. As a conceptual planning study, the team worked closely with engineers, programming specialists, and the city's Historic Preservation Office to ensure feasibility.

The 21st century library is a place for knowledge creation. It is where we explore, connect to others, participate in communities, and create. It is both a portal to vast networks of information and an open forum for social interaction. It is quiet and personal, yet lively and public.

What, then, is the architectural expression of tomorrow's library in the nation's capital? DC Public Library is imagining a new flexible space within the existing walls of the Martin Luther King Jr. Memorial Library. Inspired by the progressive thinking of Mies van der Rohe (the building's original architect), this vision also lives up to the ground breaking aspirations of social inclusivity of the building's namesake Dr. Martin Luther King, Jr.

Tomorrow's library can be open, visually connected and filled with natural light. An expansive atrium can connect visitors to their destinations and reveal the multitude of daily activities and events. Equipped with the most up-to-date technology, the atrium – the new heart of the library – can be filled with a range of spaces for collaboration. The open plan creates visual access that transparently connects all parts of the building including access to a rooftop garden where customers can experience the library outdoors against the dramatic backdrop of the city.

District weighs proposals for renovating MLK Library while preserving historic status

By Philip Kennicott, September 19, 2012

By carving a large “donut hole” into the center of the existing Martin Luther King Memorial Library, the building could be an exemplary 21st-century main library space, full of light, open to multiple uses, easy to navigate and worthy of “a great city.”

Meeting on Wednesday night in special session in the main atrium of the rigorously modernist building — which is a study in right angles, rational layout and long vistas — the library's board heard proposals for how to renovate the dilapidated steel-and-glass icon. Ideas included adding two more floors to the existing four, renting space to other tenants, converting below-ground levels to commercial parking and adding a cafe space under its stern, classically inspired loggia.

At stake is the future of one of the city's most important examples of mid-century modern architecture, designed by Mies van der Rohe in the late 1960s — his only work in Washington, and his only library. The meeting advanced a process that began in November, when the library asked the Urban Land Institute to study its historically landmarked main building and consider all possible options. Among the possibilities on the table was to sell the structure and find a new home for a purpose-built main library branch.

This library was Mies' last building and his only one ever constructed in Washington, D.C. Additionally, it is the only public library ever designed by Mies. Completed in 1972, the building cost \$18 million. The building has been plagued by neglect and problems with its HVAC system. DCPL has recently restored lighting on the entire first floor. DCPL has also recently completed elevator and restroom renovations throughout the building.

On June 28, 2007 the District of Columbia's Historic Preservation Review Board designated this building a historic landmark. The designation, which applies to the exterior as well as interior spaces, seeks to preserve Mies' original design while allowing the library necessary flexibility to operate as a contemporary library facility. It was listed on the National Register of Historic Places in 2007

But Wednesday night's meeting suggests that the library is seriously considering the option of staying in its flagship, albeit with a major retrofit.

Library Board President John Hill said the purpose of the meeting was simply “to foster a discussion about the future of the library” and that no decisions would be made. But District librarian Ginnie Cooper said she had asked the library's architect of record, the Freelon Group, to build on ideas that emerged from the ULI report and to consider the question: “Is a knock-your-socks-off library possible?”

Freelon came back with two basic architectural plans, both of which require cutting a large light well into the center of the rectangular structure. One design would criss-cross that space with stairways and bridges to create more open and dynamic floors. The other would emphasize the verticality of the new light well, with a glass-walled auditorium fronting onto a soaring central atrium. Both designs would keep much of the ground floor essentially intact — a requirement of the building's historic preservation status — but would add stairs to allow patrons to circulate without using elevators.

Both designs include substantial renovation of the library's systems, in many cases the same ones in place since it opened. That includes \$12 million to replace the exterior glass windows — which, Freelon head Phil Freelon said, “waste energy to an appalling degree” — and \$3 million to give the metal framing a fresh coat of paint, its first in 40 years.

Although, aesthetically, the library was thoroughly modern when it opened, many elements — including the light fixtures under the ground-floor loggia — are now antiquated: Bulbs burn out every six months, and replacing the entire system with something more efficient would cost more than \$100,000.

The board also heard from real estate analyst Jair Lynch, who put some rough figures on the various options now before the board. Simply renovating the library as is, without the internal reconfiguration, would cost the District \$5 million to \$10 million a year in regular maintenance and upgrades. The plans presented by Freelon would cost between \$175 million and \$250 million. That could require an increase in the District debt limit, and could be a hard sell with the D.C. Council and voters. But other options, including a state-of-the-art automated parking facility below ground, might bring in new revenue, as would renting space on new floors added above the existing library.

The “dream big” approach of Wednesday's meeting was probably intended to generate momentum toward solving one of the District's most fraught architectural sagas. The Martin Luther King building is widely respected among architecture enthusiasts, and the city designated it a historic landmark in 2007. But despite new enthusiasm for the mid-century modern look, and concerted efforts at more consistent maintenance in past years, it isn't universally loved. As Freelon acknowledged, if the library site at Ninth and G streets NW were bare ground, he could build a new bells-and-whistles library much more cheaply than remaking the old one. Since at least 2000, when a team from the Washington chapter of the American Institute of Architects drafted a study for adapting the library, the city has studied, dithered and delayed finding a solution to the building's long-standing maintenance and design issues. In 2006, then-Mayor Anthony A. Williams (D) pushed hard for moving the library to a new home on the site of what was once the old convention center, but he couldn't sell the idea to the council.

## [Martin Luther King Jr. Memorial Library, Library Renovation: Great Hall and Digital Commons, District of Columbia, Washington DC – USA 2013](#)

The Martin Luther King Jr. Memorial Library is the Central Library for the District of Columbia. Ground Floor Renovations were completed in 2013 consisting of restoration of the historically landmarked interior spaces and the insertion of a new Digital Commons within a ground floor, glass enclosed historic reading room. Great Hall renovations reopened original view corridors to

create an inviting arrival point where visitors could clearly navigate hosted events and services. Improvements included new mobile displays, digital kiosks, cafe seating, restoration of finishes, and adaptation of historic service counters into state of the art Circulation and Welcome Desks.

As customer needs have expanded from individual consumption of information to collective creation, the library has evolved from a “grocery store” of collections to a “kitchen” of experiment and production. The new Digital Commons is designed to encourage creative exploration by making visible new tools and infrastructure to all visitors. The 11,000sf Digital Commons includes over 80 computers, an array of tablet devices, 3D printing, self publishing book machine, technology infused group collaboration spaces, and a new service model where staff partner with customers on their projects.

Set within the challenging environment of a historically registered interior space, the wall-less Commons is equipped with mobile infrastructure throughout to meet the flexibility demands of an unknown future. The space is designed to evolve with rapidly changing technology and the shifting demands of the Library’s community. Highly visible through the transparent glass street frontage, the renovation forges a new precedent for the Library’s future by respecting and preserving its architectural past, transforming to accommodate the needs of the present, and incorporating flexibility that anticipates the future.

<http://www.freelon.com/portfolio/299/Library>

The DC Public Library opened Digital Commons, an 11,000 square foot technology and collaboration space designed for easy access by students, job seekers, entrepreneurs, start-up ventures, tech novices, and aspiring authors.

Designed by architects The Freelon Group and built on the first floor of the historically-registered Mies van der Rohe-designed landmark central library, Digital Commons is visible to pedestrians through its transparent glass street frontage. The Commons includes over 80 PC and Apple computers together with an array of tablet and e-reader devices along a standup digital bar. A self publishing book machine, 3D printing, group collaboration spaces with whiteboards and a Skype Station are all available to visitors. To inform and assist users of the Digital Commons, the Library is introducing a new service model where library staff partner with customers on their publishing, printing and digital projects.

“The Digital Divide is now more than just access to computers and the Internet,” said Chief Librarian Ginnie Cooper. “As technology continues to expand how people seek employment, work and create, Digital Commons is a place where the District’s growing community of entrepreneurs, developers, designers, students and educators can create using state-of-the-art software and equipment for free.”

According to Cooper, spaces like Digital Commons represent a growing trend in public libraries. While libraries in Chicago, Cleveland and Chattanooga, Tenn., have opened spaces with this type of technology, the District is the first to feature a space of this size and scope.

The Digital Commons is a part of an ongoing improvement and modernization initiative planned for the Martin Luther King Jr Memorial Library, the District’s central library. For this 25,000 square foot renovation, The Freelon Group provided design services for the Digital Commons and the restoration of historically landmarked interior spaces. In 2012, the Durham, N.C.-based Freelon group completed a conceptual planning study for a comprehensive redesign and updating of the 403,000 square foot downtown library.

## **District of Columbia Public Library, Tenley Friendship Library, Washington, DC – USA 2011**

**Design Architect/Architect of Record: Freelon, Associate Architect: R. McGhee & Associates**

**Project Size: 21.472 sqf., Project Cost: \$10.200.000**

### **Awards:**

**2012 AIA DC Award of Excellence in Architecture**

**2012 AIA South Atlantic Region Honor Award (Regional)**

**2012 AIA Triangle Honor Award (Local)**

**2012 AIA Triangle Gail Lindsey Award for Sustainable Architecture (Local)**

**2011 AIA North Carolina Honor Award (State)**

Located at the highly visible corner of Wisconsin Avenue and Albemarle Street in DC, the new two-story, 23,000 gsf Tenley-Friendship Neighborhood Library is inspired by a complex series of overlays drawn from the urban fabric of Tenleytown and Washington, DC. Sustainability, daylighting and civic place-making were significant drivers in the development of the library’s design. The new facility provides a range of services and features including Adult Studies and Computers, Children’s Services, Conference Rooms, Project Work Rooms, a Young Adults Division, office and work space for administration, and a green roof. The Library is located in Tenleytown, the second oldest village in Washington, DC after Georgetown. The context is a rich mixture of historical and eclectic buildings comprised of nostalgic places such as Fort Reno and the 20th century landmark Sears and Roebuck. As a part of the evolution of the community, the intent of the new library is to recognize and reinforce the character of the new contemporary urban fabric evolving in the community while respecting the traditional roots and history of Tenleytown. Inspiration for the library image is derived from an “open book” metaphor. The exterior skin of the building on the south and west sides of the plan, in a theoretical sense, wrap the building like the hard back cover of a book. This “cover” abstractly acts as a protector of knowledge with much of its opaque skin facing west. In contrast, the north and east elevations of the building are designed as a transparent façade which welcomes pedestrians walking and traveling along Wisconsin Avenue and Albemarle Street. Conceived of as pages of a book, these facades incorporate glass fins which reinforce openness and transparency to the street. This approach allows the reading rooms and stack areas to take advantage of natural daylighting for the interior spaces. The fins control and diffuse the light, virtually eliminating glare.

The program for the Library resolves itself into a two-story building with a partial third floor for mechanical equipment, and a green/garden roof. The new facility provides Adult Studies and Computers, Children’s Services, Conference Rooms, Project Work Rooms, a Young Adults Division, and office and work space for administration. The “active and fast” elements of the program are located on the first floor of the library while “slower and quiet” areas of the program are located on the second floor.

2010 AIA North Carolina COTE (Committee on the Environment, State)  
2009 AIA North Carolina Merit Award, Unbuilt (State)  
2008 AIA Triangle Merit Award, Unbuilt (Local)

The design of Washington DC's Anacostia Neighborhood Library is a response to the residential character of one of the district's oldest neighborhoods. Configured as a series of pavilions set into a larger glass volume, the library establishes a sense of scale and hierarchy that complements its residential context. A large, green perforated roof shelters the glass-enclosed reading room and unites the pavilions positioned along its edges.

The 23,000 sf program for the Library is organized around the main reading room which overlooks a broad entrance plaza. Surrounding the reading room, program components that require enclosure, such as the Young Adult's Area, the Children's Program Room and various staff support spaces, are housed in pavilions. The perforated roof form folds down along the west facade to provide sun-shading while visually tying together the massing composition. Resolving a 12-foot drop in elevation across the site, the building has entrances at both levels: the main entry at Good Hope Road and a secure access to the community meeting room from the lower level.

This LEED Gold project stands as a teaching tool for patrons. It utilizes descriptive text placards, information handouts, and tours. The selection and development of this Brownfield site, boosted levels of community and transportation connectivity. Low-flow water fixtures, solar hot water collectors, and an inhabitable bioretention pond, support a responsible water usage agenda. Underfloor air distribution is used for its efficiency in conditioning tall spaces and to give users more thermal comfort control. Daylight harvesting is also a noticeable and salient feature throughout. Selecting sustainable materials did not significantly increase costs. Ultimately, the design, energy, and lighting strategies employed in this library resulted in an energy savings close to 25%.

### South Branch Regional Library, Durham, NC – USA 2010

Project Size: 25,000 sqf. , Project Cost: \$ 5,400,000

#### **Awards:**

2010 Durham City-County Appearance Commission Golden Leaf Awards for Community Appearance (Local)

In May 2004, Durham County purchased the former Lowes Grove Elementary School site located at the intersection of South Alston Avenue and North Carolina Highway 54 for the development of a new South Regional Library. This facility is one several planned to support the County's long-range goal of providing the region with state-of-the-art lifelong learning and literacy resources.

The new facility was originally conceived to be one of three prototype buildings. In order to recognize the former use of the site as one of significance to the Lowes Grove community, the prototype was modified to better respond to its more retail context. The library contains approximately 25,000 Sq. Ft. with provisions for a future addition of 10,000 Sq. Ft. It includes major spaces such as a large meeting room, administrative areas, adult collection, young adult collection, children's collection, various reading and study spaces, computer areas, reference area, and periodicals. The one-story structure is organized in a series of layers defined by heavy masonry walls and volumes. The front façade features a taller glass volume defining the main entrance and meeting room and providing an illuminated "lantern" during evening and dusk hours. A significant highlight of the design is the open and airy main reading space accentuated by a large shed roof that allows for maximum day-lighting and exterior views. Glazed walls at either end of the reading room provide a continuity of space and vistas into the surrounding landscape. The entire development accomplishes the goal of sustainable design in public buildings and exemplifies careful stewardship of the land and natural resources. The USGBC LEED® (Leadership in Energy & Environmental Design) system sets the benchmark for the design, construction, and operation of high performance green buildings. The design also incorporates CPTED (Crime Prevention Through Environmental Design) principles consistent with the County's goal of providing safer environments for the public.

#### [St. Clair County Community College | College Center, Port Huron, MI – USA 2006](#)

Client: St. Clair County Community College, Location: Port Huron, MI, Cost: \$5,500,000, Sq Ft: 46,670, Completed: 2006

The goal of this project was to renovate, update and expand the College’s engineering, math and lecture spaces, as well as establish the media center as a centralized location for support and instruction. College Center renovations included the remodeled and expanded Learning Resources Center (library), new classrooms and faculty offices.

The main reading areas and book stacks are located inside the addition. An abundance of natural light provides a comfortable study environment. The existing building was modified to house ancillary library spaces, conference space and student tutoring and testing areas. Advanced multi-media and technology systems, including direct and wireless Internet access, were added.

Additionally, the outdoor plaza leading to the building’s main entry was completely remodeled and landscaped.

<http://www.frenchaia.com/markets/education/st-clair-county-community-college/>

The goal of this project was to renovate, update, and expand the College’s science, engineering, math, and laboratory spaces, as well as to establish the Learning Resource Center as a centralized location for support and instruction. This project included renovations and upgrades to the Clara E. Mackenzie Library-Science Building and College Center, and a 15,000-sq.-ft. addition. The College Center has become the new location for the Learning Resources Center (library). New biology, chemistry, and geology labs were added to the renovated space where the library was previously located. What was once an underutilized campus structure is now a new, nautically detailed bustling area highlighted by a serpentine blue glass curtain wall.

The main reading areas and book stacks are located inside the addition. The abundance of natural light combines with new mechanical systems to provide a comfortable environment. The existing building was modified to house the ancillary library spaces, conference space, and student tutoring and testing areas. Advanced multimedia and technology systems, including direct and wireless Internet access, were also added.

The “new” SC4 library puts the world at the fingertips of students and the community by providing the most technologically advanced research library in the county.

### [Front Studio Architects](#)

formerly : Lubetz Architects, Pittsburgh, PA – USA <http://www.lubetz.com>

Front Studio Architects, LLC produces architecture that is experientially powerful and environmentally responsive. An emphasis on collaboration and experimentation creates flexible spaces that have the capacity to evolve and adapt. The firm understands architecture to be an interactive, ongoing and creative process. Front Studio embraces opportunities to engage its users in the delight of architecture.

Front Studio’s steadfast reputation for excellence is due to an intensive review process that includes code compliance, budget control measures and sound construction practices. The firm’s work makes use of provocative yet economical materials to create fresh and unique solutions. With every project, Front Studio provides its clients with individualized attention and superbly executed services.

<http://frontstudio.com/about-the-firm.html>

Arthur Lubetz is a principal of Front Studio Architects. He is formerly of Lubetz Associates, an architectural firm Recognized for creating memorable, experiential architecture, established by Art in 1967. The practice has been guided by Art’s views on architecture for over 40 years, producing such notable projects as the award winning Carnegie Library at Squirrel Hill. He is a former board member and past president of Preservation Pittsburgh, an advocacy group for the protection of historic structures. He was also a founding member and vice president of the Pittsburgh Community Design Center and the Environment Design

Collaborative. For the past 20 years Art has been an active adjunct professor at Carnegie Mellon University where he continues to encourage his students to profoundly explore their experiences with architecture.

**Libraries:**

[Carnegie Library of Pittsburgh – Squirrel Hill, Pittsburgh, PA – USA 2005](#)

**Awards:**

**2007 AIA Architectural Honor Award**

It reinvents the library from a place to go to a place to be. It defines a new experience to attract and engage users. The library is a singular open space in an expansive light-filled volume. Spaces are defined by the porosity of books, changes in materials, and varying acoustic and light levels. Continuous bench seating facing the streets allows people to participate in the activity below. Individual seating in window boxes provide memorable framed views of a neighborhood church. This \$4.7 million renovation and addition project is the busiest library in the CLP system. The library experienced a 74% increase in visitors since its reopening. It uses state-of-the-art ideas about building performance, systems integration, and its LEED™ certified. The library is adaptable & flexible to accommodate shifting patterns of use over time. A raised access floor system allows the library to modify data systems and technological upgrades. Lightweight furniture, wheeled shelving, and display panels facilitate continual reconfiguration of the space. Every visit is potentially a fresh experience.

## **F & S ( Smith Group), Dallas, TX – USA**

F&S Partners in Dallas Merges with SmithGroup

June 25, 2009

By Jenna M. McKnight

F&S Partners, a Dallas-based firm that specializes in the design of educational, recreational, and religious projects, announced today that it is merging with SmithGroup, one of the nation's top architecture and engineering firms.

Founded in 1962 as Fisher and Spillman Architects, the F&S Partners office will now carry the name "SmithGroup/F&S." It will provide architecture, interior design, MEP, and planning services to clients throughout the Southwest.

No jobs will be eliminated at the 40-person F&S Partners. According to a prepared statement, all of its employees will remain on staff, and its five principals will continue to hold their management positions. The company's president, Robert L. Shaw, Jr., AIA, will become the office director of SmithGroup/F&S. He also will become a SmithGroup vice president and member of its board of directors.

Expected to be finalized next Tuesday, the merger will boost F&S's ability to take on institutional projects. "One of the major initiatives in Texas right now is the elevation of its emerging research universities to national status," says Shaw, "and we wanted to find a way to help our clients meet this goal by designing the best facilities." Recent educational projects by F&S include a \$35 million student recreation center addition and renovation at the University of Texas, and \$7.2 million renovation of a lab facility at Texas Tech University.

SmithGroup president and CEO Carl Roehling, FAIA, says the merger will help his company build strong relationships with Texas universities. "We're confident they're the right firm to accelerate SmithGroup's growth in the higher education market," he explains, noting that F&S has an "impressive portfolio of recreational facilities, which fits in well with SmithGroup's student-life initiative."

Founded in 1853, SmithGroup is the oldest continually operating architecture and engineering firm in the U.S. It posted gross revenue of \$166.1 million in 2008, and ranks no. 18 in RECORD's recently released "Top 250 Firms" list. With the addition of F&S Partners, the company now has 800 employees and operates 11 offices across the country.

Earlier this year, SmithGroup and F&S Partners teamed up to win several projects in the Southwest. These include: a \$10 million community center in Avondale, Arizona; two major renovation projects at the Texas Tech University; and a contract with the Department of Veterans Affairs to provide ongoing architecture and engineering services for various projects in the North Texas Health Care System.

Collaboration between the two firms dates back to the 1970s. SmithGroup subsidiary JJR, which specializes in landscape architecture, civil engineering, and planning, worked with F&S Partners to develop a master plan for the University of Texas Southwestern Medical Center in Dallas. In recent years, the two worked together to design a campus development plan for Baylor University, in Waco, Texas.

[Carrollton Library & Senior Center at Josey Ranch Lake, City of Carrollton, TX – USA 2004](#)

**\$ 600,000 Owner: City of Carrollton**

The new Carrollton Library and Senior Community Center enjoy commanding views of the 30 acre Josey Lake site. Site design fulfills two primary project objectives:

Integrate the new buildings with the natural environment. Native plant materials replace high water-use/ high maintenance ornamental typical of urban settings. Drought tolerant shrubs, perennials, and native grasses screen parking lots and enhance

building foundations. All native plantings reflect the wetland/ prairie character to help ensure sustainability and low maintenance needs. Covered walkways and viewing terraces provide vistas of the lake and wetlands, with gently sloping walks to the lake trail below. The 3400 LF walking & biking trail takes visitors to the water's edge, with connections to the adjacent city park trail and recreation facilities. Protect and celebrate wildlife habitat and wetland ecology Adjacent Blackland Prairie and bird rookery were set aside as protected zones during construction. Wetland edge native plants and native grass mixes create additional nesting sites for migratory birds and aquatic life already established in the area. Along the new hike/bike trail, redwood boardwalks, a pedestrian bridge, and lake pier access wetland and lake areas for wildlife viewing. Use of redwood decks and steel posts minimize water contamination by typical treated wood products. A "dry stream" outdoor classroom adjacent to the overflow pond provides an excellent opportunity to expand upon the library's interior environmental programming and exhibits. (F&S)

#### [New Buffalo Township Public Library, New Buffalo, MI – USA 2014](#)

Due to continued growth of their community and immediate service area, the New Buffalo Township Public Library board commissioned a needs assessment in 2008 which recommended expanding their 30-year old facility. Although every square inch of the existing 7,300-sf library was being utilized efficiently, industry standards supported the need for an increase to 18,000 sf to effectively meet the current and projected space needs of the community.

Working with the existing site and building, FTC&H developed a conceptual design which meets the long-range space needs and identified, retains, and expands the existing building providing an efficient layout for public and supporting staff areas. Having dealt with only on-street parking over the life of the building, the new site plan includes a dedicated parking area and drive-up book/video drop off. A new entry welcomes patrons from the main parking area into an extended lobby which is directly adjacent to a large community room, accessible for after hours meetings and dividable into two separate spaces for efficient and flexible use. A new pitched roof scheme provides opportunities for eyebrow dormers to introduce natural light into the center of the building and contributes to an architectural scale and style which is compatible with the surrounding resort community.

#### [Caledonia Township Library, Caledonia, MI – USA 2011](#)

With strong support from the community through a successful bond vote in May 2009, final plans for a new Caledonia Township Library were put into motion. Working with the Township and Kent District Library staff, FTC&H provided architectural, interior design, and engineering services, and focused on creative solutions compatible with the values of the community. Work began with an in-depth analysis of the undeveloped 10 acre site selected for the project.

The new 18,000-sf library was designed for potential future expansion in order to meet the current and future needs of this growing community. The facility, carefully situated to avoid existing wetland restrictions while protecting natural site features, is a simple overall form, taking advantage of views toward an adjacent lake. A main corridor bay, open to a series of clerestory elements, provides natural light and ventilation to the center of the building while the exterior treatment reflects the community's agrarian history.

#### [Delta Township Library, Lansing, MI – USA 2008](#)

Delta Township's existing 8,100-sf facility had an inefficient layout and could no longer accommodate this growing district. Beginning with a detailed space needs analysis for the district and its projected service population of over 30,000, FTC&H worked closely with the library board and staff to determine how best to plan for its future.

To accommodate a new facility the Township generously made available a 16-acre site, near established commercial and residential developments, and accessible to major transportation routes. FTC&H evaluated a number of master planning options to support both the library and a future Township facility with shared parking and an entry plaza. The library design takes advantage of the site's natural features. The library is arranged on a natural ridge with a central entry and library stack and reading areas oriented for daylighting and views. A main level meeting room is located with a separate entry for access during the library's off hours and is adjacent to the children's area for easy program use. The careful use of natural light and materials both inside and out is designed to take full advantage of what the unique and beautiful site has to offer. Due to continuing success of its active Friend's Group Used Book Store, a portion of the lower level is committed to this function and has access to an outdoor patio and a network of trails planned for the site.

The project will be the first LEED®-certified facility for Delta Township.

#### [Cascade Branch Library, Kent District Library, Cascade Township – USA 2007](#)

#### **Awards:**

### **Project of the year award for historical Restoration and Preservation, American Public Work Association, Michigan Chapter City of Lansing, Michigan**

Due to cost issues, the original library had cut back on program room space and some library services. FTC&H is now designing an addition to correct those earlier sacrifices while reestablishing the library's role as a community center.

Attendance at the popular programming events has reinforced the need for a large community room. The planned addition will feature a 3,000-sf program room, which is subdividable in three smaller rooms, each with different capacity. Requisite services include a catering kitchen, special A/V capacity, and dedicated toilet facilities. Other library improvements include group study rooms, historical collections capacity, and Friends of the Library book sale space.

<http://www.ftch.com/architectureengineering-services/portfolio/architectureengineering-portfolio/libraries/539-cascade-branch-librarykent-district-library>

### **Alice and Jack Wirt Public Library, Bay County Library System, Bay City, MI – USA 2005**

Expanded services in a new central library facility were planned as part of the Bay County Library System expansion and the new Wirt Public Library was constructed on a primary downtown intersection in Bay City. The two-story library was intended to accommodate a wide variety of uses, including child, young adult, and adult library services; computer lab; local history and genealogy collections; system-wide administrative offices; public meeting rooms; and a coffee shop.

The exterior of the building pays homage to other significant downtown landmarks with its stylish use of stone, brick, and glass. The main entrance facade of the facility provides a backdrop to historic Battery Park. The park area is being redeveloped to create opportunity for large gatherings and significant downtown events, as well as continuing to provide a place for citizens and patrons to relax during their busy schedules.

FTC&H provided overall project management and all architectural development and engineering design services for the new facility, and has renovated other libraries within the system as a part of the Bay County Library System expansion.

<http://www.ftch.com/architectureengineering-services/portfolio/architectureengineering-portfolio/libraries/538-alice-and-jack-wirt-public-library>

### **Hart Area Public Library, Hart, MI – USA 2004**

Design for a new library began with an evaluation of the existing library space and a needs assessment. The programming revealed the need for a building to accommodate the current service population of the library. The site for this new, 8,000-sf library is on the main street in Hart, adjacent to the existing city hall. The orientation of the site called for a prominent facade facing the street, but because of parking availability, the entrance was located opposite the street elevation. To maintain a connection to both the street and parking areas, the design used the concept of a front porch to draw visitors from both directions into the entrance.

The reading and stack areas of the interior were designed to accommodate the library's large collection, as well as the space needed for many children's programs throughout the school year. FTC&H provided full architectural, interiors, engineering, and construction management services for an integrated, single source approach to project delivery.

<http://www.ftch.com/architectureengineering-services/portfolio/architectureengineering-portfolio/libraries/543-hart-area-public-library>

### **Grand Rapids Public Library, Expansion Programm, Grand Rapids, MI – USA 2003**

A successful bond proposal in Grand Rapids in September 1997 triggered a \$31 million, six building library improvement and expansion campaign. Three existing branch libraries were slated for renovation and expansion, while three new facilities were developed to replace antiquated and non-accessible facilities.

FTC&H performed programming, architectural and engineering facility design, and construction administration, and assisted in library site selection. Each branch library was tailored to meet both system and neighborhood service needs.

The Seymour Branch Library was the first branch to be modified and included an expanded youth area with flexible multipurpose space, and young adult and adult areas designed to provide a warm, welcoming environment for patrons.

Renovations to the main library included tripling the size of the children's area, replacing all of the building's major mechanical systems, reopening the Ryerson Building for public use, and making improvements to the building's exterior.

<http://www.ftch.com/architectureengineering-services/portfolio/architectureengineering-portfolio/libraries/541-grand-rapids-public-library-expansion-program>

### **Grand Rapids Public Library System, Seymor Branch, MI – USA 2000**

This was the first branch to be modified as part of the Grand Rapids Public Library system's overall renovation/expansion of six branch libraries. FTC&H performed all programming, architectural and engineering facility design, and construction administration services for this new 10,000-sf facility. The design reflects traditionally styled architecture present in the neighborhood. An expanded youth area with flexible multipurpose space, young adult, and adult areas were designed to provide a warm, welcome environment for patrons.

<http://www.ftch.com/architectureengineering-services/portfolio/architectureengineering-portfolio/libraries/542-grand-rapids-public-library-system-seymour-branch>

### **Colma Public Library, Colma, MI – USA 1998**

A growing community and a cramped library made the need for a larger and updated space apparent to library users, staff, and supporters. Design of the new Colma Public Library began with a needs assessment that resulted in a new library facility. FTC&H provided complete design and construction management services for the new, 18,200-sf building uniquely situated near one of the main intersections within a residential area. The project included enhanced functional features such as comfortable, user-friendly stack and reading areas, a community room for 100 people, a children's area with a dedicated program room, proper staff and storage areas, drive-up book and video drops, and public computer stations.

The interior of the library is organized in a linear fashion to take full advantage of site opportunities. It is characterized by a variety of spatial volumes, and it features a high vaulted ceiling traversing the main service area. Large glazed areas capture views and bring natural light into the space. The children's area is designed for fun and learning with a story-telling tree sculpted into the building, engaging young listeners and budding readers. The adult reading zone overlooks the adjacent park and is anchored by a massive masonry fireplace that soars two stories.

Interior design services were provided by Riemenschneider Design Associates, Inc.

## Academy of Information Technology, Stamford, CT – USA 2007

(42 Mill. \$) Hovering all the other buildings, tracing the east-west natural ridge between two forests, is a long wood-clad volume which houses the new study rooms and office spaces. The structure is the articulating element and the spine of the whole complex. Where this block intersects the new Library, it opens up in a series of dynamic spaces. Boxes hang from the ceiling defying the laws of physics, light pours in from sky lights and from the continuous glazed façade inviting one out into the Library's roof terrace....Located at one end of the atrium on the inmedia level, the Library is of a cylindrical shape, two stories high, and is covered by a 60' translucent dome. All of the book stacks and functional fixed items have been located on the exterior perimeter wall with reading and study functions in the centre to provide flexibility and dual functionality for group instruction and after-hour activities. Wireless electronic equipment on movable carts is provided for the centre study area

[http://www.worldarchitecturenews.com/index.php/index.php?fuseaction=wanappln.projectview&upload\\_id=11117&sector=education](http://www.worldarchitecturenews.com/index.php/index.php?fuseaction=wanappln.projectview&upload_id=11117&sector=education)

The Academy of Information Technology and Engineering (AITE) is the first Connecticut school of its kind for students interested in all aspects of technology and fundamentals of architecture and engineering. Similar to the Piazza, the primary architectural goal was to create a communal feel to the project through the use of open courts, various transparencies through bridges and classrooms, and volumetric definition and expression of the main spaces. The building exterior dynamically expresses the various functions housed within, which creates a sculpture responding to the nature of art and engineering. The building employs advanced energy conservation systems including a thermal ice storage assisted cooling system, sun shading screening devices, solar orientation to capture light and reduce heat gain, and daylighting control of artificial illumination. The IT Network Infrastructure is comprised of the most cutting edge zoned wireless technology used in education today. The advanced material selections are ground face single wythe concrete insulated block, high performance glass and aluminum curtain wall system, insulated metal panels and a 60 foot diameter translucent dome.

### Ronald Reagan Presidential Library, Renovation, Simi Valley, CA – USA 2011

Dedicated: November 4, 1991, Architect: Stubbins Associates, Boston, MA, (Hugh Asher Stubbins Jr. \* 11.01.1912 Birmingham, AL - + 05.07.2006 Cambridge, MA) [http://www.nytimes.com/2006/07/11/arts/design/11stubbins.html?\\_r=0](http://www.nytimes.com/2006/07/11/arts/design/11stubbins.html?_r=0)

Size: 150,000 square feet total; 29 acre campus on 100 acres, Cost: \$40.4 million (construction contract); \$57 million total, Style: regional traditional Spanish mission, with red tile roof and central courtyard (similar to the Nixon Library)

Gallagher & Associates designed a complete renovation of the exhibits at the Ronald Reagan Presidential Library and Museum in Simi Valley, California. The new exhibit explores the former President's early influences, presidency and legacy, introducing educational multimedia in the process. Through immersive and interactive experiences, visitors can explore replicas of the Oval Office and the Berlin Wall, act in a movie with Reagan, or ride a horse alongside Reagan at Rancho del Cielo.

### Jimmy Carter Library and Museum, Atlanta, GA – USA 2009

Shortly after taking office as President, Jimmy Carter indicated his interest in a Presidential Library to be built "someplace in Georgia." The National Archives was invited to establish an office in the Old Executive Building and to staff it with archivists who could advise the White House staff on the preservation and arrangement of materials prior to their movement to Georgia. In December 1980, a search was undertaken for a suitable site for building the Jimmy Carter Library. After surveying a number of sites, one close to downtown Atlanta was selected. The land was owned by the state of Georgia, originally acquired to build an interstate highway. The highway project had been stopped by then Governor Carter. Approximately thirty acres of that land was acquired for the library's site.

The Carter Presidential Library, Inc. was incorporated in the State of Georgia to raise the funds to build the building. An Atlanta architectural firm, Jova/Daniels/Busby (close its firm 2013), in cooperation with Lawton/Umemura/Yamamoto of Hawaii <http://www.rkyarchitect.com/index.php?/institutional/jimmy-carter-library/> was selected to design the structure. The facility design included not only the presidential library, donated to the federal government (approximately 70,000 square feet), but also privately maintained space, including President Carter's office, offices for foundations he supports, and the Carter Center of Emory University (approximately 60,000 sq.ft.)

Temporary quarters were selected in the former post office building in downtown Atlanta for the twenty-seven million pages of paper and other historical materials from the Carter presidency. A small staff of archivists began processing these materials, preparing them for eventual use by researchers, and working with the architects in designing the facility. Ground breaking for the entire facility was held on October 2, 1984. Construction costs for the entire facility were \$26 million, raised by donations from friends of President Carter from around the world. The building was dedicated and the museum opened to the public October 1, 1986. The research room was opened January 28, 1987.

<http://www.jimmycarterlibrary.gov/library/libhist.phtml>  
[http://architecture.about.com/od/tourstravel/ss/presidential-libraries\\_8.htm](http://architecture.about.com/od/tourstravel/ss/presidential-libraries_8.htm)

In 2009, Gallagher & Associates completed a \$10 million renovation of the Jimmy Carter Library and Museum in Atlanta, Georgia. The exhibit explores the former President's early influences, his presidency and his continuing humanitarian work. The museum tour traces Carter's entire life, from his childhood in segregated southwest Georgia, to the nuclear submarine he worked on as a naval officer, to his political career, first as a state senator, then as governor and finally as President.

**Johnson C. Smith University, Renovation Carnegie Library, Charlotte, NC – USA 2009**

**Awards:**

**2010 Preservation Award; Historic Charlotte**

Carnegie Library Renovations received the 2010 Blast for the Past Preservation Award for commercial preservation.

The Carnegie Library, built in 1912, is historically significant as one of the oldest and finest examples of Neo-Classical architecture in Mecklenburg County. The building's structure was well maintained; however, the front portico was settling, placing the Doric columns out of alignment and causing sag in the pediment. The building's terracotta cornice was sagging at the corners and mutules covering cornice supports were falling off. Wood windows had been replaced with aluminum and tops covered with plywood panels. Historic renovation, under a grant from the Department of Interior, followed Secretary of Interior Standards, and was administered by the National Park Service. Renovations included waterproofing the exterior basement walls, underpinning front portico foundations, leveling and reattaching cornice details, repointing masonry, and resetting and repositioning terracotta columns, window sills, vusoires and parapet. Damaged wood truss members and rafters were replaced, and wood windows were fully restored, including installation of UV protective interior screens. Finishing touches included installation of copper grilles and mutules re-cast from the one original mutule remaining in the pediment.

Carnegie Library was among the Charlotte Old City Hall, Doyle Residence, Thomas Funderburk House, and Wilmore Neighborhood Association to receive an award. For more information, contact [spienkny@gantthuberman.com](mailto:spienkny@gantthuberman.com).

Innovatively Combining Uses ImaginOn joins a library and children's theater to create a place that engages children and their families with storytelling in ways unlike any before. The new facility, with its unique programs, inspires visitors of all ages to experience the written, spoken, and electronic word in a dynamic environment and has emerged as a new prototype for education, the arts, and entertainment.

Recycled Materials Selecting renewable or recycled materials was a major priority for ImaginOn and examples of these can be found throughout the project in: the compressed wheat board of the cabinets and ceilings; the recycled plastic bottles in the computer desks and toilet stalls; the wool in the theater curtains and loft carpeting; the marmoleum of the lobby walls and flooring; and the discarded stone used in the story telling room.

### University City Regional Library, Addition and Expansion, Charlotte, NC – USA 1992

#### **Awards:**

1994 Silver Award, Carolinas Chapter IBD Design Awards

1993 Merit Award, Metal Construction Association Awards Program

The University City Regional Library serves the University City area of Charlotte, one of the fastest growing business, health care, and academic areas of the county. The library has expanded its facilities to better serve its growing community. In addition to the services already offered, the library now has a special storytime room for children's programming, a room in the adult services area equipped with fifteen computers for expanded computer resources and training and more places for the public to use as study areas and for laptop use. The University City Regional Library also continues to strive for excellence by maintaining a growing fiction and non-fiction collection of print materials.

### Gardener Spencer Smith Tench & Jarbeau, Atlanta, GA - USA

<http://gsstj.com/>

#### **Libraries:**

#### Paulding County Library, Crossroads Public Library, Acworth, GA – USA 2011

Date: 2011 | Owner: West Georgia Regional Library System | Sq. Footage: 10,000 sf

Services Provided: Full Architectural, Engineering, and Interior Design Services

If the enthusiastic atmosphere of Opening Day Ceremonies is a valid indicator, the design of this 10,000 square foot new public library building has met the high aspirations and specific needs of this burgeoning north Paulding County community. The “three wing” form and plan configuration of the facility allows for full day-lighting into all major public spaces and successfully resolves the site challenge of frontal duality. One building front is viewed from Harmony Grove Church Road; another viewed from the parking area shared with the adjacent Fire Station. The centrality of the main circulation desk provides for strategic vistas of each of the wings for superior control. The concept is based upon a retail model with provisions for comfortable seating towards the entrance as well as a small, but popular “café bar.”

<http://gsstj.com/experience/libraries/crossroads-library/>

#### Coweta County Library, A. Mitchell Powell Jr. Branch, Newnan, GA – USA 2011

Date: 2007 and 2011 | Owner: Coweta County | Sq. Footage: 26,000 sf

Services Provided: Full Architectural, Engineering, and Interior Design Services

The 2007 interior renovation and expansion of the existing Newnan-Coweta Public Library encompasses a broad scope of work including interior demolition, new partitions, new wood stud exterior walls, new concrete block exterior walls, and a complete renovation of mechanical, electrical, and plumbing. Exterior improvements done in 2011 include corrective measures to exterior details, as well as the re-roofing of the existing one-story Library to be a new metal roof with a new gutter and downspout system.

#### Coweta County Library, Grantville, GA – USA 2010

Date: 2010, Owner: Coweta County Public Library System, Sq. Footage: 5000 sf, Services Provided: Full Architectural, Engineering, and Interior Design Services

The compact plan of this 5,000 square foot branch library includes a welcoming lobby, a spacious reading room with a “quiet zone,” stack areas for both adults and children, a very popular community meeting room, and a staff work area. The attractive exterior features a “wrap-around porch” which allows a patron to take full advantage of the verdant beauty of the natural park setting of the library. The porch feature, combined with generous windows, provides abundant yet controlled indirect light to all major public interior spaces. Comparatively small in area, this facility efficiently and effectively serves the Grantville community through the pervasive presence of technology.

<http://gsstj.com/experience/libraries/grantville-library/>

#### Coweta County Library – Main Branch, Newnan, GA – USA 2007

Date: 2007, Owner: Coweta County, Sq. Footage: 25,000 sf, Services Provided: Full Architectural, Engineering, and Interior Design Services

The design takes full advantage of the natural beauty of its lakeside setting and is based upon a retail model – with a vending café, comfortable seating towards the front, and a self check-in and -out. The adult wing consists of typical stacks and reference, research tables, a quiet room, two group study rooms, and a teen/young adult area. The children's wing has typical stacks, a craft/science area, a “story hour” room, and a learning garden. The third wing is the circulation and staff wing which maintains a strong visual control within the library. A technology center and multipurpose community room that seats 50 people comprises the fourth wing of the facility.

### **Libraries:**

[East Elmhurst Branch, Queens, New York, NY – USA in progress](#)

11,890 sf., Client: NYC DDC Design Excellence Program

### **Awards:**

**NYC Public Design Commission Award**

The East Elmhurst Library addition seeks to create a new public space in its articulation of new and existing buildings. The new central space is an interior landscaped court with copious natural light. Visible from all parts of the library, it links circulation and activities while acting as a flexible reading space and a foyer and breakout space for the community room.

The challenge of relating new construction to old has been met by enclosing the public face of the existing building within a continuous glass room along Astoria Blvd. This strategy treats the existing building as an artifact in a vitrine while collecting the original building and the addition behind a unified facade.

The project meets the criteria for LEED Silver and contains several innovative sustainability features, including thermostatically controlled buoyant air natural ventilation, carefully designed solar control, active heat recovery ventilation, and a high performance envelope with insulated glazing.

### **Libraries:**

[Spauldings Library, Prince George's County Memorial Library System, District Heights, MA – USA 2011](#)

The building was originally constructed in 1985 and incorporated the character of a "big-box" store with tall ceilings and uninhibited, open space. Project Architect, Kristen Hogue, worked in a collaborative effort with the Associate Director of Administrative Services, Michael Gannon, to create a new scheme that divided the large open space into a collection of smaller scale groupings that serve a variety of functions including:

- A WIFI lounge with counterspace where patrons can plug in their personal computers and gain access to the library internet.
- Three separate areas devoted to Public Access Computer stations.
- A multi media spaces that includes a sound dome for listening to audio recordings.
- a childrens readings room.

<http://www.gba-architects.com/projects/im/spauldings.html>

[Greenbelt Library, Prince George's County Memorial Library System, Hyattsville, MA – USA 2010](#)

Interior alterations were designed for just over 25,000 SF that included the replacement of lighting and electrical throughout the renovated area, the construction of new bulkheads over the Circulation/Info Desk and Study Area, a new circulation desk, a new information desk, expansion of the public access computer stations, and the construction of a new WIFI Lounge and seating area.

### **Libraries:**

[Science Library, Princeton University, Princeton, NJ – USA 2008](#)

The Lewis Science Library, located on a two acre site on the main campus, is envisioned as an efficient, easily accessible environment conducive to the research requirements of the Princeton University community in the 21st century.

The exterior is distinguished by its bold, curved roofline and center tower that rises to a height of 103 feet.

The stair-stepped design and the materials, composed of stainless steel, light-colored brick, glass and stucco, were selected to relate to the scale and texture of the buildings nearby.

You enter the multi-story atrium lobby from "the street," an area paved with rose-colored limestone. Walls in the building are painted in bright blue, orange and chartreuse.

"It's great to be in the main lobby space at different times of the day and to see how the light changes as it casts shadows from the mullions of the skylights onto the colored walls."

The entrance to the library section of the building is on the first floor off the atrium. On the second floor, the library extends out of the tower into the glass-enclosed area that overlooks the atrium. A star-shaped opening between two floors of the library is surrounded by shelves.

The Lewis Science Library's mission to further the advancement of learning at Princeton University extends to the provision of a wide variety of electronic resources, including catalogs, indexes, reference tools, full text electronic books, electronic journals, numeric data, digital maps and images.

## **Gensler, San Francisco, CA – USA**

<http://www.gensler.com>

### **Libraries:**

[Julia Idson Building, Houston Public Library, Houston, TX – USA 2011](#)

<http://www.ideson.org/photos.php>

.....The building was named after the city's first librarian, Julia Bedford Ideson. Ideson was hired in 1903 and, under her direction, the library's collection and services expanded until their building was too small. Ideson and the library building committee worked to plan a new structure, which was to be a prototype in design for future public buildings in downtown Houston. They selected architect Ralph Adams Cram (\* 16.12.1863 Hampton Falls, NH - + 22.09.1942 Boston, MA) and his Boston firm, Cram and Ferguson (<http://www.cramandferguson.com/>), for the project. Cram worked with local architects William Ward Watkin and Louis A. Glover, coordinating also with the city's architect, W.A. Dowdy.

The Spanish Renaissance Revival style was chosen for the library and it was intended that future municipal structures were to be of the same architectural style. The new library building opened in 1926. With the crash of 1929 and the Great Depression, however, the Julia Ideson Building was the only structure completed in the style envisioned for downtown Houston.....

<http://www.thc.state.tx.us/preserve/projects-and-programs/state-archeological-landmarks/julia-ideson-building-state>

Constructed in 1926, the Julia Ideson Building is one of Houston's civic treasures. A \$32 million renovation of the former main library resulted from a dynamic public/private partnership between the City of Houston and the non-profit Julia Ideson Library Preservation Partners (JILPP). Providing a repository for Houston memorabilia and rare archival material, the "new" library serves as the official city reception space and venue for exhibits, meetings and special events. Designed by noted Boston architect Ralph Adams Cram, the Spanish Renaissance building is replete with polychrome painted ceilings, intricate woodwork, marble columns and lofty public spaces. The restored library introduces a south wing and reading garden that were unrealized features of Cram's original design.

### [Leventhal Map Center, Boston Public Library, Boston, MA – USA 2011](#)

The Norman B. Leventhal Map Center at the Boston Public Library, created in 2004, is a nonprofit organization established as a public-private partnership between the Library and philanthropist Norman Leventhal. Its mission is to use the collection of 200,000 maps and 5,000 atlases for the enjoyment and education of all through exhibitions, educational programs, and a website that includes more than 3,700 digitized maps at [maps.bpl.org](http://maps.bpl.org). The map collection is global in scope, dating from the 15th century to the present, with a particular strength in maps and atlases from the New England region, American Revolutionary War period, nautical charts, and world urban centers.

The Leventhal Map Center is located on the first floor of the Library's historic McKim Building in Copley Square. It includes an exhibition gallery that features changing thematic exhibitions, a public learning center with research books and computers, and a reading room for rare map research. Other elements include a world globe three feet in diameter and a Kids Map Club with map puzzles, books and activities.

Educational programs for students in grades K to 12 are offered to school groups on site and in the classroom. More than 100 lesson plans based on national standards are available on the website, and professional development programs for teachers are scheduled regularly throughout the year.

The Leventhal Map Center is ranked among the top ten in the United States for the size of its collection, the significance of its historic (pre-1900) material, and its advanced digitization program. It is unique among the major collections because it also combines these features with exceptional educational programs to advance geographic literacy among students in grades K to 12 and enhance the teaching of subjects from history to mathematics to language arts. The collection is also the second largest in the country located in a public library, ensuring unlimited access to these invaluable resources for scholars, educators, and the general public.

<http://www.bpl.org/research/nblmapcenter.htm>

Located on the ground floor of the McKim building of the Boston Public Library, the Norman B. Leventhal Map Center is home to a collection of 200,000 original historic maps and 5000 atlases, as well as 3700 digitized maps on its website. The size of its collection, historic materials dating to pre-1900, and advanced digitization program rank it among the top ten in the United States.

Gensler renovated the center with state-of-the-art gallery lighting, new mechanical systems and an overall redesign of the space. What began as a basic project took on a life of its own as work moved forward and both the Leventhal family and the library became increasingly engaged in the opportunity to create something special, according to Kenneth Fisher, principal and project director.

The McKim building is one of two main spaces of the library (the other is the Johnson building), and is adjacent to a landmark courtyard. Originally, it functioned as the stacks area of the library and was surrounded by heavy steel frames. In the early 1990s, one of the stacks levels was removed to create a double-height space that became the micro-text reading room. That's where Gensler's work began. "There were adjacent spaces that take up other parts of the program, but the major gallery space went in there," says Fisher. "There's a bare, vaulted ceiling with a stucco finish. We were able to strip out most of the finishes, reroute the mechanical and soften the ceiling. It's a much gentler arch now. The adjacent spaces were low-level exposed arched flooring systems. That's where we worked in terms of developing storage for the collection, research areas and curatorial areas, as well as the administrative suite for the Map Center directorship."

The Map Center includes a public gallery space, educational programs for students in grades K – 12, public research and reading room, scholar's research area, administrative and curatorial offices, and storage and preservation and work areas.

The front foyer displays include a globe and a stained glass piece and portion of a favorite map that was a gift from Norman Leventhal's son in honor of the philanthropist's 94th birthday in November 2011. "It's kind of the calling card to the whole Map Center, even though it's in a non-designated location within the library," says Fisher.

With the digital age unfortunately calling into question at times the relevance of libraries, the Boston Public Library's leadership saw opportunity in the redesign. "This is a way to bring people of all walks of life, of all levels, to what is quite a special collection within the library," says Fisher. "The key was a gradient of expertise. You have world-class scholars that come to look at the collection and research, but you always want to engage and excite new learners, school and pre-school programs as well as the layperson coming in just to enjoy the collection. So spatially, you've got what turned out to be this long linear gallery. As you move from the very public end that enters from an interior court — the intersection between the two buildings — through the back, there are research areas and secured areas where the most valuable pieces of the collection can be viewed by scholars, and then the curatorial staff."

### [South Texas College of Law, Fred Parks Law Library, Houston, TX – USA 2001](#)

#### **Awards:**

**AIA Design Award 2002**

The Fred Parks Library is a flexible, inviting space that considers the long hours law students spend in libraries. With its entry linked to the primary college entrance, a grand stair welcomes students and staff to a two-story lobby on the second floor of the library. This open space is illuminated by a corner curtain wall system that transmits natural light. The upper level of the library includes a conference center and a terrace with views of the Houston skyline for reading and studying. (Gensler)

The Fred Parks Law Library is a six-story, 72,000-square-foot addition to the South Texas College of Law campus in downtown Houston. The project included designing the new library and conference center, as well as renovating 25,000 square feet of existing space. The design team conceived a contemporary, open environment with all of the technological amenities of a 21st-century library. The building's articulated facade echoes aspects of the existing campus while creating a striking visual transition through the introduction of floor-to-ceiling glass and an aluminum curtainwall system on the east and south facades. This gives the building a transparency that introduces natural light into the interiors and creates a lantern-like nighttime presence.

The curved roof gives the building a distinct silhouette, provides greater ceiling heights in the sixth-floor conference facility and conceals mechanical equipment. The sixth floor is set back to create a large rooftop terrace featuring abundant landscaping, benches, water features and 270-degree views of downtown Houston's ballpark, convention complex and arena.

**Libraries:**

#### [Teton County Library, Addition/Renovation, Jackson, WY – USA 2013](#)

Remodel: 24,850 sqf, Addition 11,515 sqf.

Jackson, WY- The Teton County Library Board announced Wednesday that Gilday Architects with Humphries/Poli Architects will be the design team of choice for the library renovation and addition. The announcement was made at the Board's monthly public meeting at the library on September 23.

"It was an incredibly tough decision," said Library Board member Anne Ladd. "All the firms were extraordinarily well-qualified. However, Gilday and Humphries/Poli stood out as the top choice."

Seven architectural firms submitted requests for qualifications (RFQs) in August for the library facility project. The Library Board selected a committee earlier in June to review the RFQs, interview firms and make an architect recommendation to the Board. The committee was comprised of library staff, board members, and community residents.

Director Deb Adams announced the committee's architect recommendation to the Library Board on Wednesday, and the Board voted unanimously to support the recommendation.

In August 2008, voters approved the library's proposition on the Specific Purpose Excise Tax (SPET) ballot which asked for \$1.5 million for the planning, design, engineering and initial construction costs of an addition to the main library facility at 125 Virginian Lane. The library will begin receiving these previously voter-approved funds by early 2010.

With the selection of the architectural team, the library will now be asking the community for input on a library renovation and addition. Initial community input sessions are planned for this October and November, with dates yet to be confirmed. The library will also provide in-house and online comment forms for community input.

Filament Mind is an information-driven installation at the Teton County Library in Wyoming, designed to visualize the collective questions of library visitors through an interactive and dynamic spacial sculpture. Designed by Brian W. Brush and Yong Ju Lee of E/B office, Filament Mind illuminates searches in a flash of color and light through glowing bundles of fiber optic cables. Whenever any Wyoming public library visitor anywhere in the state performs a search of the library catalog from a computer, each of the 1000 fiber optic cables hanging above (totaling over 5 miles of cable) corresponds to a call number in the Dewey Decimal System, which organizes the library's collection into approximately 1000 categories of knowledge. These category titles are displayed in text on the lobby's south and north walls at the termination points of the fiber optic cables. For further clarification how the installation works watch the video below:

#### [Darien Public Library, Darien, CT – USA 2009](#)

<http://www.petergisolfiassociates.com/#/projects-by-type/libraries/%E2%80%A2--public-libraries/darien-library/darien-18>

A long, flexible process helped the new Darien Library become the Northeast's first projected LEED Gold library building, while truly reinventing the public library

By Louise Parker Berry & Alan Kirk Gray -- Library Journal, 05/15/2009

The new Darien Library opened on January 10, 2009, a snowy day in our corner of Connecticut. After the speeches, the governor's proclamation, and the ribbon cutting, 7200 revelers headed toward the building (the crowds were so large, it took them more than 20 minutes to make their way in). Some 10,000 people visited that weekend.

When we first started thinking about how to provide new services to our community ten years ago, we had no idea how long it would take us, how much it would cost, or how, exactly, our plans would be realized. Certainly we had no idea of the technology involved, or that we would end up pursuing LEED (Leadership in Energy and Environmental Design) certification. And we could never have imagined the extraordinary building into which we'd eventually be moving.

We knew our project had a great pedigree. We already enjoyed strong community support—the library's use statistics were off the charts—and have for several consecutive years been ranked by Hennen's American Public Library Ratings among the country's top ten libraries. The library's trustees had created a long-range plan that set forth the community's need for additional services, concluding that a new building would have to be constructed. The subsequent building program was authored by Princeton Public Library, NJ, director Leslie Burger, also head of Library Development Solutions and later president of the American Library Association. Written in 2002 and significantly updated in 2005, it defined our new building needs clearly, including the need “to reduce maintenance and operating costs as much as possible...utilize efficient building systems and...achieve LEED certification.” We decided to work with Peter Gisolfi of Peter Gisolfi Associates in Hastings-on-Hudson, NY. Peter is an architect whose work we respected, someone who realized, as we did, the importance of a significant public building at the center of a New England community. Peter likes “heavy” buildings, but he imbues them with light and transparency, and we wanted our new facility to be open and accessible while also having a heavy, i.e., permanent, presence.

As it happened, our early planning was derailed in 2002 when our first idea—to acquire neighboring property and expand the existing 22,750 square foot library—fell through. In retrospect, it was a stroke of luck. On our initial trajectory, we would have built a better Darien Library, but we would have missed an opportunity to take our building vision, and our service vision, to the next level.

After several frustrating years spent looking for a suitable site in Darien, our perspective gradually changed. We shifted our focus to the future instead of trying to improve on the past. We stopped thinking about ourselves and about what we wanted and looked around the corner to a future we couldn't clearly see—a future in which we envisioned our patrons approaching us with entirely different concerns and values. We visited new libraries looking for takeaways and saw lots of great architecture but found few ideas we could use. So we decided to design a library entirely our own.

Considering what the future might look like

We knew the building would have to retain the small-town look and feel of the existing, 50-year-old library, which many of our users did not want to lose. We would be fanatical about making sure that every space in the new building worked exactly right. And we would place a big bet on technology as the means to allow us to provide an expanded array of services to each patron as an individual.

Our working partnership with Peter and his team was the most important element in the success of the project, because it was a true partnership. In a sense, we designed the library from the inside out, space by space, while Peter, as an architect does, designed the building from the outside in and from the ground up. At our request, he was a participant in every design meeting for the first three years.

We agreed on the building's core structure early on—a three-floor facility, plus a mezzanine, with an active main level, classic library functions on the upper level, and technology and computers on a lower level. When Peter first proposed this idea, he referred to Charles McKim's 1887 design of the Boston Public Library, a “palace for the people” with a busy main floor and a grand staircase that pulled people up to the second level.

That idea resonated with us, and it anchored us to hallowed library tradition, even on so much smaller a scale, but we had a different reference point: Ray Oldenburg's vision of libraries as described in his 1991 book, *The Great Good Place*. There, Oldenburg foresees libraries as “the third place,” that “heart of a community's social vitality, the grassroots of a democracy.” We wanted our library to be less what he referred to as “exacting, complicated and expensive internal arrangements,” i.e., less like a hospital, and more like a café or a bookstore, so that it would be at the heart of our community's social vitality.

.....

Perhaps unique to Darien, the library board always knew the building project would be paid for with privately raised funds, as the existing library had been. The cost of the expansion, originally estimated at \$10 million, jumped significantly when it became a stand-alone building. We ended up with a design for a 54,000 square foot structure (including 7000 unfinished square feet on the lower level) and a project cost of \$28 million, including land acquisition and remediation. It is a library built to last a century, with steel columns and concrete block walls, brick and aluminum-clad windows, and a slate roof. The interior combines timeless New England and modern finishes.

.....

The next generation library

In 2005, we'd decided we wanted to build the first of the new libraries, not the last of the old. We felt a responsibility to do something more than just expand on the success of the existing Darien Library. Our goal was not bravado, just a way of saying, “We haven't figured everything out yet, but we will.”

What we've learned in the intervening years is that we haven't figured everything out yet—and that we're not likely ever to. That said, when we unveiled the new Darien Library in 2009, we opened the doors to a wonderful building that fulfilled its ten years in the making. It is all we ever dreamed it might be—a library that will stand for generations as a tribute to this community's commitment to knowledge and learning and, we hope, a library to meet the opportunities and challenges of the future.

The Scheele Library at Concordia College, built in 1972, occupied two full floors and one-third of the existing 3rd floor of a simple masonry building in the center of the campus. We transformed Scheele by renovating the existing spaces and by seamlessly adding 8,000 sf of new construction to the third floor to create the new Krenz Academic Center.

The Krenz Center houses the OSilas Art Gallery, the Board of Regent's Room, the Pietruski Auditorium, digital classrooms, the television studio, offices, and common lounge.

Renovation and addition to local landmark, 1913 Georgian brick structure with extremely difficult access issues abutting the “Village Green” on two sides and a brook on the rear. All work was done while the library remained fully operational. Added a two-story wing that includes a new community meeting room of 1,100 square feet with entrance foyer and support facilities including pantry and restrooms.

Renovated and doubled the size of the children’s room with staircase from entry foyer, circulation desk, reading area, and computer access.

Five year construction management commitment with four schemes budgeted during extensive zoning approval and architectural review board process.

Renovations and code upgrades to various areas of the existing facility include the front entry, fire alarm, reference room, offices, receiving room and restrooms.

Construction management services included: budgeting, value engineering, subcontractor bid and award, safety and logistical planning, scheduling and construction.

### [Timothy Dwight College Library, Yale University, New Haven, CT – USA 2003](#)

192,000 sqf., cost per sqf. € 280.00

[http://www.petergolfassociates.com/#/projects-by-type/libraries/\\*--academic-libraries/timothy-dwight-college/yale-TD-07](http://www.petergolfassociates.com/#/projects-by-type/libraries/*--academic-libraries/timothy-dwight-college/yale-TD-07)

The new library for Timothy Dwight College consists of three interconnected, light-filled floors overlooking the Libraries/Media Centers quadrangle. The top floor incorporates the original Timothy Dwight Library and reading room with a barrel-vaulted ceiling. The mid-level (formerly lounge and bathroom space) replicates the panel details of the original, and provides reading rooms and additional space for the collection. The lower level (formerly basement space) provides additional reading space and a computer center. The library shares the “town hall” entrance with the commons, the expanded dining room and the new server, and it connects to the basement level, which is dedicated to new student activity spaces. Its three entrances are adjacent to the ceremonial stair, which connects all of the student activity spaces within the college. Thus, the library becomes the centerpiece for student life at Timothy Dwight.

### [Scarsdale High School, Scarsdale, NY – USA 2003](#)

[http://www.petergolfassociates.com/#/projects-by-type/libraries/\\*--academic-libraries/scarsdale-high-school/scarsdale-trans-02](http://www.petergolfassociates.com/#/projects-by-type/libraries/*--academic-libraries/scarsdale-high-school/scarsdale-trans-02)

Client: Scarsdale Union Free School District, \$ 3.400.000, COST PER SQ FT \$220.00

The library is situated at the center of this 260,000-square-foot high school, close to the student commons and cafeteria, on the most high-traffic corridor in the building. It accommodates a variety of activities simultaneously in a space that is serviced and supervised easily by a small staff.

The space clearly refers to the inspiring tradition of Design features:

-The library formerly was a 1938 Gothic Revival-style gymnasium.

-A two-story addition was added, a mezzanine was built within the original high space, and a clerestory was cut into the roof. The result is 13,000 square feet of new space.

-Student seating: 240. Staff: 6. Collection: 40,000 volumes.

-Visible collection, two computerized instructional spaces, reading and reference areas, banks of computer areas for group/individual study and staff work space.

-Soft, warm materials create an acoustic environment that allows many activities to thrive in an inspiring space.

-The new library is anchored firmly in the tradition of inspirational public and academic libraries.

-It fosters a sense of community activity, working together to learn, and interaction between staff and students.

-The library integrates printed and digital media.

**Libraries:**

[Dineen Hall, Syracuse University College of Law, Library, Syracuse, NY – USA 2014](#)

Dineen Hall is a new 200,000-square-foot facility that anchors Syracuse University's West campus expansion with a distinctive, five-story, state-of-the-art building for the College of Law. A central atrium at the main level visibly linking the core elements – library, celebratory space, ceremonial courtroom – is positioned beneath a green roof that creates a seasonal outdoor terrace space, with the sky-lit vertical axis introducing natural light throughout the building. The iconic ceremonial courtroom will be visible from inside and outside the building, signifying the law school's inherent accessibility and transparency. Classrooms, offices, and cafe are carefully arranged with casual spaces for informal meetings interspersed throughout the facility. The masonry and glass exterior will be engineered to achieve LEED Gold certification. A 60-foot wide green swath, adjacent to the new building, will enhance the circulation spine from the West campus to the Main campus. Anticipated completion 2014.

### [Syracuse University, The Warehouse, Syracuse, NY – USA 2006](#)

This project for Syracuse University is part of the Chancellor's initiative to help revitalize the city center by creating a dynamic downtown presence for the University. The 140,000 sf renovation of a 1920s warehouse building is a temporary home for the School of Architecture, and a permanent downtown location for several School of Visual and Performing Arts programs. The building houses a 125-seat lecture hall, [reading room](#), community and student gallery spaces, café, community and arts incubator spaces, administrative offices, [library storage](#), and studio and classroom space. Driven by an extremely aggressive one-year fast-track schedule and a \$50/sf budget, the facility has been fully renovated with new mechanical, electrical, plumbing, and fire protection systems, and the installation of new elevators. A significant portion of the existing building skin was removed in order to create transparent, lively interior spaces open to the historic urban center.

### [Robin Hood Library for PS 192, New York, NY – USA 2005](#)

As part of its "Library Initiative" with the New York City Department of Education, the Robin Hood Foundation commissioned Gluckman Mayner Architects to design a 2,400 sf. elementary school library for PS 192 in Harlem. The renovation incorporates sustainable and child-friendly materials, as well as custom casework, into a bright, playful and inviting space for reading. A long, stepped window seat with jewel-colored cushions serves as a comfortable reading area and as amphitheatre-style seating for performances. Light fixtures that suggest books with flapping wings, and a ceiling that is papered to look like a blue cloudy sky, create a whimsical atmosphere. Major materials, including bamboo flooring, formaldehyde-free wheat straw board, and recycled plastic, were selected for their low environmental impact and low cost.

#### [Library/Multipurpose Building , Texas A&M \(Agricultural and Mechanical\) University, Killeen, TX - USA 2012](#)

[http://en.wikipedia.org/wiki/Texas\\_A%26M\\_University](http://en.wikipedia.org/wiki/Texas_A%26M_University)

The Library / Multipurpose Building is the second structure on the new A&M-Central Texas campus. Completion of this building will allow consolidation of all existing A&M – Central Texas instructional programs, faculty, staff, administration and support services on a single, permanent site. The new building will also locate all operations and collections for the university library in one place. The four-story building provides 125,000 SF, including general purpose smart classrooms, biology and chemistry teaching labs, flexible meeting areas including space for student activities, a counseling center and a campus-wide technology hub supporting both administrative and instructional systems. Besides meeting on-campus needs, the Technology Hub will support the creation and delivery of online courses and programs.

The exterior of the new building combines local rough limestone with precisely machined aluminum panels, acknowledging Central Texas architectural heritage while looking to the future. The first and second buildings together begin to delineate exterior campus spaces, creating not just a collection of structures but outdoor places which will ultimately define the character of the campus.

#### [Environmental Science Building at Lakehill Prep School, Dallas, TX – USA 2008](#)

The Environmental Science Building for Lakehill Prep School provides new classrooms for the study of field biology and botany. As the first academic building on a satellite campus, the new building is configured to take advantage of a sloping wooded site and the adjacent creek, while minimizing disturbance to existing topography and vegetation. The facility includes three laboratory classrooms and a great hall/library, as well as support facilities. A cantilevered covered porch will provide a treetop-level observation platform, and a new plaza, constructed of local limestone, will provide a place for social functions for the school community. The building is seeking LEED Silver certification.

## [Hockaday Upper and Lower School Library. Liza Lee Academic Research Center, Dallas, TX – USA](#) 2001

In cooperation with: [Overland Partners](#)

### **Awards:**

**AIA/ALA Library Building Award 2003**

Good Fulton & Farrell collaborated with Overland Partners of San Antonio to deliver three important new buildings and a significant renovation for this prestigious north Dallas school for girls. Hockaday's 54,000 SF Academic Research Center houses libraries for the lower school and the middle / upper school, uniting the campus, and enhancing a treed courtyard. This linkage addresses physical and psychological connections in a school serving a wide range of ages. The design serves as a counterpoint to the 1960's rational concrete frame-and-infill of the original facilities. While adopting the structural rigor of the early buildings, the ARC introduces soft curves in the same St. Joe brick. Large planes of glass are protected from the Texas sun through motorized sunscreens. The building received design awards from the Dallas Chapter AIA and the American Library Association.

### **Libraries:**

## [Lawrence Public Library, Kansas MO – USA](#) 2014

### **SYNOPSIS**

The design process for the expansion of Lawrence Public Library involved the study of trends, analysis of community outreach opportunities and history of printed media. Ultimately we realized that the library is a tool for the community in which it serves. It's a tool for information gathering, social networking, and... yes, a place to read.

The existing library was built in 1974, is reviled by the public for its brutal nature, poor thermal performance, and lack of daylighting and openness. The expansion diagram is simple, a continuous community reading room that wraps the existing library. The core services supporting this reading room are contained within a continuous wood threshold. This depth of this threshold adapts to the various functions required of the library and serves to separate the reading room from the media contained within.

### **SUSTAINABILITY**

Project will meet the 2030 Challenge with greater than 60% reduction in energy use over comparable building types in this region.

<http://www.gouldevans.com/synopsis.php?id=LPL>

Last week (July 2011) the leaders of the Lawrence Public Library in Kansas unveiled the new design for a \$19m expansion of a library located at Seventh and Vermont Streets. Designed by Gould Evans, the expansion adds 20,000 sq ft of space to the existing 47,000 sq ft building and dramatically transforms its appearance with long horizontal windows framed by terra cotta stone panels to give it 'a more open and natural feel'. At the unveiling, Library Director, Bruce Flanders described the design as 'inspirational'. But judging from the over 100 posts on the Lawrence Journal's web site, a local newspaper, the design has been overwhelming derided by those who weighed in as 'too expensive', and 'out of character': not to mention 'a butt ugly building' that 'looks like a child's Lincoln log set'.

Perhaps the comments are a sign of the times...mere tensions between a community that seeks to curb public spending and the powers that be that see it differently. But clearly this is not the reaction one hopes for when vetting a new design to the public. The project does have some controversial aspects that have yet to be addressed, namely how to make the building appear more 'monumental' when the adjacent parking garage that is part of the project has yet to be designed and will be at least a storey taller than the library proper, due to structural limitations of the existing library building. While the comments about the design could be called a 'rush to judgment' as so much more is yet to be learned, one could equally argue that the design itself was rushed in to public view. The integration of the parking garage is an important aspect of this project and one that is especially concerning to the locals. Going forward, the library plans to host several public forums on the design to get more feedback before taking the plans to the City Commission for approval in mid-August. Jane Huesemann, a principal with Gould Evans, told the Lawrence Journal that 'the current plans call for the garage to be 10ft taller than the new building'. If city commissioners decide to add another level to the garage, resistance to the current design may grow. Sharon McHugh, US Correspondent (<http://www.worldarchitecturenews.com>)

Lawrence city commissioners on Tuesday saw the latest designs for a \$19 million expansion of the Lawrence Public Library and put the project on track to begin construction by mid-November.

"We really wanted to make this a signature public building," said City Commissioner Aron Cromwell. "All the elements really have come to play here. It will have a public-square feeling to it."

The design for the library, though, looks different than when it was unveiled by library leaders last year. The building still uses large amounts of terra-cotta stone, but the new design uses more glass at the corners of the building and along Vermont Street.

"I think it is a design that is very open," said Sean Zaudke, an architect with Lawrence-based Gould Evans. "We want a design that explains how the library can support the community."

The main way it does so is by letting the community see into the library. The new design put a particular emphasis on making the youth and teen rooms of the library on public display by making them visible from Vermont Street.

The inside of the building also will include fewer walls and more wide-open spaces, Zaudke said. Several reading rooms will be on the perimeter of the building, with larger, more bustling rooms near the building's main entrance at the southeast corner of the building. Smaller, individual reading rooms will be on the west and north sides of the building.

City commissioners also got their most detailed look yet at the parking garage design. Plans still call for a perforated metal skin to cover most of the garage, although glass towers to house stairways and an elevator also will be used.

"We really want to make the interior environment of the garage as open and light-filled and ventilated as possible," Zaudke said. The parking garage will be the first part of the project under construction. Commissioners on Tuesday unanimously agreed to seek bids for 18 different bid packages, ranging from concrete to steel work, for the garage. Bids are expected to be approved by Nov. 6, and work would begin by Nov. 15.

Architects hope construction of the garage will be completed by June. Work on the library itself isn't expected to begin until February. April 2014 is the tentative completion date for the project.

Commissioners on Tuesday left their options open regarding how large the parking garage will be. The new garage will include at least 250 spaces — up from the 125 spaces currently provided in the library's surface parking lot. Commissioners also are considering adding an additional level that would provide another 72 parking spaces but are still considering ways to pay for the project. The bids for the parking garage will include amounts both with and without the extra level.

In other news, commissioners:

1 Balked at the idea of allowing \$695,000 in land acquisition costs to be reimbursed through a tax increment financing district for a proposed hotel development at Ninth and New Hampshire streets.

The development group, led by Lawrence businessmen Doug Compton and Mike Treanor, had sought to have the costs to purchase the land added to the list of items eligible for reimbursement through the TIF district.

But commissioners said it was too late in the process to bring up the request. A representative of the development group said the hotel project will continue on without the reimbursement.

### [Maryvale Library / Paolo Verde Community Center, Phoenix, CA – USA 2006](#)

Size: 16,000 sq. ft.

#### **Awards:**

2009 Honor Award, AIA/ALA National

2007 Honor Award, AIA National

2006 Merit Award, AIA Western Mountain Region

2006 WESTMARC Best of the West Award for Architectural Innovation

2006 Pride Award, IIDA International Interior Design Association - Southwest Chapter, Award of Merit (Public Facility)

Named one of 10 New Landmark Libraries by Library Journal in 2011

Sharing the Maryvale Community Complex with the Maryvale Community Center and Maryvale Pool, Palo Verde Library is helping west Phoenix residents engage in a "mind/body dialogue." The Library includes Teen Zone - a special "teen only" area, computer training lab, children's storyroom and First Five Years/Los Primeros Cinco Años interactive learning space for families with young children. WiFi and Internet-accessible public computers are also available. The Library's collection of newspapers and magazines, books, DVDs and CDs is designed to meet community members' educational and recreational needs. Finally, an auditorium, shared with the Community Center, provides space for community meetings as well as library programs.

### [Cedar City Library, Cedar City, Utah – USA 2003](#)

The Cedar City Public Library has won three awards since it moved to its new building in September 2003.

"We have received a number of awards," said Steve Decker, the library's director.

"American Institute of Architects awarded us with the Merit Award. AIA and the Utah Masonry Council presented us with the Best of Show Award."

He said the library was just notified a couple of days ago that it received the Intermountain Contractor magazine's Silver Award. Decker said he thinks the library has received so many awards because of Gould Evans Associates, the architectural firm that built it, and the large amount of community participation.

"I think we have been receiving these awards because we chose a firm with library experience," Decker said. "We also had community input. We held meetings where the community could come and tell us what they liked and didn't like. We didn't incorporate the negative things. We also had a good working relationship between the builder, architect and the owner."

Rob Beishline, associate architect for Gould Evans, said the library board was wonderful to work with.

The groundbreaking took place in September 2002 and was completed a year and a day later in September 2003.

Beishline said the new library was built to have a connection with the Main Street Park.

"We wanted a strong relationship with the park," he said. "We wanted readers to be able to see out into the park and to feel like they were out there while they were reading. That is why we used a lot of glass on the south side of the building."

Beishline said they focused on using natural materials.

"We wanted to use natural materials like red sandstone, reclaimed timbers and wood columns," he said. "The trestles are from the Great Salt Lake from the bridge stockpile. We bought some of them because we felt they had character in them and the stone.

"(The library) has a nice sense of proportion, and it feels comfortable," Beishline added. "We were careful to address the details, like the way the signs are bolted to walls and the way the light fixtures hang."

### [Truman Presidential Library / Museum – Independence, MO – USA 2002](#)

The Truman Library renovation improves circulation and sight lines

By Gordon Wright, Executive Editor

August 11, 2010

A renovation project doesn't necessarily result in a conspicuous change of appearance. A case in point is the renovation of the Harry S. Truman Presidential Library and Museum in Independence, Mo., on which BD&C's Reconstruction Project Awards judges bestowed a Merit Award.

Although the project increased the size of the 46-year-old facility by only 4,365 sq. ft., it has improved circulation for visitors and enabled the library/museum to expand its community outreach capabilities. New construction represented 15% of the project's \$10.5 million hard construction cost.

Approaching the main entrance, it is hard to detect a difference in appearance. "We intentionally did not try to change the look of the historic facade," says Dennis Strait, design principal with the project's architect, Kansas City, Mo.-based Gould Evans Goodman Associates. Stonework was restored, or replaced if necessary.

The lobby also has a familiar look, with Thomas Hart Benton's mural *Independence and the Opening of the West* surmounting and extending to either side of a doorway. However, lighting, casework, millwork, and finishes have been upgraded.

**Backtracking banished**

Renovation benefits start to become apparent as visitors reach the Presidential Gallery. By providing a direct connection to the lobby, a new corridor eliminates the tyranny of walking through a sequence of spaces and having no alternative but to return via the same route.

In the Presidential Gallery, visitors follow a continuous pattern, returning through new space. "This allows visitors to flow as they would in a contemporary gallery, without backtracking," Strait adds.

Two areas of equal size — 1,350-sq.-ft. — are the largest additions resulting from the renovation. The Legacy Gallery is on the first floor, and the Press Room for the library's White House Decision Center educational program is directly beneath it on the lower level. The remaining additions were a 540-sq.-ft. corridor connecting the Legacy Gallery to the East Wing; a 900-sq.-ft. expansion of pre-function area adjacent to the East Wing conference rooms; and a 225-sq.-ft. stair tower addition to increase egress capacity. The new Legacy Gallery, located in a triangular addition that extends slightly into the courtyard, gives visitors a place to relax and to contemplate on what they have learned about Truman era history. A life-size bronze statue of Truman faces a window that provides views of a relocated Eternal Flame and the gravesites of Truman and his wife, Bess.

Visitors now have direct views from the Legacy Gallery into the courtyard. "Previously, you could find your way to the courtyard if you followed the signs, but you wouldn't see the courtyard until you actually reached the glass doors that lead to it," Strait says.

"Within the building there's now a major space with a major view of the courtyard."

The gift shop was enlarged from 400 sq. ft. to 900 sq. ft. through the appropriation of former corridor space.

New seating, carpeting, and wall treatments were provided for the auditorium.

The new Press Room provides a venue for the White House Decision Center program, an example of the library's renewed emphasis on community outreach. Groups of up to 64 middle school or high school students gather to elect a president and appoint members of the President's Cabinet. They view exhibits in the Presidential Gallery to learn about the historic events that occurred during Truman's presidency. The students develop recommendations for presidential action, and conclude their visit by conducting a press conference to explain the rationale behind them.

Part of the two-story original gallery was infilled to create a new orientation theater where an introductory film traces Truman's life from boyhood days on the farm to his swearing-in as President. Restored Chrysler limousines used by Truman will be among items on display in a gallery space being completed.

A number of project elements involved normal replacement items. For example, HVAC work, at \$1.9 million, was the largest single item.

"The building was at a point [in its life] where it needed rejuvenation," Strait observes. Coincidentally, library officials decided to make it a more vibrant learning center that would be regarded as more than just a documents repository.

**Renovation boosts attendance**

The library opened in 1957. Attendance has increased about 20% since the renovation was completed in January 2002. About 120,000 visited Truman Library in the past year.

Gould Evans Goodman's work that led to its eventual commission for the Truman Library renovation began in the early 1990s, when the firm received a contract from the U.S. General Services Administration (GSA) to evaluate needed repairs at Truman and other presidential libraries.

Walton Construction of Kansas City was general contractor for the project, which received \$8 million of federal funds. More than \$15 million of private funds underwrote the cost of exhibits.

GSA project manager Ann Marie Sweet-Abshire says the project has given the Truman Library a livelier atmosphere and made it able to play a more interactive role with the public.

Abshire, who has been involved with renovations of three other presidential libraries, says the age of a facility and the initiatives taken by the library itself are two of the primary factors considered in deciding the priority for renovation. The number of presidential libraries will increase to 12 next year when the Clinton Library in Little Rock, Ark., is completed.

## [Lewis D. Cannell Library, Clark College, Vancouver, CA – USA 1990](#)

CLARK COLLEGE CANNELL LIBRARY VANCOUVER, WA

Architect GouldEvans

**THE CHALLENGE** To pull off a renovation of a two-story, 40,000 square foot library serving 16,000 commuting students (up from 7000) who arrive and stay and are always "on," said Michelle Bagley, dean of libraries, e-learning, tutoring, and faculty development. Oh, and bring together the library with e-learning, tutoring, and writing after a recent merger. With tight competition for every inch of the first floor for PCs, staff, IT support, and printing, the second floor—with its shrinking collection footprint—might yield to options. Needs? Group study rooms and quiet study areas, multimedia equipment, and a Kinko's tech center on the first floor.

**THE BRAINSTORM** Sparked by the Idea Kits created by GouldEvans, participants got busy. They suggested working with movable walls, including powered collaboration walls, to build in flexibility. Dismantle the elongated service desk and replace it with a reference kiosk in the center of the first floor. Check out laptops. Shift shelving to compact units. Perform an ethnographic study to understand users—but avoid "analysis paralysis." To the mix of ideas, GouldEvans's Tony Rohr and Steve Clark (above, l.) added zones of seating, phasing from quiet to social, with quiet near windows, and content creation rooms complete with green screens and audio recording equipment. Among the missions met: fresh ideas for Bagley to take home.

## **Libraries:**

### **[Kavli Institute, University of California, Santa Barbara, CA – USA 1994 – 2004](#)** 1990-1994, expansion, 2001-2004

The Kavli Institute for Theoretical Physics is located at the eastern gateway to the UCSB campus, where its two splayed wings are oriented to the engineering complex on one side and to Lagoon Road overlooking the Pacific Ocean on the other. A cylindrical pavilion containing the library anchors one end of the building. A second-phase expansion filled in a former courtyard between the wings and created a bar-shaped addition with offices, meeting rooms and a small auditorium oriented to a gathering space at the center of the plan, where interaction among faculty and researchers is encouraged. The character of the original building and the picturesque nature of the expansion are in keeping with the traditions of Spanish mission architecture in Santa Barbara. Clay tile roofs and stucco exterior walls are typical of the area. Wood trellises supporting climbing vines that screen the interior from the sun reinforce the connection to the landscape.

<http://www.michaelgraves.com/architecture/project/kavli-institute-for-theoretical-physics.html>

### **[Martel College, Rice University, Houston, TX – USA 2002](#)**

Residential colleges at Rice are an integral part of undergraduate experience. Because they contain dining halls, libraries, seminar rooms, recreational areas and other common spaces in addition to dormitories, the colleges are the centers of students' social and academic life. Martel, a new 107,032-SF self-contained college for 232 students, with a separate 4,950-SF house for the College Master, followed the North Campus Master Plan that arranged the buildings around open courtyards. Shared spaces and covered passages face common courtyards, whereas the more private sleeping and study areas face outward. The plan thus accommodates a hierarchy of living spaces from public to private, giving physical form to the University's goals for residential life. The entrance façade of Martel is oriented to terminate the diagonal axis from the campus core. The architectural character of the new construction also relates to the scale, materials, and brick patterns of the original campus buildings without imitating them.

### **[Topeka & Swanee County Main Library, Topeka, KS – USA 1995 – 2001](#)**

Upon the 125th anniversary of its founding, the Main Library of Topeka and Shawnee County commissioned a total renovation of its 65,000-square-foot building built in the 1950s and an expansion of 100,000 square feet. New space is wrapped around the existing structure, resulting in redesigned facades that integrate the new and old portions of the building and re-establish the Library's identity as one of Topeka's most important public buildings. A three-story rotunda on axis with Washburn Street creates a new public entrance facing public parking. Flanking the entrance are several community facilities, including a 360-seat auditorium, a café, a bookstore, and a 3,500-square-foot art gallery. The circular lobby reinforces the communality of these amenities and leads to the Topeka Room on the third level. Large circular skylights allow natural light to enter the building during the day and create a monumental beacon when lit from within at night. Internally, the intersection of the building's east-west and north-south axes is distinguished by an atrium lit from above by a skylight. The atrium allows users to orient themselves within the Library and gain access to the surrounding Adult Collections, Periodicals and Youth Services Departments. While each of these departments has its own architectural identity, the openness of the plan allows flexibility for future program changes. On the north and west sides of the building, adjacent to the large open spaces, intimate reading areas allow individuals to sit and read quietly by the windows.

<http://www.michaelgraves.com/architecture/project/main-library-of-topeka-and-shawnee-county.html>

### **[Charles E. Beatley, Jr. Central Library, Alexandria, VA – USA 1996 – 1999](#)**

The 60,200 square foot building was designed by Pierce Goodwin Alexander & Linville in association with Michael Graves, Architect. The library opened on January 31, 2000 and was named for Charles E. Beatley, Jr., Mayor of Alexandria from 1967 to 1976 and 1979 to 1985.

The several programmatic functions of the 45,000-square-foot Charles E. Beatley, Jr. Central Library are composed as distinctive volumes around a semi-public courtyard, creating a massing strategy reminiscent of a village square. The library has two primary facades, one forming the entrance from Pickett Street, and the other providing a public presence along Duke Street. The building is topped by a dozen roofs that recall the community's roots in Old Town. The resulting silhouette symbolizes the first step toward the city's master plan goal of establishing a new civic center on the west side of Alexandria. The interior of the library is open in plan. However, the various departments are distinguished by the configuration of the ceilings, which reflect the distinctive roof structures.

<http://www.michaelgraves.com/architecture/project/charles-e-beatley-jr-central-library.html>

### **[Brown and Jones Colleges, Rice University, Houston, TX – USA 1999](#)**

Based on a master plan for the entire residential North Campus of the University, MGA was commissioned to provide new dining commons for the existing Brown and Jones Colleges, connected to a new 25,122-SF central kitchen and servery. In addition, the expansion of Jones increased the student residence by 44 beds to a total of 247 and created a new 4,539 SF house for the College Master. Brown College dormitory space was increased by 56 beds to a total of 247. In addition to a dining commons, Brown also received two new classrooms and a library. The site plan followed the master plan strategy to arrange wings of the buildings around open courtyards reminiscent of the historic campus core. The new architecture of the North Campus also relates to the scale, materials and patterns of the original campus without replicating it. However, the architectural character of each of the three colleges on the North Campus, including their dining commons, was varied in order to reinforce their individuality.

<http://www.michaelgraves.com/architecture/project/brown-jones-colleges.html>

### **[Denver Central Library, Denver, CO – USA 1991 – 1996](#)**

Michael Graves, architect of the Central Library, is hailed worldwide as a co-founder of the Postmodern school of architecture. Postmodernists reject modern skyscrapers for the classical forms, natural materials and colors of centuries past. Some of Graves' best-known projects are the Walt Disney Corporate Headquarters in Burbank, California; Disneyworld Swan and Dolphin Hotels in Orlando, Florida; The Portland (Oregon) Building; and The Humana Building (Louisville, Kentucky). The New York Times calls Michael Graves "the most truly original voice that American architecture has produced in some time."

Construction of the new Central Library was funded by a bond issue approved by a 75 percent majority of Denver voters in 1990. In 1995, the new Central Library opened to nationwide acclaim. It is now the largest library between Los Angeles and Chicago, and each year over a million people visit the Central Library.

<http://denverlibrary.org/content/michael-graves>

Date: 1991-1995; Renovation 1996 Location: Denver, Colorado, Size: 526,000 sf. , Studio Head: Thomas Rowe, Associated Architect: Klipp Colussy Jenks, DuBois Architects, PC

The AIA/ALA award-winning Denver Central Library, 8th largest in the US and voted “best library in America” several times, is located on Denver’s Civic Center Park. The project, won in a design competition, involved preservation and renovation of a 1956 147,000-SF modernist library by Burnham Hoyt (\*1887 Denver - + 1960 Denver [http://www.historycolorado.org/sites/default/files/files/OAHP/Guides/Architects\\_hoytb.pdf](http://www.historycolorado.org/sites/default/files/files/OAHP/Guides/Architects_hoytb.pdf) ) <http://denverlibrary.org/content/burnham-hoyt> , and a 390,000-SF expansion. The expansion is composed as a series of elements to allow the existing building to read as one part of a larger composition. Two public entrances establish an east-west axis through the Great Hall, a 3-story public room of urban scale. The south-facing rotunda, a signature feature of the expansion, contains special functions such as the reference room, periodicals center and Western History Reading Room. The Reading Room, which houses genealogical materials and special collections of paintings and documents on the American West, is centered on a timber derrick-like structure that figuratively recalls the nation’s westward expansion, rooting the building in this particular city and site <http://www.michaelgraves.com/architecture/project/denver-central-library.html>

### Clark County Library, Las Vegas, NV – USA 1994

Date: 1994. Location: Las Vegas, Nevada. Size: 120,000 sf. Studio Head: John Diebboll  
Associated Architect: JMA Associates (JMA Associates: <http://www.jma-arch.com>)

The Flamingo Road Branch of the Clark County Library occupied a 1968 structure that had deteriorated significantly when MGA was hired to design an expansion. The project evolved to include complete renovation of the building and expansion on all sides, a strategy that simultaneously remedied the deficiencies and provided a unified exterior image. MGA’s plan added 27,000 SF of library space to the existing 50,000 SF and created a new 43,000-SF wing housing a 400-seat thrust-stage theater and rehearsal and back-of-house facilities for a community theater program, events and touring shows. The theater wing, with sculptural reliefs embedded in its main façade, is entered through a dramatic centralized structure facing Flamingo Road or alternatively through an outdoor courtyard along Escondido Street.

<http://www.michaelgraves.com/architecture/project/clark-county-library-and-theater.html>

### Library of the French Institute, New York, NY – USA 1998

Alliance Francaise

The French Institute/Alliance Francaise is located in a historic townhouse at 22 East 60th Street in Manhattan. MGA completely redesigned the library, which occupies approximately 5,800 square feet on the second and third levels. The second floor contains public spaces, including a reception room and gallery, the main reading room, the reference room, a computer learning center and the children’s collection. Openings in the ceilings create visual connection to the stacks on the third floor. The organization of the plan provided a series of orderly rooms like the gracious plans of urban townhouse residences but sized to accommodate the new institutional use. The bookshelves that are organized in alcoves give an architectural presence to the room and provide human-sized spaces for study and contemplation.

<http://www.michaelgraves.com/architecture/project/library-of-the-french-institute.html>

### Barbara Goldsmith Rare Book Room, American Academy, Rome – Italy 1996

The American Academy in Rome and its library are located in a historic building designed by McKim, Mead & White. MGA was commissioned to convert an existing space adjacent to the library’s main reading room into the Barbara Goldsmith Rare Book Room to house the Academy’s collection of 6,000 rare volumes on art, archaeology and architecture. The architectural character of the library, with its pear wood millwork, created a study environment sympathetic to the subject matter. The requirement to meet the highest conservation criteria was accomplished by appropriate climate control and lighting, as well as by selection of materials that minimize off-gassing and avoid insect infestation and mold.

### Gresham & Beach Architects, Tuscon, AR – USA

<http://www.greshamandbeach.com>

**Libraries:**

#### University of Arizona, The Integrated Learning Center, Tuscon, AR – 2001

114,000 sqf., \$ 20,800,000

**Awards:**

2002 American School & University 20th Anniversary Architectural Portfolio, The Integrated Learning Center at the University of Arizona, Tucson, Arizona

The Integrated Learning Center is a below-grade academic facility for freshmen students that incorporates the latest digital-learning technologies. Situated in the center of the University of Arizona’s mall, the site was chosen so that freshmen would feel more involved in daily university life. The building has an information commons, 300 – 150-seat theaters, two lecture halls, classrooms and administrative offices. The information commons connects to the lowest level of the main library in a series of five separate “trays.” Sunlight streaming into the information commons from the main entry stair is diffused by fritted, low-e green glass. The central courtyard also provides natural light and offers a flexible gathering space for spontaneous interaction or planned functions. Materials such as red brick and mill-finished aluminum were chosen to complement surrounding campus structures.

### Grimm + Parker Architects, Calverton, MD – USA

Grimm + Parker Architects has recently planned and designed over 20 public libraries. With over 16 years of award-winning public library experience, combined with over 36 years of public architecture experience, our team is especially qualified to provide high quality library design services.

We are abreast of the latest trends in library services and technologies. We share our specialized knowledge and expertise in library furnishings, library lighting, library acoustics, and library technologies with our clients. Our award-winning library designs are not only attractive and inspiring, but highly functional, user friendly, easy to maintain, and cost-effective. Our extensive library experience allows us to share valuable insights into state-of-the-art library design and construction with our clients. We have

developed expertise on issues such as construction costs, operating costs, mechanical systems, maintenance concerns, energy consumption, technology integration, and library security systems. This expertise allows us to design public libraries that can be built both on time and within a client's specified budget with few construction changes. We have worked closely with library boards, library staff, and Friends of the Library in numerous library systems to help them achieve their visions for their systems. (Grimm)

<http://www.grimmandparker.com>

#### **Libraries:**

#### **Crozet Library, Crozet, VA – USA 2013**

Crozet Library will be a new 20,000 s.f. regional public library with a collection of 75,000 volumes. The project, designed to achieve LEED Silver certification, will be the first building in the town's new Masterplan District designed to energize and revitalize the historic downtown area. The building's central circulation spine, with clerestory glazing, is oriented east to west recalling Crozet's tunnel that connected eastern Virginia to the west through the blue ridge mountains. This spine feature will be an opportunity to express rich local traditions of bridge building, engineering, railroad influences, and early American ideals of westward expansion. Interior design will focus on creating warm, inviting areas where patrons can concentrate, read, study, work, relax and share ideas while being connected to the downtown district and having great views of the mountains to the west. Building program elements include:

- Community Meeting Rooms
- Distinct Adult, Teen, and literature stack areas
- Reading and Study areas
- Staff workrooms and offices

#### **Howard County Library, Charles E. Miller Branch Library and Historical Center, Columbia, MD – USA – 2011**

The design of the new Charles E. Miller Branch and Historical Center is the result of a collaborative visioning effort between the architects, Howard County Library, and the Howard County Historical Society. The Center is a two story building located on approximately a 10-acre triangular site adjacent to the existing Miller Branch on Frederick Road in Ellicott City, Maryland. The new Miller Branch and site development project was designed for LEED Silver Certification. The building matches the caliber of the curriculum HCLS delivers under its three pillars: Self-Directed Education, Research Assistance & Instruction, and Instructive & Enlightening Experiences. A welcoming destination, the branch's array of spaces are conducive to studying, reading, conducting research, attending classes and events -- and enjoyment.

#### **Burke Centre Library, Burke, VA – USA 2008**

##### **Awards:**

##### **LEED Silver certified library**

- AIA Merit Award for Architectural Excellence, AIA Potomac Valley
- Award of Excellence for Best Institutional Facility, National Association of Industrial + Office Properties (NAIOP)
- Award of Merit for Best Green Building, National Association of Industrial + Office Properties (NAIOP)

The Burke Centre Library was LEED-Silver certified by USGBC in 2009 and was the first library to be LEED-certified in Virginia. The 17,000 s.f. building form provides visibility from an adjacent, high speed road. The central spine locates the entrance during the day, and glows at night. The curved form responds to site access and vehicular access requirements.

A central space connects the front lobby and access to the main reading space, which orients to a wall of north-facing glass with views to hardwood trees beyond. A clerestory along the edges of the central space brings controlled daylighting deep into the building.

Library collections include children's, young adult, reference, adult fiction/non-fiction, extensive audio-visual, new items, and periodicals. Support spaces include dividable, public meeting room, kitchenette to support meeting functions, group study room, small conference room, and full-service, drive-up circulation station. Public meeting rooms and toilets can be accessed after hours, with full security for the rest of the library.

The main circulation desk has visual control of the center of the library and out to the drive-up window. The reference desk has visual access and control of most of the library floor, due to careful planning of the stack layout.

[http://www.grimmandparker.com/project\\_89\\_](http://www.grimmandparker.com/project_89_)

#### **Crofton Library, Crofton, Anne Arundel County, MD – USA 2007**

##### **Awards:**

- Award of Excellence, Associated Builders + Contractors

Crofton has a new 25,000 g.s.f. Branch Library for Anne Arundel County. A site with high visibility from all sides required this facility to be designed as a building in the round. High windows in the reading room maximize shelving and daylight.

A skylit spine and curved wall across from the reading room define the main circulation path and draw visitors through the library. The circulation desk has clear supervision of the main entrance, all of the stack areas, and into the Children's area.

The Crofton Library includes: public meeting rooms; adult fiction; adult non-fiction; young adult collection; children's collection; audio-visual collection; reference; periodicals; computer catalogs; study areas; reading areas; staff work areas; public restrooms; an information desk; and circulation desk areas.

[http://www.grimmandparker.com/project\\_99\\_](http://www.grimmandparker.com/project_99_)

#### **Hopewell Library, Hopewell, VA – USA 2007**

The Hopewell Regional Library is located in the heart of the new masterplan for the City of Hopewell. Hopewell is an industrial city located at the confluence of the Appomatox and James Rivers. The tradition of industry and the idea of confluence are celebrated in the design of the library.

The confluence of old and new, young and old, past and present, industry and environment all help to shape the library and the traditions of industry to help to provide character to the building both inside and out.

The exterior facade of the building is reminiscent of the turn of the century warehouses and power plants, with large glazed openings, brick walls, and painted steel framing while the interior of the library is open with exposed structure and mechanical duct work. Balancing the exposed steel are warm wood tones and brick.

Organizing the plan of the building is a meandering river which provides the main circulation for the library. A secondary river provides access to the second floor, which house the regional library offices. The intersection of these rivers mirrors the confluence of the two rivers which helps to shape Hopewell.

This 2-story, 34,000 s.f. building incorporates the following spaces:

- large adult library;
- children's library featuring a replica of "The Good Ship Hopewell";
- cyber cafe;
- variety of seating areas;
- computer areas.

<http://www.hopewellva.gov/community-services/hopewell-library/>

### **[Perryville Library, Perrville, MD – USA 2007](#)**

The 15,100 s.f. Perryville Branch Library in Cecil County is adjacent to Perryville Middle School. Patrons will have the convenience of a drive-up window and book drop as well as over 100 parking spaces.

The library is situated to preserve the natural landscape. Building orientation has been set to maximize natural daylight and solar control. The compact building footprint was used to reduce site disturbance. Stormwater management has been incorporated in the south corner of the site to reduce the earthwork as much as possible and retain some forest area.

The design features 100% pre-conditioned outdoor air that will support the health, safety, and comfort of staff and users of the library. Geothermal energy will be used for cooling and heating.

Simulated stone and energy-efficient thermal glass windows enhance the connection between the indoor and outdoor environments.

The program will include a technology lab, study rooms, a quiet room, a cafe, a meeting room to accommodate over 75 people, 1,500 s.f. of children's collections, and a total collection of 100,000 items.

Completion: June 2007

[http://www.grimmandparker.com/project\\_90\\_](http://www.grimmandparker.com/project_90_)

### **[Rockville Library, Rockville, MD – USA 2006](#)**

The Rockville Library is a 100,000 s.f., three story, civic focal point located at the heart of the new Town Center.

A Pedestrian Plaza is the focal point of the downtown redevelopment. This plaza includes open space, a fountain and a band shell, as well as an area of shade under a tree canopy. The library has state-of-the-art energy conserving glass that visually connects the interior spaces with the activities happening outside.

The undulating facade of the library along Maryland Avenue was created to give the library a dramatic distinction from surrounding rectilinear buildings and pays homage to the mapping of the human genome which took place in Rockville in the year 2000.

The central atrium space has energy conserving LED lighting inviting people up to the second floor via the dramatic curving stair.

The floor of the atrium is a terrazzo mosaic art installation also commemorating the mapping of the human genome.

The 100,000 s.f. facility includes:

- 66,000 s.f. 2-story library
- 18,000 s.f. 3rd floor library headquarters
- 17,000 s.f. retail and leasable tenant office space
- Children's library
- Media room
- Community room
- Transit -oriented development

[http://www.grimmandparker.com/project\\_100\\_](http://www.grimmandparker.com/project_100_)

### **[Prince Frederick Library, Prince Frederick, MD – USA 2006](#)**

The Prince Frederick Library is a 29,000 gsf, two-story building located in Prince Frederick's New Town Center and surrounded by retail, shopping, and nearby residential. The library is located in the heart of Calvert County, Maryland - a peninsula which is bound on the east by the Chesapeake Bay and on the west by the Patuxent River.

Interesting local features are the famous "Calvert Cliffs" (which are embedded with prehistoric fossils and overlook the Chesapeake Bay), the Drum Point Lighthouse, the history of boat building, the history of farming, and the numerous historic tobacco barns in the surrounding region.

The library's design refers to and celebrates many of these local features:

- The massing of the building takes its shape from local tobacco barns and boat building sheds;
- The main stair of the library is physically expressed as a lighthouse on the exterior of the building;
- The masonry coursing at the base of the building is reminiscent of the rock strata that forms the famous "Calvert Cliffs."

[http://www.grimmandparker.com/project\\_122\\_](http://www.grimmandparker.com/project_122_)

### **[Howard County Library, Glenwood Library, Cooksville, MD – USA 2000](#)**

#### **Awards:**

AIA Special Citation for Lighting Design, AIA Northern Virginia Chapter  
AIA Merit Award for Architectural Excellence, AIA Potomac Valley Chapter  
Award of Excellence, Metal Architecture  
AIA Merit Award for Architectural Excellence, AIA Maryland

Howard County's newest Branch Library serves the rural western section of the county. This 30,000 gsf. facility is the first building in a new government services center complex.

Glenwood responds to its rural setting and context; using massing, building forms, and finish materials to relate to its idyllic, rural landscape while maintaining an appropriate public library image.

An iconographic, barn-like frame creates a strong entry feature for the building. The barn frame and clerestory create a clear interior organization that moves visitors logically and efficiently through the building.

The central information desk allows maximum supervision of the entire public area, including the radiating book stacks that provide optimal sight-lines. The Children's area is playfully designed with barns, animal and plants, and child-like proportions and scale.

Collection Size: 130,000 items

[http://www.grimmandparker.com/project\\_21\\_](http://www.grimmandparker.com/project_21_)

### [Frostburg Library, Frostburg, MD – USA 1999](#)

#### **Awards :**

**AIA Honor Award for Architectural Excellence, AIA Potomac Valley Chapter**

**Governor's Smart Groth Award**

**Masonry Design First Place Award for Architectural Excellence, Masonry Institute Mid Atlantic**

Downtown Frostburg has a new landmark building on Main Street. The 20,000 g.s.f. Branch Library for Allegany County infills an empty lot in the fabric of this historic center. The library is above an open parking structure.

Exterior massing and the facade respond to the local and regional context of traditional masonry buildings. The detailed masonry exterior incorporates regional influences in elements such as arches, masonry checker-boarding, and accent banding.

The facility includes public meeting rooms; adult fiction; adult non-fiction; young adult collection; children's collection; audio-visual collection; reference; periodicals; computer catalogs; study areas; reading areas; staff work areas; public restrooms; an information desk; and a circulation desk;

Technological capabilities correspond with the progressive development of libraries throughout the region. The flexible design allows for incorporation of future technological advances.

### [East Columbia Library, Columbia, Maryland – USA 1994](#)

#### **Awards:**

**AIA Council Honor Award for Architectural Excellence, AIA Potomac Valley Chapter**

**AIA Honor Award for Architectural Excellence, AIA Potomac Valley Chapter**

**AIA Honor Award for Architectural Excellence, AIA Maryland State Chapter**

**Grand Award of Excellence, National Commercial Builders**

**Masonry Shield Award, Masonry Institute Inc.**

A new "destination library" for Howard County; the 46,000 g.s.f. branch is the largest library in the system and houses the central office team.

An open and inviting public atmosphere is created that co-exists with the necessary behind-the-scenes functions.

Public library functions are housed in a dramatic volume enclosed by sweeping curved glass curtain walls facing the community.

This volume contains reading areas, stacks, an information center, and the children's library.

Acoustic zoning allows for noiser functions at the central information center with quieter areas at the perimeter. The library was constructed for public internet access with over 100 computer stations.

A children's library is housed separately, within, for quiet and safety. The "Rain Forest" entry connects the children to the "City" media stacks, the "County" play area, and to the "Oceans" of books stacks "around the of the world" of the library information desk.

The building includes a traditional front section of library central offices, senior center, and multipurpose community rooms. The public meeting rooms are zoned for use when the library is closed.

Collection Size: 140,000 items

<http://www.g4arch.com>

#### **Libraries:**

[Fresno Pacific University, Hiebert Library, Fresno, CA – ASU on design](#)

1962 Hiebert Library Named for Cornelius and Elizabeth Hiebert, the primary contributors.

Group 4's design for the new 65,000 square foot Fresno Pacific Library will, when completed, be the true center of campus life, expressing a bold vision for the future of this growing campus. The contemporary design builds upon university values of simplicity,

honesty, and harmony with nature. The library will become a center for study, teaching, and faculty development as well as traditional library services. The ground floor will provide highly interactive “people spaces” including a study commons, a multipurpose auditorium, and an Internet café, with many of these spaces designed for use independent of library hours. Upper levels will house staff, administration, collections, archives, technology training, computers, and space for reading, study, and tutoring.

<http://www.g4arch.com/projects/default.aspx?viewType=type&clID=1&pID=26>

read more:

<http://www.scottsvally.org/downloads/council/2012/06-06-12.Item3.pdf>

### [Woodside Library, Woodside, CA – USA on design](#)

Group 4 is working with the Town of Woodside and the San Mateo County Library to renovate the interior of the Woodside Library. The 4,800 square foot building has been well maintained since its original construction in 1969, but its infrastructure cannot support modern library technologies, and it does not meet current accessibility and energy efficiency standards.

Group 4’s interior design approach supports implementation of the San Mateo County Library’s new Service Model, such as through the creation of zones that encourage and support concurrent use by children, teens, adults, and seniors. The design removes the large staff desk from the main entrance, replacing it with a browsing-friendly “marketplace” of new and popular materials. Operational efficiency is enhanced through the improvement of customer self-service options such as express checkout and holds retrieval, as well as the relocation of the exterior book return to the front of the building.

<http://www.g4arch.com/projects/default.aspx?viewType=open&pID=49>

read more:

<http://www.smcl.org/en/content/community-input-sought-for-the-woodside-library-improvement-project>

### [Pacifica Library, Pacifica, CA – USA on design](#)

Group 4 was commissioned by the City of Pacifica to design a new library that consolidates the materials, programs, and services currently distributed between two community branches operated by the San Mateo County Library. The new library will be a magnet and catalyst for transformation of the “Beach Boulevard Property” in downtown Pacifica into a new urban mixed-use residential, retail, and civic development.

Group 4 is developing the design for the new library through a community-based process that includes strong participation by Pacifica residents as well as City and Library staff and stakeholders. Community goals for the new library include an environmentally-responsible design that responds to its urban waterfront site.

<http://www.g4arch.com/projects/default.aspx?viewType=open&pID=55>

### [Palo Alto Mitchell Park Library and Community Center, Palo Alto, CA – USA 2013](#)

Group 4’s study of library services in Palo Alto revealed that the Mitchell Park branch has the greatest need for improved and expanded facilities. Group 4 prepared a needs assessment, program, and schematic design for a new joint community center and library to replace the two existing but separate facilities on the same site in Mitchell Park. In November 2008, the Palo Alto community approved a ballot measure to fund construction of the Mitchell Park Library and Community Center as well as improvements to the Downtown Library and the Main Library.

The new Mitchell Park Library and Community Center is designed to support an efficient operational model, preservation of valued site trees, and an enhanced presence and park gateway along Middlefield Road.

The project targets LEED Platinum certification. See the City’s website for more information on target LEED credits and sustainable design strategies.

Construction is underway.

Check out design-phase video.

### [Otay Ranch Branch Library, Chula Vista, CA – USA 2012](#)

Group 4’s strategic facilities plan for the Chula Vista Public Library recommended taking advantage of opportunities to supplement service in east Chula Vista. One such opportunity is the City’s new partnership with the management of regional shopping center Otay Ranch Town Center. The City and ORTC management commissioned Group 4 to design the new mall branch to meet both parties’ goals, which include increasing community access to library services and increasing customer traffic to the shopping center.

The project transformed three retail spaces totaling 3,500 square feet into a vibrant branch library emphasizing popular materials and technology. In addition to significant financial support from shopping center management, the project also was made possible through generous donations from the Chula Vista Public Library Foundation and the Friends of the Chula Vista Library. (Group 4)

### [Oakland 81st Avenue Branch Library, Oakland, CA – USA 2011](#)

#### **Awards:**

Citation Award - American Institute of Architects San Mateo County Outstanding Project - American School & University

Magazine California State Library grant-funded

LEED-NC Gold

The new 81st Avenue Library is a civic and community beacon for this underserved east Oakland neighborhood. The largest branch in the City’s library system, it also serves as a new academic library for two elementary schools located on the same site. A large dedicated teen area, quiet reading room, and preschool area are zoned to provide multi-generational use with acoustic control. The distinctive architectural form and vibrant interiors reflect the library’s commitment to innovation and sustainability. The building incorporates many innovative energy saving techniques and achieved LEED Gold certification. Group 4 prepared a successful application to the California State Library for a multi-million dollar construction grant.

This project grew out of the Group 4 prepared system-wide master facilities plan that also included a feasibility study for a new 160,000 sf main library.

The groundbreaking ceremony was held in May 2008. The grand opening of the new library was held on January 29, 2011. Click here for KCBS’ report on the opening.

<http://www.g4arch.com/projects/default.aspx>

## [Scotts Valley Library, Scotts Valley, CA – USA 2011](#)

### **Awards:**

**IES National Award of Merit**

Group 4 transformed an existing roller skating rink into a dynamic, light-filled library for Scotts Valley. On a limited budget and quick schedule, Group 4 worked with staff and the opportunities inherent in the existing building to create a design with minimal columns and an open, flowing floor plan.

Working within the existing shell, Group 4 organized the library around a new suspended polycarbonate lantern that brings in daylight and creates programmatic divisions while maintaining the generous interior volume. The teen platform re-creates booths from the original roller rink, and supports gaming and collaborative learning. The salvaged disco ball will be available for special night time programs.

Retail tenant space is also being developed adjacent to the library as part of this mixed-use redevelopment project. The library's grand re-opening was held in June 2011.

<http://www.g4arch.com/projects/default.aspx?viewType=type&cID=1&pID=46>

## [Walnut Creek Library, Walnut Creek, CA – USA 2010](#)

The new Walnut Creek Library is the culmination of the community's vision and years of planning. The design is not only an efficient solution to the building program, but also a synthesis of the disparate desires of the community and user groups into one cohesive whole. Although the new library will more than quadruple the size of the former building in Civic Park, re-siting of the new building will result in a net gain in green space in the park as well as a stronger connection with Walnut Creek's civic center and downtown commercial districts. The new library incorporates a wide variety of green design strategies, including daylight harvesting, an advanced mechanical system, and recycled materials. The placement of 80% of parking spaces under the building and plaza areas reduces the heat island effect of paving and preserves space in Civic Park.

The grand opening of the new library was July 17, 2010.

## [South San Francisco Main Library Interior Renovation, South San Francisco, CA – USA 2010](#)

Group 4 worked with South San Francisco Library staff to create a new library within the shell of the existing 1966 main library building. Group 4's design supports an updated operational model and more efficient work flow for staff, as well as improved customer access to materials and services.

Group 4 designed an arching library "marketplace" that connects the building's two existing public entrances and displays new books, high circulation material, holds, and displays and exhibits. To maximize the limited budget, much of the existing furniture was refinished and combined with selected new furniture. Carpeting and wall finishes completed the transformation which has been hailed as "a diamond for a dime."

The renovated library re-opened to the public in April 2010. (Group 4)

## [Ingleside Branch Library, San Francisco, CA – USA 2009](#)

### **Awards:**

**Citation - American Institute of Architects San Mateo County**

**Special Citation - American School & University Magazine**

**Kirby Ward Fitzpatrick Prize - Architectural Foundation of San Francisco**

The Ingleside Branch Library is a new community jewel along Ocean Avenue in San Francisco. Designed by Group 4 in association with Fougerson Architecture, the 6,100 square foot branch features a main reading room, a children's reading room, a community room, staff support space, and an outdoor garden — all on a small corner site in the heart of an urban commercial center and surrounding residential neighborhood.

San Francisco Chronicle architecture critic John King praised the new library: "...with its egg-shaped children's room, mahogany-framed study nooks and a roof that hovers eight feet above the entrance, the Ingleside Library sends an ambitious message that public buildings can strive to be civic landmarks, sources of neighborhood pride as well as books and DVDs."

## [Milpitas Public Library, Milpitas, CA - USA 2009](#)

### **Award:**

**Merit Award - AIA East Bay Chapter**

Group 4's expansion to a 1916 grammar school building serves not only as the new Milpitas Public Library, but also as the centerpiece of the city's new North Main Street redevelopment district. New north and south wings frame and embrace the historic structure, complementing its strong classical design with bold, dynamic elements that celebrate the integration of the past and the future. A largely transparent building, the new library admits abundant light through well-oriented clerestories. A new tensile canopy transforms the school's central courtyard into a bright public reading room. The south tower features art that celebrates Milpitas history. The new library opened to the public in January 2009.

<http://www.g4arch.com/projects/default.aspx?viewType=type&cID=1&pID=6>

## [San Leandro Washington Manor Branch Library, San Leandro, CA - USA 2009](#)

### **Awards:**

**Honor Award - AIA San Mateo County Chapter California State Library grant-funded**

The new San Leandro Washington Manor Branch Library is a study of light and space. Windows along the street both define and blur the edge of the building, admitting reader-friendly light while preventing glare and heat gain. Bold and elegant details connect wood, steel, and concrete in a robust and dynamic, yet surprisingly delicate structural system. At night the library becomes a glowing beacon, inviting the community in for events, conversation, or even just a comfortable chair and a good book. Intuitive wayfinding and express-checkout stations enable customers to get in and out of the library quickly, while attractive displays and

comfortable seating areas tempt them to linger. The program room doubles as overflow computer lab and study space. The circulation desk and the staff work room have excellent visibility of public areas as well as a streamlined flow of materials from the drops to the shelves.

### [Santa Clara Central Park Library, Santa Clara, CA – USA 2007](#)

#### **Awards:**

Technology Award, First Place – ASHRAE Golden Gate Chapter

Technology Award, First Place – ASHRAE Region X

Award of Merit – APWA South Bay Chapter

Designed for a strong connection with its namesake park, the new Santa Clara Central Park Library provides both innovative and traditional services. Park-facing pavilions provide spacious and light-filled reading rooms, each with unique architectural features and gardens between. Underlying the warmth and beauty is one of California's most technologically-advanced libraries, with facility-wide wifi as well as RFID and automated materials handling systems. The library showcases original commissioned works by national artists celebrating the value and wonder of reading, knowledge, and creative thought. Sustainable design features include an award-winning variety of innovative systems, materials, and technologies. The project was completed on schedule and under budget, and received major utility rebates.

<http://www.g4arch.com/projects/default.aspx?viewType=type&cID=1&pID=4>

### [Burlingame Public Library, Burlingame, CA – USA 1997](#)

Following the 1989 Loma Prieta earthquake, the City again approved a bond issue to reconstruct a new main library. The original children's room and reference room, including the original furnishings were restored and reused in the reconstructed library. The library grew from 27,000 square feet to 48,000 square feet and maintained much of its original charm and period appeal. On October 4, 1997, the library was rededicated on the Bellevue and Primrose Roads site. The library was opened to much acclaim by then California State Librarian Kevin Starr and seven term Congressman Tom Lantos. The awarding winning architecture was featured in Library Journal in December 1997 and was a cover story in American Libraries in April 1998.

#### **Awards:**

Honor Award AIA San Mateo County Chapter

#### **Literature:**

"The Jewel of Burlingame" cover story in American Libraries, April 1998

This classic Community Library building was originally designed by prominent peninsula architect Colonel Norberg and constructed in the early 1930's (May 1931). The popular community landmark was completely gutted and totally reconstructed, with 15,000 square feet of additional space, including a new expanded full floorplate Basement and a new Second Floor. O'Mahony & Myer was retained to provide electrical engineering and lighting design services for the complete reconstruction and expansion. The lighting for this project was deemed to be critical to the overall success of the Architect's "historic" scheme, and was carefully designed by the staff of our lighting design studio, Peters & Myer, to both augment the period architectural design as well as provide the high levels and quality of light so necessary in a modern Library facility. Included in this effort was the development of a "family" of custom period chandeliers and wall sconces that use energy efficient lamps and ballasts. Our staff designed "period" pendant luminaires that are separated into lower (and low wattage) lamps within the hanging globe, and an array of upper lamps that bathe the ceiling in light. The results are soft glowing alabaster-like globes that are easy on the eyes, while providing abundant indirect illumination throughout the library.

All other specialized power, data and communications systems, including provisions for future evolution and expansion, were carefully incorporated into the finished project. The library also features a flexible electronic infrastructure as well as energy-conserving electrical systems.

[http://www.omniconsulting.com/projects/library/burlingame\\_library.php](http://www.omniconsulting.com/projects/library/burlingame_library.php)

Group 4 took to heart the Burlingame community's desire to build a much larger library without losing the charm of the original 1930s Italianate building, resulting in an expansion so well integrated that it feels like a wholly new building. Significant details from the original library were cast and reproduced in the addition in a seamless integration of the old and the new. The new library offers high levels of service and enhances the unique character of downtown Burlingame.

The distinctive entry tower showcases the library's collection of 17th and 18th century tapestries. A spacious skylit stairway provides a clear wayfinding cue, guiding customers to the public rooms on three floors. The library also features a flexible electronic infrastructure as well as energy-conserving mechanical and electrical systems.

#### [23<sup>rd</sup> Street Touro Library, Touro College, New York, NY – 2006](#)

The Castro Building, Address 43 West 23rd Street New York, N.Y. 10010, Location West 23rd Street between Fifth & Sixth Avenues, and back to West 24th Street. Neighborhood Chelsea / Flatiron District Built June 30, 1893, to May 30, 1894

(Henry J. Hardenbergh, 06.02.1847 New Brunswick, NJ – 18.03.1918 New York, NY)

[http://en.wikipedia.org/wiki/Henry\\_Janeway\\_Hardenbergh](http://en.wikipedia.org/wiki/Henry_Janeway_Hardenbergh)

Landmark Status Within the Ladies' Mile Historic District.

Use

Originally a warehouse. Now administrative offices for the Girl Scouts and Touro College's Graduate School of Education & Psychology, and also the Moda Furniture store, which at the time this was taken on May 29, 2006, was offering a big sale.

Intricate geometry for a building meant to serve as a warehouse. Four two-story columns support four two-story pilasters (two thin, two wide), within which three one-story pilasters support three one-story columns.

[http://www.startsandfits.com/hardenbergh/43\\_west\\_23rd.html](http://www.startsandfits.com/hardenbergh/43_west_23rd.html)

The Touro Library is located in the historic Castro Building, a structure that typifies the bustling, youthful neighborhood it calls home, the land-marked 23rd Street District in Manhattan. Gruzen Samton • IBI Group provided architectural and interior design services for the 10,000-sf library facility, which occupies an entire floor and spans the block from 23rd Street north to 24th Street.

The library provides definition to the existing space that Touro occupies within the building, serving as a central study and social area. Several small classrooms, administrative and study spaces were included with library stacks, computer stations and media rooms.

Our design reflects the space's unique features. Abundant natural light, exposed high ceilings, handsome wood floors, and a historic half-round window create a loftlike, contemporary atmosphere that also incorporates more traditional collegiate design.

### [Thurgood Marshall Academy, New York, NY – USA 2004](#)

FIRM Gruzen Samton Architects, Planners & Interior Designers, CLIENT Abyssinian Development Corporation  
AREA 87,000 sq.ft., TOTAL COST \$28,500,000.00, COMPLETION DATE 2/2004

The architect's design solution for this 750-student middle school and high school facility involves a six-story structure rising from within an existing three-story shell. Built in 1924, it is the original address of the legendary Harlem jazz club, Small's Paradise. The project team worked with the New York City Board of Education and residents of Harlem to address concerns, and adhere to the design guidelines and requirements of both groups.

Classrooms are organized along exterior walls and around a large circulation space (galleria) at the center of each floor. This allows a tight floor area of no more than 89,000 square feet to accommodate a full range of programmatic functions, including 5,000 square feet of retail on the street level.

One of Thurgood Marshall Academy's primary missions is to help students understand the importance of giving back to the community. Amenities in the new building, including an accessible, high-tech community learning center on the first floor, support students, faculty and administration in this mission.

### [Babylon High School, Babylon, ME – USA 2003](#)

FIRM Gruzen Samton Architects, Planners & Interior Designers, CLIENT Babylon Union Free School District, AREA 33,755 sq.ft., TOTAL COST \$3,887,000.00, COMPLETION DATE 8/2003

The existing Babylon High School required four additional classrooms to meet the demands of an increasing student population. By moving and consolidating several office suites, space for the required four new classrooms could be found within the existing building, minimizing the need for new construction.

The design team reconfigured the existing 6,700-square-foot

Libraries/Media Centers to include both a new library/media center and the district central administrative offices. A new 3,300-square-foot entry hall was created to provide high school administrative offices, as well as a distinctive and visible main entry for the entire high school complex. The four new classrooms were provided in the spaces formerly occupied by administrative offices.

In addition to new furnishings and finishes, the reconfigured library has been given a more open and well-lighted appearance. The exposed ceiling surfaces and steel frame were painted white. New lighting and acoustic banners were installed. Also, new clerestory windows were opened up high along the exterior walls to provide increased daylighting while reducing glare.

"Way to capitalize on an opportunity to update a library, and create a new entry and community connection."--2005 jury

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=2167](http://schooldesigns.com/Project-Details.aspx?Project_ID=2167)

As part of a \$16 million bond referendum, Gruzen Samton • IBI Group provided design services for the restoration of all schools in the Babylon Union Free School District. Work completed under this initiative involved three educational facilities and included both renovations and additions to these structures. For the project team, this complicated initiative represented a simultaneous, district wide effort to design and construct multiple projects.

In addition to extensive building infrastructure and system upgrades, these complex projects involved extensive internal renovations to accommodate curriculum and program changes. Construction on all projects was carefully phased and scheduled to allow for continuous use of the respective facilities. The design team carefully monitored the estimated cost throughout all design phases, allowing for all projects to be completed on budget and within a tight schedule.

In order to meet the demands of a growing student population, Babylon High School required four new classrooms. By moving and consolidating several office suites, we created room for the supplemental instructional space within the existing building, minimizing the need for new construction.

Gruzen Samton • IBI Group also reconfigured the existing 6,700-sf library to include the new, state-of-the-art Library/Media Center, as well as multiple administrative offices. In addition, we created a new 3,300-sf hall to house a prominent and distinctive main entry for the school complex.

Design highlights included the addition of clerestory windows, positioned high along the exterior walls, to increase natural light and reduce glare; a new entryway capitalizing on a library update by creating a community connection; exposed ceiling surfaces and steel frame (painted white) contributing to a sense of openness; extensive renovations including new furnishings & finishes, as well as installation of a new lighting system and acoustic banners.

[http://culturenow.org/entry&permalink=15599&seo=Babylon-High-School\\_Gruzen-Samton](http://culturenow.org/entry&permalink=15599&seo=Babylon-High-School_Gruzen-Samton)

### [Dalton School Library Renovation, New York, NY – USA 2001](#)

FIRM Gruzen Samton Architects, Planners & Interior Designers, CLIENT The Dalton School, AREA 8,400 sq.ft.  
TOTAL COST \$2,400,000.00, COMPLETION DATE 9/2001

The project transformed a former gymnasium into a library/resource center for middle-school and upper-school students that also could serve as the school's primary events venue.

The designers faced special challenges: construction on the tenth floor of an occupied building; accommodating a main floor, mezzanine, and HVAC within a total clear height of 15 feet;

a multipurpose reading room that could be reconfigured quickly for student functions or meetings of trustees, faculty or parents; providing for current and future technology throughout the library within the space constraints; and convincing technocrats that a modern library still needs books—and that low, accessible stacks require more floor area.

The renovation resulted in a simple, quiet design to provide rest from the visual activity generated by books, stacks, technology and young learners. A gently curved mezzanine reaches beyond the bounds of the library, embracing the main reading room and unifying the middle-school and upper-school libraries. A simple acoustical ceiling is gently washed by wall lighting, leaving the ceiling free from clutter. Natural light reaches all areas and views to the outside expand the space. A media wall permits rear-projection images in the main space.

Wireless technology reaches all points in the library, and hard ports maximize the speed of data access.

Carlson, Scott, Library Renovation at Ohio State University Promises More Space, but Fewer Books, in: The Chronicle of Higher Education

Thompson Library is the main library at Ohio State serving more than 54,000 undergraduate and graduate students. The original c. 1913 Beaux Arts building was enlarged in 1947–1951 and expanded again in 1977. This project transformed the library that largely functioned as three separate buildings into a unified and flexible 21st century research library and campus hub. Challenges included reconfiguring the internal organization and merging building styles and materials without increasing the building's gross size. Thompson Library has become an active academic and social destination. Since the university's 2009 fall quarter began, about 12,000 students a day have used the library — more than three times the daily gate count than prior to the renovation.

Thompson Library occupies a prominent location within the university's historic Oval—the most significant campus green space—conveying the significance of the library in the main stream of campus life. Site constraints limited options for expansion, therefore compact massing strategies were fundamental to the success of the project. Earlier additions on both the east and west facades were removed because they compromised library image and functions. The new compact massing and reconfigured organization reduced the library's gross size, but increased its usable area.

The library maintains a symmetrical organization and east-west “public street” through the building in response to the east-west axis of the Oval. Transparency and openness clarify the internal organization of the library. Entrances on both the east and west lead to new sky-lit atria connected by a glass-encased book tower at the center of the building. The existing skin of the book tower was replaced with glass to reveal seven stories of books. The significant volume of the atria coupled with the natural light and views of collections and activities surrounding the atria provides a dramatic sense of arrival while offering visual cues that remind the library is a place for scholastic work. Users immediately understand the library's organization, spatial hierarchy and direction. The tower remains the repository of print materials (with the exception of special collections, which are located off of the atria). Reading rooms are located on the east, west and on the top level of the tower. The historic Grand Reading Room on the east was restored to the grandeur of its original 1913 design. In contrast, the new Buckeye Reading Room on the west is a very contemporary space with advanced technology to support lectures and special events. The Campus Reading Room on the top floor of the tower is a flexible area offering some of the most dramatic views of campus. It is frequently used for gatherings and special events. Collaborative meeting areas are located throughout the library. The “trays” surrounding each atrium, are highly adaptable environments for the evolving patterns of learning and library use. The trays feature flexible furniture and lighting, and a straight-forward organization within which secondary and tertiary modifications can be made as program, learning styles, and technology advance. Staff areas line the building on the north and the south. Offices feature open layouts to support interaction among librarians and with students.

## **Upper School Campus, Ensworth School, Nashville, TN – USA 2004**

COMPLETION 2004 Phase 1 Upper School Campus, 2009 Performing Arts Theatre, SIZE 250,000 SF

### **AWARDS:**

Boston Society of Architects, Honor Award for Design Excellence

American Institute of Architects Tennessee, Honor Award for Design Excellence

American School and University, Citation for Design Excellence

Brick Industry Association, Brick in Architecture Awards, Gold Winner

This independent day school planned to develop an entirely separate new upper school campus for grades 9-12. The challenge of siting the extensive program for the new high school campus, together with its related athletic fields, parking and circulation roads, was exacerbated by its historically significant site. The site is located between two seams of development: a rugged mountainside forest on the eastern edge and densely settled residential neighborhoods on the western edge. Several small buildings remained from the original graceful layout of old farm buildings on the 120-acre site.

The process began with a visioning exercise and physical Master Plan to address both curricular and physical goals for the school.

The resulting program defined 250,000 gross square feet of built space in the first-phase of a complex build-out and an additional 100,000 gross square feet of future expansion, including a theater and natatorium.

Preservation of mature trees, old stone walls and several small historic buildings defined the layout hierarchy and site organization.

The main entry sequence is organized by drop-off and parking along the wilderness edge, with distinct buildings organized around a central quadrangle. Defining this space are the Commons Building, Academics Center, Visual and Performing Arts Center and the Athletics Center. Playing and practice fields mediate between changing scales and context.

A contemporary expression, grounded in traditional planning roots, gives the new campus a striking sense of permanence and community. Throughout the day, as students move through the campus, distinct buildings with glass rotundas and other entry forms serve as markers of discrete activity.

The Commons Building contains the library, dining hall and central administration. A dramatic two-story library, the physical and symbolic center of campus, is used for small group work, assemblies and individual study. Soaring two-story umbrella trusses are the focal point of the multi-purpose dining space, which modulates between formal and informal configurations. The boundary between inside and outside, formal and informal is further blurred with outdoor seating beyond the primarily glass facade facing the quadrangle. Spilling out onto the courtyard, students move to the Academics Center to the west, the Arts Center to the east, or the Athletics Center toward the south.

The Academics Center contains classrooms for the humanities, along with mathematics and state-of-the-art laboratories for chemistry, biology and physics. Unique collaborative spaces foster frequent interaction among students and faculty, including generous lounges, informal gathering areas and small group study spaces. In many classes, discussions take place around Harkness tables, where each student is actively involved in the learning process.

The Arts Center contains rehearsal space for dance, band, orchestra and other musical ensembles, a photography studio and darkroom, small theater for performances in the round, and spacious art studios. Multiple media are explored in the art studios, which feature flexible seating and working arrangements and an abundance of natural light. With a series of double doors to the outside, students often work in small groups along the arcade on the northern edge and a small courtyard to the northeast. The Athletics Center contains a flexible gymnasium with removable bleachers and a school-wide fitness center that is used by every student and athlete. The Athletics Center also acts as a forecourt to the playing fields, which are located below the main quadrangle. The education of the entire person—mind, body and spirit—is exemplified in the mission of the school and its new physical expression. The arts and athletics are considered an integral part of each student's programs and the boundary between these expressions, as well as the inside and outside is intentionally porous. Small groups and classes often work in the courtyards and quadrangle. Anchored by the main circulation spine between buildings, which can be primarily external with the temperate Nashville climate, movement through the site is always linked to its extraordinary history and remarkable natural features. Fast-track planning and implementation allowed the entire process, from Master Planning to occupancy, to be completed in just over two years. A significant accomplishment is that the entire project, including all site work and interior furnishings, was completed for just under \$150 a square foot.

### [Mount Holyoke College, Williston Library Expansion, South Hadley, MA – USA 2003](#)

Williston/Smith Library

The main building of the Mount Holyoke College libraries, Williston Memorial Library was built in 1905 and has undergone several renovations and expansions, including the addition of the 33,000-square-foot wing completed in 1992 and the addition of the Information Commons in 2003. The Williston Library and Miles-Smith wing offer pleasant spaces for study, some private rooms for collaboration, and classrooms for course instruction. Also housed here is the Writing Center, where students receive assistance with their writing from faculty and trained student assistants. Recent building projects have equipped the library with an infrastructure that supports the latest computer technologies.

Named for A. Lyman Williston in 1917, Williston Memorial Library was built on the site of the 1870 library. The main reading room, built in 1905, was designed to resemble Westminster Hall, an early English legal chamber. The library's atrium, part of the 1992 renovation project, is modeled after the Medici Library in Florence, Italy. A sixteenth-century wellhead standing at the center of the court has a Latin inscription chiseled into one of its panels, which when translated reads, "You who are thirsty, come and drink freely." This inscription is the library's motto.

### [Berwick Academy Library, South Berwick, ME – USA 2002](#)

Completed in 2002, the state-of-the-art Jackson Library is the center of academic inquiry and discovery on campus. The two-story, 16,000 square foot facility contains over 17,000 volumes and subscriptions to over 100 periodicals and newspapers. The library web page links students to a virtual library of thousands of online resources that support and enrich the curriculum.

### [University of New Hampshire, Diamond Library, Durham, NH – 1998 – USA](#)

45,000 SF New Construction, 165,000 SF Renovation

**Awards:**

AIA / ALA Excellence In Library Design 2001

American School and University, Design Ciation 2000

Boston Society of Architects, AIA Honor Award 1999

Society of American Registered Architects, Award of Merit 1998

One of the central questions being asked by college and university administrators is how to deal with the vast stock of outmoded and failing 1960s-era buildings. When the firm was engaged by the University of New Hampshire to analyze its main library, built in 1957 and expanded in 1967, student visits were at an all-time low. The original library was designed with a traditional separation between the public areas, service and stacks. With its expansion 10 years later, large floor plates further eroded the definition between the public use areas and stacks. While the university's Sputnik-era library provided 170,000 square feet of space, its organization was mainly for the storage of books. Adding to this dilemma was the drab character and quality of interior finishes. Low ceilings of acoustical tile panels and striped carpet, which covered floors and ran up interior walls and across public service desks, created a dark and complicated public circulation.

The simplicity of traditional New England forms and reuse of building structure characterizes the design solution. With a limited public university construction budget, the approach was to reuse the existing building for stacks, reference areas and staff, together with new construction that contains large public reading areas and primary library service. A 45,000-square-foot addition on the north and east edges of the building comprise the new reading rooms, while the existing structure was renovated and functionally reorganized. The existing building was set back from the center of the most significant campus quadrangle, creating a dark and

forbidding entry sequence. Taking down the old entry portico and covering two sides of the existing building with taller new construction allowed the building forms to be reinserted into the main campus organization with a more civic-scaled presence. Two new wings that house the major public spaces of the library are brought out further into the primary central courtyard on campus to better engage the student pedestrian experience. The north wing fronts and completes the central courtyard of the campus. The east wing opens to vistas across the rolling New England setting. At night, the tall reading rooms behind the oversized windows are illuminated, casting light across the courtyard and campus, and inviting students within.

In the old sections of the building, all interior finishes were replaced and the location of interior partitions and finishes were replanned for better efficiency. Throughout the six levels, the 210,000-square-foot floor plate is organized for consistency as well as efficiency. The library visitor is oriented on each floor with reference to the three-story entrance lobby and can proceed to the reading rooms, stacks or the staff/service points without hesitation.

### [Library, Math and Science Building, The Taft School, Watertown, CT – USA 1997](#)

COMPLETION 1997, SIZE 60,000 SF

Two interventions on this venerable campus combine to remake the academic heart of the school. Two distinct architectural traditions create the primary character of campus. The original Gothic buildings by James Gamble Rogers and Bertram Goodhue evoke medieval, ecclesiastical and collegiate architecture. The site-specific inflection of the buildings extends their function and shape into the landscape, while the more recent “object” buildings are more static and less successful in creating a unified whole.

Celebrating this vocabulary as the integrating thread of the campus ensemble, the new buildings and renovations utilize similar form-making gestures, while acting as background to the established, historic buildings. The Gamble Rogers and Goodhue buildings provide the primary inspiration for the new Mathematics and Science Center. The building is broken down into humanly scaled elements and begins to create outdoor spaces, similar to the original buildings, using bays and dormers to interact with the landscape. A large courtyard acts as an outdoor classroom. A 1960s library was enclosed in brick to create a cohesive assemblage of building skins.

The Science Center forms a new focal point on the campus edge where building and nature exist harmoniously. During early considerations of the campus as a whole, the importance of the pond at the campus center became apparent. A key issue of the new building intervention is its relationship to the water. The solution emphasizes the pond as the anchor for campus buildings. To emphasize water as a primary locus, the size of the pond was doubled, increasing its ability to physically engage the building edges. During the preliminary investigation of campus hierarchy, the relationship of a modern intervention in the campus fabric came to the forefront. The 1960s-era library facade clashed dramatically with the ornamented campus aesthetic, and the interior spaces lacked many public amenities. As part of the larger campus reorganization, it was proposed to wrap the existing library facade and create a new reading room to continue the line of facades along the water’s edge. Taken together, the new Mathematics and Science Center and expanded library create an educational center that presents a cohesive whole while unifying the renowned campus architecture.

The new library construction consists of two large spaces and renovations to the existing building. The addition replaces the former sunken common area with a soaring great room.

Due to its internal configuration, the common room is organized by a skylight covering almost the entire ceiling. This space is the new heart of the library, an orientation point for students and the location of the new circulation desk.

Phrases from the school’s founders are sandblasted in the glass of the library reading room, recalling the stained glass and etchings seen in the windows around campus and expressing the traditions and missions of the school.

### [Lawrenceville School Library, Lawrenceville, NJ – USA 1996](#)

AREA 45,000 sq.ft., TOTAL COST \$8,000,000.00

Located on the campus of a private, secondary school, the new library takes its design cues from the surrounding mix of romantic architecture. Situated in the center of the school’s revered Flagpole Green, the building provides a new focal point for the green, and a new physical and ceremonial heart for the campus.

1998 Architectural Portfolio or great hall. Two special pavilions off the great hall are symbolic of the romantic nature of the campus.

The visually open scheme allows for a clearly organized space easily understood by library users.

The new library is flexible to accommodate the technological evolution taking place in the world of information. No longer merely warehouses for this new age, libraries need to house tools for literacy in computers, as well as in language. Therefore, the design incorporates an electronic classroom where students and faculty can learn, hands-on, the latest techniques for research and data communication.

#### **Libraries:**

### [New York Public Library, Mid-Manhattan Library and Renovation Project, New York, NY – USA \(2004 Project\)](#)

The Mid-Manhattan Library is the main circulating library in the New York Public Library system, currently serving 4,000 New Yorkers daily, with 40% coming from boroughs other than Manhattan. Presently, this facility is severely overcrowded, congested, and unable to fully meet the needs of New Yorkers for library information resources, particularly through information technology.

The proposed \$120 million renovation and expansion project of the Mid-Manhattan Library will better meet the daily information needs of 8,000 New Yorkers on-site and thousands more electronically, creating a powerful catalyst for educational opportunity and economic growth. The current Mid-Manhattan Library occupies a prime location on Fifth Avenue and 40th Street in the former Arnold Constable building which is owned by The New York Public Library. The expansion will add an additional eight floors and 117,000 square feet for library service to the existing 139,000 square foot building, while creating a 20,000 square foot ground floor presence for rental to a prominent retailer. The Library is proposing a public-private partnership to fund the project, combining private fund-raising, revenue from the retail location, and support from the City of New York. The design maintains the existing building, with structural modifications, retaining the contextual/urban reference, while re-imagining the limestone frame as a base and screen for a new, iconic intervention. Using the existing side facades of adjacent taller buildings on both Fifth Avenue and Fortieth Street, the addition acts as a counterpart to the original building; an articulate, glass sheathed, sculptural crystal volume that anchors the corner and establishes an extended and dynamic “place marker” for the New York Public Library/Bryant Park context. The creation of a singular and memorable new object, as a counterpoint, embodies the visual and psychological presence of the original Beaux Arts Building with a modern vision: “A Beacon of Knowledge”. The expanded Mid-Manhattan library will offer a massive presence of information technology including over 300 computers, 100 laptops, and broad access to hundreds of electronic databases and technology training programs combining computer literacy and library literacy. Facilities will include five “Information Commons”, one on each of five paired floors: Reference, Art, History and Social Sciences, and Periodicals and an extensive popular library including multiple copies of the latest bestsellers, language books and literature in addition to biographies, mysteries, travel books and vacation guides, books on tape, videos, and current multi-media items.

### [North Carolina School of the Arts Library, Winston-Salem, NC – USA on design – \(2017\)](#)

The main function of this new library is to provide an inspirational space for collaboration and communication between the five major schools of the University as well as to be the social umbrella under which all students, staff, and faculty gravitate as the natural, safe, gathering space for the University. Although site selection was critical in this matter the primary function is also enhanced by the floorplan of the library— the arrangement of appropriate adjacencies and spaces, assigned and unassigned, within the building footprint.

The entry provides an appropriately distinctive entrance to the UNC School of the Arts Library,

serving as a landmark on the campus by day and a lantern to the campus and to learning at night. An open entry volume serves as a dramatic zone for orienting visitors to the building. The technologies in the lobby further promote programs and services within the library as well as productions and activities across campus.

Accessible and independent of library security, a state-of-the-art, versatile multi-media venue for fifty people functions as an intimate auditorium for special programs, video conferences, gaming, cultural or other events.

Jenkins•Peer Architects Teams with Gwathmey Siegel & Associates Architects on UNC School of the Arts Library

October 2008

The University of North Carolina School of the Arts (UNCSA) has commissioned AIA award-winning firms, Jenkins•Peer Architects and Gwathmey Siegel & Associates Architects, to design their new 75,000-sf Library facility. Charlotte-based Jenkins•Peer brings extensive experience in campus design for colleges and universities throughout the Carolinas. The collaboration with New York City-based Gwathmey Siegel brings the distinctive perspective of an internationally acclaimed design firm.

UNCSA envisions the new Library as the “social umbrella” of the campus—a dynamic, engaging space that will attract students, staff, and faculty. The new Library will replace the University’s existing undersized and outdated facility. The new Library will include provisions for Archives, Reference, General Collections, Music Media Library, Chancellor’s Suite, and an auditorium, to name a few.

An arts conservatory of international renown, the University of North Carolina School of the Arts was the first state-supported, residential school of its kind in the nation. Established by the N.C. General Assembly in 1963, the School of the Arts opened in 1965 after nearly a million dollars was raised to win the new school for Winston-Salem. In 1972, the School became part of the prestigious University of North Carolina system.

### [Yale Arts Complex, Paul Rudolph Hall – Jeffrey H. Loria Center for the History of Art and the Robert B. Haas Family Arts Library, New Haven, CT – USA 2008](#)

Since its completion in 1963, the landmark Paul Rudolph Hall, originally called the Art + Architecture Building and located on the corner of York and Chapel Streets, has become one of the most identifiable buildings on campus. Designed by Paul Rudolph

[http://de.wikipedia.org/wiki/Paul\\_Rudolph\\_\(Architekt\)](http://de.wikipedia.org/wiki/Paul_Rudolph_(Architekt))

(\* 28.10.1918 KY USA - + 08.08.1997 New York NY USA) , then Chair of the Architecture department at Yale, the nine-story building, with its Brutalist-style façade of hammered concrete aggregate, is one-of-a-kind at Yale. Along with the Yale Repertory Theater, Louis Kahn’s Yale University Art Gallery and the Yale Center for British Art, Rudolph’s structure marks the center of the arts area on campus. Equally lauded and criticized for its design and interior organization, Rudolph Hall has gone through many changes in its 45-year history, surviving a mysterious fire in 1969 and undergoing several renovations since. In 2007, a major restoration and expansion began under the leadership of Yale School of Architecture Dean Robert A. M. Stern and architect Charles Gwathmey. Completed in August 2008, the building was renamed Paul Rudolph Hall. Together with the newly completed Jeffrey H. Loria Center for History of Art and the expanded library, now known as the Robert B. Haas Family Art Library, Rudolph Hall forms a new arts complex for Yale.

Owner/Developer: Yale University, New Haven, Conn., Architect: Gwathmey Siegel & Associates Architects, New York  
Consulting Preservation Architect: Hoffman Architects, Hamden, Conn., MEP Engineer: Altieri Sebor Wieber Consulting Engineers, Norwalk, Conn., Structural Engineer: Severud Associates Consulting Engineers, New York, Construction Manager: Turner Construction Co., Milford, Conn., Concrete Restoration Contractor: Frank Capasso & Sons, Northford, Conn.  
Roofing/Waterproof Contractor: Barrett Inc., Danbury, Conn., Window Wall Installer: Curtainwalls & Windows Inc., Glastonbury, Conn., Environmental Design Consultant: Atelier Ten, New York

Yale University’s Art + Architecture Building, captured headlines when it opened in 1963 in downtown New Haven, Conn. The fortress-like, 114,000-sq ft cast-in-place concrete structure was one of the world’s most iconic, Modernistic buildings ever built as a

school of architecture. But over the years a fire and unsympathetic patchwork renovations destroyed legendary designer and then-Yale architecture school dean Paul Rudolph's original vision. A fast-track \$126 million renovation, restoration and construction project has restored the building, rededicated as Paul Rudolph Hall, to its original landmark status. Besides the 46-year-old building, the project included construction of an 87,000-sq ft, 7-story building for the history of art department called the Jeffrey Loria Center; and the Robert B. Haas Family Arts Library housing arts, architecture and visual resource collections, which extends across the ground floors of both buildings. The restoration of the existing facility included both exterior and interior work designed by New York-based Charles Gwathmey Siegel & Associates Architects. Coincidentally, the firm's principal Chalres Gwathmey was an architecture student of Rudolph's. The project was also a top priority of the architecture school's dean, Robert A.M. Stern, also a student of Rudolph's. Four other plans over the past decade failed to win Yale's endorsement. Added to the complicated scope of the project, Yale didn't want to displace students and faculty from the architecture school for more than one academic year. That meant demolition, renovation and new construction had to be coordinated and finished with a 14-month time frame, something Gwathmey project associate Steven Forman said was only accomplished with the early and constant involvement of construction manager Turner Construction. The result was a project that was brought in on time, on budget and is winning praise. Details of the restoration included cleaning and repairing the exterior, replacing patches of original hammered-rib texturing, and removing mismatched window units with new, massive insulated sheets of glass. That last step coupled with reopening enclosed spaces added a tremendous amount of light into the building. The new Loria building houses all faculty offices and auditorium space. The Haas library features a huge atrium, and visitors can move between the two buildings easily, one results Forman said is improved circulation patters and vistas from each floor, as well as improved views to the outside. The entire project achieved LEED Gold certification.

### [Allen County Public Library, Addition and Renovation, Fort Wayne, IN – USA 2007](#)

centerpiece building for downtown Fort Wayne, the largest public library genealogy collection in the United States, large parts of the collection "browse-able" from open stacks, 250-seat auditorium and stage, café, book store, exhibition gallery, community computer training facilities, below grade and surface visitor parking, administrative offices, basement level closed stacks, storage, and support spaces, 4000 sf flexible public meeting rooms, public access television studio, children's department and young adults services, art, music and audio visual departments, rare books (collections and exhibitions), general readers fiction and non-fiction, business, science and technology department, total 845,000 volumes on open shelving, expandable to 1,000,000 volumes on open shelving, completion 2007, gsf 425,000, Design Architect Gwathmey Siegel & Associates Architects, Architect of Record MSKTD & Associates

This two-story, 127,000 square foot addition to and renovation of the existing 240,000 square foot Allen County Public Library in Fort Wayne, Indiana creates a monumental civic building that integrates the best aspects of the existing library and acts as a revitalizing influence in the downtown area. The design identified the basic urban and architectural strategies that met the goals of the library and the community. The selected design gives the library, which has one of the largest genealogy collections in the nation, an image that reflects its prominent role in the community and enhances the urban context. It will make a significant portion of the collection "browse-able" by expanding open stacks. There are two public entrances to the expanded facility. The existing re-imaged Webster Street entrance maintains the current easy pedestrian access from downtown and incorporates a Café and Library Shop to permit a synergy of uses. The new Ewing Street wrap-around entrance integrates the connection to the new below-grade parking and includes a major glass component that affords attractive views to neighborhood churches and the historic district. The east and west entrances are interconnected by the great hall, which provides clear visual orientation and access to all library departmental facilities and seamlessly integrates the existing renovated spaces and the new construction. The curved roof of the great hall contains a large north-facing skylight and a shaded south-facing clerestory window, bringing daylight into the center of the building. The great hall can be separated from the library spaces, so that community functions can extend past library hours if needed, without compromising library security. The central great hall also houses the Circulation Desk, Central Reference Desk, self-check stations, electronic catalog stations, and informational components, as well as stairs and elevators to the Library's second level, the new Auditorium on a lower level, and the Garage below grade. Community use facilities are organized along the southern side of the first floor, between the great hall and Washington Blvd. These spaces include flexible Meeting Rooms, Access Fort Wayne Television, Community Computing and Public Computer Training, an Exhibition Gallery, the Café, and the Library Friend's Store.

<http://www.gwathmey-siegel.com/portfolio/pdf/200011.pdf>

### [Akron Summit County Public Library, Akron – Akron, OH - USA 2004](#)

focal point of downtown Akron's cultural, commercial and architectural center, includes feasibility study for two sites during initial project phase, latest technology and communication systems, 425-seat theatre, book store/café, public meeting rooms art exhibition spaces, direct link to City parking garage, completion 2004, gsf 270,000

#### **Awards:**

**AIA Cleveland – Citation 2007**

**Associate Architect: Richard Fleischman Architects, Inc.**

The addition to and renovation of Akron-Summit County's existing Main Library has become a major civic destination in downtown Akron. Comprised of a series of "object" buildings along Main Street and designed to maximize transparency and light, the 270,000-square-foot library complex reestablishes the public and institutional image of the Main Library and reinforces downtown Akron as an urban, cultural and architectural center. Beginning with a master plan and the feasibility study, the program was defined both by the need to make the collection materials "browse-able"—by moving them out of existing basement stacks—and the need to expand and modernize seating, public service infrastructure and public programs. The new addition mediates the twenty-five foot difference in elevation between High and Main Streets. The buildings has three points of entry: the primary pedestrian entrance at the lower level on Main Street, the High Street vehicular entrance on the second level, and an interior ramp linked to the municipal parking garage on High Street. The Main Street entrance is marked by an iconic four-story pylon containing the library's boardroom on the third floor. The lower level includes two computer training classrooms, a library bookstore and cafe. The addition affords open, loft-like reading rooms on all levels with flexible seating and stacks to meet departmental needs. Information desks are located within the reading rooms. Staff workrooms and back-of-house operations are clustered within the gutted and renovated old building, allowing for space and operationaliciencies while maintaining the openness of the loft. The library's second level, accessible to both school buses and cars, includes the Children's Library, a 425-seat auditorium and public meeting rooms available for community use. Patrons can access the auditorium during off-hours through the High Street entrance. The library's third floor houses

the special collections department complete with its own environmentally controlled HVAC system. The sub-cellar and cellar levels of original library building contain additional back-of-house operations as well as mixed-use classroom spaces for the community. By doubling the size of the library to properly accommodate the vast collection, as well as providing greatly expanded public service components, the library complex is a significant public amenity within its community. Designed to be a patron-friendly place that is open, airy and inviting, the Akron-Summit County Library has become an essential catalyst of the city's revitalization.

### [Middlebury College, Davis Family Library, Middlebury, VT – USA 2004](#)

anchor building for new intellectual and social campus complex, façade of granite, limestone and marble, expansion space for print collection, state-of-the-art technology infrastructure, expanded seating areas for group study and meetings, designed to meet the LEED Silver Standard, completion 2004, gsf 143,000

**Awards:**

**American School & University Magazine Collegiate Citation 2007**

The new Middlebury College Library is the first step to fulfilling the College's master plan for the development of a campus intellectual and social center. The library is a state-of-the-art research and learning facility, combining a traditional print collection with the latest communications technology. Located on the eastern edge of the Front Quad, the facility also establishes a new campus center and enhances the existing relationship between both the College and the Town. The three-story, 143,000-square-foot facility accommodates the increasing use of technology in teaching and research. It also provides expansion space for the College's growing collection of printed materials to support evolving curriculum needs. The library is architecturally consistent with the other buildings on the historic front quadrangle in both its materials—limestone, granite and marble—and its scale. The project reconfigures a composition of existing roadways, buildings and prominent public spaces, establishing a new campus center that fits into existing view corridors and pedestrian circulation routes. Library interiors provide efficient and flexible space that will serve the College's needs well in to the next century. This includes increased seating to accommodate planned growth in the student body. Because of the importance of interactive and collaborative learning in the residential liberal arts environment, most seating is in group study and meeting rooms. In keeping with Middlebury College's overall concern for contextual and environmentally sensitive design, the project is designed to meet a high rating for the LEED (Leadership in Energy & Environmental Design) standard for environmental efficiency.

### [Bryant University, George E. Bello Center for Information and Technology, Douglas and Judith Krupp Library, Smithfield, RI – USA 2003](#)

Grand Hall with multi-media display wall, multipurpose classroom with access to the Grand Hall, cybercafé, Information Commons state-of-the-art multi-media training facilities and classrooms, with computers, double-height perimeter reading room, 12 group study rooms, trading room, seminar rooms, 24-hour study areas, new Campus Quadrangle, completion 2003, gsf 72,000

At Bryant University, the planning of the new George E. Bello Center for Information and Technology, which includes The Douglas and Judith Krupp Library, resulted in the creation of a new campus quadrangle displacing vehicular drives and parking. An updated master plan introduced a landscaped academic quadrangle and a new sense of place and identity for the school. In the great tradition of University campus libraries, the Bello Center frames the quadrangle and provides a new focal point for campus life. The Bello Center's primary spaces are organized within a glass enclosed, double-height pavilion structure, which orients to the new campus quad. In the evening, the center radiates light and provides views into its facilities from the campus. The library, which occupies a major portion of the building, provides for the introduction of state-of-the-art, electronic information services, classrooms, conference rooms and study rooms that formerly had not been available. It will also accommodate the growth of the library's current collections which includes books, bound journals, audio-visual materials and microfilm. The other portion of the building is devoted to the entry Grand Hall and other spaces complementary to the library. The two-story rotunda serves as a central campus meeting place, special events venue and exhibition center. The Grand Hall and the library both connect to a cybercafe, library classrooms, group study rooms and a fully equipped Trading Room, all of which remain open to students and offer study spaces and electronic access when the library is closed.

62,000 sqf.

### [Ferris State University FSU, Library for Information, Technology and Education \(FLITE\), Big Rapids, MI – USA 2001](#)

double-height atrium, general collection reading room, sunken court garden, extended hours library, reference reading room reference collection, microform reading room, multimedia and computer labs, electronic reading room, food court, informal study court, loading dock/holding and receiving area, equipped for remote electronic access, completion 2001, gsf 185,000

Associate Architect Neumann/Smith & Associates

**Awards:**

**Engineering Society of Detroit Outstanding Achievement Award for Building Design and Construction 2003**

FLITE is a 185,000-square-foot facility that combines a traditional print library and state-of-the-art digital information library with a technological learning center. The building has been designed to provide an architectural and symbolic presence to a campus of undistinguished post-war buildings. The siting of the new facility became the impetus for a complete reconsideration of campus circulation systems, the organization of public arrival, and the spatial relationships among the University's component parts. Also part of this rethinking was the conversion of the centrally located parking lot to a campus green as part of the new "heart" of the University. As the central focus of the campus, it acts as a social and intellectual commons, a cultural space for Ferris State University and the larger community. In addition to the library, the building houses an Educational Technology Center that includes an Instructional Technology Unit, a Center for Teaching, Learning and Faculty Development, and a Center for Distributed

Learning. The design facilitates personal assistance with information needs and help with finding, assessing, creating and using expanded resources. The 440,000-volume print collection of monographs, periodicals and documents is housed in standard open shelving and compact shelving. It is interspersed with computer facilities and electronically equipped study, teaching and meeting rooms, allowing electronic access from homes, laboratories, residence halls and offices. Electronic flexibility was a major design requirement. The three main two-story-high 'reading rooms,' each programatically and architecturally unique, occur at the ground, second, and third levels, affording optimal research and study environments, as well as establishing a varied architectural and volumetric presence within the design. The massing articulation and different facade scales address both orientation and specific site/campus contexts, allowing the building to be experienced as a multi-faceted object as well as a primary referential frame that combines and reverses the typical object/frame strategy of other projects.

Campus entry building with a three-story formal gateway, lobby information commons, fully-wired classrooms, virtual reality lab advanced graphics lab, lighting lab, electrical engineering and computer labs, photography studio, TV production and broadcasting studios for long distance learning, galleries and lecture rooms, an office of the future, resource center with a 15,000-volume library conference rooms, office space, redesigned campus plan, traditional pedestrian quadrangle, completion 2000, gsf 82,500

#### **Awards:**

AIA-NY-Award of Merit 2004

AIA Michigan Honor Award 2003

The University Technology and Learning Complex, the largest academic building the University has ever constructed, provides state-of-the-art learning facilities and a dramatic new monumental "front door" for the 115-acre campus. The new building serves all of LTU's programs in technology, communications, management, design and the fine arts. The complex offers comprehensive facilities for learning in an electronic environment with fully wired classrooms, a virtual reality lab, an advanced graphic lab, a lighting lab, electrical engineering and computer labs, a photography studio, and TV production and broadcasting studios with double-height ceilings. It also offers galleries and lecture rooms, an office of the future, a resource center with a 15,000-volume library, conference rooms and office spaces. The ground floor lobby announces the building's focus on technology with an information commons featuring computer stations available for campus information, group teaching and individual research. The four-story, 82,500-square-foot building extends between the one-story Architecture and Engineering Buildings, its length interrupted by a grand three-story portal that acts as the school's formal entrance and leads to the campus quadrangle. White ceramic tile has been used to clad the facade's base, with silver metallic painted ribbed steel panels used for siding. Zinc shingles were selected to clad the special facilities that extend from the exterior walls as rectangular objects. The initial analysis of the building site also resulted in a complete reconsideration of the campus plan. Formerly, the main road to the campus continued through the middle of the central campus quadrangle, impeding pedestrian flow among the main academic buildings. With the introduction of the Technology and Learning Complex, the road now circles the campus perimeter, and the parking lot previously on the site has been relocated to an edge of the campus. The result is a pedestrian quadrangle, with the Technology and Learning Complex completing its architectural frame. A new landscape plan features tree-lined paths connecting the buildings that border the quadrangle.

#### **Awards:**

2000 Modernization Awards Buildings Magazine

The new campus of The Graduate Center of The City University of New York is a vertical complex organized on twelve levels of a Renaissance Revival landmark, the former B. Altman's Department Store in midtown Manhattan. The challenges of the 580,000-square-foot renovation included not only the updating of a nearly 100-year-old building, but the design of a wide variety of educational and cultural facilities including the new library which is at the intellectual heart of the campus. Library visitors enter from building's 17-foot-high lobby into the 92,000-square-foot facility, which occupies a portion of the first floor, concourse and entire second floor. Combining print and high-tech media, it offers open shelving for more than 250,000 periodicals and monographs, over 500 work stations which are wired to support lap-top and desk-top computers, and fully equipped state of the art electronic training rooms. The library also offers group study areas, miscellaneous special collection rooms, dissertation archives and a media library complete with music listening stations. In its previous quarters, the library was in the basement. Now library users have the luxury of sitting next to 12-foot-high windows that look out onto Fifth Avenue, Madison Avenue, and 35th Street

### [The New York Public Library. The Science, Industry and Business Library \(SIBL\), New York, NY – USA 1996](#)

Street level axonometric Lower level axonometric, storage and circulation of over 1.5 million books, 60,000 square feet of remote storage stacks, double height entrance hall suitable for exhibitions and social events, 45,000 square foot research library information services center, full-service circulating library and reading room, microform and patents reading room, electronic information center, electronic training center, 50,000 square feet of administrative office space, flexible design will accommodate new technologies as they emerge, technically complex intervention in a landmark structure, completion 1996, gsf 250,000

#### **Awards:**

2001 AIA Award of Merit

**1997 AIA/ALA Library Building Award  
1996 Record Interiors, Architectural Record**

The New York Public Library's Science, Industry and Business Library (SIBL) is housed on five levels of the landmarked former B. Altman Department Store. SIBL is a full-service circulating library with storage for a collection of 1.5 million volumes, an open shelf reference collection, periodical shelving and a full catalog area. The Library's philosophy is decidedly hands-on, with a highly trained staff of specialists supported by a complete reference department, open micro-form shelving, an electronic information center and several training rooms. SIBL is the largest branch of the New York Public Library, heralded as the "...a prototype of the 21st century Library." Public areas are organized on the ground and lower floors, providing maximum horizontal adjacency for the Research Library below and easy street access to the Circulating Library and Reading Room on the ground level. In addition to elegantly appointed public reception spaces and efficient reserve stacks, the facility provides 50,000 square feet of office space for library management. Storage and administration are organized on the upper floors; with staff areas surrounding the climate-controlled, structurally reinforced stacks. Healy Hall, a 33 foot tall, two-story volume provides a highly visible forum for changing exhibitions and receptions. A stainless steel and terrazzo staircase and a pair of glass and stainless steel elevators lead down from the entrance lobby to the Research Library, which comprises extensive research facilities, a 125-seat Conference Center and an Electronic Training Center with four modifiable classrooms. Flexibility and accessibility were the goals of the design. Workstations are separated by adjustable perforated dividers that provide lateral flexibility, create a discrete territory, and are handicapped accessible. Sight lines allow the entire library to be supervised by five people, maximizing staffing resources. A grid of removable concrete panels raises the floor six inches, permitting power and data lines to be easily reconfigured in the future. SIBL is a classic solution to a problem of preservation and adaptive re-use: reclaiming the historic B. Altman façade while reconstituting the interior for a new purpose.

"Gwathmey Siegel handled the marriage of the traditional and the new in a brilliant way at SIBL. The library is more than a space of great presence and beauty; it functions just as I hoped it would, namely as an information environment that makes a brilliant transition from libraries as we've known them to the kind of facilities they will be in the future."

Paul LeClerc, President and Chief Executive Officer  
of the New York Public Library

"The new Science, Industry and Business Library of the New York Public Library [...] is every bit as grand, in its way, as the library's great main building at Fifth Avenue and 42nd Street. It is just that the grandeur is of a late-20th-century sort: less a matter of grandeur than of comfort; less of sprawling physical space than of accessible cyberspace."

Paul Goldberger, The New York Times, April 24, 1996

**Harvard University. Werner Otto Hall – Busch Reisinger Museum and Fine Art Library. Addition to the Fogg Museum, Cambridge MA – USA 1991**

Founded in 1903 as the Germanic Museum, the Busch-Reisinger Museum is the only museum in North America dedicated to the study of art from the German-speaking countries of Central and Northern Europe in all media and in all periods. Its holdings include significant works of Austrian Secession art, German expressionism, 1920s abstraction, and material related to the Bauhaus. Other strengths include late medieval sculpture and 18th-century art. The museum also holds noteworthy postwar and contemporary art from German-speaking Europe, including works by Georg Baselitz, Anselm Kiefer, Gerhard Richter, and one of the world's most comprehensive collections of works by Joseph Beuys.

From 1921-1991, the Busch-Reisinger was located in Adolphus Busch Hall at 29 Kirkland Street. The hall continues to house the Busch-Reisinger's founding collection of medieval plaster casts and an exhibition on the history of the Busch-Reisinger Museum; it also hosts concerts on its Flentrop pipe organ. In 1991, the Busch-Reisinger moved to the new Werner Otto Hall, designed by Gwathmey Siegel & Associates, at 32 Quincy Street.

In 2008, the 32 Quincy Street building that formerly housed the Fogg Museum and the Busch-Reisinger Museum closed for a major renovation project to create a new museum building designed by architect Renzo Piano that will house all three museums in one facility. During the renovation, selected works from all three museums are on display at the Arthur M. Sackler Museum.

<http://www.rpbw.com/project/103/harvard-art-museums-renovation-and-expansion/>

<http://www.harvardartmuseums.org/renovation/project-overview>

<http://www.harvardartmuseums.org/renovation/updates>

<http://shs.umsystem.edu/historicmissourians/name/b/busch/index.html>

Reisinger, Hugo (1856–1914) businessman, art collector; born in Wiesbaden, Germany. He graduated from the high school in Wiesbaden and became a sales manager for the Siemens Glass works in Dresden. After his second sales trip to America, (1882, 1884), he settled in New York City as an importer and exporter. As he grew in wealth, he collected contemporary German and American paintings to further cultural relations between the two countries. His collection formed the core of Harvard University's Busch-Reisinger Museum.

Expanded university art library with new reading room, Expanded reference stacks, New study-storage room for archival collections, 6 new exhibition galleries for the permanent collection, New 1,000 square foot temporary exhibition gallery, New climate control system, New staff and curatorial offices, Creates a link between the original Fogg and Le Corbusier's Carpenter Center completion 1991, gsf 15,000

This 15,000-square-foot addition houses the permanent exhibition galleries of the Busch-Reisinger Museum and its collection of German twentieth century paintings and decorative arts, as well as portions of the Fogg Museum's Fine Arts Library. The major public spaces consist of the library reading room on the ground floor and the permanent collection galleries on the second floor. To the south are smaller scale spaces: on the ground floor, staff offices for the library; on the second floor a temporary exhibition gallery; and on the third floor, the archival study area.

Its design responds to a number of unique site conditions, including the adjacent Carpenter Center for the Visual Arts, designed by Le Corbusier, an existing subterranean library by Jose Luis Sert and a required three level connection to the Fogg Museum.

The building establishes a primary two-story facade facing the street and integrates a new exterior stair, plaza and ramp at the library entry. Behind it, the building rises to three stories, complementing the Carpenter Center as a distinct yet related object perceived from all angles. The fine-arts library has a separate entrance from the gallery, thus resolving a security problem when the library and museum hours are different. With its high ceilings, tall windows, and visible reference stacks, the reading room conveys the stature associated with such spaces. Existing streetscape and scale relationships had to be addressed, and constraints imposed by building above an existing underground library structure with limited load bearing capacity had to be accommodated.

The solution also resolves Le Corbusier's compelling site circulation idea. The Carpenter Center ramp, which was intended to provide a public mid-block walkway from Quincy Street to Prescott Street through the building, ended in the Fogg's rear yard without a connection to the sidewalk. The design extends the ramp onto a new plaza from which one can either enter the library or descend a new exterior stair to the street.

#### **Libraries:**

#### **Youth-Centred Library Spaces-Nationwide**

Over the past ten years, public libraries have demonstrated their increasing commitment to youth and teen services through new expanded, targeted facilities. H3's library specialists, Daria Pizzetta and Margaret Sullivan, have been responsible for giving architectural form to this national transformation.

Specifically, the Centereach and Selden branches of the Middle County Public Library demonstrate a dedication to specific youth and teen space. Sandy Feinberg, Director of the Library, was one of the first librarians to introduce "place as play" as a library initiative. In developing the design of space for the youth services collection, as well as the entire branch, our library specialist team aimed to invoke imagination, innovation, and the playful spirit that has proven to bring positive return from learning environments.

An innovative design approach for youth services can also be seen in the design of *ImaginOn: The Joe and Joan Martin Center* in Charlotte, North Carolina. Both Daria Pizzetta and Margaret Sullivan were involved in the programming of this "first library of the twenty-first century" and the design for youth-centred services that, for almost the first time, created an environment that placed the emphasis on a child's experience and not on the design of space for the collections. The intentionally sensory design encourages brain development of youth ages 0-5 in support of the public Library Association's "Every Child Ready to Read" initiative. But more importantly, *ImaginOn* brings the world to each child's fingertips, whether through written, spoken or electronic word. The intention of the library to be a place for children to realize dreams has transformed the lives of Charlotte's youth.

#### **Dream Yard, New York, Bronx, NY – USA ongoing**

*Dream Yard* is the largest arts education provider in the Bronx, with programs that reach 8,500 K-12<sup>th</sup> grade students annually during in-school and out-of-school programs. The *Dream Yard Art Center* provides positive, creative programming for youth and arts learning training programs for educators and artists.

H3 has been working with *Dream Yard* over the past two years to provide design services to enhance their spaces to represent the creative spirit encouraged by the program. In addition, H3 and *Dream Yard* are beginning a new project: to design a prototype for a nation-wide model for a *YOUmedia*-inspired digital media learning environment for youth and teens.

The Center, located on the ground and lower levels of a housing development in the poorest congressional district in the country, is a vibrant community environment, fostering success through arts education, whose programs include poetry and creative writing, fine arts, dance and theatre.

<http://www.h3hc.com/&flashid=1450#/4239>

#### **BRIT (Botanical Research Institute of Texas) Library, Fort Worth, TX – USA 2011**

In spring 2011, BRIT moved into a new 70,000-square-foot (6,500 m<sup>2</sup>) facility designed by Hugh Hardy of H3 Hardy Collaboration Architecture. The building is one of only six buildings in Texas to earn a LEED-NC Platinum Rating from the U.S. Green Building Council. The building's ingenuity and efficiency is supported by sustainable design and organized into two parts: an Archives Block and a Think Block.

The Archive Block of the Botanical Research Institute of Texas houses the extensive collection of botanical specimens in the Herbarium, a two-storey 20,000 sq. ft. Climate controlled storage hall, together with a distinguished book collection found in the library stacks. Because of the delicate nature of the specimens, the structure is nearly windowless – a solid box of tilt-up concrete panels to provide maximum temperature and humidity controls.

BRIT's library houses more than 125,000 volumes of books and journals from more than 100 countries. The library facility includes a rare book reading room and children's library. The Herbarium, a collection of more than one million dried plant specimens representing much of Earth's plant diversity is among the largest in the United States and is the largest U.S. herbarium not part of a university, botanical garden, or broader natural history museum.

BRIT's plant collections and educational programs are open to the public to help fulfil their mission of achieving public understanding of the value that plants bring to life. Classrooms, children's library, rare book room, exhibits, gathering spaces and other public areas help support this mission. Taken all together, the project's elements create a fitting new home for the Botanical Research Institute of Texas.

#### **Martha Rivers and E. Bronson Ingram Library, Renovation and Addition, Vassar College, Poughkeepsie, NY – USA 2001**

\$ 15,000,000

<http://www.knowitall.org/legacy/laureates/Martha%20Rivers%20Ingram.html>

<http://library.vassar.edu/about/history/index.html>

The Martha Rivers and E. Bronson Ingram Library was added in 2001, featuring the Catherine Pelton Durrell Archives and Special Collections—housing the Francis Fitz Randolph Rare Book Room as well as exhibit, storage, teaching and reading areas. Ingram Library also includes Reserve Services, studies for faculty members, the periodical collections, the Class of 1951 Reading Room, the library classroom and staff offices.

[http://cdn.nucloud.com/maps/240/1373645411/mobile\\_stops/6689.html](http://cdn.nucloud.com/maps/240/1373645411/mobile_stops/6689.html)

Vassar College Libraries Renovation and Martha Waters and E. Bronson Ingram Addition.

After creating the master plan which reorganized and enlarged the library, we implemented its renovation and expansion. The project added a 30,000 sq. ft. Building to the complex while honoring the surrounding architecture and unifying the libraries' interior and exterior. Additional improvements include electronic facilities; enhanced reader services; special-collections archives; new reading rooms and seating areas that accommodate more than 700 people; and an exterior courtyard.

### [Fredrick Ferris Thompson Memorial Library, Vassar College , Poughkeepsie, NY – USA 2001](#)

One of the most important of early campus buildings was the Frederick Ferris Thompson Memorial Library. Originally a free-standing structure built in 1905 (1905, Francis R. Allen \*1844 Boston - + 07.11.1931 Boston), it has grown in pieces over time. Renovations to double its space in depth took place first in 1918 and then in 1937. The latter linked the library to Taylor Hall to the south and included John McAndrew's important early modernist Art Library. There were further additions to the north, including the 1977 Lockwood addition (Helmut, Obata and Kassabaum) and its renovation, which has created the Ingram wing (Hugh Hardy, 2001). Identifying the different parts of these renovations, some of which are indistinguishable to the untrained eye, would be a major goal of any educational material produced by the college as a result of this initiative. Such work would also help to focus attention on the ambitions of the early college and its original library--not just the central tower, which is truly monumental, or the Cornaro stained glass window, which shows the 17th-century Venetian intellectual, Elena Lucrezia Coronaro Piscopia, the first woman to receive a Ph.D.--but on the entire decorative program of the building, which links Vassar and its education to the world of wider learning.

The architectural character of this building, which mixes clear, box-like, Beaux-Arts massing with complex Gothic decorative detail, provides the dominant formal theme for the west side of the campus. Thus each of the linked additions (the Frances Lehman Loeb Art Center to the south and the Ingram wing to the north) relate to this original structure. Generations of students, under the training of the history department most notably, used the library and its epistemological frame for their own study. Thus the building not only housed books, but was, in its form, a lesson for generations of students.

### [Bull Street Branch, Live Oak Public Libraries, Savannah, GA – USA 2000](#)

Located in Savannah's Victorian district, the Bull Street Library is the largest facility of the three-county library region. Prior to 1998, the Bull Street branch consisted of three distinctly different buildings: the original neo-classical Carnegie structure built in 1916; a 1936 stack addition; and a 1966 concrete-block addition that doubled its size to 32,500 sqft.

The Library needed capital improvements including new and expanded services, space for growing collections, incorporation of new technologies and building systems upgrades. Our design more than doubled the existing the library and reconfigured space.

Patrons now enter through the fully accessible original Carnegie entrance. Its interior has been reorganized to house services appropriate to the classically styled spaces. At ground level, the former check-out area has been returned to a sky-lit grand foyer with public meeting spaces and a newly expanded Georgia history department. The second floor contains the boardroom and administrative offices. New check-out, reference services, expanded public facilities and vertical circulation were added, while all historic spaces were enhanced with new architectural finishes appropriate to the period in which the library was built.

The new, two-story addition is attached to the north façade of the existing library. This wing houses a new children's reading room on the lower level, adult services on the upper level, and a mezzanine for newspapers and magazines. New landscaping and public spaces integrate the two environments. To be compatible with the Carnegie structure, new construction is clad in cubic blocks of Georgia marble. Extensive fenestration and clerestory windows maximize the use of natural light and provide views of the park and the city.

Association with: Woollen Molzan

155,000 sqf., \$ 26,300,000

Hafer Associates designed this 155,000 s.f. university library in collaboration with Woollen Molzan Partners. This is the tallest building on campus, visible from all directions. As the most widely used facility and the academic center of the university, it was important to design the facility to incorporate the latest educational technologies and also to provide the infrastructure to accommodate future technologies as they emerge. Most importantly, this is a building the students use often, so it was essential that the facility catered to this social need, and offered meeting places and a variety of group study areas.

### [Kansas State University, Hale/Farrell Library, Manhattan, KS – USA 2007](#)

Hale's architectural design features a seven-arch loggia entrance and finial-topped towers rising six and seven stories high. Interior design features include oak hardwood floors, brass handrails, sculpted metal banisters, carved and etched limestone facings, and door ornamentations depicting native Kansas plants and wildlife. The original library, named Farrell Library in honor of Francis David Farrell, the university's eighth president (1925-1943), was completed in 1927, making it the first building on campus devoted solely to housing the library. A second addition to the southwest was completed in 1970.

The design solution resolved disparities in floor levels, uncohesive circulation patterns, and the formal discontinuity generated by an episodic history of expansion, while doubling the library's holding capacity. Two new entrances to the library are extensions of existing campus walkways, and the character of the exterior combines both the Gothic and Romanesque expression of surrounding buildings. The entire building is now pulled into a composition that suggests that it was built over time in a way that was 1927 Collegiate Gothic Revival building.

### [Newport Public Library, Newport RI – USA 2001](#)

This project involved an addition and renovation to an existing library constructed in 1967. The existing building was considered an eyesore by most residents, and required extensive upgrades not only to library stack space, but to its mechanical and electrical infrastructure as well. The majority of the existing construction materials contained hazardous materials and required abatement. Aesthetically, the library needed to obtain a cohesive appearance inside and out, but without closing operations to the public. An addition extends the building to the north, expanding and relocating children's stack areas, children's activities, periodicals, and circulation on the upper level, and administrative and lecture hall space on the lower level. Both levels are connected to the existing building by means of new lobby spaces and new entrances from the exterior. (HBRA)

### [Harold Washington Library Center, Chicago, IL – USA 1991](#)

At approximately 756,640 square feet (70,294 m<sup>2</sup>), it is the largest public library building in the world.

1897 – Charles Allerton Coolidge \*30.11.1858 Boston, MA (USA) - +01.04.1936 Locust Valley, Long Island, NY (USA)

<https://digital.lib.washington.edu/architect/architects/718/>

Coolidge's final concept for the library was a Beaux-Arts (neo-classical) style of architecture that combined Greek columns of the Doric order and Roman arches. The design combined a unified exterior with an interior that served as both a library and war memorial.

The building has taken much flak for its unabashed post-modern behemothness; but Chicago loves its public library system; its big and loves big things; and takes great pride in its historic architecture. Now it has a great big historic-looking library. Ask and ye shall receive. Or in words of eminent architectural historian Vincent Scully, "This is a classicism that, in a sense, it's all Chicago: big and brutal like the city itself, but specifically metallic and fluid like the interlocking iron work of Louis Sullivan's Carson Pirie Scott store...one powerful mass, built of the very bones and blood of Chicago, of the tough body of the Loop, and the ancient urban gesture of its classical facade." (AIA Guide to Chicago) Hammond, Beeby & Babka won a much-publicized and controversial commission to design the largest library building in the country, and spent \$ 195 million to carry out this mission.

<http://www.galinsky.com/buildings/hwcp/>

The Harold Washington Library Center is a ten-story 760,000 sf main library facility for the Chicago Public Library. At the time of its 1991 completion it was the country's largest circulating library and the largest design/build architectural project ever undertaken. It continues to be recognized as a model for the planning and design of major public libraries.

Chicago's Famous Buildings: Fifth Edition, by Franz Schulze and Kevin Harrington

The huge publicity preceding the 1991 opening of the new main Chicago Public Library mostly stemmed from two sources: a long-lasting argument over where the new structure should be erected (indeed, should it be a new building at all or a rehabilitated old one?) and the formal competition for a final design, a contest that unfolded once the South Loop site was selected.

Moreover, the winning entry generated considerable controversy in its own right. Design architect Thomas Beeby conceived a building of the sort one rightly calls an edifice, which mostly looks as if the modernist revolution of the last century had never happened. Clad with granite on the lower levels and brick above, the library is monumental in more than scale, harking back to the Beaux Arts manner of the late nineteenth century not only in its powerful axial symmetry but in the heavy representational decoration that adorns its exterior. It is clearly indebted to the ancient Western tradition of grandiloquent civic structures.....

<http://press.uchicago.edu/Misc/Chicago/740668hwlc.html>

YOUmedia is an innovative, 21st century teen learning space housed at the Chicago Public Library's downtown Harold Washington Library Center. YOUmedia was created to connect young adults, books, media, mentors, and institutions throughout the city of Chicago in one dynamic space designed to inspire collaboration and creativity.

High school age teens engaging with YOUmedia can access thousands of books, over 100 laptop and desktop computers, and a variety of media creation tools and software, all of which allow them to stretch their imaginations and their digital media skills. By working both in teams and individually, teens have an opportunity to engage in projects that promote critical thinking, creativity, and skill-building.

Mentors from Digital Youth Network as well as Chicago Public Library librarians lead workshops to help teens build their skills and create digital artifacts – from songs to videos to photography to blogging. Teens learn how to use a variety of technology and digital equipment, including still and video cameras, drawing tablets, and video and photo editing software. YOUmedia also provides an in-house recording studio featuring keyboards, turntables, and a mixing board.

All high school age teenagers are welcome, and the YOUmedia technology is available for free with a valid Chicago Public Library card.

[Paul Barret Jr. Library, Rhodes College, Memphis TN – USA 2005](#)

Associated Firm: Shepley Bulfinch Richardson & Abbott

\$ 42,000,000

<http://www.traditional-building.com>

### **Awards:**

2009 Interior Design Excellence Award, First Place, ASID Virginia

2007 National Palladio Award, Traditional Building Magazine

2007 Honorable Mention, College Planning & Management Magazine, Education Design Showcase

2007 Algernon Sydney Sullivan Award, Jane Cady Wright, recipient

This Collegiate Gothic library transforms campus, aligning the intellectual heart with the geographic heart. It creates a new campus quadrangle, in the Oxford tradition and a stately new entrance to campus. The building accommodates classrooms, a media center, group study rooms, teaching/learning technology laboratory, computer labs, wired carrels, a 24-hour coffee lounge, faculty offices, and vastly improved facilities for the library collection, archives, and rare books. The project is rich with symbolism, which is embedded in the architectural features to communicate the story of the building and the campus.

Associated Firm: Shepley Bulfinch Richardson & Abbott

<http://www.hewv.com/>

More Than a Building: The 136,000 square foot Paul Barret, Jr. Library, located in the center of Rhodes' 100 acres, has become its symbolic heart as well. Its placement reoriented the campus so that the academic core physically and symbolically connects with curricular facilities. Large areas once relegated to the "back forty" are now integrated into the life of the college. And it is certainly not your grandfather's library! Barret is a technology center with a theater, complete media production facilities and a teaching and learning center that gives our professors the capacity to hold virtual global classes with colleagues around the world. But we haven't gone technocrazy. The collection includes books and traditional resources as well as databases and online journals.

It has dozens of collaborative study spaces where students can work with professors and each other and actually talk out loud. These spaces, like the rest of the library, offer a completely wireless environment. The 24-hour Middle Ground cybercafé has become the most popular gathering place on campus. Students like the Starbucks coffee and gourmet fare, the computers for checking email or working on a paper, the comfortable lounge furniture and the wall-mounted oversized plasma TV screen. Quieter interludes often occur in the literary garden that is tucked away behind the cloister on the east side of the building. Students relax on the benches or directly on the grass and enjoy the plantings that were featured in the works of Southern writers such as William Faulkner, Eudora Welty, Carson McCullers and Robert Penn Warren.

### **Libraries:**

[Albert & Shirley Small Special Collections Library, University of Virginia, Charlottesville VA – 2004](#)

\$19.6 Million

The new library houses the University's Rare Books and Special Collections, which include valuable documents such as Thomas Jefferson's original papers. As an adjunct to the main University libraries, the new facility establishes a separate, but related identity. Constructing the bulk of the new library below grade preserves the library quadrangle as an open green. The library provides seminar rooms, visiting scholar offices, exhibition and meeting spaces, rare book and manuscript preparation spaces, a state of the art digital processing area and a new below-grade archive. In addition to the main reading room and secure special collection stacks which house the main reading room and staff areas on one level and the secure special collection stacks below.

<http://www.hartmancox.com/projects/projects.php?pid=53&tid=5>

### [The Jefferson Library. The Thomas Jefferson Memorial Foundation, Charlottesville VA – USA 2002](#)

\$4.1 Million

A small (15,000 GSF) library serves the Center for International Jefferson Studies at Kenwood House and the staff at Monticello. The design of the new library reflects the angularity of the roofs and the rectangular planning and the crispness of the house itself, while disguising the fact that it is three times as large as the house by placing its bulk to the rear and down the hill. It contains a two-story reading room, carrels, offices, conference rooms and a work area for research on the Jefferson papers.

Architecture, Programming, Interior Design, and Site Planning  
New Construction and Addition

<http://www.hartmancox.com/projects/projects.php?pid=98&tid=5>

### [Washington University School of Law. Washington University, St. Louis MO – USA 1997](#)

\$31.2 Million

This new, 175,000 square foot law school building contains the usual law school components: a large law library, classrooms, moot courtroom, trial courtroom, faculty and administrative offices, along with related student facilities. The Washington University site is part of an extremely cohesive and picturesque collegiate Gothic campus whose design and master plan stem from a turn of the century design competition. Located at the north edge of the campus, the site slopes thirty feet from the quadrangle to the service drive to the north, effectively concealing much of the bulk of the building from the quadrangle side.

### [McDonough Hall Addition. Georgetown University Washington DC – USA 1997](#)

\$10 Million

The McDonough Hall East Terrace Expansion is a 44,000 square foot addition to the original Law Center building designed by Edward Durrell Stone in 1971. The massing has been designed to be sympathetic to the Edward Durrell Stone original. The new building stands four stories above ground, continuing the roof line as well as the window spacing of the original. The East Terrace Expansion extends the existing building's mix of classrooms, student activity areas and faculty offices, providing windows for all faculty members.

Architecture, Programming, and Interior Design  
Addition and Renovation

<http://www.hartmancox.com/projects/projects.php?pid=43&tid=5>

### [Kelvin Smith Library. Case Western Reserve Library, Cleveland OH – USA 1996](#)

\$22.5 Million

The Kelvin Smith Library at Case Western Reserve University is the new, main University library. The Library is configured to relate to the non-parallel streets and serve as the focus for a new open space called the "Heart of Campus." Stylistically, the Kelvin Smith Library is modern classic, referring to Cleveland's neighboring Museum of Art and Severance Hall in materials, scale, openings and character-but not in detail. The design is intended to balance the demands of shaping the "Heart of Campus" and blending with its monumental neighbors.

Architecture, Programming, and Interior Design

<http://www.hartmancox.com/projects/projects.php?pid=39&tid=5>

### [University of Connecticut Law School Library, Hartford, CT - USA 1996](#)

Design Architect: Hartman-Cox Architects, Architect of Record: The S/L/A/M Collaborative

\$18.3 Million

This new law school library of 120,000 square feet is located in the middle of a small, cohesive "collegiate Gothic" state law school campus, the former Hartford Theological Seminary. The library is arranged in a flexible, open plan with reader spaces and offices around the perimeter. The massing, materials and details directly reflect the other buildings on the campus so that only its relative newness causes any disparity. Given its prominent, central location, it is now the focus of the campus and redefines the spaces between the buildings.

### [Florida Gateway College, Wilson S. Rivers Library and Media Center, Lake City, FL - 2012](#)

37,725 SF | January 2012

The Wilson S. Rivers Library and Media Center adds a 37,725 square foot facility that will establish the aesthetic standard for future projects on the main campus of Florida Gateway College.

Harvard Jolly has incorporated critical design elements such as natural lighting, sustainable and attractive materials, and technological advances that create an inspiring learning environment. The library has been designed to accommodate archival, leisure and community functions as well as areas for individual and group study.

The media center houses a studio with a master control suite, soundproof editing suites, storage space, work areas for video production and photography, lecture hall and office space.

### [Cooper Memorial Library, Lake-Sumter Community College, Clermont, FL – USA 2009](#)

50,000 SF |

**Awards:**

Associated Builders and Contractors – Central Florida Chapter 2010 Excellence in Construction Awards – Eagle Winner

Harvard Jolly developed the building program and design for Cooper Memorial Library, a joint-use facility for Lake-Sumter Community College, University of Central Florida, and the Lake County Library System. The facility is located at LSCC's South Lake Campus, which is an ideal location to serve library patrons and students associated with all three entities.

The 50,000 square foot library includes distinct spaces for the college and public library book collections, children and teen rooms, as well as technology labs, group study rooms and an archival room. The facility also has a large dividable community meeting room, campus bookstore, full service café and three classrooms. These ancillary spaces are arranged on the first floor so that they can be utilized regardless of the library's hours of operation.

Easily recognizable by its prominent arched roof, the exterior materials used in the building's design also relate the new library with the existing architecture on the campus.

<http://www.harvardjolly.com/expertise-higher-education-cooper.php>

### [Spanish River Library and Community Center, Boca Raton, FL – USA 2008](#)

City of Boca Raton | 43,000 SF | 2008

**Awards:**

Real Estate & Construction Review Florida Edition - Building of America Award, 2009

The City of Boca Raton wanted their newest library to be designed as example of the Mediterranean Revival style established by Addison Mizner, which is prominent throughout the city. Harvard Jolly worked closely with the city to gather historical photographs and documentation to inspire a design that was accurate, detailed, and rich in character.

The library serves as Boca Raton Library System's administrative headquarters and a regional branch. It is also a community center that offers a full service café and a large upper terrace for wedding receptions and events.

Despite the traditional design elements, the facility is equipped with the latest in library technology, and features multiple computer labs. The library's youth department has a story hour room for children and a distinctive teen area.

### [Town 'N Country Commons, Tampa, FL - USA 2008](#)

43,000 SF

**Awards:**

Hillsborough County City-County Planning Commission - Awards of Outstanding Contribution to the Community: Commercial, Public, or Quasi Public, 2009

Tampa Bay Regional Planning Council - 17th Annual Future of the Region Awards – 1st Place (Cultural/Sports/Recreation Category)

Town 'N Country Commons is a unique facility in that it combines a library, senior center and Head Start facility and sits adjacent to a four-acre neighborhood park. The 45,000 square foot facility replaced an aging one-story library.

Upon entering the main lobby, patrons have access to an art gallery, coffee vending area, Friends of the Library bookstore, multi-purpose community room, as well as the internal entries to the senior center, Head Start program, and the library.

The majority of the 25,000 square foot library component is housed on the second floor of the building. Casual reading areas can be found along the exterior walls and windows, and tutor/study rooms provide dedicated quiet spaces. The library also features an abundance of public computers.

**Senior Center**

The 10,150 square foot senior center component was designed to accommodate independent active seniors, day-care seniors, and seniors with dementia who require full-time supervision and care.

**Head Start**

The 5,200 square foot Head Start component has three large classrooms with capacity for 36 children each, all of whom have direct access to a secure outdoor playground area.

**Park**

An open green space was designed around a gazebo within the adjacent, four-acre neighborhood park to accommodate large events. A paved walking trail meanders around the perimeter of the park that links to the gazebo, children's playground, and butterfly garden.

<http://www.harvardjolly.com/expertise-libraries-town-country.php>

### [Oldsmar Public Library, Oldsmar FL – USA 2008](#)

19,800 SF | 2008

#### **Awards:**

Tampa Bay Regional Planning Council - 17th Annual Future of the Region Awards, 2009  
Florida Redevelopment Association - 2008 Florida Outstanding New Building Project

Designed to characterize "Old Florida" architecture, the City of Oldsmar's public library embodies the city's rich history while contributing to the ongoing downtown redevelopment. The design exhibits a number of examples of Florida vernacular architecture and Mediterranean Revival styles, such as cast stone, painted stucco, and clay barrel tile roofing.

Exterior elements like the main entry façade and prominent octagon-shaped spaces on the corners of the building make the library appear larger than its actual size. Together these features create a proper civic presence within the city and visually anchor the building to its site.

Paddle fans and pendant lights adorn the interior, and the library's arched ceilings further reinforce the "Old Florida" design style. The center of the library is supported by stained wood beams that are naturally illuminated with daylight via clerestory windows, reminiscent of traditional grand reading rooms.

The REO Lounge, an octagonal teen room named after Ransom E. Olds, founder of Oldsmar and Oldsmobile, features sofas that are similar to the seats of a classic car.

<http://www.harvardjolly.com/expertise-libraries-oldsmar.php>

### [Cagan Crossings Library, Clermont FL – USA 2008](#)

Lake County | 30,000 SF | 2008

Known as "Four Corners," the intersection of Lake, Orange, Osceola and Polk Counties is one of the many growing areas of Central Florida with a population of about 100,000. Located near Walt Disney World, the population of Four Corners could jump to 250,000 residents by 2020.

Rapid growth and library space projections dictated the need for a new library, as local residents were previously using a 6,200 square foot leased space. Cagan Crossings Community Library was the first facility that Lake County built to specifically serve as a library. At 30,000 square feet, it includes a self-checkout area, public access computers, Wi-Fi, café and a 160-seat community room. The first floor's story time room permits views to a quiet reading garden nestled within the site's lush vegetation. The second floor features a special collections area and abundant casual seating.

<http://www.harvardjolly.com/expertise-libraries-cagan.php>

### [Leedsburg Main Library, Leedsburg FL – USA 2007](#)

42,000 SF

Located on the eastern edge of Main Street, the Leedsburg Public Library epitomizes the city's architectural character and serves as the anchor of the historic downtown district.

First floor amenities include the Friends of the Library bookstore, multi-purpose rooms, and a café. The adult fiction collection is complemented with multiple casual seating areas adjacent to windows that overlook the downtown area. The library also boasts an outdoor reading garden.

The second floor has a large Palladian window with views to downtown. A "Florida Room" provides an ideal space for patrons to relax and read while enjoying the richly landscaped butterfly garden and amphitheatre below.

The library features the latest technologies such as a radio-frequency identification (RFID) system for book security and inventory, computers with public internet access, and Wi-Fi throughout the facility.

<http://www.harvardjolly.com/expertise-libraries-leedsburg.php>

### [Broward Community College, South Regional Library, Pembroke Pine FL – USA 2006](#)

72,000 SF

#### **Awards:**

Southeast Construction Magazine Awards, Best of 2006 - Merit Award, Category: Concrete  
Building Owner and Manager's Association (BOMA) of Ft. Lauderdale and the Palm Beaches - 2007 Government Building of the Year  
Associated Builders and Contractors - Excellence in Construction, 2008

As both a regional public and academic library, this building serves as Broward Colleges' principal research facility, while also meeting the specific needs of Broward County's local seniors, adults, teens and children. When opened, the library became one of the first joint-use facilities in Florida and the nation.

The joint-use trend allows multiple user groups to afford greater amenities by being more accessible to a larger cross-section of users.

The design concept is analogous to the way that the layers of a story are revealed to a reader through the pages of a book. Like a book, the layers of the library are expressed to visitors through a series of protruding planes.

A 40-foot glazed curtain wall creates a dramatic presence on the north side of the library. It welcomes visitors and also provides a great amount of controlled natural daylight to the interior, and is a beacon of light in the evening.

The library is the first LEED Certified building in the state college system and the first LEED Silver building in Broward County.

<http://www.harvardjolly.com/expertise-libraries-broward.php>

### [Clearwater Main Library, Clearwater FL – USA 2004](#)

Harvard Jolly designed the library in conjunction with Robert A.M. Stern Architects.

92,000 SF

Uniquely sited on a bluff overlooking a public park, Intracoastal Waterway and Gulf of Mexico, the Clearwater Main Library is a locally recognizable landmark, a source of civic pride, and a community-wide learning resource. The 92,000 square foot library offers a local history center, café, computer lab, teen room, gallery space, expansive reading areas and a children's collection.

The street façade presents an urbane and dignified civic building by using traditional local materials such as cast stone and stucco. The garden façade opens onto the park and the waterfront, and features four stories of curtain wall glass that showcases panoramic views. A trellis-covered rooftop terrace provides additional views and an ideal space for social events.

Library features includes distributed network-cataloging systems, electronic smart cards, and magnetic locks that limit access to the building and selected interior areas, such as special collections. The main conference room, executive board room, and children's/young adult rooms are each equipped with plasma displays and electronic writing tablets at the speaker's podiums.

### [Dennis L. Jones Seminole Community Library, St. Petersburg College, Seminole, FL – USA 2003/2007](#)

70,235 SF

#### **Awards:**

**Tampa Bay Regional Planning Council – 12th Annual Future of the Region Awards – 1st Place (Public Education Category)**

College Planning & Management Magazine - 2003 Community College Innovation Awards - Grand Prize Winner

Situated on the Seminole campus of St. Petersburg College, the 52,000 square foot Dennis L. Jones Seminole Community Library is a joint-use library and classroom building that is owned and operated by the City of Seminole and SPC, and serves students and the general public alike.

The library was sited to provide the greatest visibility from a major thoroughfare and serves as an icon for both the city and college. Library patrons can find a café, classrooms, computers, and a variety of meeting and conference room spaces.

The design met the separate needs of the college as an academic library and the city as a community library. A curved glass wall affords a soothing view over an existing nature preserve into the college campus. The exterior design blends with existing campus buildings as well as two adjacent buildings designed by Harvard Jolly for the City of Seminole.

A few years after the library was completed, Harvard Jolly was commissioned to design an addition to serve as the International Center for Governmental Studies. The 18,235 square foot addition included: an atrium, display gallery, 500-seat auditorium/conference facility, break-out collaboration rooms, kitchen, and office space.

In addition to the Dennis L. Jones Seminole Community Library, Harvard Jolly has provided architectural services for many projects at SPC's campuses throughout the past decade. Additional projects include: serving as the EpiCenter Campus Architect where we provided a complete exterior and interior reconstruction of the 41,000 square foot Annex II building, among other projects; central energy plant expansion at the Clearwater campus; and master planning for the 35-acre Clearwater campus.

#### **Libraries:**

### [Schlow Library, College Township, PA – USA 2005](#)

Schlow Centre Region Library is located at the corner of Allen Street and Beaver Avenue in the heart of downtown State College. The library serves not only the borough of State College, but also the surrounding townships that make up the Centre Region. It is part of the Centre County Federation of Public Libraries.

Then known as the Bella S. Schlow Memorial Library, the library opened to the public in 1957 in two rooms of a rented house on College Avenue. In 1965 the library moved to its current site at the intersection of Beaver Avenue and South Allen Street, in a building that formerly housed the State College Post Office. Shortly thereafter the library became a regional institution when it started to receive financial support from the townships surrounding the Borough of State College. In 1986, the library expanded once again, adding an addition in the postmodern style that housed a new entrance, elevator and meeting room.

This building was demolished in 2004 and a new library, designed by Hayes Large Architects, opened on the site of the old one in October 2005. The building's cupola and golden dove weathervane were salvaged from the old building and reinstalled on the new structure.

The Library annually serves over 350,000 visitors, checks out over 700,000 items and offers educational programs to over 27,000 attendees.

### [Charles C. Wise Library, West Virginia University, Morgantown, WV - USA 2002](#)

Additions and Renovations, 114,000 SF Additions, 187,000 SF Renovations, 300,000 Volumes

WVU's library had migrated from the old Wise Library building to Mountainlair Student Union. Or at least, the students had fled there: unlike Wise, "The Lair" offered light, power, data, and comfort.

Doubling Wise's size was the least of the design team's challenges: more significant were collections and services scattered over a dozen levels and half-levels, and a severely sloping site. Any new façade had to respect the grace and beauty of Wise's Beaux-Arts front. And most importantly, a new facility had to entice students back to the library.

The new "heart" of the library is a sky-lighted atrium showcasing Wise's former front façade. Circulation, reference, government documents, media, reading and periodicals are reorganized on two new main levels. Restored neoclassical reading rooms and lobbies contrast with contemporary colors and furnishings in new areas. An on-grade entrance leads to University Avenue via a new landscaped Scholars Walk.

This project is a joint venture of Hayes Large and SBRA.

### [Pennsylvania State University, Harrisburg Library, Middletown, PA – USA 2000](#)

New Construction, 110,770 SF New, 263,000 Volumes

Penn State Harrisburg was a commuter campus without a strong sense of place. Buildings were largely hand-me-downs from a former military base.

Besides serving as Penn State's next-generation library, a new facility needed to create a focus where there had been none.

The design response focuses on flexibility, technology and user-friendliness. Floors contain 20 years' growing room for collections and archives. Wired and wireless video and data links with networked, internet-accessible computers provide connectivity for commuter students. Curved window walls afford inspiring reading areas; Group Study rooms are dispersed throughout.

A double-height art/events gallery is a popular venue for campus and community functions, and a cyber cafe is convenient to the main entrance.

The library's striking three-story profile and central location create a flagship for the campus.

This project is a joint venture of Hayes Large and SBRA.

### [Fannie L. Millstein Library, University of Pittsburgh, Greensburg Campus, Greensburg, PA – USA 1995](#)

Opened in 1995, the Millstein Library is a multi-purpose structure. In addition to housing the library, it contains the offices of Financial Aid, the Registrar and the Business Office. Named for Fanny Millstein, this is the largest building on campus.

[http://www.google.de/imgres?imgurl=http://www.pitt.edu/~upg/millsteinlibrary.gif&imgrefurl=http://www.pitt.edu/~upg/academics80.html&h=358&w=350&sz=102&tbnid=MaH9OxkG8RULiM:&tbnh=121&tbnw=118&zoom=1&usq=\\_cbY\\_B97l2O4J\\_oNOcDDeN4FFGEA=&docid=04cxtVRvgYM2wM&itg=1&sa=X&ei=mQCFUo3VB4mRtQBntIEY&ved=0CFEQ9QEwCg&dur=68](http://www.google.de/imgres?imgurl=http://www.pitt.edu/~upg/millsteinlibrary.gif&imgrefurl=http://www.pitt.edu/~upg/academics80.html&h=358&w=350&sz=102&tbnid=MaH9OxkG8RULiM:&tbnh=121&tbnw=118&zoom=1&usq=_cbY_B97l2O4J_oNOcDDeN4FFGEA=&docid=04cxtVRvgYM2wM&itg=1&sa=X&ei=mQCFUo3VB4mRtQBntIEY&ved=0CFEQ9QEwCg&dur=68)

### **HBM (Holzheimer Bolek Meehan) Architects, Cleveland, OH – USA**

<http://www.hbmarchitects.com>

#### **Libraries:**

#### [LSU \(Louisiana State University\) - Health Sciences Library, Shreveport, LA – USA on design](#)

For several years, students have been reporting in focus groups that they would like to have more student space in the library. When the student alumni committee met in 2012 to discuss the future projects that they consider important for this campus, the information commons was among the top three. When presented with information about this potential project, the Alumni Association Executive Committee unanimously agreed to fund services to design a plan for an information commons area on the ground floor of the library to enhance the student experience.

Information commons is widely recognized as an academic library space that emphasizes technology. In many institutions, this type of space is available 24 hours a day, 7 days a week through badge access. Currently, the public space on the ground floor of the library is mainly occupied by stacks of print journals with study carrels around the periphery and a couple of group study rooms.

Our vision of the renovated space includes removal of the stacks to create an area where students can work individually or collaboratively in an attractive, comfortable environment. The space is envisioned to include an abundance of electrical outlets; appropriate lighting; study tables that are large enough to accommodate laptops, books and writing space; and comfortable seating areas for reading; as well as rooms to accommodate the institution's need for teaching small groups in the problem-based curriculum. We see the space as being high-tech and secure. A vending area will be provided so that students do not have to leave the secure area when studying or working late hours.

The plan provides all of the above with a complete redesign and expansion of the public area on the ground floor of the library. The space offers wireless connectivity, additional group study rooms and individual study rooms, collaborative high-tech areas, wired study tables with room to spread out, an area where technological assistance can be provided, and even the addition of windows on the south wall, a feature that students have often mentioned they would like to have. A variety of seating and work spaces to accommodate individual preferences are included in this attractive layout. The plan will be incorporated into the master facility plan and funds will be sought to get this project underway and completed.

#### [HAM \(Houston Academy of Medicine\) - Texas Medical Center Library, Houston, TX – USA on design](#)

This project is based on a complete interior update and renovation of a 76,000 SF medical research library located in the center of a vast medical campus surrounded by hospital and educational facilities affiliated with the University of Texas, Baylor College, Rice University, Texas Southern University, Texas Women's University, and the Houston Academy of Medicine.

The challenge was to design a space that is used by doctors, administrators, professors, students, and visitors. Main priorities for the Library centered around creating flexible and collaborative work areas with varying degrees of isolation and privacy while accommodating the latest in changing technology.

The Library has decided to reduce their print media collection by 70% allowing for the development of collaborative learning and study spaces, social seating areas, flexible seminar rooms, a 24 / 7 cafe, and improved staff work and service areas. The TMC Library is also considering a partnership with the Harris Public Library and may be carving out a portion of the first floor for their use.

In response to these intentions, HBM developed a series of conceptual design plans based on input we received during discussions with the Library.

<http://www.hbmarchitects.com/projects/ham.html>

### **Amherst Public Library, Amherst, OH – USA 2017**

This project involves the design and construction of a 24,000 SF addition to and renovation of an existing 15,000 SF Carnegie library originally constructed in 1906. (M.O.Wurmser)

The design of the new addition not only reflects the architectural style and material use of the original Carnegie building, but also serves to bring an abundance of natural light into the center of the building.

HBM has also provided campaign support materials and services for a bond issue.

We are currently working with the Library to develop strategies for how to best reconfigure and update the existing library spaces for functionality, efficiency, and comfort. The layout of the spaces will also position the building for future growth once funding for the addition can be secured.

### **East Roswell Branch Library, Roswell, GA – USA 2014/2015**

The design for the new East Roswell Branch Library centers on a connection with its wooded surroundings creating a functional library space within a canopy of trees. The use of warm natural materials such as stone and wood products combined with large expanses of glass filter the boundary between the exterior and interior spaces of the library while providing views to customers looking out from within the building. A welcoming covered bridge entry leads customers into the space where they are immediately presented with views through the building and into the natural landscape beyond.

This new 15,200 SF branch library will feature 1,000 SF of flexible meeting space accessible after hours; 15 public computers; group and individual study rooms located adjacent to the adult collection area; a designated story / craft room located within the children's area; an area dedicated to teens; and outdoor program space.

### **RCPL - Glenvar Branch Library, Salem, VA – USA 2013**

Once the South County Library building entered into the design phase, we began developing a concept for the Glenvar Branch Library. This process began with a site analysis to determine location and orientation of the new building on the same site as the existing branch. Our familiarity with this project and the Roanoke County Library System as a whole allowed us to develop a loose conceptual design scheme for initial discussions and public presentations prior to the allocation of funds for this project.

HBM is providing full architectural, interior design, and construction administration services for this project in addition to facilitating multiple community meetings at various milestones in the design process.

This project is currently under construction

<http://www.hbmarchitects.com/projects/glenvar.html>

<http://www.ghcontracting.com/projects/glenvar-branch-library/>

### **Doylestown Branch Library (Wayne County Public Library), Doylestown, OH – USA 2013**

This new branch library for the community of Doylestown was designed to accommodate a popular materials collection, children's collections, a small program/meeting room, comfortable seating areas, public computers, and a staff work area.

The exterior of the building reinforces the streetscape of the small town while creating a focal point of rebirth in the area. The large windows not only provide ample natural light, but also a connection with the street while drawing people in.

Interior materials were selected to provide warmth, durability, and function. Earth tones were accented by the use of copper while the wood ceiling helped to create a comfortable and inviting palette.

<http://www.hbmarchitects.com/projects/doylestown.html>

### [Warrensville Heights Branch Library, Warrensville Heights, OH - USA 2012](#)

HBM worked very closely with the Cuyahoga County Public Library to accurately translate their vision and building program into an attractive, functional, and high-performance building. This new 25,000 SF branch library is the first in a series of new projects for this system and will act as a flagship facility setting the bar for projects that will follow.

The performance of this building reflects an innovative approach to floor plan flexibility creating transparency for visual control, minimal staffing points, and the use of raised floor systems for flexible technology and highly efficient air distribution. This building is certified LEED Silver.

The library is co-located on the same site as a new YMCA facility creating a new civic destination point for this community. HBM also worked with the City and the firm designing the YMCA to coordinate site features and orientation creating a unified frontage along Northfield Road.

### [RCPL - South County Library, Roanoke, VA – USA 2011](#)

HBM began working with the Roanoke County Public Library in the fall of 2006 with development of the building program and space needs analysis. Working closely with the library, our team determined that the new main building needed to be approximately 54,000 SF.

More than a library, this new facility will be a cultural center with over 12,000 SF dedicated to community use with such spaces as meeting rooms, a 200 seat auditorium, café, bookstore, and special YA community/library room. All of the community space including the YA room will be accessible outside of normal library hours.

Other amenities include drive up library and café services, a community adult reading garden as well as a children's story time garden, and access to 1100 miles of pedestrian and bicycle paths via the Blue Ridge Parkway.

The design for this building centers around the views and connection to the wetlands. The materials selected focus on bringing aspects of the surrounding natural landscape into the building through cabinetry designs, warm colors, textures, and advantageous views framed within large expanses of glass. The building exterior is a combination of terra cotta and stone reflecting the earth tones of the steep hillside in which the building is set.

### [Newport Branch Library, Youngstown, OH – USA 2009](#)

The site is an abandoned grocery store in a challenged urban neighborhood. The location is a gateway and anchor for revitalizing this area of Youngstown. The project is not just a branch library but also a new technical services and delivery department serving the entire library system.

The exterior blends tall vertical elements, expanses of glass, and monitors that glow at night to draw people in. The new façade is composed using layered geometries and materials that carry through to the interior design. The result is a new public library building with no hint of its original use.

Shifting blocks of ceiling forms placed at varying heights and bisected by monitors are reflected in striking carpet patterns. The strong use of colors, patterns and overlaid geometric forms not only draw patrons into the space, but encourage them to stay and explore the wonders within.

### [Dexter District Library, Dexter, MI - USA 2009](#)

The challenge facing HBM and the Dexter District Library was to find a suitable site that the community as a whole could endorse. Through a series of community forums, public meetings and research, HBM developed a list of over 32 possible locations and investigated 12 of those in greater detail before arriving at the best conclusion, a 1.08 acre site overlooking Warrior Creek Park and Mill Creek. Completed in spring of 2009, the new library is located in the Central Business District adjacent to the farmers market and has become a destination for visitors to downtown.

Responsive to the community's request, the library is a blend of traditional and contemporary forms situated on a sloped site overlooking a community park. The design is a warm mix of natural materials including curved wood beams and wood ceilings, sandstone and brick masonry and curved glass walls. On approach, the front façade of the library is pulled forward to match with the architecture along Main Street and the Central Business District. Once inside, the interiors are filled with natural light and include the same warm tones and variations in materials as the exterior while providing fabulous views in a contemporary modern library setting.

### [Sandusky Library, Sandusky, OH – USA 2004](#)

This 63,000 SF facility weaves two magnificent National Register Historic Landmarks, the 1901 Carnegie Library and the nearby 1883 former Erie County Jail, together with a new 30,000 SF addition that triples the size of the original library. The result is a highly functional library and a unified urban streetscape using compatible stone, details, forms and proportions.

The entire 10,000 SF main level of the Carnegie building has been renovated for children's services. The lower level now includes a public archival collection and supportive preservation and work areas.

The former jail has been fully renovated and the cells removed to create open areas to accommodate meeting, technology training, staff and administrative functions. The north facing glass wall of the addition provides an abundance of natural light and views to the neighboring courthouse. Passersby see the activities and materials within.

The new addition accommodates a quiet reading room, as well as adult and media services.

<http://www.clevnet.org/sandusky.php>

### [Morley Library, Painesville, OH – USA 2004](#)

The exterior design relates to the historic architecture of downtown Painesville. This relationship starts with the tall building proportions and carries through to all the stone detailing. Connections to the past include reusing elements of the original Carnegie library building. Leaded glass windows are not only reused, but their pattern is the basis of design for the main stair railing and decorative exterior grilles.

The tall proportions enclose a new library organized on three floors and a basement served by two oversized elevators and a dramatic stair. This solution allows for doubling the size of the library and doubling parking, all on the existing site.

<http://www.hbmarchitects.com/projects/morley.html>

**MORLEY LIBRARY:** The nucleus of the Morley Library on Phelps Street was provided by the local Women's Christian Temperance Union, which established a temperance library and reading room in 1878. After librarian Mary Dean's death in 1898, friends set about fulfilling her dream of a free public library. Other groups donated more books, the Village of Painesville agreed to provide tax funds, and businessman Jesse Healy Morley bought the land and erected the building. It was named in honor of his parents. Morley Library opened its doors in October, 1899, with Julia Erwin as librarian.

Additions to the building were made in 1937 and 1978. The first bookmobile started running in 1957. Morley Library automated its catalog and circulation in 1984. With the passage of the first operating levy in 1988, an Audio-Visual Room, a new bookmobile and Sunday hours became possible. Internet access was introduced in 1997 through OPLIN, the Ohio Public Library Information Network. The November 2001 general election saw the passage of Morley Library's Bond Issue. A groundbreaking ceremony on May 14, 2003 marked the official start to construction of a three story library designed by Meehan Architects of Cleveland, OH. The original library closed to the public at 5:00 PM on Sunday, October 17, 2004. The new Morley Library building opened to the public on November 7, 2004, with a Ribbon Cutting. The Building was officially dedicated on Sunday, February 13, 2005.

The Genealogy Room, featuring historic components of the original Morley Library includes the entrance leaded glass windows which were features of the 1899 building.

### [Wayne County Public Library, Wooster, OH – USA 2003](#)

This new main library extends the town square by providing new community green space while anchoring a cultural campus adjacent to the square. Tower forms are used to draw you to the library while celebrating the historical county courthouse across the square. The repeated rhythm of gable forms relates to the college campus architecture in town while transitioning to the residential neighborhood beyond.

Strong entrances on the north and south lead you to the library from both the square and the cultural campus. The entries draw patrons into a light-filled rotunda that opens to the rest of the library.

Spirograph and Etch-A-Sketch inspired carpet patterns, color wheels at the ceiling, and waves of color in the cabinetry create a fun-filled, inviting children's area that is capped off with carousel lights that blink in a running pattern to announce story time.

read more:

<http://www.wcpl.lib.wv.us/history.html>

### [Madge Youtz Branch Library, Canton, OH - USA 2003](#)

The program called for a new 5,000 SF branch library with an emphasis on public amenities. The building design had to be an identifying landmark on a heavily travelled street in a neighborhood that is rebuilding and rejuvenating itself.

The building forms were inspired by the previous use of the site as a community airport. The exterior forms create a soaring interior space that welcomes the public and creates bright, comfortable areas for the patrons.

The use of metal materials both on the exterior and the interior of the building reinforce the design objectives and history of the site. Custom cabinetry is a combination of metal and wood incorporating forms and ideas of flight. Custom carpet is patterned to identify the concourse and terminal giving unique identities to children's and teen areas.

<http://www.hbmarchitects.com/projects/madgeyoutz.html>

### [Carnegie West Branch Library, Cleveland, OH – USA 2003](#)

As part of a complete renovation and restoration, windows were replaced and elevator access was provided adjacent to the monumental entrance stairs. Irreplaceable ornate terra cotta columns and trim, severely weathered and cracked, were restored using specialized epoxy injection and coating techniques.

Large interior reading rooms were reorganized to accommodate patrons and staff in clearly organized, open and comfortable spaces.

An energy efficient indirect lighting system developed in conjunction with General Electric lighting research division highlights the central room ceiling while providing comfortable shadow-free lighting below.

The American Institute of Architects recognized this project with their preservation and design award.

### **Libraries:**

#### **[Sterling Memorial Library, Yale University, New Haven, CT – USA 2014/2015](#)**

A Brief History of Sterling Memorial Library

Sterling Memorial Library (SML) was built with funds from the bequest of John W. Sterling, a New York attorney who graduated from Yale in 1864. Mr. Sterling, who at his death in 1918 left most of his estate to Yale University, wished to have at least a portion of the money used to create one magnificent and useful building which would act as a memorial of his affection for his alma mater. By 1931, Sterling's total gift to Yale amounted to over \$29 million.

Designed by James Gamble Rogers, the library was built to house 3.5 million volumes in a bookstack tower intended to be the dominating feature of the facade, something of an innovation for the time. The interior of the tower is a self-supporting, unified structure of steel fused together by an electric welding process which was new in 1928; this book tower was at the time the largest such welding project ever undertaken. Although technically seven stories high, the book tower actually contains sixteen levels of stacks. In the days when the new library building was largely surrounded by much smaller buildings, the sheer size of the tower stunned its viewers. The impression of the size was heightened still more by the semi-Gothic style of the tower, and its rather plain facade and elaborately crenellated battlements.

Attention to artistic detail pervades all of Sterling Memorial Library. As a general rule, the ornamentation of each library area was designed to be in harmony with the intended purpose of the room being decorated. A second floor room originally designated as the English Study has window decorations portraying King Lear, Hamlet, and Lady Macbeth; the offices of the Babylonian Collection were given windows bearing the human-headed winged bulls of Ninevah and the Babylonian lion. In larger areas, design schemes were even more elaborate. The entrance hall relates, in stone and stained glass, the history of the Yale Library. Carved stone panels below the windows represent such events as the meeting of the Branford ministers in 1701 to form a "college in the colonies", the Saybrook plea for the retention of the library, and the British invasion of New Haven in 1779. The windows above the panels have decorated panes that interweave the story of Yale and New Haven; the windows show everything from a portrait of Elihu Yale to the ox carts that brought the books from Saybrook.

Throughout SML, in almost every available wood, stone, and plaster surface, is carved a design that will remind the viewer of the dignity and significance of learning in general and of libraries in particular. A visitor passing through the archway separating the nave from the exhibition corridor will walk beneath four quotations on the value of written knowledge. Above the circulation desk, field bosses on the ceiling represent various writing implements, from quill pen to typewriter keyboard; and a painting of Alma Mater on the backwall is surrounded by allegorical figures representing her academic schools. In the exhibition corridor, stone corbels picture scenes that include a fifteenth century scholar, a reader with a book and jug, and a student receiving his diploma. Countless windows throughout the building are glass representations of great literary works, such as Blake's Songs of Innocence and Twain's Huckleberry Finn. In the original Rare Book Room (now Manuscripts and Archives), each decorative pane is a tale from Aesop's Fables. The original Medical Study on the fifth floor has one window showing a witch shooting pain into a man's foot, a picture copied from an illustration in a fifteenth century medical text. Even a custodial closet, just outside the renovated Starr Main Reference Room, is decorated with a mop, pail, broom, and brush.

The sculptor responsible for much of the stone carving within SML was Rene P. Chambellan. He drew his inspiration not only from well-known literary works but from their illustrations; from symbols of historic, philosophic, religious, or mythological significance; from nature; and from the heraldry of the University itself.

The library's windows, with their tracery and leaded glass, were designed by G. Owen Bonawit. Like Chambellan, Bonawit received his ideas from the scholarly world around him. The decorative panes in his windows were inspired by book sources from around the world, many of which are now housed in Yale's Beinecke Rare Book and Manuscript Library.

Even the most unexpected portions of SML have been adorned in the manner of a Gothic cathedral, but in this case to the greater glory of scholarship and the dignity of libraries. The iron doors of the public elevators were wrought by Samuel Yellin and represent Medicine, Law, Shipping, Manufacturing, Agriculture, Chemistry, Husbandry, and Machine Work. Yellin was also responsible for the ornamental iron gates that stand between the Wall Street entrance and the Exhibition Corridor. Many of the plaster ceilings are either painted or bordered with decorative friezes, and such decorative schemes do not cease in the areas of the building open to the public: the staff lounge has windows decorated with such characters as Jack Spratt and his wife and Jack Horner, and a staff restroom has windows made colorful by heraldic shields.

In brief, the ornamentation within Sterling Memorial Library is beautiful, detailed, all-pervading, and symbolic of the history and universality of the libraries of the world. This art work contributes much to the unification of form and function in a building that affirms the value of knowledge and scholarship at Yale, and the enduring nature of the written word.

<http://www.library.yale.edu/news/briefhistory.html>

Beginning this summer, the grand nave of Sterling Memorial Library — a destination for thousands of students, scholars, and campus visitors each year — will be renewed and restored, thanks to a \$20 million gift from Richard Gilder '54 and his wife, Lois Chiles.

The restoration honors outgoing Yale University President Richard C. Levin and his wife, Jane A. Levin, lecturer and director of undergraduate studies for the Directed Studies Program.

Gilder, founder of the brokerage firm now known as Gilder Gagnon Howe & Co. LLC, has for many years worked closely with the Levins to advance the University's mission.

"I have the deepest respect and appreciation for the way Rick has steered his beloved alma mater through many difficult times," Gilder said. "Today, Yale is firmly on the path to continued excellence, thanks to Rick's consistent vision and leadership."

Designed by Helpern Architects, the restoration will encompass the full interior of the nave, including the card catalog areas to the south, the north space adjacent to the Selin Courtyard, and the area behind the circulation desk.

A major component of the project will be a complete restoration of the nave's stained glass windows, which are among the approximately 3,300 windows that artist G. Owen Bonawit designed for placement throughout the library.

In addition, the nave's multi-toned stone, woodwork, painted motifs, and the painting of the Alma Mater will be cleaned, repaired, and illuminated by modern lighting.

The entrance to the stacks will be reconfigured to enhance access to the library's 4 million volumes. Installation of new heating and air-conditioning will create a more comfortable and energy-efficient space.

As of June 3, library patrons who use the High Street entrance to Sterling Memorial Library will enter a covered pedestrian walkway spanning the length of the nave, with side tunnels providing access to major reading rooms on the first floor. Signage will help patrons to navigate the construction in order access the collections and services they need — all of which will continue to be available, although some will be relocated for the period of the restoration. Although the first-floor reading areas, such as Starr and the Linonia and Brothers rooms, will still be open, the noise of construction may prompt users to seek out quieter spots. The library has created a list of recommended study spaces to accommodate patrons during the restoration. Additional details and a timeline of the project, which will be completed in fall 2014, can be found here.

While the library will remain open throughout the restoration, it will not be able to accommodate tour groups until the project is completed.

Speaking at the opening of Sterling Memorial Library in 1931, Yale University President James Angell said he envisioned it as a place where “the casual reader in search of transient intellectual diversion, not less than the serious scholar embarked on explorations far-flung and recondite, may both be well and promptly served.”

According to University Librarian Susan Gibbons, this mission has not changed — only the logistics of serving a 21st-century library user. “We considered how we could make things more intuitive and efficient, connecting people to the expert help but also empowering users to work on their own.” The restored nave will continue to be, as Angell envisioned, “a very temple of the mind” for a new generation, she notes.

The reconfigured nave will be better equipped for self-service. Along the north wall, a new “iDesk” will offer a single service point for information and library privileges, including circulation. There, in small, flexible meeting spaces, users will also be able to consult with specialists and librarians. Behind what is now the main circulation desk, a new self-service hub will feature self-checkout machines, a book-drop station, scanning stations, and direct access to books on hold (a function currently handled by staff). In the south aisle, patrons will have use of 15 public workstations. The card catalog cabinets that are flush to the walls will remain to provide textured boundaries to a conversation area with sofas and chairs. The reconfiguration of the circulation desk will also provide much more direct access to the stack tower. During the course of the restoration, the circulation, privileges, and information desks are being relocated to the Franke Periodical Reading Room, just adjacent to the High Street entrance of the library.

“This wonderful gift will allow us to achieve two goals in one effort,” notes Gibbons. “It will return this Yale landmark to its original beauty while making its services more convenient and intuitive.

<http://news.yale.edu/2013/05/30/renewing-architectural-temple-mind-new-generation>

In the summer of 2011, Yale University received a generous donation to restore and the entrance nave of Sterling Memorial Library. Opened in 1930, Sterling Library is architect James Gamble Rogers’s (\*03.03.1867 Bryan Station, KY (USA) - + 01.10.1947 New York, NY (USA)) masterpiece of collegiate gothic style. With more than 3,000 decorated windows, seven stories of reading rooms and offices, and fifteen floors of book stacks, Rogers intended Sterling Library to be a cathedral to learning and the intellectual heart of a great university. The entrance nave is the grandest of the many awe-inspiring spaces in Sterling Library. The architectural elements in the nave are reminiscent of gothic cathedral architecture, which find their modern equivalents in the massive stone columns, soaring leaded-glass windows, and a circulation desk at the crossing of the nave that generations of visitors to the library have mistaken for an altar.

In October of 2011, the University selected Helpern Architects of New York to lead the restoration of the nave, working alongside experts in historical preservation and planners from the Library, the Office of University Planning and Facilities, the Office of the Provost, and selected faculty members. Planning assumptions for restoring the nave include the following:

- Retain the architectural splendor and the sense of awe what one experiences in the nave.
- Restore all glass, wood, and stone in the nave to their former glory.
- Make the nave an inviting location for members of the Yale community.
- Enhance library services and empower users in the nave.
- Develop the ability to keep the first floor of Sterling Library open after library services close.

The descriptions and drawings in this guide explain how many of these assumptions will be put in place during and following the restoration.

### [Abraham Joshua Heschel School, New York, NY – USA 2012](#)

Once an industrial building near Lincoln Center, the new Heschel High School building completes the nursery-12 mission of this progressive Jewish day school. After programming all of Heschel’s facilities, Helpern Architects gutted the four and a half story, 45,000-s.f. building, added two stories, and transformed the structure, especially the façade, increasing square footage by a third, to 60,000-s.f. The conversion allowed Heschel to increase its total enrollment from 489 to 800 students. The building was included in the 2005 New York Now exhibit at The Center for Architecture.

### [St. Agnes Branch Libray, New York Public Library, New York, NY – USA 2010](#)

St. Agnes library had served for a century as a cultural center for Manhattan’s Upper West Side community – though through heavy use and a few only serviceable renovations, it slowly declined. The inaccessible library branch finally closed in 2006, the worse for wear. However, during a time when the New York Public Library found itself cash-strapped, funds already allocated went towards a transformation designed by Helpern Architects. The result is what Dr. Paul LeClerc, former New York Public Library president/CEO, proudly called “the single best renovation of a Carnegie library I have ever seen.”

### [Low Memorial Library, Columbia University, New York, NY – USA 2007](#)

The Low Memorial Library is the administrative center of Columbia University. Built in 1895 by University President Seth Low in memory of his father, Abiel Abbot Low, and financed with \$1 million of Low’s own money due to the recalcitrance of university alumni, it is the focal point and most prominent building on the university’s Morningside Heights campus.

Low Library was designed by the architectural firm of McKim, Mead and White (Charles Follen McKim \* 24.08.1847 Chester County, PA USA - + 14.09.1909 St. James, NY USA, \* William Rutherford Mead \* 20.08.1846 Brattleboro, VT USA - + 30.06.1928

Paris France),\* Stanford White \* 09.11.1853 New York, NY - + 25.06.1906 New York, NY USA)

[http://en.wikipedia.org/wiki/McKim,\\_Mead\\_&\\_White](http://en.wikipedia.org/wiki/McKim,_Mead_&_White)

, which was responsible for the design of much of Columbia's Morningside Heights campus. The library was designed in the neo-classical style, incorporating many of the elements of Rome's Pantheon. The building is in the shape of a Greek cross and features windows modeled on those of the Baths of Diocletian. The columns on the library's front facade are in the Ionic order, suited to institutions of arts and letters.

Helpern Architects assessed the condition of Low Memorial Library, Charles McKim's 1897 architectural triumph, and then executed essential restoration of Columbia's icon. The work on the 132-ft-high masonry dome has been hailed by both The New York Times and Architectural Record as "an architectural-engineering detective story."

## **Henneberg Eddy Architects, Portland, OR - USA**

<http://www.henneberveddy.com/>

### **Libraries:**

#### **Hillsboro Shute Park Library, Hillsboro, OR – USA 2014**

The transformational design for Hillsboro's Shute Park Library began with a total reorganization of the library—inside and out. A new public plaza and transparent entrance redefine the west elevation forming a strong, clear connection between the library and surrounding park. A ceramic frit pattern with tree-rings that contain first lines to books, selected by patrons and staff, is integrated into the glazing, which conceptually connects the library to the trees, adds a graphic dimension to the entrance, and reduces heat gain.

#### **City of Hillsboro Brookwood Library, Hillsboro, OR – USA 2007 / 2014**

Hennebery Eddy worked with the City of Hillsboro to expand the second floor of their main library providing space for additional collections, seating, study rooms, staff areas, and meeting spaces. A new central stair is a key design element that orients patrons and provides a clear and open connection between floors. Circulation space on the second floor doubles as art gallery space featuring local artists, and a reconfigured entrance lobby creates a spacious and welcoming interior signifying arrival to this important civic space.

<http://www.henneberveddy.com/projects/59>

[http://upload.wikimedia.org/wikipedia/commons/5/5c/Hillsboro\\_Public\\_Library\\_back\\_entrance\\_sunny.JPG](http://upload.wikimedia.org/wikipedia/commons/5/5c/Hillsboro_Public_Library_back_entrance_sunny.JPG)

#### **Troutdale Library, Troutdale, OR – USA 2010**

This 6,000-square-foot library offers a community meeting room, 16 public computers, spaces for kids and teens, and access to Multnomah County Library's two million books and other materials.

Sustainable building features include Douglas fir ceiling and wall panels with Forest Stewardship Council certification, end panels made of low-emitting material and 40 percent recycled content, furniture made of recycled content, and eco-friendly paint, adhesives, and carpet.

In addition to producing full design and construction documents, Hennebery Eddy assisted Multnomah County in evaluating various site locations based on the site's economic viability and criteria developed by the community. This tenant space option proved to be a very economical approach for the County.

<http://www.henneberveddy.com/projects/62>

[http://www.google.de/imgres?imgurl=http://upload.wikimedia.org/wikipedia/commons/7/77/Troutdale\\_Library.jpg&imgrefurl=http://commons.wikimedia.org/wiki/File:Troutdale\\_Library.jpg&h=2848&w=4288&tbnid=eOKw-V8v90dhcM:&zoom=1&tbnh=122&tbnw=184&usq=\\_\\_o8SUMe2xy23YDdjvS8Mve5BQw28=&docid=dy10dY1wyBeuM&itg=1&sa=X&ei=dh8PVJudHea\\_vgPguIKoBO&ved=0CCYQ9QEwAQ&dur=273](http://www.google.de/imgres?imgurl=http://upload.wikimedia.org/wikipedia/commons/7/77/Troutdale_Library.jpg&imgrefurl=http://commons.wikimedia.org/wiki/File:Troutdale_Library.jpg&h=2848&w=4288&tbnid=eOKw-V8v90dhcM:&zoom=1&tbnh=122&tbnw=184&usq=__o8SUMe2xy23YDdjvS8Mve5BQw28=&docid=dy10dY1wyBeuM&itg=1&sa=X&ei=dh8PVJudHea_vgPguIKoBO&ved=0CCYQ9QEwAQ&dur=273)

#### **Kenton Library, Kenton, City of Portland, OR – USA 2010**

An existing dropped ceiling was removed to expose the wood bow trusses to create a warm welcoming atmosphere. Wood ceiling joists from the original building were salvaged and reused for wood paneling. "Bar height" seating along the new storefront encourage an active library while sliding glass doors in the community room offer flexibility and increased library space.

The library required approval from Portland's Historic Design Review due to its location in the Kenton Commercial Historic District which was listed on the National Register of Historic Places. Restoration of the building's Art Deco signage mast helps to inform of the building's past.

Portland Chapter IIDA, Honor Award, 2010

### **Libraries:**

#### **Pratt City Library, Birmingham, AL – USA 2013**

CLIENT CONTACT: City of Birmingham, CONSTRUCTION FIRM: Monumental Contracting LLC, DATE OF COMPLETION: December 2013, Herrington Architects, Chasm Architecture LLC- associate

The Pratt City Library was a hub of social, academic, and community affairs of this northwest Birmingham neighborhood. Severely damaged in the April 2011 tornadoes, the building renovation provides a new symbol of hope, recovery, and progress, and a "living room for the community". The design gleans much of the former library's exterior and reconstructs the primary reading room as a glass "lantern" overseeing the neighborhood. The lantern symbolizes the light of knowledge, while evoking the coal mining heritage of the neighborhood. The facility incorporates multiple museum-quality displays of historic artifacts, and features a tornado safe room.

#### **[Hercules Public Library, Hercules, CA –USA 2006](#)**

This project was done in collaboration with Will Bruder+Partners.

##### **Awards:**

2007 AIA East Bay Honor Award

2007 AIA San Francisco Honor Award

2007 IIDA Wisconsin First Place Award

Doubling as a library and community center, the 21,500-square-foot Hercules Public Library houses approximately 800,000 books and periodicals, computer stations, children's "Story Cove," reading area with fireside seating, and café.

The design integrates an enclosed courtyard-or sky garden-that directs natural light into the interiors. The sky garden separates the adult and children's areas while bright primary colors and materials further define the visual separation between spaces and circulation. In the Story Cove, for instance, a deep-blue starry plywood ceiling, green carpeting and varied-colored pillows and beanbags offer a delightful children's retreat. In the adult reading area, colorful chairs and expansive windows create an inviting, relaxing space.

<http://hga.com/work/hercules-public-library>

#### **[Milwaukee Public Libraries, Washington Park Library, Milwaukee, WI – USA 2003](#)**

##### **Awards:**

2005 Wisconsin Green Building Alliance, SE<sup>2</sup> Award of Merit

2004 IES/IIDA Regional Guth Award for Interior Lighting Design

2003 Midwest Construction Magazine Merit Award

2003 Wisconsin ASID Silver Award

2004 IES/IIDA Section Guth Award for Interior Lighting Design

Washington Park Library has transformed an abandoned urban site into a much-loved community center. The 20,000-square-foot library invites neighborhood residents to relax in the sunlit reading room with views of the park, attend a book club discussion in the community room, participate in an adult literacy program in the tutoring room, or access a range of other community-focused resources. The library features a brick and paneled façade with a glass entrance and metal canopy. The interior is bright and modern, with the stacks, circulation desk and reading areas positioned under an open two-story spine. Sustainable features include ground-source heat pumps, energy-efficient glass, automated lighting controls, and geothermal heat pumps.

## [Minnesota History Center, Saint Paul, MN – USA 1992](#)

### **Awards:**

1993 AIA Minnesota Honor Award

1993 Consulting Engineers Council of Minnesota Grand Award-Civil Engineering

1986 Minnesota Historical Society National Design Competition Winner

Part of a national competition, HGA's winning design for the Minnesota History Center reflects St. Paul's architectural tradition with a fresh perspective. The History Center forms a striking visual axis with the State Capitol and the Cathedral of St. Paul from its hilltop site. In detail, craftsmanship and planning, the building fulfills the Minnesota Historical Society's mission to increase attendance, expand exhibition and storage capacity, and boost public outreach.

The 427,000-square-foot, six-level History Center includes museum and exhibit galleries, education wing, reference library, 314-seat auditorium, café, and archival storage. The façade echoes the formal classicism of the State Capitol. Inside, the classically inspired Great Hall marks the crossroads of the History Center's two axes where visitors arrive.

## [West Irving Public Library, Irving, TX – USA 2011](#)

Statistics: 25,876 SF New Library Facility Construction Complete February 2011, LEED Gold Certification (Pending)

The West Irving Library serves as one of 4 new libraries for the City of Irving Library System. The facility is situated at the base of an existing water tower. The building's crescent shape curves with the circular shape of the water tower, opening to the north with walls of glass. The glass walls floods the facility with natural light, reducing the energy required to light the building and provide dramatic vistas to their park-like setting. The facility includes the latest in touch screen technology with micro-soft "Surfaces" table, SMART tables, and SMART walls located throughout the Children, Teen, and Adult spaces. A geothermal ground loop heat pump system to heat and cool the facility was utilized as well as a photovoltaic system consisting of solar panels situated over (2) carpools and (6) arrays comprising of 1,444 (245W) solar panels providing enough power to create a NET ZERO building saving the city approximately \$55,000 per year in energy costs. The project is required to meet the certified requirements of LEED, at this time it has enough points to be Gold (pending certification).

## [Pleasant Grove Branch Library, Dallas, TX – USA 2011](#)

Statistics: •40,516 SF Adaptive Re-Use, •Construction Complete January 2011, •LEED Silver Certification (Pending)

Sonia King Mosaic Artist - Public Artist, Core Construction - General Contractor

### **Publications:**

Featured in Library Journal's Year in Architecture 2011

A 20,200 square foot branch library for the Dallas Public Library System consists of an open floor plan (adult, children and teen collections and public computers strategically located to feel that they have their area within the library but visible from a central point of control "service desk"). Flexible classroom space, study rooms and a multi-purpose meeting room that transforms into a "black box theater" four months out of the year. Situated in the culturally diverse suburb of Pleasant Grove, the building incorporates the work of a local artist, which depicts the cultural diversity of the community. The building form consists of curved walls opening up to the community beyond, reminiscent of the turning pages of a book. The building is scheduled to meet the criteria for LEED Silver certification (pending certification).

## [Bedford Public Library, Bedford, TX – USA 2011](#)

40,516 SF Adaptive Re-Use, Construction Complete January 2011, 251.32KW Solar Panel Array installed on the roof

### **Awards:**

**AWARD of EXCELLENCE (IEC) Independent Electrical Contractors: WINNER**  
**THE WAYNE WILLIAMS LIBRARY PROJECT OF THE YEAR Texas Library Association: WINNER**  
**LIBRARY OF THE YEAR American Library Association: RUNNER-UP**

#### **Literature:**

**Featured in Library Journal's Year in Architecture 2011**

Hidell Architects was commissioned in 2008 to renovate and expand an existing Food Lion grocery building into a new home for the Bedford Public Library. The 40,516 square foot adaptive reuse, includes a 200 seat meeting room, an electronic resource center, an automated book sorting system, cyber/vending area, express zone, children's craft room, children's story time, a toddlers zone and a dedicated teen room. The existing building, with its "flat" front facade, was modified to present a new image for the library while tying into the adjacent Old Bedford School architecture. A large circular volume and curved wall begins to soften the front facade, providing the patron with a dynamic entry into this whimsical space. The existing "box" shape was transformed with flowing curved walls and ceilings, assisting the user to navigate the various program spaces as well as define the individual areas within. The use of colored glass is seen throughout the new facility (both interior and exterior), creating walls of changing colors throughout the day. A geothermal ground loop heat pump system to heat and cool the facility was utilized, increasing the building efficiency, and reducing life-cycle costs. The use of durable materials, energy efficient lighting (LED), and shading of exterior glazing has created a sustainable home for the Bedford Library. In addition the City received a SECO grant where they were able to add a photovoltaic system consisting of (824) Sunpower T5, 305W solar panel modules with integrated racking on the roof of the building providing a total system capacity of 251.32KW.

#### **Watsonville Public Library, Watsonville, CA – USA 2008**

Statistics: 42,000 SF Public Library, 27,000 SF City Administrative/Council Chambers, 45,000 SF Superior Courts of California, Santa Cruz County, 16,000 SF Private Lease Space, Six Level Parking Structure with 460 Parking Spaces, •Library Architect | Hidell and Associates Architects, Inc., Architect of Record | LPA, Inc., Construction Complete May 2008

#### **Awards:**

**2008 Project of the Year Award - APWA Monterey Bay ChapterProject Information**

The Watsonville Civic Plaza building is located in one-square block, downtown at 275 Main Street, Watsonville, California. This government building is a 131,000-square-foot multi-use project, plus parking structure. The facility provides space for the City of Watsonville city hall and administrative offices, City Library, County of Santa Cruz Superior Court, and lease space including retail tenants. The downtown location provides a functional setting for the project that also serves as a revitalization engine for its immediate urban environment.

The project was constructed under numerous separate contracts, reflecting economic as well as political requirements. The parking structure was completed first prior to the construction of the main shell and core of the building. The County Courts were located on the first and third floor, City offices (fourth floor), the Library facilities (first and second floor), and for multiple tenants, including a self-help program area, offices for the District Attorney and commercial retail users on the first and third floor.

The Watsonville City Library more than doubled its size of the old library when it moved into its new facilities in April of 2008. As part of the Civic Plaza building, the library located on the first and second floor: first floor housed the children's department, circulation, technical services and the Literacy center. The second floor housed the adult collection, reference, computer Lab, California Agricultural workers' History Center, Teen zone, meeting rooms, study rooms and the administration offices.

New technology was implemented throughout the new library of great benefit to the public. The Children's area features a "Toddle tech" area with eight bilingual Early Literacy stations that are programmed with educational programs targeted towards children from pre-school age to second grade. Patrons of the library can use the new Xpress Check stations to check out their own materials- including DVDs, videos and CDs.

#### **Loma Colorado Public Library, Rio Rancho, NM – USA 2006**

32,000 SF Library, Construction Complete November 2006

#### **Awards:**

**Grand Winner 2007 Best Building, Energy Consious Design/Construction**

**Alsoa winner in Municipal and Utilities**

**2007 AIA Citation Award**

**LEED Silver Certification**

This state-of-the-art library features the latest in technology and library design. Each visitor's experience begins through a gallery space modeled after a pedestrian mall, quaint in look and friendly in scale. The gallery space leads the patron to a main reading area with collections and programming areas (dedicated storytime and craft room, quiet reading room and study areas). A wireless system enhances the flexibility of each space and provides a user friendly experience.

Situated in the foothills of the Rocky Mountains just outside of Albuquerque, New Mexico this 32,000 square foot library is the centerpiece of this growing community. The building configuration and internal layout was oriented to capture the sweeping vistas it surrounds, while nestling into a flat level of a very undulating site. The overall building footprint emulates the site contours, enabling the building to "fit", while minimizing unnecessary site grading. The large overhangs provide sun shading throughout the summer, and allow natural light in the winter. Both interior and exterior materials have been chosen for their eco-friendly qualities.

#### **Civic Center Library, Warren, MI – USA 2006**

Statistics: 32,000 SF Library | Construction Complete November 2006

The new Warren Library evolved thru the desire to make the library more interactive, involving, educational and more entertaining. When the patrons arrive they are immediately aware of being in an exciting learning destination thru the immense collection of business, recreational and reference materials all illuminated with stack lighting. Vibrant wall and floor colors converge onto all

areas, which are emulated in the handcrafted heat treated copper which forms various distinctive signage and components of the services desks; to the patterned layout of multi-colored laminated glass; to the playful energy of the youth area; to the "cool" interactive hang-out in the Teen area; and to the quiet study area while sitting in a comfy chair by the colored glass tile surround at the fireplace in the Special Collections room.

The serpentine motif and soft undulating curves allows the patron to navigate themselves to discover and explore the features of the library. The motifs encapsulates the ceiling, wall, program spaces, signage, furniture and lighting in three-dimensional form, mirroring their two dimensional equivalent in the floor. Similar shapes, forms and seating continue in an exterior program space which creates a setting for quiet outdoor reading or children storytelling.

Occupying over 32,000 SF and ultimately housing over 151,000 items this new library creates a link to a world of information available today, allowing your studies, career, business and recreational pursuits lead you virtually anywhere you want to go. The new library preserves the tradition of the library as a community center and gathering place but provides the idea of service that would be experience by all users.

Statistics: •52,013 SF New Library Facility, •Construction Complete February 2003

#### **Awards:**

2004 Best Building Winner - Interiors (New Mexico Building Branch, AGC and NM Business Journal)

2004 Best Building Winner - Lighting (New Mexico Building Branch, AGC and NM Business Journal)

This 52,013 SF "State of the art" library facility speaks volumes to the diverse culture of its community. The Library, located 80 miles from the Navaho Nation, gets its direction from elements found in the culture and architecture of the people it serves. The counterclockwise layout and "kiva like" rotunda bring a spiritual meaning to this community building. Working seamlessly within the dynamic layout of this complex are both indoor and outdoor programming spaces, allowing a broad flexibility of programs in this mild climate. Located within this exciting structure are many flexible spaces with state-of-the-art technology. Computers are located throughout as well as flat-screen monitors, which inform the patron of upcoming programs, local news, and entertainment. The library philosophy is one of customer service, which the layout and technology of this building enables through its self check stations, various multi-media rooms, and immense computer access, as well as, its built-in flexibility to allow change throughout the years to come. Farmington Public Library is a building for the Library of the 21st Century.

The Hilton Head Branch Library facility was completed in November. The building (at 11 Beach City Road), with 26,000 square feet of floor space (three times the size of the previous facility) and a volume capacity of 100,000 books.

<http://www.beaufortcountylibrary.org/htdocs-sirsi/history.htm>

### [Central Library, Lake Charles, LA – USA 1995](#)

The Central Library, or "Headquarters" as it was then known, opened April 4, 1944, the first library in the parish system. It was located at the corner of Kirby and Hodges Streets in a former store building. Miss Ruby Tanner was the first Branch Manager. In March, 1947, the Library moved into a building owned by Oscar Colletta at 1830 Broad Street. But by 1949, the Library had outgrown its facility again. It moved again and again until it found its home in 1954 to a location on South Ryan Street.

In 1965, the need for more space was needed again. It moved to a space at the corner of Prien Lake Road and Center Street.

Circulation jumped when the library moved to this location; the city's population had also begun to move south. The Police Jury then purchased a 3.2 acre lot at the corner of Ernest and West Claude Streets in 1977.

Ground was broken and the library was completed in December, 1984. Thanks to the Capital Improvement Program, plans were once again made for a new and larger Library. The new building opened on August 6, 1995. The Central Library's building is 41,000 square feet, the collection size is about 150,000+ and the building also houses the Administrative offices of the Calcasieu Parish Public Library.

### [Highland Associates, New York, NY – USA](#)

<http://www.highlandassociates.com>

#### **Libraries:**

### [St. George Library - Teen Center, New York, Staten Island, NY – USA 2010](#)

services Architecture, Interior Design, MEP Engineering, size 2,000 sq. ft.

In an historic building on Staten Island, adjacent to the harbor, The St. George Library Center is a dynamic resource for community members offering a main reading room since 1907, a computer lab since 2001 and most recently a Teen Center, completed by Highland Associates. A renovation of approximately 2,000 square feet of space, including architecture, interior design and related MEP engineering services, the project's goal was to create an inviting space, separate from the main area, for teens to interact and explore the library's resources and multi-media technology.

Highland's design team discovered a spectacular view the Library has of the New York harbor through glass windows in the main reading room. Inspired by the view and building upon the community's connection to the harbor, Highland developed a nautical theme for the Teen Center. Encapsulating the space is a glass wall, bowing slightly, supported vertically by curved wood planks

replicating the hull of a ship. Constructed in the base of this wall are shelves for periodicals and books, and emerging from the wall are tables for reading and working space.

Carefully constructed, the wall was built offsite (like a boat) and installed in less than a week as a solid stationary piece. It transformed the tired space and also anchors the room and its remaining elements. Ocean colors invigorate the space; books and magazines scale the blue colored walls and neon green furniture provides a lounge space in front of the plasma TV. Spanning the ceiling are curved plastic "sails" to simulate the movement of the ocean wind. The space is centered with a circular workstation of computers for teens to search the library database.

<http://www.highlandassociates.com/portfolio/gov-public/libraries/?project=54&image=image1>

### [Yonkers Library and Board of Education Offices, Yonkers, NY – USA 2002](#)

services Architecture, Engineering, Interior Design, Project Management, size 120,000 sq. ft. renovation, 80,000 sq. ft. addition

In March 2000, Highland Associates won a competition by invitation for renovations and an addition for the Yonkers Public Library and Yonkers Public School Offices. The building being renovated is a 120,000 square foot four-story abandoned industrial building built in 1923. Located by the waterfront and diagonally across from the Yonkers train station, it occupies a prominent location in the civic landscape.

It was the intention of this project to bring the Public Library and Public School functions together, thereby revitalizing an important part of the City. Besides renovations, an 80,000 sf addition was added to the entire front face of the building. Highland Associates assembled a group of experts who acted as consultants to the team. These included, among others, a library planner, acoustical consultants, telecommunications and audiovisual consultants, civil engineers and landscape architects. Highland Associates provided all programming, design, architectural and engineering services.

### [Abington Community Library, Clarks Summit, PA - 2002](#)

services Architecture, Engineering, Interior Design, size 10,000 sq. ft.

The Abington Community Library had outgrown its facility, and was unable to offer many programs to the public due to limited parking. The donation of land from a local resident allowed the board to proceed with the plans for a new facility. Highland Associates provided architectural, engineering, and interior design services for the new library, and also assisted the library in acquiring a \$400,000.00 Library Service and Construction Title II grant.

The new one-story 10,000 square feet facility houses reading rooms, children's areas, a community multi-purpose room, periodicals, a reference collection, staff kitchen, administrative areas, a conference room, and storage / maintenance areas. There is now adequate parking, with room on the site for future expansion, as well as outdoor landscaped reading areas. The circulation desk is placed in a central location on the open plan, which results in more efficient use of staff and better control of the library and library materials. The facility is totally accessible to the handicapped.

In 2001, Highland Associates was commissioned to expand the Library to add a separated Children's Area. The new Children's Area became a "distinct area" that maintains a visual connection from the original library so that parents can monitor their children. The space includes a Story Room and an Arts and Crafts area as well as space for storage and equipment and a separate office. There are two skylights that provide diffused natural light to the reading and stack areas. The design included age appropriate heights for computer access and a lower more open area for books because of the reduced size of the stacks. There is also glass looking out to an outside landscaped reading area. The addition consisted of approximately square feet and was completed in 2002.

## [Hillier Architecture, New York, NY – USA](#)

15 Dec 2008

Award-winning architectural firm, RMJM Hillier today announced that the company will now operate under the name RMJM in North America. RMJM Hillier was formed in June 2007 following the merger of RMJM and Hillier Architecture. The RMJM Hillier name was used only in North America while the firm, headquartered in the UK, is still known as RMJM throughout the rest of the world. The new name also coincides with a global rebranding for RMJM including a new logo and website.

J. Robert Hillier founded Hillier Architecture in 1966 in Princeton, N.J. Today it is one of the nation's largest design firms with 300 architects, interior designers, urban designers, landscape architects, and preservationists. The firm has worked on high-profile projects in the United States, Europe, the Middle East, Asia and the Caribbean, and has offices in Princeton, New York, Philadelphia, Washington D.C. and Shanghai. Hillier's culture is rooted in a philosophy of respecting and celebrating the extraordinary differences among people and places, and elevating the ordinary design opportunity to extraordinary design dimensions. It provides services in architecture, interior design, urban design, historic preservation, land planning, and environmental graphic design.

#### [University of Louisville, Ekstrom Library Expansion, Louisville KY – 2006](#)

Ekstrom Library – Major Addition and Renovation, University of Louisville, Louisville, Kentucky

Client: University of Louisville, Scope: \$14,500,000, Size: 50,000 s.f., Status: Complete in March 2006, Project Team:

Design Architect: Hillier, Inc., MEP Engineers: CMTA, Inc., Structural Engineers: Slessor Engineering, Inc.

The library expansion is organized on 3 levels around a naturally lit central atrium space and is connected to the existing building at all levels. A three story volume "book box" houses the Automated Storage Retrieval System (ASRS) which is capable of holding over 1.2 million volumes. The Entry Level has an open lobby with a circulation desk and work area, a 24-hour study room and café, IT Classroom, and instructional labs. The Lower Level contains a 150-seat auditorium. The Upper Level is home to The McConnell Center, open reading areas, and display.

The Ekstrom Library Expansion was honored by the AIA Kentucky chapter with an Awards for Excellence in Architectural Design at the 2006 AIA Kentucky Honor Awards Program. It was also selected for publication in Penton Media's American School & University 2007 Architectural Portfolio. An annual competition honoring education design excellence, the Architectural Portfolio spotlights projects representing some of the most effective learning environments in America.

The Main Library is in the midst of a large-scale expansion and renovation project. The project has been split into three phases, the first of which has already been completed. The first phase of the project was designated to revamp the lobby and install new doors to the entrance on Washington Street. The second phase of the project is not yet under way as the capital to finance the project is still being raised. The second phase will include the restoration of Centennial Hall, the reading room on the second floor and the restoration of the Fiction Room and the Auditorium. The third phase is the construction of a glass building at 5 Washington Street, which will include the Charles F. Cumming New Jersey Information Center, the James Brown African American Room, the La Sala Hispanoamericana, world language collections, young adults space, a café, and a meeting room.

### [Princeton Public Library, Princeton – USA 2006](#)

Designed in concert with the diverse community it serves, the 58,000 square feet Princeton Public Library has become, in the words of its Director, "a community agora for the new millennium."

The collaborative design process between architects and librarians and multiple community groups and organizations defined not only the functional requirements for the new building but also its values, themes and architectural expression.

### [Harry Bennett Branch Library, Stamford, CT – USA 2000](#)

by Alice Knapp

The dramatic, new Harry Bennett Branch Library has been a resounding success with the Stamford community. Opened in January 2000, and sharing the campus of a public middle school, the 24,000 square foot facility replaces the very tired Turn of River Branch, which had been operating in a cramped former church since the late 1960's. Project costs exceeded \$4.4 million, of which \$3.5 million was provided by the City of Stamford and \$350,000 by a state library construction grant. The library is named for long-time branch supporter and benefactor, Stamford realtor Harry Bennett. It was Mr. Bennett who, in the mid 1960's, was instrumental in getting the original Turn of River Branch built. Over the years he has been a tireless friend to the Ferguson Library. The new library has a soaring interior with skylights that flood the space with light. The result is a spectacular, modern building that is a delight just to enter. The floor plan is open; ramps and stairs link different sections of the library. A 120-seat auditorium, a meeting room, and a children's program area are included in the facility. State-of-the-art when it comes to technology, the library is equipped with 43 computers-28 for public use, 15 for staff. Public computers provide catalog services, electronic databases, Internet access, and word processing; several are dedicated to pre-school multi-media use. The branch has the capacity to add up to a dozen more workstations for the public, as well as laptop Internet access. "The Harry Bennett Branch incorporates the latest advances in information technology," says library president Ernest A. DiMattia, Jr. "We are also no longer limited by lack of space, so our ability to serve the public has expanded." In fact, as soon as the branch opened, users were clamoring for extended hours. The former Turn of River Branch had operated on a limited schedule, and the new branch maintained the same hours until additional city funding in January 2001 made it possible to keep Harry Bennett open longer. Now, the library is open six days a week, four days until 8 p.m.

Harry Bennett supervisor Susan Baldwin says that with the new hours librarians hope to offer more daytime programs for young children, as well as additional adult computer training in the evenings. "We expect the library to be even more heavily used now," says Ms. Baldwin. The branch averages about 13,000 visitors a month and circulates some 22,000 items per month. In its first six months of operation, the number of people attending library programs more than doubled attendance at the former Turn of River Branch. The Harry Bennett Library was designed by architect [David Finzi of the Hillier Group](#) in New York City and completed by Frank Mercede and Sons, Inc., general contractors based in Stamford. It is accessible to people with disabilities and has on-site parking for 75 vehicles. It also garages the Ferguson's Bookmobile and "Purple Bus." <http://www.ctlibraryassociation.org>

School Construction News, "Off the Shelf – High-Tech Library Ushers in The Digital Age at University of Nevada", January/February 2009

Completed in 2008, the Mathewson-IGT Knowledge Center is the centerpiece of a new north quadrangle for the University of Nevada, and is one of the most technologically-advanced libraries in the nation. Here, computing and information technologies, multimedia tools, and the university's extensive library resources are brought together in an environment designed for comfort, efficiency, and collaboration. H+K Architects was tapped to shepherd this significant project from advance planning through design and construction, a process that engaged the firm for more than eight years. The building represents a contemporary interpretation of the historic academic architecture that makes the campus core unique. Arcades and traditional brick detailing will relate to the existing buildings and serve as a new typology for the development of the north campus.

## Joe Dini, Jr. Library, Western Nevada College, Carson City Campus NV – USA 2005

Library Design Consultant: Ripley & Associates

### Literature:

"Spend Billions And They Will Come", Library Journal, December 2004

The Joe Dini, Jr. Library and Student Center occupies a prominent location at the terminus of Western Nevada College's entrance road to provide a strong visual image at the entrance to campus. The 35,000 square foot building features a 25,000 square foot library and a 10,000 square foot student center. In response to the importance of information technology, the library contains a large "electronic commons" featuring 40 computer workstations for research and data retrieval. In addition to the information resources, printed materials are housed in a large reading room with a capacity of 50,000 volumes and a variety of seating and study spaces. The Student Center is made up of recreational, athletic, and administrative spaces for the student body and WNC staff. The building utilizes environmental principles such as drought-tolerant landscaping, day-lighting, recycled materials, and energy efficient heating, cooling and lighting controls.

## Incline Village Branch Library NV – USA 2003/2004

Associate Architect: Leo. A. Daly

### Awards:

2007 Reno Magazine/AIA Northern Nevada Architecture Design Awards Award of Citation - Built Category

2006 American Library Association (ALA) and International Interior Design Association (IIDA) Library Interior Design Competition

The new Incline Village Library is designed to settle into the context of the existing site, respecting the vernacular of the area while incorporating a fresh, contemporary attitude in the "Tahoe Style." The building features a sloped-roof silhouette that commands attention from the nearby highway. The new facility incorporates ample amounts of glass to take advantage of the tremendous views in all directions. Exterior wall materials consist of a combination of split-face concrete block at all load-bearing walls, and cementitious lap siding at the wood-framed exterior walls.

### Libraries:

## Eastfield College, Learning Centre, Mesquite TX – USA 2008

LEARNING BY DESIGN has released its much-anticipated spring 2010 edition, which showcases the nation's best education design and construction projects from pre-K to 12 to college and university facilities. Eastfield College Learning Center in Mesquite, Texas received a Citation of Excellence Award in the college/university/specialized category.

Designed by HKS, Inc., the 55,000-square-foot classroom and administrative office facility is a new initiative in the education market that promotes knowledge gained through interactive learning environments and studio-like classrooms.

Moving away from the limitations of the traditional instructor-student setting, with rows of desks and a chalkboard, the learning spaces vary in size, are technology-intense and have a more informal feel. A variety of comfortable social spaces are located outside the rooms to allow for interaction between students and teachers.

The building also creates a new gateway into the campus, along with creating and enhancing the courtyard components that are a key element of the Eastfield campus.

The new gateway is partly defined by the lobby, which includes a Starbucks-like internet café and conferencing facilities that can be used after hours for different school and community activities.

A jury of distinguished architects and educational facility planners reviewed the outstanding projects that appear in the LEARNING BY DESIGN spring 2010 edition, and named this year's honorees. The judges noted trends in sustainable design and increasingly flexible learning environments that support experiential learning as well as enhanced technology components that support learning outside the traditional classroom model.

LEARNING BY DESIGN is the premier source for education design innovation and excellence. Published twice each year, this prestigious magazine recognizes the nation's best firms by publishing outstanding pre-K to 12 and college/university projects.

HKS, Inc. is a leading architectural design firm ranked among the top-four architectural/engineering firms, according to Building Design+Construction magazine and among the top-seven international architectural firms, according to BD World Architecture magazine. Since its founding in 1939, HKS has completed construction projects totaling more than \$66 billion in more than 1,038 cities located in 46 states, the District of Columbia and 64 foreign countries. The firm operates from 22 worldwide offices.

## HMA2 architects, Henry Myerberg with Helfant Myerberg Guggenheimer Architects, New York, NY - USA

<http://www.hma2.com>

### Libraries:

Town of Elon Public Library, Elon, NC – USA on design

15,000 SF

A new public library for a growing community enhances and compliments a public recreational park. The broad roof of the one-story library is like a giant leaf over a square terrace pad and fronts a “town green.” Conceived as a community center for multi-generational activities, the library invites children and adults to participate in learning, computing, reading and socializing.

### [Washington, DC, Public Libraries, Washington, DC – USA 2008 - 2012](#)

22,000 SF

Updating Carnegie libraries for living and learning in the 21st century was part of Washington DC’s visionary expansion plan for its public libraries promoting community pride and participation. As part of the work to the Southeast branch, neighborhood residents and social media were engaged to produce decorative finishes. The 1925 Mount Pleasant branch (in collaboration with local firm, CORE) conceived a sensitive restoration and respectful expansion. A central atrium connects old and new buildings, greeting and orienting visitors. Work included the restoration of existing murals by artist Aurelius Battaglia, who went on to illustrate Disney movie classics, Dumbo and Pinocchio. His colors and patterns inform the new interior design, inspiring ongoing generations.

<http://www.hma2.com/projects/learn/washington-dc-public-libraries>

### [Stuyvesant High School Library, New York, NY – USA 2012](#)

6,000 sqf.

The way students use a library has radically changed since this world class high school’s library was built a generation ago. While the existing library had been retrofitted more recently to accommodate fixed computer stations and a writing center, the library spaces and services are so in demand that eager students often waited in line at the front door to gain access. In response, HMA2 conceived a learning and gathering center that could flexibly accommodate large numbers of students working in groups, multiple computer stations, teaching with smart boards, and assemblies for events as well as a home for the English department and its writing center. Now students enter an open, compact and welcoming loft for learning and an oasis for study.

<http://www.hma2.com/projects/learn/stuyvesant-high-school-library>

### [Davidson College Library, Renovation, Charlotte, NC – USA 2011](#)

30,000 SF

A new welcoming entry with concierge help desk and cafe greets students and faculty to a teaching and learning center and “tech forum.” This first phase renovation that was built in two months transforms the ground level of 1970’s era library into a modern academic and social magnet.

<http://www.hma2.com/projects/learn/davidson-college-library>

### [L!BRARY Initiative, NYC Schools, New York, NY – USA 1999 - 2008](#)

<http://new.pentagram.com/2009/03/murals-for-the-library-initiat/>

Henry Myerberg: <http://www.hma2.com/team>

The designs for the L!BRARY initiative reinvented the school library in New York, aiming to boost student reading scores as well as the love for learning. Funded and led by the Robin Hood Foundation, the L!BRARY initiative produced 60 libraries for public schools in NYC’s neediest districts. As a volunteer and in collaboration with educators, Henry Myerberg helped conceive the L!BRARY initiative in 1999. He designed 12 libraries and recruited other leading architects and designers to participate in creating the libraries. As children learn best in collaborative settings, the libraries have open and flexible spaces equipped with current technology, books and newly trained librarians in what Myerberg calls “playgrounds for learning”. The new spaces also provide well-needed after school facilities for children.

<http://www.hma2.com/projects/learn/lbrary-initiative-nyc-schools>

### [Westport Public Library, Renovation & Expansion, Westport, CT – USA 2007 – \(2017\)](#)

<http://www.westport-news.com/news/article/A-forecast-of-55M-in-Westport-projects-by-2017-3912837.php>

65,000 SF

A renovation and expansion aims to transform Westport Library into an architecturally uplifting destination worthy of its powerhouse community. Nearly 1,500 daily visitors crowd into the existing facility. Due to its insufficient and inefficient spaces, many are currently turned away from the library’s popular events and experiences. The new design not only addresses practical issues of access and operation, but also engages the park and river setting with open views and inviting extensions of indoor and outdoor spaces. As Westport’s beacon on a hill, the library becomes a center of lifelong learning, a catalyst of economic vitality and a 21st century home away from home.

<http://www.hma2.com/projects/learn/westport-library>

10,000 sf renovation + 35,000 sf expansion / 1986-1997

#### **References:**

Architectural Record, 1998

Metropolitan Home, Jan. 1990

This project heralds the transformation of the academic library from a quiet book-filled study sanctuary to an active academic and social center. Respectful of its setting, the modern glass, steel and stone two-story library is conceived as a restrained expansion to historic Thomas Hall, nestling into a sloping site under a grassy roof terrace. A central four-story high atrium hosting both passive activities such as reading as well as organized events, connects the old and new buildings while bringing daylight and by night, moonlight, into the lower levels. The library's dense weave of study, lecture, seminar, book stack and office spaces create settings for planned and spontaneous interactions amongst students and faculty. Today this library is a top stop on Bryn Mawr campus tours. <http://www.hma2.com/projects/learn/bryn-mawr-college-rhys-carpenter-library>

### [Baltimore Hebrew Library and School, Baltimore, MD – USA 1995](#) 10,000 SF

An expansion and renovation of a synagogue and school included a library, classrooms and gym. The library is the heart and soul of the school expansion and provides flexible gathering, study and technology spaces for all age groups. It features an interior rotunda whose encircling books and glazed openings help create an iconic and quiet setting for storytelling, reading and conferences. <http://www.hma2.com/projects/learn/baltimore-hebrew-library-and-school>

Project Budget: \$ 151,000,000, State Bond Funds: \$ 79,000,000, Local Bond Funds: \$ 72,000,000, Design: 2013-2015, Construction: 2015 - 2017

<http://www.docstoc.com/docs/101085027/Untitled---Welcome-to-Mt-San-Antonio-College>

The vision for the LRC project was to create a new vibrant campus center to attract and encourage interaction and knowledge sharing. The LRC gives new direction to an evolving progressive institution, by creating an activity center that merges student research, study, and activity spaces to create a central, multifunctional destination. The Architect worked with College leaders to design a dynamic campus landmark and gathering place that connects the academic, cultural, and social pursuits of the students, faculty and community. The Architect and client outlined the following objectives to help make the vision a reality: - To design a "beacon of knowledge", a prominent landmark and visual reference for students and the surrounding community. - To combine library functions, student government and clubs, dining facilities, and retail spaces within a central, multifunctional destination. - To create flexible interior and exterior gathering spaces to accommodate a variety of student needs and activities. - To maximize the quantity and variety of study space for individuals and groups. The 200,000 square foot LRC and Student Center include an open library with a focus on study areas, activity and meeting centers, a bookstore, a convenience store, and student and community dining. The complex sits down-slope from a newly defined campus quad, designed to accommodate the largest of campus gatherings. The complex engages the slope to address and invite participation from all campus levels. The central landscape of the LRC courtyard flows from the campus' main quad, meanders through the complex, and forms a series of gathering spaces capable of housing many cultural and social events. From this courtyard, students can access all the functions of the complex. Elevating the outdoor activities spaces creates an interactive plinth which supports the LRC and Student Center. Against a contextual brick background, the Student Center grows from the existing roots of the campus. The porosity of its exterior walls invites activity from many different points. The library is transparent and translucent to encourage the open flow of interaction, knowledge, and ideas, while the bridges interconnect multiple levels of the complex to link the interdependent programs. Patrons enter the library through a 3-story atrium featuring a cantilevered mezzanine study space with clear views to the campus. Circulation, study rooms, and the organizational layout are visible from every level within the atrium, a transparency that promotes the open flow of knowledge, information and ideas. A monumental staircase transitions through the atrium lobby, linking levels and connecting to the bridges that span the open courtyard. Indoor study spaces define the edges of the building and bridges, taking advantage of natural light and creating a direct visual link with the courtyard and campus. Concrete, glass, and brick masonry blend the LRC with the existing campus while the material treatment and utilization allow it to stand apart as a student activity center. Vertical exterior fins – symbolic of an "open book" - welcome patrons from all parts of the campus. LEED Platinum is the sustainable goal for the complex. The Green strategies promote the college's decree to save energy and maximize efficiency. Double skin insulates and ventilates the exterior envelope. Geothermal heating and cooling are captured and routed to each floor through the precast concrete slab channels. Horizontal sunshades screen sun while vertical fins protect from east-west rays. Green roofs insulate the building and help blend it with the surroundings. Large skylights and insulated glazing with solar tracking louvers around the building's skin allow natural light to penetrate deep into all levels. A greywater system is employed to reduce water consumption. And finally photovoltaic panels convert the areas abundant with sunlight into electricity. These sustainable goals reduce energy consumption, provide long-term cost savings, and enhance the learning environment.

<http://www.worldbuildingsdirectory.com/project.cfm?id=1456>

### [San Francisco State University, Paul Leonhard Library & Sutro Library, San Francisco CA – USA – 2012](#)

A major expansion and renovation of the J. Paul Leonhard Library building is underway. Set to open Fall 2011, the new home of the J. Paul Leonhard Library, Sutro Library, Labor Archives and Resource Center, Academic Technology and the Center for Teaching and Faculty Development, will provide expanded study and computing space for users, growth space for collections, access to new technologies, and a safe and healthy environment for work and study. Once completed the new Library will have 34% more total space; 50% more seating; 50% more group study areas; 50% more collection capacity, both in open stacks and a high-density automated retrieval system; and 100% more computers. The new library building will provide a flexible and congenial learning environment in the heart of campus.

## **HMR (Holt Morgan Russel) Architects, Princeton, NJ - USA**

<http://www.hmr-architects.com>

### **Libraries:**

[Princeton University Library, Harvey S. Firestone Memorial Library – Princeton, NJ – USA ongoing](#)

See: [Shepley Bulfinch Richardson & Abott, Boston, MA – USA](#)

<http://www.sbra.com>

Firestone Library opened in 1948 (Architects: Robert Barnard O'Connor (\*21.11.1886 Manhasset, NY - + Nov.1993, Mount Kisco, NY) and Walter Harrington Kilham (\*30.08.1868 Beverly, MA – +11.09.1948 Boston, MA), as the first large American university library constructed after World War II, Princeton University Library is the main library system of Princeton University. With holdings of more than 7 million books, 6 million microforms, and 48,000 linear feet of manuscripts, it is headquartered in the Harvey S. Firestone Memorial Library building, named after tire magnate Harvey Firestone.

Creating the vision for the Firestone Library Renovation Project has been a cumulative process involving extensive planning and research. This renovation will not only provide modern building systems and infrastructure, but it will also highlight and capture the unique character of the original 1948 building design. Through this renovation, Firestone's architectural history will be gracefully combined with the needs of today's scholars. In the words of the project's Architect of Record, Carole Wedge, "Firestone's central vision for scholarship remains a constant in a setting that reinforces its strong sense of place."

#### **Celebrating Our History**

In 1948, an issue of Princeton Alumni Weekly showcased the newly constructed Harvey S. Firestone Memorial Library. The article featured photographs, interviews and historical facts about the opening of the library, telling "the story of the new library and how it came to be." Within the article, the University Librarian described the essence of what makes the library a successful study environment:

The outstanding characteristic of Princeton's Firestone Library is its openness, its ease of access to books and to the library services....It is a building dedicated to the dignity and value of knowledge and of wisdom. It exists for these purposes alone. If the architectural ornaments are beautiful or if the technical paraphernalia of librarianship intrude themselves upon you, remember that they are present incidentally or through necessity. Their purpose is to house books and to make them conveniently accessible for your study and for the enlargement of the horizons of your mind. This, in effect, is what the new Princeton Library seeks to proclaim to every student who enters it.

—Julian P. Boyd, University Librarian

This is the legacy on which the renovation will build.

#### **Embracing Our Future**

Among the most important goals of the renovation project are improving reader and study spaces, upgrading Rare Books & Special Collections areas, introducing sustainable building features, updating life-safety systems, and renovating graduate study rooms, exhibit spaces, and shelving areas in the library.

This renovation work is being done so that, in the words of former President Harold W. Dodds, the miracle contained within this library can continue—"the miracle of imagination kindled, prejudice thrown overboard, dogma rejected, conviction strengthened, perspective lengthened."

<http://libblogs.princeton.edu/renovations/the-vision/>

Renovations completed at Princeton's Firestone Library over seven years included several projects totaling over 29,000 square feet of space. This formerly open stack library was experiencing a rapid increase in the theft of materials due to lack of circulation control in the large lobby space. The introduction of control barriers virtually eliminated the problem while maintaining the integrity of the lobby space. HMR also designed spaces to house the Princetoniana Collection of University memorabilia as well as exhibit areas for the Music Collection and Graphic Arts.

[http://www.hmr-architects.com/portfolio\\_show\\_firestone.php](http://www.hmr-architects.com/portfolio_show_firestone.php)

### **[Free Public Library, Morristown, NY – USA 2006](#)**

Through continued successful development of new services, this Library had again outgrown its existing building. HMR's design responds to those changing needs and continued growth by providing enhanced public library spaces and a new Children's Library through expansion of the existing Collegiate Gothic building. Future anticipated growth is accommodated through the relocation of the Local History collection to an adjacent historic structure and a new underground research reading room that serves as a connector to the Library building.

[http://www.hmr-architects.com/portfolio\\_show\\_morristownlib.php](http://www.hmr-architects.com/portfolio_show_morristownlib.php)

## **Hodgetts + Fung, Design and Architecture, Culver City – USA**

<http://www.hplusf.com>

### **Libraries:**

[Hyde Park – Miriam Matthews Branch Library \(Los Angeles Public Library\), Los Angeles CA– USA 2004](#)

Built at the epicenter of the 1992 Los Angeles riots, the Hyde Park Miriam Matthews Branch Library stands as a testament to civic renewal and the healing power of architecture. More than just a place to read or gather, the library reaffirms the city's faith in South Los Angeles as a vibrant neighborhood and a generator of hope. Part of an ambitious program to build 36 libraries in communities around Los Angeles, the Hyde Park branch needed to make a statement that reinvestment in small-scale civic structures could make people's lives better. Although just 10,500 square feet, the new library offers almost twice the number of volumes as the neighborhood's old facility (40,000 books, compared with 25,000). And it nearly triples the number of computer terminals to 28, up from 10. Hodgetts + Fung originally envisioned the Hyde Park library as an exercise in glass and colored light. But the client wanted something bolder, so principals Craig Hodgetts, AIA, and Hsin-Ming Fung, AIA, decided to give the building a more sculptural presence. "We looked at Brancusi's work because it has such great energy," says Hodgetts. Eventually, the architects designed the building with angled glue-laminated-wood columns and beams on the inside and moss-colored cement-board walls on the outside. "We wanted it to be muscular, to have an animal-like quality to it," explains Fung. Sitting on a corner site, the building offers four different faces to its surroundings....

<http://www.archrecord.construction.com>

Standing at the crossroads of where the 1992 Los Angeles riots burned is the new Hyde Park Miriam Matthews Branch Library, named for the first African-American librarian in California. As designed by Hodgetts + Fung Design and Architecture, the library is helping to revitalize and unite the community, offering residents educational, social, and professional services. The 10,500-square-

foot library – which replaces the former, smaller Hyde Park branch – draws on a rich palette of materials, colors, and forms. The culture and history of South Los Angeles informed much of the building’s design, which is marked by a layering of materials and angled forms. “We wanted Hyde Park residents to interact and respond to the library,” says Craig Hodgetts, AIA. “Instead of designing space sympathetic to Euro-American culture, we developed a fresh palette of materials and textures that residents would identify with. Aesthetically, the library is in complete response to the people who occupy it.” The library’s street-front façade is clad in crisp, pleated layers of moss-colored cement board and copper-tinted steel, and a hand-painted tile mosaic designed by artist Robin Strayhorn. The brightly-colored mosaic – inspired by local students – portrays the leadership and dreams that have helped bridge the Hyde Park community. At one end of the building is a courtyard garden designed by landscape architect Katherine Spitz Associates. The northern façade is marked by sculptural elements of glass, metal grating, cement board, and copper-tinted steel woven into horizontal panes provocatively angled and set above a slanted cement-board structural base. A jauntily-angled copper-colored flagpole provides structural support at one corner of the building. Inside, to break the scale of the 22-foot-high ceiling, exposed structural and mechanical elements diverge in various directions and orientations. Suspended horizontally overhead, copper-tinted air-conditioning ducts are angled as jagged, sculptural tubes. Support beams, constructed of recycled lumber chips, stretch vertically, adding to the thicket of elements and colors that inhabit the space. Over the book aisles, rows of elongated concrete-clad light fixtures are rhythmically suspended below lowered ceilings. Perimeter spaces support computer kiosk stations, a children’s reading area, seating areas, and book stacks. The center – largely open – is anchored by an information desk. There is also a large meeting room and administrative offices. Finding inspiration in the language of African art and culture, the architects layered and textured the interior and its functional elements with a warm palette of environmentally sustainable and durable materials – brown synthetic wood, moss-colored cement board, copper-tinted steel, and burnt-orange Corian counter tops. Tucked in a corner, the children’s reading area, which includes a cozy storytelling nook, is distinguished by a curvy, synthetic-wood wall that snakes around and separates it from the main space. A clerestory that wraps around the upper-edge of the street front side brings natural light to the interior, and offers a glimpse of the landscape’s mature trees and sky, creating an illusion of natural escape within the dense city surroundings. The library was designed to achieve the U.S. Green Building Council’s LEED rating. In addition to employing sustainable construction materials, Hodgetts and firm principal Hsin-Ming Fung, AIA, incorporated an energy-savings concept that uses sun shades, natural light, and photovoltaic panels for solar access gains. The panels cover the roof and extend over the edge, forming a sleek, horizontal awning. The new library has indeed struck a chord with the community. According to Hyde Park’s senior librarian Kren Malone, patronage and book circulation have tripled to 18,000 visitors and 9,000 books each month. Los Angeles-based [Hodgetts + Fung Design and Architecture](#) was founded in 1984 by Hsin-Ming Fung, AIA, and Craig Hodgetts, AIA. Fung’s background in artistic design and Hodgetts’s engineering experience lend a playful, theatrical approach to architecture while fusing technology and fabrication. Their monograph, [Hodgetts + Fung: Scenarios and Spaces](#) by Kurt W. Forster, is regularly found on the desks of students. The firm has won more than 50 international international and national design awards.

<http://www.archnewsnow.com/features/Feature185.htm>

Built on a lot that has stood empty since the violent conflagrations of 1992, this neighborhood library is both a source of community pride and a symbol of rebirth. Hodgetts + Fung worked closely with community members to create a design vocabulary which referenced the ethnic heritage of the residents while looking forward to growth and prosperity. The root of the design lies in the transformation of the language of African sculpture to a modern urban idiom. The result is an aesthetic grounded in traditional cultural forms, but enlivened by contemporary experience and tastes. This is a building of intense contrasts. From the uninterrupted view of the treetops across Florence Avenue, to the punched-out shards of sky glimpsed through the north-facing lattices, the building provides requisite security, yet manages to respond conscientiously to the demands of librarians as well as patrons.

<http://hplusf.com/project/hyde-park-library/>

### [Sylmar Branch Library \(Los Angeles Public Library\), Los Angeles CA – USA 2003](#)

LOS ANGELES. More than 13 years after the LA Riots devastated South Los Angeles, the community is finding itself the benefactor of recent private and civic investment, including the new Hyde Park Miriam Matthews Branch Library, whose acclaimed design by Hodgetts + Fung Design and Architecture has been attracting residents into the library in record numbers. The ground-up, 10,500-square-foot library, which replaces the former, smaller Hyde Park branch saw its monthly book circulation quadruple following the November grand opening. According to Branch Manager Kren Malone, the library has since maintained a monthly book circulation of 9,000, which is triple the old library’s monthly circulation. The library’s patronage has also tripled to 18,000 visitors each month. The Hyde Park community is fully embracing the new library and the services we offer, Malone says. Patrons are particularly happy about the building’s color scheme and unique ceiling structure, which are always getting compliments. The Hyde Park Miriam Matthews Branch Library funded under the Los Angeles Public Library’s far-reaching bond program joins 35 new facilities that have been constructed across the city. Hodgetts + Fung widely known as the architect for the new Hollywood Bowl designed the library to reflect the culture of South Los Angeles. We wanted Hyde Park residents to interact and respond to the library, says Craig Hodgetts, AIA, principal of Los Angeles based Hodgetts + Fung Design and Architecture, which also designed the public library in suburban Sylmar. Instead of designing space sympathetic to Euro-American culture, we developed a fresh palette of materials and textures that residents would identify with. Aesthetically, the library is in complete response to the people who occupy it.

[http://www.sciarc.edu/news\\_archive.php?id=302](http://www.sciarc.edu/news_archive.php?id=302)

Hodgetts + Fung conducted workshops with a community review panel during the design of this Library. Inspired by the colors of the surrounding community and the profile of the nearby San Gabriel Mountains, the main space of the library is defined by a casually creased roof resting on irregularly spaced columns. A luminous “cowl”, extending from the parking lot to the interior, surrounds and identifies the centrally located circulation desk. Three reading rooms, specifically designed for children, for young adults, and for mature patrons, are arranged around the space with direct sight lines to the desk. Barbara Strasen, an artist known for her work with lenticular imagery, created the animated images of insects, sea creatures, and time-lapse floral blooms which form the ceiling of the Children’s Reading room and are visible from the street through a large “viewing window”.

<http://hplusf.com/project/sylmar-library/>

### [UCLA Towell Library , Westwood, Los Angeles CA – USA 1997](#)

Our design for the Powell Temporary Library at the University of California at Los Angeles (UCLA) is conceived as a grouping of tented land-forms arranged to receive the Westwood extension of the original campus axis and redirect it towards the active Student Center to the south. The site is located between two Romanesque revival buildings and terminates Janss Memorial Stairway. It is marked by a monumental classical balustrade, which we thought to integrate by the array of internal axes and radii to define the building volumes. Thus, the semi-circular East Reading Room is tangential to the stair, while the circular West Reading Room is co-axial with the balustrade. Since the project was subject to severe time and budget constraints, we chose to employ a re-usable aluminum and fabric roofing system capable of rapid construction for the major enclosures, and to link them with an intentionally varied ensemble of disposable masonry, wood and plastic substructures. An integrally-colored concrete block similar in hue to the brick and limestone characteristic of the campus proper establishes the periphery of the land-form, suggesting the foundation of a

building which is no longer there, and reinforces, by contrast, the temporary nature of the structure which covers it. The resulting assembly of rational individual components defines services and transition areas within the volume, while a braced steel substructure carries the mezzanine and stabilizes the ribs at mid-span. As in an aircraft, decorative emphasis is placed on the orchestration of fasteners, cables, and exposed elements necessary for the efficient operation of the library. Program Solution The design program was to provide a structure to temporarily house the collection of the main undergraduate library during 2-1/2 year seismic upgrading of the permanent library building. The architectural solution combined tensile, steel and masonry structures to create a library "complex" of four distinct buildings; an open plan Main Library Hall and mezzanine housing the majority of the collection, two reading room "pods" and an administrative wing. The structures were connected by passageways of informal "lounge" seating and a central service core containing bathrooms and mechanical/electrical rooms. Unique Requirements The University required a temporary building that would preserve the existing plaza between the historical Dance Building and the Men's Gym. The siting of the structure integrated existing elements of the surrounding context and the foundations were designed to preserve the existing paving beneath the building. The University intends to utilize the structure for other functions once the library seismic upgrading is complete. The design of four separate buildings breaks down the mass of the project and provides versatility for a variety of other programs to occupy the spaces. Library Director Statement Plan and design of the Temporary Library provided an opportunity to accommodate modernized services and electronic access now prevalent in academic libraries as well as traditional study and print oriented environments. Goals were to have an easily understood and logically organized facility with areas for activities requiring human interaction such as online catalog use, reference tool consultation and interpretation, teaching and computer labs along with areas more isolated to allow for concentrated individual study. The floor plan succeeded in providing such areas and provides a variety of aesthetic experiences for users. <http://www.arcspace.com>  
<http://archinect.com/hplusf/project/ucla-towell-library>  
<http://www.architectural-review.com/essays/los-angeles-reflecting-on-six-months-of-shows/8652972.article>

Hodgetts + Fung designed a proprietary tension structure for this temporary library on the UCLA campus. Conceived as a grouping of iconic pavilions, and boldly asymmetrical, the Towell Library was nevertheless tightly woven into the architectural fabric of its surroundings, with playful homage to the school colors and subtler references to the curving balustrades and banded masonry of the existing buildings. Lightweight, with a skeleton akin to that of an aircraft, the Towell's regularly-spaced aluminum ribs were covered with a stretched-fiberglass membrane that was in turn anchored with laced cables to surrounding masonry walls. On the inside, a cavernous space was criss-crossed by angled struts and the muted light admitted through pressed fiberglass panels at each end of the building. Despite its ephemeral nature, this jubilant building rapidly became an icon, with its luminous nighttime presence, and casual yet functional design.

[Columbia University, Butler Library, Facade Renovation and Plaza Design, New York, NY – USA 2010](#)  
see: [Shepley Bulfinch, Columbia University, Butler Library 2010](#)

The iconic Butler Library anchors the south end of Columbia University's Morningside Campus Mall. Built in 1934, the ten-story landmark has a facade of brick in a distinctive Flemish bond pattern, with limestone panels, cornices, and bands. A three-story limestone colonnade, a copper cheneau, copper lanterns, and cast iron marquees adorn the plaza-facing facade.

Columbia elected to undertake a multi-year, phased renovation of the library. Shepley Bulfinch Richardson and Abbott, architects of record for the project, selected Hoffmann Architects to act as plaza and facade specialists on the project team.

Pursuant to New York City Local Law 11 of 1998, an exterior wall inspection and repair ordinance, Hoffmann Architects conducted a facade evaluation, both to document conditions requiring repair as well as to identify opportunities for improved aesthetic and functional integrity. Hoffmann Architects provided cost estimates and scheduling guidelines for all necessary and recommended facade repairs.

Subsequently, Hoffmann Architects was retained to conduct a water infiltration investigation at the entry plaza. The library's 3,600 square foot north plaza exhibited widespread upheaval and differential settlement of granite slabs due to extensive water infiltration and freeze/thaw cycling. The leaking plaza had also caused damage to an underlying subterranean vault.

Hoffmann Architects developed a program of facade and plaza rehabilitation that included complete plaza reconstruction; repair, repointing, and cleaning of facade masonry surfaces; replication of missing ornamental stone pieces; restoration of copper lanterns; and restoration of cast iron marquees. Although the university decided to postpone the renovation of the plaza, our architects and engineers provided construction administration services to see the facade renovation effort to a successful completion

[Exterior Restoration & Third Party Review, Paul Rudolph Hall, Yale University, New Haven, CT - USA 2006 – 2008](#)

### **Awards:**

AIA New York State Historic Preservation Award of Excellence, 2009

AIA Connecticut Preservation Design Award, 2009

International Concrete Repair Institute Award of Excellence, 2009

New York Construction Magazine's Best of Awards Award of Merit, 2009

Connecticut Building Congress Project Team Award First Place, 2009

Since its completion in 1963, the Art + Architecture Building (rededicated Paul Rudolph Hall) has been an integral part of Yale's arts campus. The 114,000 sf cast-in-place concrete structure, with 37 terraced levels on nine stories, had succumbed to a series of destructive renovations that marred architect Paul Rudolph's original vision.

Acting as building envelope specialists, Hoffmann Architects teamed with design firm Gwathmey Siegel & Associates Architects LLC (GSAA) to reinvent the Brutalist icon. To remedy pervasive leaks, roofs and terraces were redesigned, and damaged finishes and fixtures restored. Rudolph's innovative light wells, which had admitted daylight into sub-grade floors, were uncovered and reconstructed. Some of the largest sheets of insulated glazing ever made were used to recreate the original fenestration design while meeting current energy standards. This massive glass in turn required re-engineered anchoring systems and supports, while the irregular textures of the megalithic concrete slabs demanded custom repair strategies.

The result: a stabilized, watertight, efficient building that re-articulates Rudolph's characteristic interplay of mass and light. Restoration accompanied addition of the Loria Center for the History of Art and the Haas Family Arts Library, both designed by GSAA, for which Hoffmann Architects provided third party facade and roof consultation and review.

#### **College of Lake County, University Center, Grayslake IL – USA 2005**

Construction of a 91,146 square foot Grayslake building completed in October 2005, with a formal building dedication ceremony held on October 28, 2005.

### **Awards:**

**Madigan Outstanding Project Award 2005**

Word from architect Steven Brubaker that he is now in private practice after a long association with HOK, Inc., which was in the news last year for their design of the the new Wrigley Global Innovation Center along the Chicago River on Goose Island. Brubaker's and HOK's University Center of Lake County in Grayslake this part March received the Thomas H. Madigan Award for Outstanding New Construction in Illinois from the Illinois Capital Development Board. The 90,000-square-foot facility, which serves as a Distance Learning Center for a consortium of 17 educational institutions, sited on a prairie, features two brick and concrete blocks, one housing a conference center, the other, classrooms, at either end of a winding steel and glass courtyard. According to Brubaker, the brick facings insulate against northern winds, while the central commons "opens south to the sun."

Among Brubaker's other projects is a new Technology Building for the College of Lake County, recently completed, with a satellite classroom building currently under construction. Brubaker has also recently been selected to design two new buildings for Moraine Valley College, and is teaching a second-year Master's studio at IIT.

#### **Abraham Lincoln Presidential Library and Museum, Springfield, IL – USA 2004**

SIZE 219,800 sq. ft. / 20,420 sq. m.

### **Awards:**

**AIA Illinois – Honor Award**

The Abraham Lincoln Presidential Library and Museum is the most-visited state-run presidential museum in the United States. The design attracts visitors who might otherwise overlook the historic treasures describing the story of the 16th president of the United States. The museum offers visitors an immersive experience that incorporates state-of-the-art entertainment and storytelling technology.

The library and museum are housed in separate buildings, each occupying a full city block. Connected by a fully-enclosed overhead pedestrian walkway, the entrances to both buildings are located in a rotunda-type element reminiscent of the dome of the nearby Old State Capitol, where Lincoln served as a state legislator. Together, the buildings create a unique complex where people can engage emotionally and intellectually in the life of this historic figure.

As a research library, this facility differs from most presidential libraries in that its scope covers not only Abraham Lincoln, but all of Illinois' history.

<http://www.hok.com/design/type/civic-cultural/abraham-lincoln-presidential-library-and-museum/>

#### **King Abdullah University of Science and Technology (Library), Thuwal - Saudi Arabia 2009**

**Honor Award – ASLA Georgia**

"The [Lab of the Year] judges were impressed with KAUST on multiple fronts. The total flexibility, high hat areas for research, ability to attract world-class talent, LEED Platinum status, livability, and sustainability all contributed to its selection as a winner."

R&D Magazine

This new campus along the coast of the Red Sea houses the world's most advanced collection of laboratories, equipment and instrumentation across the entire spectrum of science.

The mission of KAUST's internationally renowned scientists is to address humanity's most urgent scientific challenges related to energy and the environment. Interdisciplinary research being conducted at KAUST includes pursuing sustainable

solutions for water, energy and food.

The project team had less than 30 months to design and construct 5.5 million square feet of complex space across 27 buildings. The campus features 2 million square feet of laboratory space spread across four interconnected, 500,000-sq.-ft. buildings. Exceptionally flexible building shells and universal floor plates accommodate virtually every lab type. R&D Magazine reported that “KAUST contains just about every modern lab concept known today. Just a few of the notable features include interchangeable lab neighborhoods, changeable lab support zones, grid planning, kit-of-parts lab furniture, walkable interstitial space, overhead lab services, MEP systems integrated with lab grid, heat recovery wheels, lab visibility/transparency, collaboration spaces, simple and large circulation spines, high-height pilot areas and lab daylighting.”

The campus is Saudi Arabia's first LEED certified project and, at the time of its certification, was the world's largest LEED Platinum project.

<http://www.hok.com/design/type/education/king-abdullah-university-of-science-and-technology/>

#### **KAUST Library Wins AIA/ALA Library Building Award**

The library at King Abdullah University of Science and Technology, better known as KAUST, recently earned an AIA/ALA Library Building Award for design excellence.

This building isn't just a place to store books. Designers focused on the social and technological sides of learning to bring this library to life. (The design is sustainable, too – KAUST happens to be the world's largest LEED-NC Platinum facility!)

“Those of us who work in the KAUST library every day certainly appreciate its architectural beauty,” KAUST library director Joseph Branin said. “It is a wonderful building to work in, and more important, the students and faculty find it very attractive and functional.”

#### **King's Library at the British Museum, London, UK – UK 2002 - 2003**

“The British Museum's new King's Library has turned out to be a sensation. Every epithet implied by the word 'museum' – scholarly, monotonous, specialist, dry, boring – has been stood on its head.”

Simon Jenkins, *The Times*

SIZE 21,500 sq. ft. / 2,000 sq. m.

#### **Awards:**

Crown Estate – Crown Estate Conservation Award

Green Organization – National Gold Winner, Green Apple Awards

Royal Institute of British Architects – Conservation Commendations

Royal Institute of British Architects – RIBA Award for High Architectural Standards & Contribution to its Local Environment

Royal Institute of Chartered Surveyors – Building Conservation, London Region

HOK's conservation work at the King's Library British Museum won the prestigious Stirling Awards Crown Estate Conservation Award.

The King's Library, originally designed by Sir Robert Smirke, was built in the 1820s to house the Royal Libraries of King George II and King George III.

After the removal of the collection from the British Museum to the British Library at St. Pancras, HOK's restoration architects used historical records and drawings to guide the conservation of the King's Library. The project allowed the magnificent room to be completely revitalized by restoring the splendor of the decorative scheme and carrying out much-needed conservation, repairs and cleaning.

In consultation with the British Museum, it was determined that the room itself, considered to be one of the finest neo-classical rooms in London, should act as the primary exhibition. The library's conservation plan provides for the discreet incorporation of a variety of new and mechanical services – including air conditioning, fiberoptic lighting and power, data and security cabling – in addition to restoring the room to its original decorative order.

The project provided the British Museum with a new exhibition space devoted to the Enlightenment period while keeping interventions to the historic Grade I building to a minimum. Its architecture and décor were not only respected, but enhanced.

## **Holabird & Root, Chicago, IL – USA**

A leading design firm since its founding in 1880, Holabird & Root's history reflects the evolution of American architecture.

As the birthplace of modern architecture, Chicago has been home to some of the world's greatest designers. The Great Chicago Fire set the stage for architects to invent new possibilities for the city and architecture. It is here that Holabird & Root designed some of the world's first skyscrapers that defined the Chicago School of Architecture (*Marquette Building 1895, one of the first steel framed skyscrapers, 333 North Michigan, 1928, 120,7 m*). The innovation and originality that came out of this era continues to define our firm. Today, the firm's influence on design can be seen throughout Chicago and the rest of the world.

<http://www.holabird.com>

#### **Libraries:**

#### **University of Illinois, Springfield Brookens Library, Springfield, IL – USA Master Plan**

Holabird & Root worked with the Library Dean and staff as well as a diverse group of stakeholders to develop a Master Plan for the Brookens Library Building. There are critical flaws in the building's current spatial organization, including the way in which library and non-library functions are separated on each floor; poor wayfinding; lack of daylighting; lack of acoustic separation between spaces with partial-height walls; and current accessibility and life safety standards are not being met. The study explores alternative scenarios for effectively transforming the facility into the intellectual living room of the campus by integrating the library with complimentary academic and technology support services. Planning objectives include improving active hands-on learning environments, integrating technology into all aspects of teaching and learning, and fostering collaboration between disciplines and departments.

<http://holabird.com/work/detail/brookens-library-master-plan-study/learning/>

### [Mason City Public Library, Mason City, IA – USA 2011](#)

The Mason City Public Library, originally designed by Holabird & Root in 1939, needed to be modernized to meet its community's evolving needs. The renovation provides all new and restored finishes and furnishings, as well as new mechanical and electrical systems for state-of-the-art lighting and technology throughout the facility. The circulation through the building was modified to increase public use of the ground floor spaces. The new commons serves as a lobby and informal gathering space with internet access, café, and small retail area. The building's beautiful existing exterior and distinctive interior wood finishes were restored to maintain the building's historic character while the re-organized interior spaces give it the functionality to serve the community for the next half century.

<http://holabird.com/work/detail/mason-city-public-library/learning/>

### [Eastern Illinois University, Booth Library Renovation and Expansion, Charleston IL – USA 2002](#)

<http://castle.eiu.edu/~historia/archives/2011/2011Martin.pdf>

Mary Josephine Booth, who became University Librarian in 1904, lobbied for a free-standing library building for many years. In the early 1940s, the new building was approved and architect Joseph Booton drew up the plans. In 1948, three years after her retirement, Miss Booth turned the first shovel full of earth to begin the construction of Booth Library.

The \$2.1 million building was dedicated in 1950. Spread across four floors, 37,500 square feet (3,480 m<sup>2</sup>) of space was available with seating for 500 people and shelf space for 150,000 volumes. By 1965, the collection had grown to 114,000 volumes. Construction began for an annex in 1967, which extended shelving capacity to 475,000 volumes and expanded seating areas to hold 1,300 people. The annex opened to the public in 1968.

#### **Awards:**

**AIA Chicago Interior Architecture Award for Sensitive Renovation**

Holabird & Root's renovation and expansion of the Booth Library preserves the integrity of the original library, reestablishes a clear organization of spaces, and integrates current technologies. The design recreates the 1948 north entry of the library and restores several original architectural details. A new, open atrium connects all floors with a grand staircase, while connecting the original building and a 1968 addition. The atrium exposes the original south façade, brings natural light into the heart of the library, and provides a central study/circulation area. (Holabird)

Constructed in 1948, the original collegiate-gothic university library included a large entry hall, reading rooms, and a central circulation desk with closed stacks. While a 1968 addition provided space for growth, it detracted from the original character of the building by covering the south facade, replacing the main entry with a side door, and creating a circuitous path through the building. The architect's design preserves the integrity of the original library, reestablishing a clear organization of spaces and integrating up-to-date technology in this 134,200 square-foot renovation of existing space and 12,800 square-foot addition. Restoring the original north entry hall and adding a second south entrance created a clear north/south axis through the building. An open central atrium exposes the original south facade, bringing natural light into the heart of the library and providing a central study/circulation area. The atrium allows clear circulation and organization throughout the library. A "main street" spans one end of the facility to the other and is easily recognized from the atrium. Offices located in the south addition free the rest of the library for open reading and stacks. ...

<http://archrecord.construction.com/subscription/LoginSubscribe.aspx?cid=/projects/bts/archives/universities/EasternIllinois/overview.asp>

The collegiate-Gothic university library was originally constructed in 1948. While a 1968 addition provided space for growth, the architectural design of the addition abandoned the Gothic styling and creative detailing of the original Library. The new design preserves the integrity of the original library; reestablishes a clear organization of spaces; and integrates current technologies. A new, open atrium connects all floors with a grand staircase, while connecting the original building and the 1968 addition. The atrium brings natural light into the heart of the library and provides a central study/circulation area. The design leads users through the renovated building, which contains reference, periodicals, study areas, computer labs, and the circulation desk. The addition establishes a new south entry to the library and services (such as management and media), staff offices, archives, special collections, and historical and genealogical records.

<http://holabird.com/work/detail/booth-library-renovation-and-expansion/learning/>

### [Loras College, Academic Resource Center, Dubuque IA – USA 2002](#)

The 94,000-s.f. Academic Resource Center (ARC) encompasses the campus library, tutorial center, a museum, cafe and a bookstore. The ARC's siting offers panoramic views toward the Mississippi River, forms a new campus quadrangle, and connects to the Student Center. Several informal gathering areas and 15 closed study areas for groups up to eight surround an ornamental cascading staircase that connects all four floors.

### [Northwestern University, Galter Health Science Library, Renovation, Evanston IL – USA 1996](#)

#### **Awards:**

**Society of American Registered Architects National Design Award of Honor**

The renovation and expansion of the medical library provided a new facility to address the needs of information management. The 57,000-s.f. project included the renovation of a historic reading room, offices, group study rooms, a special collections room, a Learning Resource Center, and a new monumental stair hall to connect the various spaces. (Holabird)

A renovation and expansion project at the Galter Health Sciences Library of Northwestern University strikes a balance between traditional and future libraries, library ambiance and high technology, old and new. When guided by a vision of future building use, renovation projects can succeed in meeting many institutional goals as a viable alternative to new library buildings. Issues addressed include planning considerations, architectural history, library design, building features, information technology considerations, and ideal library space design when new construction is not possible.

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC226246/pdf/mlab00095-0078.pdf>

The renovation and expansion of the Northwestern University medical library provides a state-of-the-art facility to address the needs of information management well into the 21st century. The effective planning of the new library accounts for current and future electronic connections. Networking within the library allows for more efficient staff communications, and connections to outside lines link the library to the university's backbone as well as to various hospital networks. In addition to stack areas and reading rooms, the project includes the renovation of a historic reading room, offices for technical services and administration, group study rooms, a special collections room, and a new monumental stair hall to connect the various spaces. The 5,000-s.f. Barnes Learning Resources Center also houses 50 computer workstations configured for digital media.

## **Steven Holl Architects, New York, NY – USA**

<http://www.stevenholl.com>

### **Libraries:**

#### **Queens library, Hunter Point, New York NY – USA 2010 - 2014**

**PROGRAM:** Library with adult reading collection, children's area, teen area, cybercenter, conference room and outdoor amphitheater, **CLIENT:** New York City Department of Design and Construction / Queens Library, **BUILDING AREA (SQUARE):** 21,000 sf , **STATUS:** competition first prize

### **Awards:**

#### **2010 AWARD FOR EXCELLENCE IN DESIGN, USA, 2011**

**CREDITS:** architect – Steven Holl Architects, Steven Holl, Chris McVoy (design architects), Chris McVoy (senior partner in charge) Olaf Schmidt (associate in charge), Filipe Taboada (project architect), Bell Ying Yi Cai, Rychiee Espinosa, JongSeo Lee, Maki Matsubayashi, Michael Rusch, Dominik Sigg, Yasmin Vobis, Jeanne Wellinger (project team), engineer – Robert Silman Associates – ICOR Associates

Located on a prominent site along the East River, the design for the 21,000 square foot Queens Library at Hunters Point takes inspiration from the views of Manhattan and Roosevelt Island.

Glazed cuts in the recycled foamed aluminum facade allow users to great views toward the city as they move up a series of perimeter stairs. The program's separation into children's area, teen area and adult area, can be read in the carved cuts of the east face of the building, one façade opening for each area.

Yet the programmatic divisions are fluid. The building section of the new library is open and flowing, while the plan is compact, allowing for the most energy-efficient design and the greatest amount of public space on the site.

Along the west is an elongated reflecting pond of recycled water, which is edged in the natural grasses that once grew at the bank of the East River. Frogs, turtles, and fish inhabit this year-round natural water strip. On the east entrance side , the library together with a low park office pavilion forms a public reading garden with a bosque of ginko trees. Ascending the stair inside one can reach the rooftop reading garden with panoramic views.

At night the glowing presence of the new library along the waterfront joins the Pepsi sign and the "Long Island" sign at the old Gantry to become a beacon and icon for this new community place.

The fabric-formed concrete structure is exposed and painted white inside, while exterior insulation and a foamed aluminum rainskin give the exterior a subtle sparkle and glow, without being overly reflectant.

"Located in Hunters Point-a formerly industrial neighborhood in the midst of a transformation every bit as sweeping as its view of Manhattan across the East River-a new branch of the Queens Public Library, designed by Steven Holl Architects, will be the jewel in a crown of several projects slated for the area. In their design, Holl and senior partner Chris McVoy blow apart the Carnegie library archetype, punching irregularly shaped windows into an 80-foot-tall facade clad in aluminum panels. These curvy openings will showcase the movement of bodies, like video game characters on an iPad screen, to underscore the library's evolution from a place that circulates books to one where communities mix and mingle."

-James Murdock, Architectural Record

"Located on a prime site along New York's East River, the 21,000-square-foot Queens Library takes full advantage of its views of the Manhattan skyline. Glazed cuts in the 100-percent-recycled foamed-aluminum rainscreen allow users to track views as they move up a series of perimeter stairs. The project, which is scheduled to open in 2013, incorporates green features such as geothermal heating and rooftop photovoltaic cells that provide 10 percent of the building's power. Sustainability is important to principal Steven Holl, AIA, "especially in a library, where it can be an educational tool," he says."

-Katie Gerfen, Architect

"It is a striking expression of the continuing effort to shake the dust off of the city's aging libraries and recast them as lively communal hubs, and should go far in bolstering the civic image of Queens. The building's beguiling appearance should make it an instantly recognizable landmark. Mr. Holl's design is not about escaping this world but transforming it into something more poetic. It is the constant reminders of the larger world provided by the giant cuts through the building's surface that give the design so much resonance. Mr. Holl is not interested in creating a monastic sanctuary; he wants to build a monument to civic engagement. The views aren't just pretty; they remind us that the intellectual exchange of a library is part of a bigger collective enterprise."

-Nicolai Ouroussoff, New York Times

<http://www.stevenholl.com/project-detail.php?type=educational&id=119&page=0>

New York will be recipient of another Steven Holl project – a new library at the Queens West Development at Hunter point. Envisioned as a contemporary “urban forum”, the project will shape public space and create new connections across the Queens West Development, Hunter Points South, and the existing neighborhood of Hunters Point. Steven Holl states, “we are very pleased with the great commission for an addition to the growing community. We envision a building hovering and parous, open the the public park. A luminous form of opportunity for knowledge, standing on its own reflection in the east river”. This new library will also include community based spaces to encourage cultural growth, such as a multi-purpose meeting room fit for a variety of locally based events and a gallery space. Holl will also incorporate a separate structure to lead users into Gantry Plaza State Park, filtering people directly into the park. “Steven Holl Architects deliver dramatic architecture and innovative responses to complex client programs, and has proven to be adept at creating iconic buildings that respond to their site, culture, and history. This will be Steven Holl’s first public New York City commission, and we are looking forward to working with him on this exciting project,” said David J. Burney, Commissioner of the Department of Design and Construction, which is managing the project.

#### **Department of Philosophy, New York University, New York, NY – USA 2004 - 2007**

**PROGRAM:** NYU Department of Philosophy Faculty Offices and Graduate Student Offices, Seminar Rooms, Periodicals Library and Lounge with a Ground Floor 120-seat Auditorium to be used by the NYU Faculty of Arts

**CLIENT:** New York University, **SIZE:** 30.000 sf

The Dean of the Faculty of Arts & Sciences and a committee of Philosophy Professors collaborated in the selection of Steven Holl Architects to design the complete interior renovation of an 1890 corner building at 5 Washington Place for the consolidation of the New York University Department of Philosophy within a concept which organizes the new spaces around light and phenomenal properties of materials.

A new stair shaft below a new skylight joins the 6-level building vertically with a shifting porosity of light and shadow that change seasonally. Prismatic film was installed on the south-facing stairwell windows which occasionally break the sunlight into a prismatic rainbow. The Ground level, utilized by the entire University, contains a new curvilinear wooden auditorium on a cork floor. The upper level floors contain Faculty Offices and Seminar Rooms which are done in different shades and textures of black & white, according to the texts in Ludwig Wittgenstein's book 'Remarks on Colour'.

The building exists within the NoHo Historic District and is within the jurisdiction of the New York City Landmarks Preservation Commission. The building is part of the main NYU campus within New York City's Greenwich Village and is sited on access to Washington Square Park.

### [School of Art & Art History, University of Iowa, Iowa City IA – USA 1999 – 2006](#)

PROGRAM: Art and art history building, including facilities for sculpture, painting, printmaking, graduate studios, administrative offices, gallery, and library, CLIENT: University of Iowa, SIZE: 70,000 sf, CONSTRUCTION COST: \$16,100,000, STATUS: completed

The new School of Art and Art History is a hybrid instrument of open edges and open center; instead of an object, the building is a "formless" instrument. Implied rather than actual volumes are outlined in the disposition of spaces. Flat or curved planes are slotted together or assembled with hinged sections. Flexible spaces open out from studios in warm weather. The main horizontal passages are meeting places with interior glass walls that reveal work-in-progress. The interplay of light is controlled through shading created by the overlapping planar exterior. Exposed tension rods of the partial bridge section contribute to the linear and planar architecture. Interior floors are framed in exposed steel and concrete planks, with integrated air and services distribution in the core voids. The resulting architecture is a hybrid vision of the future, combining bridge and loft spaces, theory with practice and human requirements with scientific principles.

### [Pratt Institute, Higging Hall Insertion, Brooklyn NY – USA 1997 - 2005](#)

PROGRAM: wing for an architecture school containing: lobby, gallery, studios, auditorium, digital resource center, review room, gallery terrace, workshops, CLIENT: Pratt Institute, SIZE: 22,500 sf, STATUS: completed

#### **Awards:**

Roger H. Corbetta Merit Award, Concrete Industry Board, USA, 2006

AIA NEW YORK CHAPTER ARCHITECTURE HONOR AWARD, USA, 2007

he dissonance between the floor plates is opened at the center with panes of clear glass, allowing a view to the east court and marking an entry to the west. A two-throated skylight marks the top, striking dissonance and joining two types of light. South and north light are combined analogous to harmonious sounds in a dissonant chord. Brick from the burned section is recycled into a slumped brick and concrete base forming an entrance and viewing terrace. Rising from the burnt brick is a concrete frame supported on 6 columns spanned with concrete and sheathed with structural glass planks. An economical industrial material with translucent insulation, the planks span between floors, creating a translucent glow at night.

'It is one of those rare interventions that has ended up creating the institution as a new beginning. It has so revitalized the existing brick structures on either side that it now seems as if the Pratt School of Architecture has finally come into its own. Thus one is presented with an eminently functional but also discreetly symbolic building that is equal in terms of its significant distribution of space to any comparable school of architecture in the U.S. In the final analysis the trick has been turned by little more than a few masterly spatial gestures from the hand of a consummate architect'.

-Kenneth Frampton, Domus 896

'Through its direct expression of materials and details, the building enables the architecture school to play a didactic role for the students it houses. This quiet, spare insertion does not ape the old buildings but has its own distinct identity, creating an ensemble that provides welcome public and educational amenities and strengthens Pratt's presence in the city'.

-Annette Lecuyer, The Architectural Review, February, 2006

'At its best, Steven Holl's architecture is conceptually rich and aesthetically vibrant - both qualities that are much in evidence at Pratt. But it is the more than 100-year-old architecture embracing it that makes his building a successful "urban intervention." More and more Holl has been experimenting with slipping futuristic buildings into dense cities. ... The lines between Pratt's nineteenth-century architecture and Holl's twenty-first century contribution couldn't be clearer - the result being that neither undermines the other'.

-Fred Bernstein, Metropolis, February, 2006

'The spaces and the whole arrangement are very successful and are very good examples of a kind of new architecture that is sensible. It responds to needs, responds to site, and makes the most out of the means available'.

-Oculus: A Publication of the AIA, New York Chapter, June, 2007

'An ingenious piece of urban infill. It is one of those rare interventions that has ended up creating the institution as a new beginning. It has so revitalized the existing brick structures on either side that it now seems as if the Pratt School of Architecture has finally come into its own. Thus one is presented with an eminently functional but also discreetly symbolic building that is equal in terms of its significant distribution of space to any comparable school of architecture in the U.S. In the final analysis the trick has been turned by little more than a few masterly spatial gestures from the hand of a consummate architect'.

-Kenneth Frampton, Domus 896, October, 2006

### [College of Architecture and Landscape Architecture, University of Minnesota, Minneapolis MN – USA 1990 – 2002](#)

#### **Awards:**

Progressive Architecture Awards – USA 1990

PROGRAM: library, auditorium, offices, classrooms, CLIENT: University of Minnesota, ADDITION & RENOVATION: 47,710 & 107,220 sf, STATUS: completed

Articulating interior and exterior spaces, the CALA expansion promotes campus activity and pedestrian circulation while unifying both schools on campus. The addition is two overlaid L-shaped masses which include a library, auditorium, office, seminar and studio space. The addition is a complement and counterpoint to an existing building by Thorshov and Cerny. While this building is centralized and homogeneous, the addition offers peripheral views and morphological multiplicity. The existing is centripetal, with right angles framing four views onto the same court; the addition is centrifugal, with obtuse angles opening to exterior landscapes. In compliment to the horizontal existing building, the arms of the addition end in vertical elevations, bracketing "shafts of space" and activating the campus.

### [Herning Center of the Arts, Herning – Denmark 2005 – 2009](#)

5.600 sqf.

#### **Awards:**

**RIBA INTERNATIONAL AWARD 2010, UK, 2010**

**DANSK BYGGERI IN SITU AWARD, Denmark, 2010**

**INTERNATIONAL ARCHITECTURE AWARD, USA/Ireland, 2010**

**HERNING BUILDING OF THE YEAR, Denmark, 2010**

The Herning Center of the Arts unites, for the first time, three distinct cultural institutions: the Herning Art Museum, the MidWest Ensemble and the Socle du Monde. The new Center is intended to be an innovative forum combining visual art and music. The design fuses landscape and architecture in a one-level building that will include permanent and temporary exhibition galleries, a 150-seat auditorium, music rehearsal rooms, a restaurant, a media library, administrative offices and an active landscape. The design for the center aims at "building the site". In transforming the flat field, a new 40,000 sf. landscape of grass mounds and pools conceals all the parking and service areas while shaping inspiring bermed landscape spaces focused on reflecting pools positioned in the south sun. Herning's prominent relationship with textiles and art formed the inspiration for the design concept. Steven Holl states: 'Part of the current art collection is housed in an old shirt factory in Herning. This 1960s building was designed in the form of a shirt collar and is across the street from the site. It was the interaction between the factory owner and Arte Povera artists such as Piero Manzoni that enabled such a special collection of art to exist in Herning.' A fabric theme is carried throughout the project from the shape of the building which resembles a collection of shirtsleeves viewed from above, through the wall finishes. Fabric tarps were inserted into the formwork to yield a fabric texture to the buildings exterior walls of white concrete.

"The imaginative intersection of art, light, and architecture offers a fittingly dramatic setting for the exhibitions..."  
-Suzanne Stephens, Architectural Record

"Steven Holl's newest museum building is a complex spatial composition in harmony with its location, inspired by the art inside and replete with references to textiles. [...] Embedded in a newly formed topography, the museum is married with its setting: the four "arms" of the structure spread out into the surroundings, while grass-covered berms extend the building's geometry, connecting architecture and landscape. A walk around the structure reveals surprising changes in view, sight line, and arrangement. Its sculptural quality is intensified by the play of light and shadow. ... What has been created here is a sculptural architecture rich in metaphor, which nevertheless cedes pre-eminence to the showroom exhibits."

-Claudia Fuchs, Detail

<http://www.stevenholl.com/project-detail.php?type=museums&id=64&page=0>

### [Knut Hamsun Center Hamarøy – Norway 1994 – 2009](#)

#### **Awards:**

**Progressive Architecture Awards, USA, 1997**

**AIA NY ARCHITECTURE HONOR AWARD, USA, 2010**

**NORTH NORWEGIAN ARCHITECTURE PRIZE, Norway, 2010**

**INTERNATIONAL ARCHITECTURE AWARD, USA/Ireland, 2010**

**HOUENS FOND DIPLOM, Norway, 2012**

This center dedicated to Hamsun is located above the Arctic Circle near village of Presteid of Hamarøy and the farm where the writer grew up. The museum includes exhibition areas, a library and reading room, a cafe and an auditorium. The concept for the museum is "building as a body," creating a battleground of invisible forces. The stained black wood exterior skin is characteristic of the great wooden stave Norse churches. The spine of the building body is the central elevator, providing handicapped and freight access to all parts of the building. At the roof garden the long grass reflects the traditional Norwegian sod roofs in a different way. Strange, surprising and phenomenal experiences in space perspective and light will provide an inspiring frame for the exhibitions.

### [Franz Kafka Society Center, Prague – Czech Republic 2007 – 2008](#)

The basement of the small one-story building, formerly used for laundry and storage, now houses a space for exhibitions, lectures, and concerts, as well as it accommodates Franz Kafka's private library. On the first level of the building the Franz Kafka Society has located its offices. The previously dark and dismal spaces of the building are now washed in daylight coming through newly inserted windows and skylights that provide unexpected views to the towers of the Maisel Synagogue. Marcela Steinbachová (Skupina) and Steven Holl Architects have deliberately situated these windows off axis to the interiors. Inside the building new visual connections through openings and inspection holes give its small spaces depth and create visual connections. All new partitioning in the building, even when carving out spaces for restrooms and a kitchenette, is created exclusively by bookshelves. In one half of the building these bookshelves appear in white (offices) and the other half is filled with black bookshelves (entry hall). Coming from the central corridor one only sees black bookshelves and when coming from the offices one encounters white bookshelves. A 360-degree rotating door between the corridor and the director's offices, black on one side and white on the other, reverses white to black.

Steven Holl's two projects entrust the metonymic process to a few pieces of fixed furniture elements, thanks to which a single part can spatially recreate an entirety: pars pro toto. In both, the focus is on constructing the space around one fundamental or primary object: books in Prague and a supercomputer in New York.

PROJECT: New "Anchor" Library, LOCATION: Dover, DE, ARCHITECT: Holzman Moss Bottino Architecture, OWNER: Dover  
SIZE: 48,000 square feet, CONSTRUCTION COST: \$18.2 million, COMPLETION DATE: 2012

Founded by William Penn in 1683, the Capital City of Dover, Delaware is located 90 miles south of Philadelphia, PA and 90 miles east of Washington, DC. While its population of 34,120 (est.) is significantly less than that of Wilmington, DE, Dover's approximately 26,000 acres encompasses the largest area on the Delmarva Peninsula. The city is home to the largest military freight terminal in the world.

#### **PROJECT DETAILS**

The Dover Public Library has been serving the community of central Delaware since 1885. Taking steps to address space and technology issues, as well as to anticipate future growth, the City of Dover, the State of Delaware, and the Library elected to construct a new state-of-the art facility. The proposed Dover Public Library, to be located in Dover's downtown historic district, adjacent to the Dover City Hall and the US Post Office, has been designed to be an "anchor" library for the Kent County Region and Central Delaware. The new facility will consist of nearly 48,000 sq. ft. providing increased collection space, meeting spaces, training rooms for staff and the public, a large children's dept., a teen zone, a services center, a cybercafé, a gallery, an auditorium, an outdoor performing arts area and ample parking. The new library will undoubtedly prove to be a popular downtown destination. Kohler Ronan is happy to provide a full array of MEP/FP design services for the new facility. Our team has utilized Revit® MEP to create the preliminary equipment layouts. Based on the architects' 2-D layouts, we created a 3-D model of the spaces for each major piece of equipment; in so doing, we ensured that spaces were adequately sized. Kohler Ronan delivered a comprehensive schematic drawing package to the architect that included space requirements, sections and isometric views. The benefits of creating a complete package early in the process are realized by all members of the design team.

The Dover Library project has also afforded Kohler the opportunity to utilize our sustainable design capabilities. The project includes an under-floor air delivery system, geothermal heating and cooling, ice storage, daylighting controls, solar PV panels and low flow plumbing fixtures. Each of these items generates significant long-term savings for the project owner.

### **United States Military Academy at West Point, Thomas Jefferson Hall Library and Learning Center West Point, NY – USA 2008**

#### **RECLAIMING A MATERIAL TRADITION**

An abandoned quarry that once supplied stone for many buildings on West Point's historic campus was reopened to give the new structure continuity with the Academy's strong traditions. Choosing materials from nearby sources contributed to the project earning a bronze SPiRiT certification, a Government-initiated building-sustainability program.

#### **TRADITIONS REINTERPRETED**

Jefferson Hall reinterprets the massive masonry volumes of Military Gothic architecture in combination with broad expanses of glass and large open interior spaces full of natural light and color. Decorative motifs from cadet uniforms, military medals, seals, and inscriptions used to enliven floors, ceilings, walls, and light fixtures firmly connect this forward-looking building to the Academy's rich traditions.

[http://www.holzmanmoss.com/index.php?option=com\\_content&view=article&section=project&id=111&catid=44](http://www.holzmanmoss.com/index.php?option=com_content&view=article&section=project&id=111&catid=44)

The new 151,000-square-foot Thomas Jefferson Hall Library and Learning Center at the United States Military Academy (USMA) at West Point is scheduled to open in September 2007. The new library will allow students to enhance their studies with the latest technology, while retaining access to the past with extensive archives that hold 500,000 books. Jefferson Hall ADDITIONAL the traditional functions of a library with the modern necessities of wireless capabilities and interactive learning centers, creating a facility that will allow cadets and faculty to expand their ability to research and learn in a technology-centered environment. Working on a historic landmark such as the West Point campus was a challenge at times. Multiple site and architectural precedents influenced the design, yet it maintained the architectural integrity of the grounds. The architect worked closely with the U.S. Army Corps of Engineers and school officials to ensure the preservation of the campus design while creating a new library facility to meet modern standards.

The six-story granite building is divided into three masses with step-backs to minimize its scale and bring it into harmony with adjacent buildings. Recognizing future environmental concerns, the project conforms to the bronze level of the Army's sustainable-design program, SPiRiT, which is based on LEED 2.0. Present and future cadets will use the latest technology to become lifelong learners and be part of the information-age army.

### **George A. Purefoy Municipal Center and Public Library, Frisco, TX – USA 2006**

Client: City of Frisco, 148,000 sqf.

#### **TEXAS CIVIC FORMALITY**

The Municipal Center is Frisco's most important civic building but its impressive monumentality was created through material and programming ingenuity, not a lavish budget. Texas red-granite strips discarded from a quarry were re-purposed to clad ten large columns along the front of the Complex—an economical and sustainable interpretation of classic fluted columns. By combining a library and city hall into a single building, some facilities are shared and the Center can afford more dynamic public spaces than if each institution was housed in its own free-standing building.

#### **MEMORABLE INTERIORS**

The public areas of the Municipal Center are dramatic vaulted spaces made more memorable by the creative use of both custom and standard materials. The cherry-red, textured circulation desk is an easily identifiable destination for library users. Surprisingly, it is constructed by carving bold texture into the edge of standard plywood and staining the material a vibrant color. Richly patterned custom fabrics and flooring were used throughout the complex to unify the public spaces of both the Library and City Hall. The large quantities of materials required throughout the complex made designing the unique finishes affordable.

## [Georgia College and State University – Ina Dillard Russell Library, Milledgeville, GA – USA 2005](#)

<http://www.georgiaencyclopedia.org/articles/history-archaeology/ina-dillard-russell-1868-1953>

The Groundbreaking which expanded the building to approximately 150,000 square feet, took place Oct. 5, 2001. Principal architects for this \$19.5 million project were Cogdell & Mendrala of Savannah; associate architects were Hardy, Holzman, Pfeiffer Associates of New York. The project was completed in June 2005.

The first phase of the project added 93,000 square feet to the existing library. GC&SU got new computer labs, study rooms, and a cyber café known as Books and Brew. The small but bustling coffee shop brews Starbucks coffee, makes smoothies, serves muffins and sandwiches, and is a favorite to students and faculty alike. Throughout the renovated and expanded library are such features as 33 study rooms, a 75-person auditorium, space for 450,000 volumes, technical services, and a larger space for its special collections.

## [ImaginOn . The Joe & Joan Martin Center, Charlotte, NC – USA 2005](#)

ImaginOn joins a library and children's theater to create a place that engages children and their families with storytelling in ways unlike any before. The new facility, with its unique programs, inspires visitors of all ages to experience the written, spoken, and electronic word in a dynamic environment and has emerged as a new prototype for education, the arts, and entertainment.  
**RECYCLED MATERIALS**

Selecting renewable or recycled materials was a major priority for ImaginOn and examples of these can be found throughout the project in: the compressed wheat board of the cabinets and ceilings; the recycled plastic bottles in the computer desks and toilet stalls; the wool in the theater curtains and loft carpeting; the marmoleum of the lobby walls and flooring; and the discarded stone used in the story telling room.

[http://www.holzmanmoss.com/index.php?option=com\\_content&view=article&id=110&catid=44&section=project](http://www.holzmanmoss.com/index.php?option=com_content&view=article&id=110&catid=44&section=project)

Plans for ImaginOn: The Joe & Joan Martin Center, began in 1997 when two colleagues had an idea.

Bob Cannon, the former Executive Director of the Charlotte Mecklenburg Library (then named Public Library of Charlotte and Mecklenburg County), and Bruce LaRowe, Executive Director of Children's Theatre of Charlotte each led organizations with great programs for young people. And those programs were growing...

Bob and Bruce collaborated on how they might work together to meet the expanding needs of both organizations. Together, they imagined a new and innovative space, a shared facility. But not just a combination library/theatre - they imagined a new type of facility, and an original approach to education, learning and the arts. The more they thought about the possibilities, the more they realized Charlotte Mecklenburg Library & Children's Theatre of Charlotte shared much more than a need for more space - they also shared a powerful mission: bringing stories to life.

What came next was a unique partnership that features two state-of-the-art theatre spaces, a dedicated library space for youth 11 and under, four multi-use classrooms, a teen-only library, a multimedia production studio and an interactive exhibit space.

Together, under one roof, the Library's Executive Leadership, including Charles Brown, Vic Phillips, and now CEO Lee Keesler have worked together with Bruce and dozens of library and theatre staff members to ensure ImaginOn's success.

Since its opening in 2005, ImaginOn has received numerous accolades and awards from its neighbors in the community and gained national exposure during the 2012 Democratic National Convention when it was the site of filming for The Daily Show with Jon Stewart

At ImaginOn, young people learn in many ways, through all five senses and "from the page to the stage." It is the launching pad for remarkable journeys and endless possibilities.

### **OUR MISSION**

ImaginOn brings stories to life through extraordinary experiences that challenge, inspire and excite young minds.

### **TIMELINE**

August 1997: Children's Theatre and the Public Library create the ImaginOn concept

November 1999: Voters approve bond funds for construction

October 2000: Hardy Holzman Pfeiffer of NY (now Holzman Moss) and Gantt Huberman of Charlotte selected as architects

December 2000: Launch of Programming Endowment Campaign led by Ken Lewis and Ed Shelton

March 2003: Groundbreaking

October 2005: Grand Opening!

### **WHO ARE THE PARTNERS?**

Children's Theatre of Charlotte

Founded in 1948, Children's Theatre has been opening young minds to the wonders of live theater for over half a century. Today, it continues to be one of the most technically imaginative and resourceful theatres in the country. Annually, it reaches more than 320,000 young people and families from preschool to late teens, with four strong program areas: MainStage productions; Tarradiddle Players, the professional touring company; Community Involvement Program, and a full scope of education classes for both community and schools. Children's Theatre also works in the Charlotte-Mecklenburg Schools, with programs that address important issues in the lives of young people.

Charlotte Mecklenburg Library

Charlotte Mecklenburg Library began more than a century ago as a treasured repository of knowledge. Although humankind has evolved to read, explore and acquire knowledge in many new ways since then, one important feature has endured: Our services remain free to all who come to us with a desire to research, learn and experience. Today, libraries must remain nimble and responsive to the changing needs of our customers. Through the evolution of communication technology, there has never been more information available to more people in human history. We act as a guide through that universe of information, providing access for those who don't have it, and collaboration for those who do. We also provide the building blocks for understanding that information, through the development of literacy, skills for success, and community connections.

**WHO ARE JOE AND JOAN MARTIN?**

Joe and Joan Martin have been two of Charlotte 's most passionately committed and inspirational residents, individuals who personify everything ImaginOn strives to be. Through the generosity of Bank of America, their support of the arts and education in Charlotte and beyond is recognized and honored in the facility's formal name – ImaginOn: The Joe & Joan Martin Center.

Joe, a champion of racial and gender equity, enjoyed a heralded career with Bank of America, retiring in 2001. He is author of two books: *Fire in the Rock*, a novel about growing up in the segregated South, and *On Any Given Day*, his personal and touching account of living with ALS. Joe touched many lives – as a father, a mentor, a grandfather, brother, confidant, civic and church leader, and husband. Joe passed away on July 1, 2006 . He remains an inspiration to us all, in our work and in our lives.

Joan's commitment to our community has touched many lives as well, through her involvement in PTA, scouting, non-profit organizations, and learning programs in public schools. For 25 years, Joan has been a devoted leader of the Learning Center and a teacher at Christ Church kindergarten. She carries many titles: mother, educator, grandmother, tutor, leader, and wife.

ImaginOn is proud to be associated with Joe and Joan Martin, and our mission will always be to uphold their ideals of service and commitment to young people and to the community.

### [Middle Country Public Library, Centereach Selden, NY – USA 2003](#)

The Library's facilities have seen many changes during the past 50 years. After initially operating out of two small storefronts, the Library relocated to a newly constructed main building in 1972, while still maintaining a small branch in a nearby community.

During the 1980s, the library buildings could not support the level of service and programs provided or adequately satisfy the explosion of new residents migrating to the area. Recognizing the need for additional space, community residents overwhelmingly supported the passage of a bond issue to completely renovate and enlarge the main library, which was opened to the public in December 1986. In tandem with this expansion, the school district gave the Selden Elementary School to the library to serve as the Selden Cultural Center.

Once again, in the late 1990s, the Library determined that with every category of usage growing and the number of innovative community programs increasing, more space was needed. A bond was passed in 1999 to expand both buildings. The expansion, designed by Hardy Holzman Pfeiffer Associates (NY), of facility space by 40% enabled MCPL to maintain and nurture its position as a pioneer in library services. What began as a tiny library grew – and is still evolving — into two state-of-the-art facilities, boasting a combined total of 107,000 square feet. Some of the special spaces that are housed in the library include the Family Place, the Family Place training center, the Museum Corner, the Nature Explorium, the Miller Business Resource Center, the Underground, and the Reading Garden.

### [Grand Rapids Public Library, Grand Rapids, MN – USA 2003](#)

The historic Ryerson library was restored and the Keeler Wing addition was stripped to its skeleton frame and rebuilt in the largest improvement ever undertaken on a library in Michigan. Now the two buildings of the Grand Rapids Public Library flow together. The Beaux-Arts classical library in rusticated Bedford limestone presides over Veterans' Memorial Park. Classical ornamentation—a festooned entablature, a modillioned cornice with anthemions—add to the library's formal dignity. The library was the gift of Martin A. Ryerson (1856–1932), a prominent Chicago industrialist who was a Grand Rapids native and grandson of Antoine Campau, one of the city's earliest pioneer settlers. Aware of Shepley, Rutan and Coolidge's distinguished library designs in eastern cities and in Chicago, Ryerson himself probably selected the Boston firm to create his library for Grand Rapids. The Keeler Wing addition wrapped around and connected to the rear of the Ryerson building but disregarded its design.

In 1997 voters of Grand Rapids approved a millage to improve the city's libraries. A large portion of the millage, coupled with private donations, funded the remaking of the main library more to the twenty-first-century community's liking. To get there the addition was reconnected to the historic library, reskinned, and windows added to make it compatible with the older building. Now the Keeler Wing rests on a masonry base that resembles the stone of the historic Ryerson building, limestone and glass replaced the concrete and tan brick exterior walls, and windows rise in three-story bands. But all attention focuses on the historic Ryerson building. The library's original entrance was restored and a lofty atrium connects and integrates the 1904 and 1967 structures. The renovated and restored main library places Grand Rapids in the forefront of a national library renaissance.

### [Columbia Public Library, Daniel Boone Regional Library, Columbia, MO – USA 2002](#)

#### SPIRIT OF A COMMUNITY

Materials and colors of the Library are bold, diverse, and reflect the character of this progressive academic community. Tall heavy-timber columns that soar like grand tree trunks out of deep blue flooring of recycled tires make the three-story entry space inspiring and welcoming. Liberal use of windows and glass block in the Library brings a sense of openness and transparency, while vividly colored hand-rails and flower-like lighting bring energy and a feeling of optimism throughout the space.

#### TRADITIONAL MATERIALS REDISCOVERED

A local quarry that had not produced building stone in 40 years was asked to supply sand-stone for the new Library. The warm-colored stone, a traditional Missouri building material, gives the Library a recognizable connection with the neighborhood as well as with the region's civic architecture.

[http://www.holzmanmoss.com/index.php?option=com\\_content&view=article&id=109&catid=44&seccion=project](http://www.holzmanmoss.com/index.php?option=com_content&view=article&id=109&catid=44&seccion=project)

The Columbia Public Library is the main headquarters for the Daniel Boone Regional Library in Columbia, Missouri. The building was made possible through a \$22 million bond that was passed by the citizens of Columbia. The structure was completed in 2002, and now offers stunning views of Columbia and the University of Missouri from the translucent entrance tower.

The library board members chose a New York based architectural firm, Holtzman Moss Architecture, to transform the location at Broadway and Garth Avenue. The library was constructed on the same piece of land as the old library, and was able to utilize the steel framework as homage to the predecessor. In addition to the steel framework, a chandelier was re-installed by the same electrician who had installed it in the previous building in 1970. Though the new building introduced modern, lively architecture to the traditional, college town setting of Columbia; an attempt was made to retain pieces of history.

The project was created by architect, Nestor Bottino. Bottino created an exterior infused with color from the natural resources used to construct much of the building, such as rosy granite, red clay blocks, and “peach and cream” sandstone. The interior is a mélange of blues, purples, greens, oranges, and more, while pine wood beams cross overhead. The library boasts a large 102,000 square feet. The creation of the Columbia Public Library did bring about some turmoil. A significant amount of tax payers protested the building because they felt their tax money had been misused. The cost of the structure paired with the high profile New York firm caused many to question the reasoning behind the decisions. The library board members followed the steps necessary to ensure the

usability and longevity of the Columbia Public Library, and as a result, a stunning, lively piece of architecture was created to bring literacy to the public.

### [California Western School of Law, Law Library, San Diego, CA – USA 2000](#)

...The design phase of the project concentrated on melding the programmatic needs of the library with the aesthetic vision of the architect and law school community. Several constraints influenced both areas. First, the Board of Trustees made it clear that the \$9,000,000 appropriation for the building was firm. Second, the 12,500- square-foot lot put severe limitations on the footprint of the building. The main goal for the exterior was for the new building to serve as a visual link between the two existing campus buildings, one of which is a late 1920s Italian Renaissance style building, the other an early 1990s Post-Modern building. These buildings sit on diagonal corners of an intersection; the new library is on a third corner. The building, with its finishes, details and colors emulating the Italianate style but in a modern vernacular, is very successful in meeting this goal. The old library's interior was dark, crowded and unappealing, so an important aesthetic goal was to design a building with a feeling of light, space and professionalism. The new building has reading spaces offering panoramic views of the downtown and the bay. Stack and reading areas have both direct and indirect lighting. Wide aisles are scattered throughout the building. Cherry wood is used on some interior walls and on the specially designed tables and carrels, imbuing a warm, professional look. Stack end panels are a combination of cherry and laminate, bringing a very finished look to the stack areas. Green, burgundy and gray-toned fabric, laminates and woods are used throughout the library and in the staff offices and work areas.... (Phyllis C. Marion)

[http://www.aallnet.org/main-menu/Publications/spectrum/Archives/Vol-5/pub\\_sp0105/pub-sp0105-cali.pdf](http://www.aallnet.org/main-menu/Publications/spectrum/Archives/Vol-5/pub_sp0105/pub-sp0105-cali.pdf)

### [Bull Street Branch of the Live Oak Public Libraries, Savannah, GA – USA 2000](#)

A new expansion and renovation project was completed in 1999, restoring the Bull Street Library to its former glory and more than doubling the building's size to 66,000 square feet. The 1916 building was restored to its original condition and painted in the neoclassical style of Robert Adam. The 1966 split-block addition was replaced with an elegant new addition clad in white Georgia marble and featuring vivid colors, sweeping curved walls, and enormous window walls looking out into the canopy of surrounding live oak trees. The library's name was changed to Live Oak Public Libraries in 2002 to reflect the personality of the region as well as the life and growth of its branches.

<http://www.liveoakpl.org/about/library-history.php>

On 2002 Bull Street is, arguably, the oldest library within the Savannah city limits. The history of the entire Live Oak Libraries system is closely linked with this particular branch. It was opened in November 1916, costing \$104,041.78 to construct, the money mostly coming from a Carnegie grant. Its 23, 000 item collection was brought from East Henry Street's Carnegie Library, which had previously served the local African-American community. For more information on the Carnegie Library:[www.liveoakpl.org/upload/LibraryHistoryLeMays.pdf](http://www.liveoakpl.org/upload/LibraryHistoryLeMays.pdf)

Designed by H. W. Witcover, the Bull Street library is a beautiful example of neoclassical architecture. In the following decades the building went under several renovations. The first came in 1936 when the WPA (Works Progress Administration) added a small wing for more book stacks and painted a Robin Hood mural in the Children's Section.

In 1956, while there was no change to the building itself, it was renamed the Chatham-Effingham-Liberty Library. It served as the single library building for all three counties, only aided by book mobiles that had routes through Effingham and Liberty Counties. This service was discontinued December 31, 1944 due to a lack of funding.

Ten years later in 1966, a whole new addition, in the form of a nearby residence, was annexed to the building that doubled its size, making it better able to handle the increased traffic after segregation had ended. A reading lounge and more room for the staff were specifically designed, as well as more stack space.

In 1999, the building went through an overhaul. Restored to its prime, the building's size was again doubled to almost 66,000 sq. ft. It was painted in the very recognizable neoclassical style of Robert Adams, a famous Scottish architect, interior designer and furniture designer. He was considered the leader of the first phase classical revival in 1790 in the United Kingdom, specifically Scotland and England. Some of his most notable works are Derby House, the front screen in Whitehall, in London, Kedleston Hall, and Pulteney Bridge, in Bath. For more information on Robert Adams : [en.wikipedia.org/wiki/Robert\\_Adam](http://en.wikipedia.org/wiki/Robert_Adam)  
The Bull Street Library's split-block addition from 1966 was replaced with white Grecian marble, vivid colors in the rest of the décor, and beautiful window walls that gave a lovely view of the live oaks that line Bull Street.

In honor of these trees, the entire library system was renamed Live Oak Libraries in 2002.

### [Multnomah County Central Library, Portland, OR – USA 1997](#)

Fletcher Farr Ayotte – exec. Architect, Hardy Holzman Pfeiffer Associates – assoc. architect, McMath Dortignac – preservation consultant Hoffman Construction Co. – general contractor

One of Portland's best-loved historic landmarks, the Central Library was designed by renowned architect A.E. Doyle and constructed in 1913. Its innovative design was heralded for its functionality as well as its beauty. Over the years, the library suffered under heavy use and ill-conceived remodeling in the 1950's. By the 1990's it was overcrowded and inefficient, and 70% of its collection was inaccessible to the public.

Starting in 1993 the needs of the Library were assessed and a plan developed for a seismic and safety upgrade, incorporation of new systems, and also a re-organization of spaces. Working with George McMath, Doyle's grandson, and drawing upon historic photographs to serve as guides, lobby spaces and reading rooms were brought back to their original grandeur.

Exterior masonry was repaired. Wood windows were refurbished. Mid-century remodeling was reversed. Additional space was added in the basement and under the roof. Structural reinforcements and system upgrades were accomplished with little compromise of historic integrity.

Completed in 1997, this community landmark will inspire and educate many more generations of Portlanders. What a treasure we continue to have in the Central Library!

### [Cleveland Public Library, Cleveland, OH – USA 1996/1997](#)

#### **VIVID SPACES**

Bold saturated colors revitalize the interior of this 60-year-old institution. Richly colored patterns of the original building's coffered vaults inspired custom carpets and much of the commissioned public art. Ceramic tile can be intensely colored but is also durable—

the ideal material to highlight the new circulation desk with bright colors, large-scaled geometric patterns, and fresh interpretation of the historic "Lamp of Learning" icon that had been used as a symbol for the Library since 1925.

#### ENHANCED URBAN SPACE

The new ten-floor library extension was located in the urban and historical center of Cleveland. As well as expanding the country's third-largest lending institution, the new facility plays a major role in energizing the character of the city center. The landscaped outdoor plaza is conceived as a reading garden and its sun-filled openness is popular with many citizens that live and work in the district. Light-hearted public art was commissioned for specific locations around the exterior of the Library to greet entering patrons.

[http://www.holzmanmoss.com/index.php?option=com\\_content&view=article&id=46&catid=35&section=project](http://www.holzmanmoss.com/index.php?option=com_content&view=article&id=46&catid=35&section=project)

Discussions regarding urbanism often center around one discourse - what is a proper response to an historic urban master plan? Should something new reflect the old or interject a spirit of the new. Some believe responsive design is sensitive to the surroundings, incorporating previous established patterns and precedents. Others argue only something new is appropriate and forward-thinking. The Cleveland Public Library demonstrates what Holzman Moss Architecture considers a more sophisticated and ultimately challenging approach - merging old and new in a thoughtful fashion. The library, one of the largest circulating libraries in the country, responds to an historic urban plan with four marble-clad towers that compliment the adjacent Beaux Arts buildings and yet offset the 10-story glass oval that provides a freshness and openness to the upper reading and stack areas. The design also integrates the beloved Eastman Reading Garden illustrating that effective urbanism is responding to the public by designing a building truly for the public, a place that becomes an integral part of the city by becoming an integral part of the lives of its citizens. (Holzmann)

The construction of the new building made news on March 11, 1995, when the laying of its foundation became the largest continuous concrete pour in the city's history: 7,000 cubic yards of concrete were poured to complete the four-foot-thick foundation. The new \$65 million building was dedicated on April 12, 1997. With eleven floors, including the lower level, the new 267,000-square-foot building has more than thirty miles of book shelves--enough for 1.3 million books and is equipped with the latest electronic resources. The new building is named for Cleveland native Louis Stokes, who, in 1968, became the first African-American elected to the U.S. Congress from Ohio. During his illustrious career, Representative Stokes helped found the Congressional Black Caucus, and he became the first black member of the powerful House Appropriations Committee. He was re-elected fourteen times before retiring in 1998. The Louis Stokes Wing is one of many important buildings erected in Cleveland since the 1980s that have transformed the city's skyline while providing tangible proof of its remarkable renaissance. These include the BP America Building by H.O.K. (1985), Key Tower by Cesar Pelli & Associates (1991), Jacobs Field by H.O.K. Sports Group (1994), and I.M. Pei's Rock and Roll Hall of Fame and Museum (1995). Of all these, the Louis Stokes Wing is perhaps the most daring in its combination of traditional elements (the use of masonry, uniform cornice lines, and corner pavilions) and innovative architecture, through the use of an oval glass tower--a first for Cleveland. The \$24 million renovation of the landmark Main Building, directed by Robert P. Madison International, called for a sensitivity to the building's architectural integrity while incorporating new technologies. To the casual observer, the changes to the Main Building may not be apparent, but this serves to underscore the success of the architects in their delicate task. Electrical, plumbing, and ventilation systems were replaced. Modern fire safety systems, including sprinklers, were installed, and trenches were cut into the cement floors to accommodate wiring for new computer and electrical equipment. New mechanical machinery was placed out of sight in the basement, returning the light court to an uncluttered and light-filled state. As part of the architects' goal of returning the building to its original luster, historic ceiling finishes were restored, the exterior marble was cleaned with a gentle water spray process, historical light fixtures were restored and rewired, decorative metalwork was repaired and polished, and the original leather doors were rejuvenated. For the first time in decades, the Main Building's historic spaces and architectural details can be fully appreciated, while featuring many technological advances and conveniences. Demonstrating the Library's continuing support for the visual arts, the Library Board commissioned a substantial collection of permanent art to be included in the buildings and garden. Thirteen artists of local and national reputation created original art for the Main Library, the Louis Stokes Wing, and the Eastman Reading Garden. Selected by a jury coordinated with the Committee for Public Art, the art works are significant additions to the Library's and the city's artistic heritage. The new art at the Main Library was made possible largely by generous grants from Cleveland foundations, corporations, and nonprofit groups.

#### [Los Angeles Public Library, Central Library, Los Angeles, CA – USA 1993](#)

The Los Angeles Central Library, the largest public library in the western United States, is the centerpiece of a multi-block development, providing both a cultural facility and related landscaping for public use in the midst of a high-rise commercial district. Its expansion and rehabilitation incorporates Bertram Grosvenor Goodhue's (\*28.04.1869 Pomfret CT - +23.04.1924 New York NY) [http://en.wikipedia.org/wiki/Bertram\\_Goodhue](http://en.wikipedia.org/wiki/Bertram_Goodhue) original 1926 landmark building with significant new construction. The 550,000-square-foot facility functions as a research center and headquarters for 66 branches. In addition to 90 linear miles of shelving and seating for 1,500 patrons, the library features a board room, meeting rooms, a conference center, a 235-seat multimedia auditorium, a cafe, a bookstore, offices, and more than 1.3 acres of public space. Pfeiffer Partners' 10-year effort began with master planning and program confirmation, and included historic preservation and adaptive reuse and full interior design services, in addition to designing.

<http://www.pfeifferpartners.com/projects.php?category=4>

The last work of the major American architect Bertram G. Goodhue, the Central Library blends the past with the modern age. Its simple massed expanses of unadorned concrete and skyscraper-like profile herald modern architecture. At the same time, it alludes to ancient cultures including Egypt, Rome, Byzantium and various Islamic civilizations, as well as to Spanish Colonial and other revival styles.

Ornamental and symbolic artworks are integral to the library's design. The limestone sculptures on the building's exterior are by artist Lee Lawrie, and represent various disciplines and literary figures. The brilliantly colored tile pyramid at the building's summit features a sunburst and is topped by a hand-held torch symbolizing the light of knowledge.

The second floor of the Library includes a high-domed rotunda exploding with light and color. At the center of the dome is a stylized sunburst and an illuminated globe chandelier with the signs of the zodiac. On the surrounding walls, twelve murals painted by Dean Cornwall in 1933 depict the history of California.

The Library was proposed for demolition in the mid-1970s. Concerned citizens formed the Los Angeles Conservancy to save the Library and prevent similar crisis in the future through an on-going program to promote historic preservation. In 1983, after several years of public discussion and debate, the City Council directed the Community Redevelopment Agency (CRA) to preserve the Library.

Before restoration work could begin, however, two fires in 1986 destroyed portions of the library's vast collections and damaged many of the building's interior decorations. Despite this extensive damage, the CRA went ahead with a major rehabilitation and

expansion plan for the Library. The firm of Hardy, Holzman and Pfeiffer served as the lead architects for this project, which included both a restoration of the original building and the addition of a new wing on the library's east side. In October 1993 - more than 15 years after the building was first threatened with demolition - the Library was re-opened in a grand community celebration. <https://www.laconservancy.org/locations/los-angeles-central-library>

Gregory Walker served as Principal in Charge for the new Toco Hill Branch Library. Targeted to achieve LEED Silver certification, the facility is a regional branch library serving a local population of approximately 30,000 residents. Programmatically, the building identifies an emerging trend in library planning, which is for decreased stacks and increased areas for sitting, meeting, a/v materials, and computer access. Based on particular demographic needs, enhanced youth and children spaces, including workrooms and story time areas, are included in this particular branch. Dedicated study rooms, a generous staff work room, a 100 seat auditorium, and executive conference room round out the major program spaces.

The building site lies on the transitional edge of a 55 acre public park and boasts impressive woodland vistas on three sides, with converging streams to the south and west of the building. Topographically, the previous building and site formed a plateau which dropped off quickly towards the streams. We found great inspiration in the surrounding park setting and sought to create an urban oasis to complement it. Functionally, we were tasked with doubling the program area of the previous structure (all of which had to remain on a single level) and increasing available parking by 50%. Our design for the new facility managed these demands, while increasing the disturbed area of the site by only 10% over the original. To accomplish this, we created a second 'plateau' sectionally, situating it underneath the new structure. This new plateau removed a large area of unsuitable site fill and allowed the building to maintain a compact site footprint. It also enabled the design to maximize surrounding views and daylight opportunities.

Formally, the building and landscape comprise a type of metaphorical 'zen garden', which is defined architecturally by a granulated, infrastructural 'field' of parking, utilities, stacks, services, etc. and discreet elements or 'stones' within this field - objects that highlight unique and special programmatic opportunities, including computer training and children's exploration areas, and library reference desks. Each 'stone' becomes a kind of guidepost, containing more active learning opportunities or guiding one more directly along a chosen path. Contrast between the two systems defines and organizes the spatial narrative and flow for users of the building. Subtle overlapping systems of various architectural elements, including lighting, ducting, carpeting, window mullions, etc. complement and reinforce this reading throughout.

The building's ecological performance concentrated around four key drivers: reducing energy consumption, daylighting, stormwater management, and thermal comfort. To reduce energy consumption, the building has a very tight, thermally efficient exterior envelope; contains high efficiency lighting and HVAC systems and controls; and high performance glazing and insulation. Carefully calculated exterior wood screening mitigates southwest solar gains and improves daylight quality. We sought to minimize the overall impact on the site by limiting the constructed footprint, creating porous exterior parking surfaces, and implementing an innovative site water filtration system which will capture, filter, and return all rainfall to the existing watershed and streams.

## **Humphries Poli Architects P.C., Denver, CO – USA**

<http://www.hparch.com>

### **Libraries:**

#### **Parker Library, Parker, CO – USA on design (Groundbreaking 2014)**

A proclamation of both time and place, this library is configured to interact with exterior surroundings while articulating an internal building organization that inspires, delights, excites and affords seclusion in equal measure. Loft-like in its ability to be completely understood from the entrance, the building unfolds in a series of cascading moments that frame spectacular views and define spaces and functions without creating a sense of division.

#### **Pine River Library (Library 21c), Colorado Springs, CO – USA 2013**

### **Awards:**

#### **2014 Best Small Library in America**

“Lots of libraries are there for the community, but here in Bayfield, the community built the library,” says Amy Dodson, director of the Pine River Library (PRL), CO, selected as LJ’s Best Small Library in America, 2014, cosponsored by Library Journal and the Bill & Melinda Gates Foundation, and recipient of the award’s accompanying \$20,000 prize. Hired by the PRL trustees in May 2013, Dodson was awed by not only the support for PRL in the very diverse Bayfield community but also the community’s willingness to donate hours of volunteer work as well as lots of important gifts in kind and then vote the funds to pay for a strong staff and an experienced and innovative director.

She also credits the PRL staff for the ideas, innovations, and leadership in executing tremendous growth and change at the library in the last two years, to fulfill the PRL motto, “connecting people to possibilities.”

Since 2011, PRL has grown in physical space, expanded services and programs, and created new partnerships. In response, the library’s circulation of 111,638; physical visits, at 319,679; 271,896 virtual visits; and huge attendance at programs and special events have all exploded.

That recent growth was built on an already strong foundation. “When I arrived, I was very impressed with how advanced this small library is. I’ve worked in all kinds of public libraries, and here the library was out there on the cutting edge in technology, in programs and services, and in innovations,” Dodson says. “PRL is the library that has pushed the farthest the limits of what a library can be. I walked into a great -situation.”

Dodson bases her observations on her work experience in Nashville; Riverside County, CA; Louisville, KY; and other libraries. She earned her MLS at the University of Kentucky.

PRL is the beneficiary of a common funding mechanism in Colorado, the special taxing district. Located in Bayfield, PRL serves the 8,749 people in an independent district that has identical boundaries to those of the local school district. From the total annual budget of \$582,000, or \$66.52 per capita, \$47,408 goes for materials, and the rest keeps PRL open seven days or 62 hours a week and pays for a full-time staff of 8.5, of whom 17 percent are professional librarians.....

<http://lj.libraryjournal.com/2014/01/awards/best-small-library-in-america-2014-pine-river-library-co/>

January 29, 2014

Library Journal has named the Pine River Public Library (PRPL) the 2014 Best Small Library in America. This honor is bestowed on one library each year. Library Journal’s annual award, funded by the Bill & Melinda Gates Foundation, was created in 2005 to encourage and showcase the exemplary work of libraries serving populations under 25,000. The winning library receives a \$20,000 cash prize from the Gates Foundation, conference costs for two library representatives to attend the Public Library Association (PLA) biannual conference in 2014 in Indianapolis, and a gala reception at PLA.

In 2003, the Pine River Library District opened a new 8,000 SF library in Bayfield, Colorado. Over the next ten years the Library District determined there were numerous shortcomings in the design of the original facility and deemed the need to renovate and expand the library to provide much needed space to offer a greater flexibility in programs and services. Humphries Poli Architects was retained in 2012 to investigate alternatives for creating a re-invented library.

After conducting extensive conversations with the community it was decided to construct a 4,000 SF addition and fully renovate the existing library. The new addition features a quite adult reading area focusing on an indoor/outdoor fireplace and a highly flexible series of community meeting rooms with after-hours entry and associated restrooms. The new addition architecturally references the scale and detailing of the original library while simultaneously evoking the notion of a contemporary library planned around the comfort and ease of the patron. The massive service desk was eliminated, the height of the stacks lowered, and a separation of spaces by zones of activities and noise was implemented. The new construction was designed with a focus on energy efficiency and abundant daylighting. The new community rooms were designed to connect to outdoor reading areas focusing around a fire pit and an adjacent community garden.

In 2013, PRPL’s physical space was expanded and designed to be flexible and responsive to the community. New space includes a larger room for community meetings; a new teen zone to host after-school activities, additional Wi-Fi access; and a “garage” door with the ability to open to accommodate program overflow. Additionally, the library expanded its services outdoors in its “Living Library,” a 17,000 SF area that includes a 24-bed community garden, fruit orchard, 26-foot geodesic greenhouse, and new programming on topics such as food preparation and canning and preserving. This initiative illustrates that PRL is a library built “by the people” as dozens of volunteers donated hundreds of hours to complete the garden beds, toolshed, and greenhouse.

#### **Rocky Ford Library, Addition, Rocky Ford, CO – USA 2013**

<http://www.hparch.com/libraries/rocky-ford-library/>

#### **Teton County Library, Jackson, WY – USA 1995/2013**

Architect of Record: Gilday Architects, Associate Architect: Humphries Poli Architects  
see also: Gilday Architects

The Teton County Library, built in 1995 is a 24,000 SF library with a children's area, small teen zone, adult collection, community/meeting room and study rooms. The community of Jackson outgrew this facility quickly. The new 11,000 SF addition includes a youth wing to the south of the existing building and a new auditorium to the north. The original library expresses the surrounding landscape and history of the region with a gable roof, log walls and columns. The addition reiterates these same values and announces the connection between new and old with a relocated grand entry lobby.

### [Fort-Warren Branch Library, Denver, CO – USA 2012](http://www.hparch.com/libraries/ford-warren-branch-library/)

<http://www.hparch.com/libraries/ford-warren-branch-library/>

The Ford-Warren branch of the Denver Public Library is a popular place in the neighborhood. The branch is named after two people, Dr. Justina L. Ford and Bishop Henry White Warren. Ford was Colorado's first African-American female physician. The Black American West Museum & Heritage Center is located in Dr. Ford's former residence. Warren was a Methodist Bishop who was married to Elizabeth Iloff Warren. Together, they founded the Iloff School of Theology and were instrumental in supporting the development of the University of Denver.

### [Fruita Branch Library, Fruita, CO – USA 2011](http://www.architizer.com/projects/fruita-branch-library/)

The Mesa County Public Library District teamed up with the Fruita Community Center to build a library wing in conjunction with the new community center. The 7,000 sf Fruita Branch Library shares a main lobby, parking lot and restroom facilities with the 51,500 sf community center. The library includes a quiet reading room with a fireplace, children's area, teen zone, study and multifunction room.

Fruita, Colorado is located 260 miles west of Denver along Interstate 70. This western Colorado high desert town offers visitors and locals thrilling outdoor adventures. The library and community center site is located on the west side of town, one mile from the downtown center.

The interior space is illuminated with solar light tubes accenting colors derived from the Colorado National Monument, a local National Park featuring the breathtaking landscape of western Colorado.

The quiet reading room features locally-harvested wood ceilings and a grand fireplace for patrons to enjoy.

The Fruita Branch Library is a key component of the community center offering the residents of Fruita a place to learn, reflect and explore.

<http://www.architizer.com/projects/fruita-branch-library/>

The Fruita Branch of the Mesa County Public Library is a 7,000 SF branch library built as part of the 51,500 SF Fruita Community Center. A unique, hybrid program, the Fruita Library offers mental recreation and information resources to accompany the Community Center's facilities for fitness, swimming, and sport. The library was designed with simplicity, efficiency, and flexibility in mind. Vibrant colors create landmarks for wayfinding while solar light tubes flood the interior with daylight. The library includes a quiet reading room with a fireplace, children's area, teen zone, study and multifunction room.

<http://www.hparch.com/libraries/fruita-branch-library/>

### [Green Valley Ranch Branch Library, Denver CO – USA 2011](http://denverlibrary.org/bond/green-valley-ranch-branch-library)

The \$11.4 million dollar GVR Library, located at 4586 North Andes Court, is the first of three Better Denver Bond funded, newly constructed Denver Public Library branches to be completed or to begin construction as part of the Better Denver Bond library improvements.

The new 26,000 square foot facility incorporates the latest in library technology including customer self-checkout stations and an automated handling system utilizing Radio Frequency Identification (RFID) technology, making the checkout of materials quicker and ensuring better tracking and accessibility of Library collections.

The Library branch also boasts fifty public computers, wi-fi accessibility, a lounge complete with a fireplace and views of the outdoors, areas for children with youth-friendly furniture, a sub-dividable 100-seat community room, small meeting rooms, and even an airplane cockpit provided by United Airline's Training Facility that encourages imagination and shared learning for visitors of all ages.

"I'm excited about this new Library and the difference it will make in Green Valley and the surrounding area," says Councilman Michael Hancock. "Everything about the Library, especially the fabulous access to computers, will add so much to the area's quality of life. Thanks to all the citizens who participated in the Library's planning and design brainstorming, and thanks to the voters for endorsing the Better Denver Bonds."

As part of the City's commitment to Greenprint Denver initiatives, the Library was designed and constructed with the goal of achieving Leadership in Energy and Environmental Design (LEED) Gold Certification through sustainable construction approaches recognized by the U.S. Green Building Council. Through the use of recycled and regional materials, materials with low emissions, low-flow water fixtures, solar tubes, day-lighting, and evaporative cooling systems the facility is estimated to use approximately 60% less energy and 40% less water annually than those buildings using conventional design approaches.

The Architecture: Plains and Planes

The vision for the Branch's physical design was derived from community comments emphasizing the building's relation to the plains landscape and the airplanes of the nearby Denver International Airport. Humphries Poli Architects specifically designed the building to accentuate the "i-Plains" and the "e-Planes" concept with an aerodynamic roof form, structural detailing developed from early aircraft design, and long and linear shapes that echo strip farming and other dry-land agricultural techniques.

Additional character-defining features include a roof-line divided into four distinct levels, or "planes," and a beautiful xeriscaped garden (the "outdoor library,") which mirrors these four planes.

### [Anythink Perl Mack Library, Denver, CO – USA 2011](http://www.anythinklibraries.org/about/anythink-foundation)

<http://www.anythinklibraries.org/about/anythink-foundation>

<http://www.hparch.com/libraries/anythink-perl-mack/>

Anythink Perl Mack has served the North Denver community since 1976 and recently received full renovations and an addition of 1,800 square feet, radically modernizing the existing facility with sustainable technology and vibrant library design. A new neighborhood entrance was added to the north side of the building along El Paso Boulevard. A children's pavilion now graces the

west side of the building, and the library includes a teen space, computer lab, renovated program space and updated staffing areas. Along with a simplified parking lot, the south side of the building includes a beautiful porch for all to enjoy.

<http://www.anythinklibraries.org/location/anythink-perl-mack>

The 1975 building received a full renovation and an addition of 1,800 square feet designed by Humphries Poli Architects, radically modernizing the existing facility with sustainable technology and vibrant library design. As a way to open up the library to the entire community, a new neighborhood entrance was added to the north side of the building along El Paso Boulevard. A children's pavilion on the west side of the building, teen space, computer lab, renovated program space and updated staff areas are just some of the new features. Along with a simplified parking lot, the south side of the building now includes a beautiful porch for all to enjoy.

Sustainable features of this renovated facility include geothermal heating and cooling, day lighting, use of recycled materials and cradle-to-cradle design, and the community garden opening this spring on the building's west side. Representatives from Denver Urban Gardens will be on hand at the debut to answer questions and accept plot reservations for Anythink Perl Mack's community garden.

<http://www.yelp.com/events/denver-grand-opening-anythink-perl-mack-library-garden-party>

### **[High Prairie Branch Library, Falcon, CO – USA 2010](#)**

The 6,000 SF High Prairie Branch Library is a community center and information hub for the Eastern El Paso County. The library houses a large meeting room, children's area, teen space, computer stations, quiet reading zone, study room and a generous front porch with views to Pikes Peak.

The High Prairie Branch Library is located in Falcon, Colorado 15 miles east of Colorado Springs. The region has a strong history of ranching and agriculture and sits adjacent to a historic bridge for the Chicago and Rock Island Railroad.

To honor this history the library form is based on a classic monitor barn, featuring a high bay of clerestory windows. The structure of the library is a prefabricated steel system often used for modern barns. In addition to natural light, the library is designed to encourage the use of natural ventilation. A 40-50% reduction in energy use is accomplished by means of a geothermal heating and cooling system.

<http://www.hparch.com/libraries/high-prairie-library/>

### **[Teton County Library, Alta Branch, Alta, WY – USA 2010](#)**

<http://www.hparch.com/libraries/teton-county-library-alta-branch/>

<http://tclib.org/index.php/alta/>

### **[Pueblo West, White Branch Library, CO – USA 2010](#)**

Responding to community growth by renovating a 5,000 sq. ft. library and adding 23,000 sq. ft. of new space, the City and County of Pueblo Library District enhances capacity and community services in a dramatic transformation of space and purpose. Among numerous sustainable design principles being incorporated in this LEED Silver facility, an innovative series of light monitors will fill the library with natural light while simultaneously contributing to reduced energy consumption and lower heating and cooling costs.

<http://www.hparch.com/libraries/pueblo-west-branch/>

### **[Anythink Huron Library, Thornton, CO – USA 2010](#)**

<http://www.hparch.com/libraries/anythink-huron/>

Anythink Huron Street is a 25,000-square-foot library located at the intersection of Conifer and Huron streets in Thornton. On Feb. 6, 2010, this fantastic new facility opened its doors to library customers in the communities of Northglenn, Thornton, Federal Heights and surrounding areas. Anythink Huron Street is gold LEED certified and includes fun, inspiring spaces for all ages to enjoy.

<http://www.anythinklibraries.org/location/anythink-huron-street>

### **[Anythink Wright Farm Library, Thornton, CO – USA 2010](#)**

<http://www.hparch.com/libraries/anythink-wright-farms/>

#### **2011 Library Journal Landmark Library**

Anythink Wright Farms, located on 120th Avenue and Holly Street in Thornton, is the district's flagship branch and houses the administrative offices for the district. A computer lab, teen area, and 7,000-square-foot children's area are just some of the incredible features of the 45,000-square-foot library. Adjacent to the building is a one-acre park that includes outdoor seating, reading nooks, and a children's play area. Funding for this park was generously contributed by the Wright Farms Metro District. Continuing its dedication to sustainability, Rangeview Library District is pursuing LEED "silver" certification for the building which includes many sustainable features, including use of recycled materials, daylight harvesting and ground source heating and cooling.

<http://www.anythinklibraries.org/location/anythink-wright-farms>

The Anythink Wright Farms is the flagship library for the Rangeview Library District. This 45,000 sf library is the largest in the district and includes office space for the district's administration staff, a 7,000 sf children's area, teen zone with a Wii room, quiet reading, computer lab, study and meeting rooms, indoor and outdoor fireplace, cafe, and multipurpose space for community events. Anythink Wright Farms is located in Thornton, Colorado, ten miles north of Denver. The 8.2 acre site is located along the high-speed traffic of 120th street to the south, and a quiet neighborhood to the north.

Indoor space and outdoor space are equally important at the Anythink Wright Farms. A park available to the public sits between the library and neighborhood to the north. The library's gently sloping roof opens in the direction of the park inviting naturally diffused light into the building. The park is accessible at multiple points from within the library. Patrons are encouraged to enjoy the outdoor rooms to read, relax and play.

The Anythink Wright Farms features a light shelf above the teen zone allowing natural light to penetrate deep into the library. A raised floor system is used to accommodate mechanical, electrical, and data needs allowing for future flexibility.

The Anythink Wright Farms is a LEED Gold certified building promoting sustainability, community, learning and creativity.

<http://www.architizer.com/projects/anythink-wright-farms/>

### **[Anythink Commerce City Library, Commerce City, CO – USA 2010](#)**

<http://www.hparch.com/libraries/anythink-commerce-city/>

Anythink Commerce City, located at 7185 Monaco Street in Commerce City, is now open. The recently renovated library received includes a 2,300-square-foot addition with children's pavilion, computer lab and teen area. A reading nook with fireplace looking out onto a small enclosed garden offers a place of quiet reflection for visitors to enjoy. Sustainable features of the new building include Solatubes, carpeting made from recycled materials, geothermal heating and cooling, and a green roof above the children's pavilion planted with xeric local flora. The newly landscaped site will also include a community garden, maintained by local citizens in partnership with Denver Urban Gardens.

<http://www.anythinklibraries.org/location/anythink-commerce-city>

### [Woodbury Library – Highland Park Branch, Denver, CO – USA 2010](http://www.hparch.com/libraries/woodbury-library/)

<http://www.hparch.com/libraries/woodbury-library/>

This building has served the area as a library since its opening in 1912. The original \$22,000 grant came from the Carnegie Foundation on March 14, 1902 Wiki list

Construction began in 1912 on the Italian Renaissance style library building. Its one-story rectangular plan and symmetrical facade is highlighted by semicircular arched windows, terra cotta trim and a hipped tile roof.

This beautiful building was designed by Jules "Jock" Jacques Benedict who also designed the town hall for the City of Littleton. Jules Jacques Benois Benedict was a noted and prolific Denver, Colorado based architect who was known during his lifetime as Julius, Julius B., Jules, Jacques, "Jock," and finally J. B.

The Roger W. Woodbury, Highland Park Branch, Denver Public Library is part of the Highland Park Historic District National Register 9/17/1986, 5DV.5320.

The Woodbury Carnegie Library was recently renovated with \$350,000 from Denver bonds and reopened in January 2010 after being closed for six months. Quote Denver Post

### [Anythink Brighton Library, Brighton CO – USA 2009](http://www.anythinklibraries.org/news-item/anythink-brighton-becomes-first-carbon-positive-library-us)

<http://www.anythinklibraries.org/news-item/anythink-brighton-becomes-first-carbon-positive-library-us>

Believed to be the first carbon-positive library in the USA, In 2009 it was offsetting 176,620 pounds of carbon dioxide. The building includes a 108 kw photovoltaic system which generates more than a third of the building's power and will save the library \$30,000 a year in energy costs. Also uses geothermal heating and cooling, and incorporates Solatubes which are reflective tubes that capture daylight and deliver it inside to illuminate interior spaces. **Awards:**

**Colorado Construction Gold Hard Hat Award**

Rangeview Library District's Anythink Bennett was awarded Colorado Construction magazine's Gold Hard Hat Award for Small Project at a reception on Friday, Oct. 2. Ozi Friedrich, designer of the project, accepted the award on behalf of Humphries Poli Architects and the district.

Fransen Pittman General Contractors constructed the 7,000 sq ft Anythink Bennett Library. The new facility is triple the size of the former library that was located on the same site. Anchoring the northeast corner of the library is a 50-seat, multi-use community room with a separate entrance that may be used when the library is closed.

Architectural treatments of Anythink Bennett include a local pine-wood ceiling to add warmth to the main browsing and reference room. A shady front porch overlooking a garden serves as the library's main entrance. The high performance, energy efficient library incorporates a geothermal field/heat pump system, substantial natural daylighting and a photovoltaic solar array. Occupant sensors, low-flow toilets, solar-powered faucet controls, low-VOC paint and outdoor rain sensors are among the other sustainable features that save energy and reduce water consumption.

"We are so very proud of this honor from Colorado Construction," says Rangeview Library District director Pam Sandlian Smith. "Our goal with this project was to create a focal point in the community, a library and gathering place where everyone feels welcome. The architects and designers at Humphries Poli Architects helped us achieve that. This award proves what others recognize as well – Anythink Bennett is a special place."

The Fransen Pittman project team included Terry Hutton, LEED AP, Senior Estimator; Brian Rethmeier, LEED AP, Project Engineer; and Mark Thiesen, Superintendent.

**Awards:**

**2nd Annual Architizer A+ Awards**

The Mancos Public Library is a building that teaches lessons of renewable energy, healthy living and stewardship of natural resources. This 8,000 sf library features a colorful children's room, teen corner, adult collection, central fireplace, sustainability room and flexible meeting space.

Mancos, Colorado known as the Gateway to Mesa Verde is located 62 miles northeast of the Four Corners monument where Colorado, New Mexico, Arizona and Utah meet at one point. The library is located one block off Main Street south of the Mancos River.

The indoor and outdoor space of the library is blurred with large windows and a reading porch on the north and east side of the building. To honor the heritage and true color of local building materials the library features Aspen ceilings and masonry from regional quarries.

The mechanical systems for the Mancos Public Library utilize a transpired solar collector on the south wall. In the winter, the solar heated air at the surface of the wall is drawn through perforations, where it rises up to the building's ventilation system. This system reduces the amount of energy needed to heat fresh air. In the summer, the walls' natural ventilation cools the south face of the building.

The Mancos Public Library is a LEED Gold certified building demonstrating sustainability and encouraging community learning and creativity.

### [Paonia Public Library, Paonia, CO – USA 2009](http://www.hparch.com/libraries/paonia-public-library/)

<http://www.hparch.com/libraries/paonia-public-library/>

The Paonia Public Library Paonia, \$1.6 MILLION, Owner: Paonia Public Library Foundation, General Contractor: MW Golden Constructors, Architect: Humphries Poli Architects, Engineers: Thomas C. Anderson, Monroe & Newell Inc., Geo-Energy Services, Keenan Consulting Group, IES Inc., Start: Mary 2008, Finish: Jan. 2009

The Paonia Public Library project consisted of new construction on an 8,000-sq-ft new public library designed to comply with LEED certification.

The initial design proved to be a budgeting challenge, forcing the project management team, the owner and Delta County to devise creative solutions to seemingly overwhelming cost challenges. The initial budget was \$2.2 million, and through teamwork and a clear commitment to the community members and patrons, the project was completed for \$1.6 million.

The new facility was designed by Humphries Poli Architects of Denver to incorporate sustainable building features including a geothermal field for heating and cooling, natural lighting, optimum energy efficiency, low water landscaping, preservation of existing trees, reuse of current library shelving, and recycled building materials.

### [Louisville Public Library, Louisville, CO – USA 2006](#)

#### **Awards:**

2007 American Institute of Architects Denver Citation Award

The Louisville Public Library benefited from a strong collaborative relationship between architect, client and public. During site selection, Humphries Poli suggested a location within the City's historic district rather than a commercialized location away from town. Embracing community context, the library now stands across the street from what will soon be Louisville's commuter rail station playing an important role in the reinvigoration of the City's core. (Humphries)

### [Dolores Public Library, Dolores CO – USA 2005](#)

#### **Awards:**

Library Journal's Best Small Libraries in America - Special Mention

"We were impressed with your professionalism, as well as your ability and willingness to seek creative alternatives and cost effective solutions to meet the challenges of the project's location, environment and budget while achieving quality." -Carole Arnold, Director, Dolores Public Library District

Site on a narrow parcel parallel to the Dolores River, this design is in harmony with the small mountain town community's desire to preserve local heritage and enhance the natural environment. Open reading and community rooms with floor to ceiling window walls maintain a constant connection with the adjacent river while the building's flexible floor plan allows for reconfiguration of space to accommodate changing community needs.

<http://www.hparch.com/libraries/dolores-public-library/>

### [Pine River Library, Bayfield, CO – USA 2003/2004](#)

In 2003, the Pine River Library District opened a new 8,000 sf library in Bayfield, Colorado. Over the next ten years the Library District determined there were numerous shortcomings in the design of the original facility and deemed the need to renovate and expand the library to provide much needed space to offer a greater flexibility in programs and services. Humphries Poli Architects was retained in 2012 to investigate alternatives for creating a re-invented library.

After conducting extensive conversations with the community it was decided to construct a 4,000 sf addition and fully renovate the existing library. The new addition features a quite adult reading area focusing on an indoor/outdoor fireplace and a highly flexible series of community meeting rooms with after-hours entry and associated restrooms. The new addition architecturally references the scale and detailing of the original library while simultaneously evoking the notion of a contemporary library planned around the comfort and ease of the patron. The new community rooms were designed to connect to outdoor reading areas focusing around a fire pit and an adjacent community garden.

173,400 sqf., \$ 53,335,000

LEED Silver Certified

2011 AIA Orlando Chapter Award of Merit

2011 FEPPA Architectural Showcase 1st Place – Universities

This four-story, 171,000 square foot building will serve as the "ceremonial front door" for the new UCF College of Medicine campus located on 50-acres in Lake Nona, Florida. The building houses all medical school functions, including the medical library, lecture halls, classrooms, teaching laboratories, state-of-the-art simulation learning laboratories and a clinical skills center rivaling those of major medical schools throughout the country. Specifically, the Teaching Laboratories will focus on the biological sciences, including biochemistry, molecular biology, genetics and cell biology; the Clinical Skills Center will provide a simulated clinical setting for students to learn and practice essential skills such as conducting physical exams; and the Simulation Learning Resource Center will be equipped with training simulators and medical mannequins to simulate a variety of settings, such as an operating room, emergency room and delivery room. Additional spaces include faculty and administrative offices, kitchen and adjacent dining areas, public gathering spaces, media production room, and a student lounge and workout room.

#### [Lake Forest Park Library, Lake Forest Park, WA – USA 2012](#)

The expansion and renovation of the Lake Forest Park Library was completed in January 2012. The \$1.63 million project increased the library by 2,299 square feet to a total of 5,873 square feet, which is 60% larger than the original library. The interior of the library has a dedicated Children's Area and Teen Zone, more computers and a multipurpose room that may be sectioned off from the main library for small group meetings via a sliding glass wall. Other enhancements include additional seating and study areas, new furniture and a public computer cyber bar. The library features expanded collections, including access to a growing collection of eBooks. To adhere to green building standards, building materials were selected that contained a high level of recycled content (the aluminum used in the storefront is 100% recycled and the ceiling tiles contain 82% recycled content). There was also a focus on energy efficient lighting and the HVAC system is equipped with occupancy sensors for efficient energy use. The interior adhesives, sealants and sealers contain a low Volatile Organic Compounds (VOCs) emission level and the furniture is Greenguard certified for being low-VOC compliant. The wood used in the project is certified as a rapidly renewable resource (planted and harvested in less than a 10-year cycle) and when possible, materials were selected that were manufactured within 500 miles of the project site. Six months after the library opened, patron visits increased 16% when compared to the same six month period at the former library.

Architect: Huttenball & Oremus Contractor: CDK Construction Services

"The new library is so light, bright and cheerful. It feels spacious and open."

#### [Medgar Evers College Library, City University of New York, Brooklyn, NY – USA on design](#)

Medgar Evers College was founded as a result of collaborative efforts by community leaders, elected officials, the Chancellor, and the Board of Trustees of The City University of New York. The College, named for the late civil rights leader, Medgar Wiley Evers (1925-1963), was established in 1969 and named in 1970, with a mandate to meet the educational and social needs of the Central Brooklyn community. The College is committed to the fulfillment of this mandate.

In keeping with the philosophy of The City University and Medgar Evers College, we believe that education has the power to positively transform the lives of individuals and is the right of all individuals in the pursuit of self-actualization. Consequently, the College's mission is to develop and maintain high quality, professional, career-oriented undergraduate degree programs in the context of liberal education. The College offers programs both at the baccalaureate and at the associate degree levels, giving close attention to the articulation between the two-year and the four-year programs.

The College has a commitment to students who desire self-improvement, a sound education, an opportunity to develop a personal value system, and an opportunity to gain maximum benefits from life experience and from their environment.

Immersion Zone | Cyber Cafe | Reference Information Commons | Archives | Media Services | Information Literacy | Reading and Collections | 40,000 square feet

The renovation and addition to the Medgar Evers College Library for the City University of New York is a transformation of an existing early 1980's traditional library into a contemporary information media commons. The program study includes maintaining traditional reading and collection areas as well as introducing new library services for the demanding student population such as: information immersion zone, media services and information literacy center. In addition to the addition of new program spaces, the study evaluated the architectural and infrastructure services and proposed options for upgrade that are consistent with the program.

### [Michael J. Grant Campus, Learning Resource Center, Suffolk County Community College, Brentwood, NY – USA on design](#)

Auditorium | Information Commons | Individual and Group Study | Center for Academic Excellence | Media Center | 68,000 square feet

The Learning Resource Center at the Grant Campus of Suffolk County Community College is a prism for illuminating the interior spaces during the day and a beacon for illuminating the campus during the night. A simple nine square cube deploys the library program on two floors. Portions of the cube are removed or expanded to allow natural light to penetrate deep within the building, thus the majority of spaces have access to day light and view throughout the facility. A central lantern houses the information commons, the collaborative learning room of the college, and rises above the roof line of the library to become a visible beacon or cupola on the campus. The lantern can be clearly seen from any part of the academic mall or from the east and west parking lots. In addition, a portion of the second floor is removed on the south side of the building to allow sunlight deep within the building and to create a green roof garden for outdoor reading and study during pleasant weather.

<http://www.ikon5architects.com/content/view/118/245/>

### [Kirkwood Public Library, New Castle County, New Castle, DE – USA 2009](#)

22,500 sqf., Community Meeting Room, Children's Library, Young Adults, Information Technology Center, EMS Station

Set along a commercial shopping strip highway, Kirkwood Public Library is designed as roadside billboard announcing the public civic function of reading, learning and exploration within. The objective was to create a new branch library for a growing diverse community that would serve as the iconic community center of the neighborhood. Shopping malls and fast food restaurants flank both sides of the site. Large commercial signs are stacked along the highway where this library is sited and a small scale residential neighborhood is set one block in from the highway site. It is within this context, that the library appears as a collection of books set on the highway. Facing the highway, the building facade, of stacked horizontal cement board siding, is fashioned as a series of boxes that represent the edge of books piled up on their side.

#### **Traverwood Branch Library, Ann Arbor MI – USA 2008**

Project Traverwood Branch Library, Ann Arbor, Mich., Client Ann Arbor District Library, Architect Inform Studio, Northville, Mich.—Kenneth Van Tine (technical design principal); Gina Van Tine (marketing, managing principal); Michael Guthrie (design principal); Cory Lavigne (design director, project architect); Andrew Mannion, Lindsay Cooper, Amy Baker, Jason Roberts, Elizabeth Huck, Melissa Alexander (project team), Associate Architect VPS Architecture, Mechanical/Electrical/Durkin & Villalta Partners, Structural Robert Darvas Associates, Construction Manager O'Neal Construction, Size 16,776 square feet

Client Ann Arbor District Library, Architect Inform Studio, Northville, Mich.—Kenneth Van Tine (technical design principal); Gina Van Tine (marketing, managing principal); Michael Guthrie (design principal); Cory Lavigne (design director, project architect); Andrew Mannion, Lindsay Cooper, Amy Baker, Jason Roberts, Elizabeth Huck, Melissa Alexander (project team) Associate Architect VPS Architecture, Size 16,776 square feet

By the time planning began four years ago for the new Traverwood Branch Library in Ann Arbor, Mich., it was tragic but not surprising for the architects at Inform Studio, of nearby Northville, to find dozens of dead ash trees on the proposed building site. Since 2002, some 30 million ash trees in southeastern Michigan have fallen prey to the emerald ash borer, a beetle thought to have boarded a ship or plane from Asia to the Midwest that has since spread to at least 14 states. Its larvae kill trees by eating their inner bark. Early in a design process focused on sustainability, the library's architects at Inform realized the dead trees' wood could become part of the library itself. It worked: The ash trees were used to make interior flooring, wall panels, ceilings and, conspicuously, a row of expressive columns along a bank of windows facing south into a nature preserve, their naked, sealed surfaces visibly scarred in rune-like patterns by chewing borers. "A happy accident"—and a guiding one, says Cory Lavigne, the firm's design director. Under the direction of artisan woodworker John Yarema, based nearby in Troy, Mich., the team employed draft horses to help move the ash logs, which were cut by hand, and began a yearlong process of air-drying the wood in Yarema's shop. Such an intensely local material would add to the design's ecology-minded strategies. Those strategies start with an L-shaped footprint for the 16,776-square-foot building, pushed to the street edges of the four-acre site to avoid intruding on the surrounding woods. Parking beneath the building, plus the city's permission to have 29 cars park on the street, reduced the city's parking requirement to only 26 paved spots on the site. Cost-cutting sacrificed a green roof, but a rain garden, planted with sedges, slows down and helps filter stormwater runoff that percolates into a nearby retention pond. Inside the library, narrow floor plates allow the sun to light the warm, ash-lined reading areas. The massing also promotes passive ventilation through operable windows activated by low-voltage actuators, which tie back to the mechanical systems. Window blinds on south- and west-facing façades are controlled by daylight sensors to cut unwanted glare. The Traverwood library is the third new branch built by the Ann Arbor District Library under its current director, Josie Parker, who wanted a sustainable building design but didn't initially expect, before the ash-tree epiphany, how poignant the results would be. People, not least children, may see the logs and ask what damaged them.

The answer points back to a constant consumer demand for cheap imported goods in a global economy, which has hurt places like Michigan well before the emerald ash borer arrived. The architects at Inform followed the U.S. Green Building Council's playbook closely but didn't apply for LEED status because, quite simply, the money on certification could be used in the building itself. "In our community, it isn't necessary to pursue LEED to have a project validated and supported," Parker says. "What's important in Ann Arbor is that we do the right thing by our community."

<http://www.architectmagazine.com/community-projects/traverwood-branch-library.aspx>

In 2005, The Ann Arbor District Library (AADL) purchased approximately 4 acres of property for a new branch library to serve the Northeast quadrant of the city of Ann Arbor.

This was to be the third branch library constructed by the current administration since 2002 and replace a 4000 sq.ft. branch library within an existing strip mall located along a nearby commercial corridor.

The site, heavily wooded and densely vegetated, is located on the Southwest corner of the intersection of Huron Parkway and Traverwood Drive.

A thorough site analysis identified edges of the property along the Southwest corner which were scarred and sparsely vegetated, an ideal and well suited location for placement of the building footprint. Further evaluation of on-site circulation brought about considerations to allow parking under the building, reducing the amount of impervious surface on-site and minimizing further site clearing.

During the early stages of the site planning process, we collectively began to discuss and investigate considerations for harvesting wood from the site for re-use in the building. Although densely populated, many of the trees were Ash, suffering the effects of the Emerald Ash Borer (EAB), a destructive beetle, which aggressively attacks North American Ash trees through feeding on the water and nutrient conducting tissues under the bark, killing the tree over a period of 3 to 5 years. Preliminary research showed that this particular tree species is especially well-suited to milling, as the insect does not damage the interior portion of the wood. With so much value found in a close, abundant, natural resource, unique uses of the wood in the floors, walls, ceiling and structure of the new branch library were proposed and considered. Additionally, grants from the South East Michigan Resource Conservation & Development Council aided in the feasibility of this reutilization.

Lumberjacks with custom ordered Swedish Gransfurs axes in hand, proceeded to manually cut down 60+/- dead ash trees, ranging in diameter from 10" to 22", in order to harvest the trees as sensitively as possible. This practice avoids unnecessary disturbance to the existing woods and existing ecosystem while minimizing root damage to the existing trees, which typically results from the use of large machinery for such a task. To avoid the inevitable damage caused by large machinery needed to remove the logs from the site, Percherron Draft Horses were used to pull those trees which were cut beyond the limits of construction to a cleared portion of the site.

The utilization of the Ash would become a major component to the design of the library interior. Used in the floors, walls and ceiling as an interior wrapper, the ash wood flows from the main entry floor and walls into a ceiling condition stretching along the entire eastern interior edge of the building and culminating in an Ash wrapped reading rooms whose primary views will be focused westward from where the wood originated. Additionally, large sections of the logs were used as structural columns, accommodating vertical and lateral loading along the large southwest expanse of glass. The bark has been stripped from these log columns exposing the randomized grooves and carvings created by the EAB larvae - creating, what is in essence, a visual and tactile testament to the life and destruction of the Ash tree in Michigan and surrounding area, allowing generations to be exposed to an autopsy report of an extinct species in the region.

#### **Airway Heights Library, Airway Heights, WA – USA 1997**

client: Spokane County Library District, location: Airway Heights, Washington, size: 4,000 SF

The library's dominant feature is a large horizontal roof plane that resembles an airplane wing, tying the structure to the community and its association with the local aeronautical industry. A continuous clerestory window provides generous natural light to the main interior space.

## **JCJ Architecture, Hartford CT – USA**

<http://www.jcj.com>

### **Libraries:**

#### **South Berwick Library, Renovation, South Berwick, ME – USA 2012**

Size: 18,000 SF, Cost: \$1.9 million, Completion: 2012

With the goal of finding a more suitable location for this local library, JCJ Architecture was hired to study the feasibility of reusing an historic church for this new purpose. The JCJ team conducted an analysis of the existing site and building, developed potential options and did a comparative analysis of an entirely new facility. A prototypical space program was developed with formulation

plans. Each design included a conceptual estimate of probable costs and an analysis was done to compare all scenarios. The initial study also included an approach to phasing and moving into the church property.

Through an energetic capital campaign, the Friends of the Library were able to raise 50% of the costs of the project in less than 2 years. This enabled the completion of the work. The project was divided into multiple phases which were funded in different town budget cycles:

- Exterior Envelope - new roof, new siding and windows.
- New Addition and Mechanical/ Electrical work Interior Finishes - carpeting, millwork, paint furnishings and equipment.

### **[Bethel Library, Bethel, CT – USA 2011](#)**

Size: 24,000 SF, Cost: \$4.2 million, Completion: Phase 1: 2005, Phase 2: 2011

The expanded and renovated Bethel Public Library has become a centerpiece of this quintessential New England town. JCJ was hired in 2003 and remained involved with the project until its final phase was completed in 2011. JCJ assisted the owner in developing a budget that would be supported by the Town and developing an appropriate plan for phased implementation. Part of the success of this phasing was the ability to retain the State Library's grant of five hundred thousand dollars and the ability to provide the town with an easily expanded library once the funds were available. Construction of the first phase was completed in 2003 and only occupied the main floor of a two story addition. The library rehired JCJ again in 2007 to re-evaluate needs and provide a plan for the upper floor fit out, as well as the much overdue historic renovations to the Seelye House. JCJ assisted the library to prepare and receive successful grants from both the CT State Library and the CT Historic Trust.

<http://www.jcj.com/bethelpubliclibrary>

### **[Montaukett Learning Resource Center, SUNNY Suffolk County Community College, Riverhead, NY – USA 2010](#)**

Size: 20,000 SF, Cost: \$5.1 million, Completion: 2010

With a campus dominated by 1960s brick structures with punched windows, design objectives for the MLRC included creating a campus focal point, establishing the north edge of what had been an unfinished quadrangle and establishing areas for future development. The campus had constraints including a protected pine barrens to the north and an underground utilities system running through the center of campus. The building design and location created a cohesive new identity for the campus: contextual without being derivative and a clear aesthetic direction for future campus expansions.

Serving a non-traditional student population, the MLRC is geared to meet the needs of all learners with variety of spaces: conventional study tables and carrels, study rooms to accommodate groups of students, lounge seating with tablet arms and booth seating for informal study groups. The MLRC has gone further with the addition of unique learning settings for Information Literacy, Distance Learning, Academic Skills and ESL. Classrooms have peripheral computer stations for independent work, a video projection system and center tables where the students gather for lectures. Repositionable furniture and fixtures maximize flexibility.

Recognition:

Learning by Design, Honorable Mention, 2012

<http://www.jcj.com/montaukettlearningresourcecenter>

Sited to centralize the Riverhead campus and allow for future expansion of the academic core, the design of the building responds to current needs while defining the next phases of development. The new facility subdivides the current large open space into two more appropriately-scaled quadrangles, which will each be visually connected by the central, transparent great hall of the library. The Montaukett Learning Resource Center includes a research as well as a lending library, a technology center, gallery/café, lecture hall, and study areas open to the campus' 25,000 students. This innovative green project was designed to utilize wind energy, graywater, argon glass, and sunshades.

### **[Sun City Library, Menifee, CA – USA 2009](#)**

Size: 10,739 SF, Cost: \$3.7 million, Completion: 2009

Inspired by the mountainous desert terrain of Riverside, JCJ Architecture designed Sun City Library to blend the Southwest environment with natural materials and contemporary architecture.

Taking advantage of the sunny climate, the library is surrounded with full height windows showcasing a beautifully complimentary landscape. An architecturally dramatic entrance includes a raised atrium ceiling and clerestory windows that fill the lobby with daylight.

This \$3.7 million remodel and expansion provide a total square footage of 10,739, adding over 4,000 square feet to the bustling library and creating shelf space for approximately 30,000 additional books and digital resources. The renovated library design now encompasses a community room, children and teen area and meeting rooms where visitors can experience the warmth and beauty of the outdoors.

<http://www.jcj.com/suncitylibrary>

### **[Simsbury Public Library, Simsbury, CT – USA 2008](#)**

Size: 40,000 SF, Cost: \$350,600, Completion: 2008

Midway through construction, stakeholders determined the need to retain consulting services from an interior designer with library expertise. JCJ Architecture was retained to create a dynamic design that would appeal to a wide range of users and within a limited budget.

The finished project includes a dedicated preschooler discovery zone, teen center and a variety of public meeting spaces. Simsbury Public Library re-opened to accolades in the spring of 2008. It ranks among the top five of Connecticut's Public Libraries according to Hennen's American Public Library Ratings.

<http://www.jcj.com/simsburypubliclibrary>

### **[UCONN Waterbury Library, Waterbury, CT – USA 2003](#)**

Size: 17,050 SF, Cost: \$5.5 million; Completion: 2003

Set within the University of Connecticut's 97,000 square foot Waterbury Campus, this library is the dramatic and functional center of the school. The library compliments existing downtown buildings in scale, texture, materials, and spirit and has space for 46,250 volumes within its vaulted three-story space. The library features a three-story open stack configuration with mezzanines wrapping on two floors and includes meeting rooms, reading carrels and multi-media storage & viewing. The campus library allows students to access resources located on the University's main campus as well as the library resources of the five regional campuses, the Law School and the University Health Center.

<http://www.jcj.com/uconnwaterburylibrary>

....The three-story building's features include 10 classrooms, four seminar rooms, a large lecture hall, four computer labs, a large library with cathedral ceilings and study carrels encircling the mezzanine on the second and third floors, and 38 faculty offices. All are within easy walking distance of each other. Also within easy reach is the heart of downtown Waterbury, with its shops, restaurants, a park, and access to mass transit....

<http://www.advance.uconn.edu/2003/030922/03092201.htm>

<http://www.lib.uconn.edu/libraries/waterbury/>

### **Mission Valley Library, San Diego, CA – USA 2004**

Size: 20,000 SF, Cost: \$5.1 million, Completion: 2004

Set in the corner of a larger commercial development, the constrained site for the Mission Valley Library was the catalyst and inspiration behind a highly efficient and compact plan. The building's striking design fosters a direct relationship with the San Diego River and features a gently curving plan that mimics the river's edge. Unique structural columns are designed to appear as trees with large metal plates suspended between tree branches to replicate a tree canopy. A portion of the second floor mezzanine was created as a secured outdoor space where patrons can read a book while basking in the sun and savoring the cool ocean breezes. Components of the complex consist of a large community room, a children's library, a computer lab with 16 computer stations, two seminar rooms and the Friends of the Library book salesroom.

<http://www.jcj.com/missionvalleylibrary>

### **Learning Commons & Museum, Effat University, Jeddah - Saudi Arabia 2013**

Size: 50,000 SF, Cost: n/a, Completion: 2013

Effat University hired JCJ Architecture to assist them in conceptual design and project scope definition for a new Learning Commons and Museum. This stand-alone building is to be the first completed building of a three building project which will ultimately add both a Student Life Enhancement Center and a Graduate Studies Building.

Effat is a unique women's university offering professional degrees in architecture, engineering, technology and an array of other programs. The walled campus currently has an underutilized corner that had been identified to the JCJ team as the location for all three of the new buildings.

JCJ's services included a week long, on-site workshop that involved meeting with stakeholders, students, faculty and potential donors to best understand their needs. By the fifth day our team was able to produce conceptual design ideas and layouts for the project. These were presented to the University for feedback, which was favorably received.

After developing design schemes, JCJ continued to work with the University as Design Architect and served as a design liaison to an architectural firm in Jeddah who prepared construction documents.

#### **Libraries:**

### **Windmill Library & Service Center, Las Vegas, NV – USA 2010**

New Construction, Architect: JMA Architecture Studios, Size: 36,233 sq. ft. (library, including future expansion space), 124,490 sq. ft. (full building, including administrative offices), Cost: \$45.7 million (full building)

The Windmill Library was built for future expansion, with more than 7,000 square feet that has been finished on the outside and wired and plumbed on the inside but that is currently unused. When the community grows, the dividing wall can be removed and that space converted to house library materials. The building features automated sorting equipment and RFID technology to improve material turnaround, and a custom self-service kiosk where patrons can pay fines and fees electronically, while a rooftop solar array will produce up to 8 percent of the building's energy demand.

[http://americanlibrariesmagazine.org/al\\_focus/photos/las-vegas-clark-county-library-district-windmill-library-and-service-center](http://americanlibrariesmagazine.org/al_focus/photos/las-vegas-clark-county-library-district-windmill-library-and-service-center)

The Windmill Library & Service Center, Las Vegas–Clark County Library District, NV, is the largest project this year, at \$45.7 million, encompassing 142,149 square feet. The building envelope was designed to provide efficiency and harmony among systems. Exterior balconies provide space for receptions and relaxation in the desert environment.

### **Centennial Hills Library, Las Vegas, NV – USA 2009**

Hundreds of local residents attended the grand opening of the Centennial Hills Library on Saturday, and 3-year-old Lizzie Creed had only been inside for a few minutes before selecting her first book — “Disney Story Time.”

“We’re very excited,” said her mother, Lisa Creed of Centennial Hills. “Before this opened, we had to make the drive to the Rainbow Library. We only live a mile away from here, so we’ll be coming here a lot.”

Centennial Hills Library is located at 6711 N. Buffalo Drive near the intersection of the 215 Beltway and Centennial Parkway, adjacent to the Centennial Hills Community Center. Construction of the \$20 million project began in July 2007, said Thomas Schoeman, president of JMA Architecture. At 32,431 square feet, Centennial Hills Library features 110,000 volumes, 42 public computers, a café and wireless Internet access. There is also a young adult library, art gallery and 1,200-square-foot multipurpose room. The library also utilizes numerous sustainable features, Schoeman said. “This is an environmentally responsible building,” he said. “Water consumption is 30 percent below the minimum energy guidelines and energy consumption is 40 percent below.”

The building extensively uses natural lighting to minimize the amount of electricity needed during daylight hours, with large windows and skylights throughout its hallways and main rooms.

## **Philip Johnson (\*08.07.1906 Cleveland OH - + 25.01.2005 New Canaan CT) – Alan Ritchie Architects, New York – USA**

<http://www.forarchitects.com/firm.aspx?id=1213>

The firm of Philip Johnson/Alan Ritchie Architects has been recognized as one of the most creative and innovative architectural firms for over half a century. Philip Johnson's leadership in the modern movement, and later playing a seminal role in the introduction of post-modernism and deconstructivism, has helped to form new ideas and exciting directions in design and architecture around the world. Now, under the leadership of Alan Ritchie, who worked with Philip Johnson for over twenty-five years, the firm continues to explore and present new and cutting edge designs. In 2004, when Philip Johnson retired, he expressed his confidence in passing on his legacy on to Alan Ritchie.

Philip Johnson/Alan Ritchie Architects is a New York Professional Corporation, with a staff of over twenty people and an in-house interior design group. The firm also has a registered architectural office in Shanghai, China with a staff of eighteen.

The firm of Philip Johnson/Alan Ritchie Architects has been recognized as one of the most creative and innovative architectural firms for over half a century. Philip Johnson's leadership in the modern movement, and later playing a seminal role in the introduction of post-modernism and deconstructivism, has helped to form new ideas and exciting directions in design and architecture around the world. Now, under the leadership of Alan Ritchie, who worked with Philip Johnson for over twenty-five years, the firm continues to explore and present new and cutting edge designs. In 2004, when Philip Johnson retired, he expressed his confidence in passing on his legacy on to Alan Ritchie. Philip Johnson/Alan Ritchie Architects is a New York Professional Corporation, with a staff of over twenty people and an in-house interior design group. The firm also has a registered architectural office in Shanghai, China with a staff of eighteen. Alan Ritchie, the managing partner of the firm, is a respected designer in his own right and has been responsible for the implementation of many of the office's most important designs. Mr. Ritchie and other senior members of the staff provide the knowledge necessary to assure the ultimate success of the project.

Philip Johnson/Alan Ritchie Architects' emphasis is on quality design and an understanding that input from the client is critical to its process. The firm's philosophy is founded on the belief that understanding the client's desires, needs and goals is an essential first step in generating designs that are functionally as well as aesthetically successful. Technical excellence, adherence to established schedules and budgets, and long-term performance are among its most important design objectives.

A team led by a senior member of the firm is established at the outset of each project and carries it through from design to completion of construction. This participation and continuity results in the creation of completed projects of the highest quality and design excellence.

The firm has won numerous awards and is well-known for many distinguished buildings, such as the AT&T Corporate (a.k.a. Sony) Headquarters, Lipstick Building, Penzoil Place, Trump International, Williams Tower, Chrysler Center, The Amon Carter Museum, The Metropolitan, and The Business Center at Drexel University.

### **Libraries:**

[Mathematics Tower / Science Library – Brown Hall Annex – Ohio State University, Columbus, OH – USA 1992](#)

Philip Johnson/John Burgee with Collins, Reimer & Gordon Architects 1992

Only blocks away from Peter Eisenman's Wexner Center for The Visual Arts (Columbus, Ohio) stand two understated buildings by Ohio native Philip Johnson. Though physically close to the Wexner Center, they are stylistically very distant from Eisenman's Deconstructivist structure. Johnson does, however, use the Wexner Center for inspiration (however loosely). In his two symmetrical brick buildings, he takes a design cue from a turret that Eisenman used in his design for the Wexner Center in order to evoke a campus building that once stood on the OSU campus.

In both of these buildings, Johnson uses brick in an inventive and layered manner that gives the buildings character, while allowing them to blend particularly well with other brick faced buildings in that area of the campus.

Located in a far less visible area within the campus that Eisenman's building, Johnson's design takes a back seat in both literal and architectural terms to the Wexner Center. By using materials that respect the environment, Johnson achieves a fluent transition from building to building, a feature which college campuses the sizes of Ohio State commonly lack. In these two buildings, Johnson manages to create interesting patterns and elegant use of materials within what is essentially a simple set educational structure. This notion is perhaps a sign of Johnson's lingering devotion to Mies van der Rohe and Mies' ability to use both elegant materials in interesting ways as well as his ability to elevate simple materials to nearly monumental heights.

The Mathematics Tower Science and Engineering Library were dedicated a year after Johnson's Museum of Television and Radio (New York City, NY) and five years after his Momentum Place (Dallas, TX.) yet Johnson's two buildings in Columbus share some qualities with these other Postmodernist offerings. In Columbus, Johnson displays a scaled back and clearly more institutional rendition of the arched entrances and symmetrical ornamentation from buildings like Momentum Place and The Museum of Television and Radio. Though possibly more restricted in monetary terms as well as in size in Columbus, Johnson still manages to shine, in this case by creating a small park-like setting in front of the Library by leaving large trees uncut. Though they partially obscure the view of building's facade year round, they give much needed shade during the summer, and in a way mimic the indoor courtyards which Johnson executed in buildings for more luxurious private clients such as PPG in Pittsburgh and Momentum Place (now Bank One Center) in Texas. <http://www.galinsky.com/buildings/ohiomath/index.htm>

## **Johnson Fain, Los Angeles, CA – USA**

<http://www.johnsonfain.com>

### **Libraries:**

[Los Angeles Unified School Center \(LAUSD\), Los Angeles, CA – USA 2006](#)

€ 161.000.000

The largest new high school for the Los Angeles Unified School District, Miguel Contreras Learning Center is located on approximately 18 acres in downtown Los Angeles in the Crown Hill District. The project addresses critical overcrowding at Belmont and Marshall High Schools by providing 71 classrooms and shared athletic facilities for the benefit of the academic community.

Facilities that can be shared with the community, such as the auditorium are sited intentionally to avoid disrupting classes.

Reflecting the density and scale of its urban location, the high school accommodates approximately 1,700 students in 221,100 square

feet of space and is comprised of an auditorium/administration building, two classroom wings, [library/multimedia labs](#), food services/cafeteria, two gymnasiums, and a parking structure. The Classroom wings are distinctive with their open air vertical circulation stairs, open air corridors and a floating corrugated steel roof with butterfly shaped beams located above the central circulation spine of the buildings, providing protection from the inclement weather but allowing natural ventilation. The Courtyard is enlivened with distinctive smaller garden elements and performance spaces, each extensions of ground level teaching rooms. These include an outdoor music garden adjacent to the Instrumental music classroom, an outdoor stage platform adjacent to the Dance classroom, an Herb Garden and informal "cook out" pergola adjacent to the Culinary Arts classroom and a stepped garden for nature sketching adjacent to the Art Studio. Garden steps on the western edge of the courtyard function as an informal amphitheater for school announcements. The two Gymnasias, Sports Fields, Olympic size Pool, and Parking are located in the northern portion of the site in a self-contained Sports Complex.

<http://www.johnsonfain.com/architecture/102>

### [Playa Vista Library, Los Angeles, CA – USA 2004](#)

The project is a new 10,500 square foot branch library for the new community of Playa Vista located on the far West Side of Los Angeles. Landscape elements help define a pedestrian entry court and gardens are designed for views from within the library. The site provides parking for 21 cars. The library is a part of the first phase of residential development, which also includes a recreational clubhouse, nearby residential neighborhoods and an adjacent Community Center. The building program includes a 1,000 square foot community meeting room, specially designed areas for children's storytelling and a central reading room two stories high surrounded by books and natural light. The structure is wood-framed finished in a combination of plaster, wood and corrugated metals, reflecting the informality of the beach communities. The reading room is the cultural space around which specialized collections are organized and provides high clerestory light into the core of the building.

<http://www.johnsonfain.com/architecture/33>

### [Johnson Favaro Architects, Culver City, CA – USA](#)

<http://www.johnsonfavaro.com>

#### **Libraries:**

### [Manhattan Beach Library, Manhattan Beach, CA – USA 2015](#)

The new Manhattan Beach Library will replace the existing Library to address heightened demand for Library services by the local community. The new two-story 20,000 square foot Library, designed by Los Angeles-based architect Johnson Favaro, will feature a glass façade offering users a panoramic view of the Pacific Ocean, and will open up to the civic center plaza in the rear. The new Manhattan Beach Library will not only serve as a resource for books but also as a community hub with educational and cultural activities for a diverse constituency.

<http://www.lacountyarts.org/civcart/projectdetails/id/211>

<http://www.youtube.com/watch?v=4eLIQULISk>

<http://manhattanbeach.patch.com/groups/city-manager-david-carmany/p/manhattan-beach-county-library-groundbreaking>

Our design of the new City of Manhattan Beach branch of the County of Los Angeles Public Library replaces the existing one-story 12,500 SF facility with a two story 22,500 SF facility located in the city's downtown civic center along Highland Avenue. Occupying only half of the area of the original building, the new library allows for a nearly doubled expansion of the civic center plaza with open space. Designed for LEED Gold certification, the new library will include a dedicated children's library, a community meeting room, a teen center, adult collections, reading areas and public access technology. A key component of the ground floor is the children's library, as the current one is the most heavily used in all of the county library system. On the second floor, dramatic views of the Pacific Ocean are highlighted with a sweeping panorama from Malibu to the north and Palos Verdes and Catalina Island to the south. The library is part of a comprehensive facilities and open space strategic master plan for the city that was completed by our firm in 2008.

<http://www.johnsonfavaro.com/our-work/manhattan-beach-library>

### [Beverly Hills Library, \(Childrens Library\) Beverly Hills, CA – USA 2013](#)

The Friends of the Beverly Hills Public Library, founded in 1959, raised funds to enhance the library's services. In 1962, a bond issue for a new building failed by 464 votes. A second bond issue to fund the construction of the library, however, passed in 1963. The library opened in August 1965.

The library underwent extensive renovation in 1990 under Charles Moore's (+31.10.1925 Benton Harbor, MI - + 16.12.1993 Austin, TX) Renovation Group design. The plan included a new building for the library, which opened September 4, 1990.

### [West Hollywood Library & Municipal Garage, West Hollywood, CA – USA 2011](#)

Named one of the top works of public architecture to open in Southern California in the last decade by Los Angeles Times Architecture Critic Christopher Hawthorne, the new West Hollywood Library is the largest capital investment and most significant civic building in the 25-year history of the City of West Hollywood. The new library and expansion of the West Hollywood Park is part of the first phase of implementation of the West Hollywood Park Master Plan, completed by our firm in 2004. Certified LEED Gold, the three-story 48,000 SF facility includes reading lounges, integrated computer and technology areas, group study rooms, shelving for over 150,000 volumes, special collections including an LGBT area and HIV/AIDS information center, the Wells Fargo Center, a children's library and theatre, a teen area, a community meeting room, city council chambers, also used as venue for community events and performances, a café, a bookstore and the city's public access cable television broadcast station. The project

also includes two parking garages, a 90-car subterranean structure for library patrons and a 330 car, five level parking garage.

### **Granby Public Library, Granby, MA – USA 2013**

The Granby Public Library is a new building on a new site, close to the Granby town common. The new building houses a new children's library, teen room, meeting spaces and greatly expanded adults collections and reading rooms. The building is designed to recall the architecture of the original library, while providing state-of-the-art library services. The project was funded with a construction grant from the Massachusetts Board of Library Commissioners, private donations, and local funding.

<http://johnson-roberts.com/JRA/granby-public-library/>

### **Mashpee Public Library, Mashpee, MA – USA 2010**

The new Mashpee Public Library replaces the existing library on a site in Mashpee Commons. This project has received LEED Silver certification. The building's green features include a chilled beam mechanical system, an extensive roof top 20 KWH Photovoltaic system, low water consumption plantings, and an on-site storm water management system, including a bioswale garden to filter stormwater runoff. An interactive web-based weather station in the lobby allowing realtime interactive display of the energy savings and production elements helps to educate the public on sustainable features within the building.

<http://johnson-roberts.com/JRA/mashpee-public-library/>

### **Brighton Branch Library, Boston, MA - 2010**

The Boston Public Library's Brighton Branch is an active neighborhood facility that was constructed in 1968. Renovations to this 16,000 square foot library provide accessibility and enhanced technology capabilities.

The project was awarded LEED Silver certification: sustainable elements include two new entry vestibules for temperature control, all new lighting and windows that improve views and daylighting, and upgraded HVAC and plumbing equipment.

### **Sunderland Public Library, Sunderland, MA – USA 2004**

The new Sunderland Public Library is located adjacent to the Town Offices and the Town Recreation Fields. Planned for ease of use and efficient operations by staff, the new library provides a separate children's room, meeting room, and reading areas.

Johnson Roberts Associates provided both building design and site selection services for the new Sunderland Public Library.

### **Blackstone Public Library, Blackstone, MA – USA 2004**

The new Blackstone Public Library was designed to reflect the architectural heritage of its context in this historic mill town.

In the children's stacks, a local artist was hired to create sculptural shelving ends with colorful animal, hot air balloon, and train motifs. Throughout the rest of the building, brick, wood, and steel create a raw look on the interior similar to that of an old mill, and the glazing and high ceilings allow for increased daylighting and an uplifting feeling of spaciousness within the interior.

**Libraries:**

### **Duvall Library, Duvall, WA – USA 2012**

The new 8,000 SF library is located within the historical district of "Old Town" Duvall, situated at the northeast corner of the Main Street (HWY 203) and NE Stephens Street intersection. The design of the new library was governed by the requirement to fit this

history along with the scale and character of Main Street and reflects the wonderful character of Duvall: rural yet urban, sophisticated yet authentic, warm and rustic yet modern. The enclosing shell is adorned with recycled barn wood and a living roof, weathered steel and glass. Inside this responsive shell, the materials remain, yet are transformed. A perforated plywood ceiling creates an acoustic environment that is quiet and calm, but lively enough to create a communal sense. Hand blown glass light fixtures speak to the craft still present in Duvall. The children's area sports circular cubbies perfect for curling up with a book – they are nearly always occupied. And the meeting room provides a light and area resource for an active community. The Duvall Library is seeking LEED Certification and is the result of a wonderful collaboration between citizens, the Friends of the Duvall Library, KCLS Administration and the design team.

### [Cascade Park Community Library, Vancouver, WA – 2009](#)

**Awards:**

**Community Pride Design Award, 2010**

Nestled between a second-growth forest and a community center, the Cascade Park Community Library in Vancouver, Washington provides a natural living room for visitors. JA worked in collaboration with **Opsis Architecture** <http://opsisarch.com> to design the new 24,000 SF library with the goal of creating an enduring model of environmentally responsible civic architecture and public hub for this rapidly growing suburban community.

Within this glassy shelter, life cycle learning is key. Movement is linked with word and image in the children's area. New modes of communication are explored in the juvenile and teen zones. Innovative accommodations are made for adult education. The library's footprint is shaped to preserve significant tree stands, and its walls are placed to frame views while screening cars, parking and future development. Site-milled Douglas fir will be used throughout as well as under-floor displacement systems for heating and cooling, extensive daylighting and on-site stormwater management with rain gardens. The design is forward-looking, sustaining and sustainable: a creative solution in a constantly changing landscape of information.

### [South Park Library, Seattle, WA – USA 2006](#)

The South Park neighborhood in Seattle is a rich and diverse place. It has a strong Latin American influence but is also home to Pacific Islanders, Vietnamese, and dozens of other ethnic groups. The library is a meeting place and focal point for this underappreciated part of the city and in that spirit the design includes a courtyard or "front porch" for South Park. The red stucco is a lively reference to the area's Latin American flavor, as is the outer and inner courtyard in the design. LEED Equivalent.

<http://www.archdaily.com/102429/south-park-library-johnston-architects/>

### [Bozeman Library, Bozeman, MT – USA 2006](#)

Bozeman Library anchors one end of a vibrant Montana town. It acts as a cultural magnet for Galatin county and a primary year round destination for patrons. The site borders on Main street to the north, Pete's Hill to the south, downtown to the west and Lindley Park to the east. The citizens of the region have developed an impressive private and public funding program to make this great new facility a reality. Soaring windows, incredible views of the Bridger Mountains from the Montana Room and an expansive physical and electronic library will bring exceptional information services to the region.

The Bozeman Library has also been awarded LEED Silver certification.

Green features include:

- natural daylighting
- a photovoltaic electrical generation system
- water harvesting and reuse
- water-efficient plumbing
- the use of low-VOC and recycled materials
- the recycling of construction debris

<http://johnstonarchitects.com/projects/public/bozeman-library/>

### [S'Klallam House of Knowledge, Kingston, WA - USA 2003](#)

The House of Knowledge is the realization of a dream for the Port Gamble S'Klallam Tribe near Kingston, Washington. The project consists of a new Longhouse, Education Center, future Elder Center and future Library. The heart and soul of the complex is the Longhouse. It's cedar clad exterior and interior walls enclose a vast performance space and built-in wood seating, supported by a frame of Douglas Fir log columns and beams. The Longhouse is the first such building of it's kind in over 100 years for the S'Klallam Tribe. This project is a collaboration between Johnston Architects and Cutler Anderson Architects

<http://www.cutler-anderson.com> of Bainbridge Island.

### [Capitol Hill Library, Portland, OR – USA 2003](#)

The project consists of a new library on the site of an existing library at the corner of Harvard and E. Republican St. The site is the border between commercial and multi-family zones of Capitol Hill. In collaboration with James Cutler, the library is designed to be environmentally sensitive. The building is wrapped by a "vertical garden" which extends inside the building as well as out. The library also extends the living environment found in the residential neighborhood to the west towards the commercial district to the east through its two story central reading room, lined and surrounded by plant material and books, which will be a refuge of calm and quiet for those visiting from the commercial area. The exterior expression of the building is urban, the library will have an urban edge as well as a living skin. LEED Equivalent.

### [Richmond Beach Library, Shoreline \(King County Library\), WA – USA 2001](#)

The 5,250 SF Richmond Beach Library located within Richmond Beach Park, is designed to provide community level services including a collection of 45,000 volumes, electronic catalog, internet access, lounge and a meeting room. The library is prominent from the surrounding park and this is reflected in its design. Aesthetically, the building has been designed to “fit” the image of a building in the park. Arbors, trellises and berms surround the building to help it make it an integral and positive aspect of the park landscape.

### [Maple Valley Library, Maple Valley, WA – USA 2000](#)

see also: [Cutler Anderson](#)

#### **Awards:**

**Institute Honor Awards for Architecture 2002**

This project is a library focusing on the craft of building in wood while capturing and recycling water.

Built in the midst of a rapidly developing suburban area, this 12,000 square-foot library is designed to serve the long term needs of the community while attempting to preserve the small 1-3/4 acre forest in which it is placed.

The book collection, lounges, children’s areas, offices and study areas are designed for maximum flexibility while attempting to visually connect the occupants with the living world around them.

The “U” shaped shed roof that was designed to minimize the visual impact of the building/forest side of the building while presenting a “crown” of wooden eaves to the busy arterial road to the south. The roof configuration also serves to gather all of the water to one central gravel pool. The edges of the pool are serrated in order to catch organic debris that will serve as nutrients for a “moss pool.” By visually displaying the amount of water displaced by the building and the life that it can foster, it is hoped that this wooden building will further connect its users to the place.

#### **Jury Comments**

“Siting of building and parking accomplished with extraordinary care to preserve the landscape...focuses on the craft of building in wood...the details give simple spaces great authority...makes an event of capturing and recycling of water.”

### [Corvallis Public Library \(Benton County Library\), Corvallis, OR – USA 1993](#)

Corvallis Public Library – 1931, The building that will house the Corvallis Public Library is completed. It is designed by the architectural firm of A.E. Doyle and Associates of Portland and is generally attributed to the genius of Pietro Belluschi, head of the firm and chief designer.

[http://boundless.uoregon.edu/cdm4/item\\_viewer.php?CISOROOT=/archives&CISOPTR=1405&CISOBX=1&REC=20](http://boundless.uoregon.edu/cdm4/item_viewer.php?CISOROOT=/archives&CISOPTR=1405&CISOBX=1&REC=20)

The historic Corvallis Library was originally designed by Pietro Belluschi (Pietro Beluschi, \*18.08.1899 Ancona Italy - + 14.02.1994 Portland, OR USA) with funding from the Carnegie Foundation. The building marked a transition period for Belluschi between earlier traditional work and later modern efforts, resulting in a wonderful blend of tradition and forward-thinking design. The original building had been expanded in 1966 by simply attaching a large box shape to the end of the existing structure.

Ray Johnston, while at Cardwell Thomas and Associates <http://www.cardwellarchitects.com>, designed a 42,000 s.f. addition to this building with underground parking and enhanced connections to the adjacent park. The design inserted a new form between the original building and the addition, resulting in a more graceful blend from old to new.

Ray assisted librarian Deborah Jacobs in the development of a library program, the implementation of a successful bond campaign and the initiation of construction documents on this well received project.

### [Samuel Coleridge Taylor Elementary School Library, Baltimore, MD – USA 2013](#)

Size:1,839 square feet

Owner:Baltimore City Public Schools in partnership with The Harry and Jeanette Weinberg Foundation

The Historic Samuel Coleridge Taylor Elementary was selected as one of the schools for the second year of the Harry and Jeannette Weinberg Foundation and Baltimore City Public Schools Baltimore Library Project. The project is currently under design. The proposed design restores some of the historical features of the space that have been erased over subsequent renovations while opening up the space to natural light and incorporating colorful design elements.

<http://www.jrsarchitects.com/projects/sct>

## **Southwest Baltimore Charter School Library Renovation, Baltimore, MD – USA 2012**

Project Size:2,655 square feet, Completed:2012, Owner:Baltimore City Public Schools in partnership with The Harry and Jeanette Weinberg Foundation, General Contractor:Centennial Contractors Enterprises, Inc., Interior Design:Kirk Design

SBCS was one of the three pilot projects for a multi-year initiative of a public private partnership with the Harry and Jeanette Weinberg Foundation and Baltimore City Public Schools. The Baltimore Library Project, a collaborative effort to design, build, equip, and staff school libraries in high-poverty neighborhoods is based on the Robin Hood Foundation Library Projects in New York City Public Schools. The aim of the initiative is to create welcoming and engaging libraries full of new books and technology that encourage students to read. At Southwest Baltimore Charter School, the roof drains and conduit layered underneath the already low ceiling presented the design challenge. The space was divided into distinct areas demarcated by changes in ceiling heights that helped define and create the space. Working with the interior designer on the project, we introduced colorful graphics, printed window shades, comfortable overstuffed benches and furniture. The result is a library that welcomes and encourages kids to linger with a book. It is the heart of the school.

<http://www.jrsarchitects.com/projects/sbcs>

## **Moravia Park Elementary School Library, Baltimore, MD - USA 2012**

Design Team: John Srygley, AIA, Ana Castro, AIA, Eric Shore, Liz Bulger, Louis Seidel Interior Design:Kirk Designs Owners: Baltimore City Public Schools in partnership with The Harry and Jeanette Weinberg

### **The Problem:**

Baltimore schools are so aged, dilapidated, underused and underfunded that they struggle to meet the minimum needs of the student population, much less inspire them to overcome the social and environmental challenges that weigh them down. Limited available funding has to be focused on areas of greatest need and leveraged through public private partnerships. One of the most interesting of these partnerships is the Baltimore Library Project, a multi-year, public/private interdisciplinary collaborative effort to design, build, equip, and staff school libraries in high-poverty neighborhoods. Based on the Robin Hood Foundation Library Projects in New York City Public Schools, the aim of the initiative is to create welcoming and engaging libraries full of new books and technology that encourage students to read.

The School and the Project: Moravia Park Elementary (1972) is an open plan school. The library was prominently located at the top of a huge, dimly-lit ramp/circulation core and, in the manner of the open plan, open to circulation and physically open to the noise, activity and distraction of adjacent classrooms. The result was very much a feeling of library in a lobby corridor, constantly disrupted and perturbed. The project was to create a new, welcoming, library, an oasis of calm conducive to settling back with a book, including new fixtures, furniture, equipment, and reading materials:

- Informal reading areas with soft, comfortable chairs or other seating that would encourage students and their parents/guardians to read together.

- A flexible floor plan with separate areas for study and research, instruction, and group discussion.

- An administrative area with a circulation counter and librarian's desk.

- Book shelving to accommodate a collection of more than 7,500 books.

- E-readers (Nooks) including training and a content management system.

- A bank of computers and other technological instructional devices.

- A "Parenting Corner" for parents/guardians

### **The Solution:**

What was once a drab ramp/corridor is transformed using a complementary color palette and the use of light fixtures as a sculptural element to create a higher visibility from the school entry, conceptually expanding the library to generate interest and intrigue. The ramp/entry now terminates in a triumphal "gate" announcing the library domain, but the library and through corridor are open to each other. The library stacks and reading area are formally centered around the focal element of the "Rotunda" a combination of book and display shelving, bench seating and wooden risers that double as seating for children during story time and provide a stage platform for activities such as puppet shows. Benches and niches provide opportunities for small group learning or just to be alone with a book. A parent-child reading area with casual seating provides a place where adults can work one-on-one with students.

Cloudy "lexan" was replaced with clear glass. Graphics and bright colors further enhance the experience and strengthen the concept that there is a world beyond waiting within the books on the shelves.

<http://www.jrsarchitects.com/projects/moravia>

## **Thomas Johnson Library Renovation, Baltimore, MD – USA 2012**

Project Size:4,350 square feet, Completed: August 2012, Design team:John Srygley, AIA, Ana Castro, AIA, Eric Shore, Liz Bulger, Louis Seidel Contractor:Plano-Coudon, LLC Interior design:Kirk Designs Mechanical/Electrical engineer:Sidhu Associates Photography:Alain Jaramillo Owner:Baltimore City Public Schools

Baltimore schools are so aged, dilapidated, underused and underfunded that they struggle to meet the minimum needs of the student population, much less inspire them to overcome the social and environmental challenges that weigh them down. Limited available funding has to be focused on areas of greatest need and leveraged through public private partnerships. One of the most interesting of these partnerships is the Baltimore Library Project, a multi-year, public/private interdisciplinary collaborative effort by the Harry and Jeanette Weinberg Foundation and Baltimore City Public Schools to design, build, equip, and staff school libraries in high-poverty neighborhoods. Based on the Robin Hood Foundation Library Projects in New York City Public Schools, the aim of the initiative is to create welcoming and engaging libraries full of new books and technology that encourage students to read.

Thomas Johnson Elementary (1977) is of the vintage of schools built virtually without windows. The lack of daylight and low ceilings were a major affliction to the library, where the designers compensated by installing borrowed light windows to even darker corridors. The library entries were undifferentiated doors on a long dark corridor. The project was to create a new, welcoming, library, an oasis of calm conducive to settling back with a book, including new fixtures, furniture, equipment, and reading materials:

- Informal reading areas with soft, comfortable chairs or other seating that would encourage students and their parents/guardians to read together.

- A flexible floor plan with separate areas for study and research, instruction, and group discussion.

- An administrative area with a circulation counter and librarian's desk.

- Book shelving to house a collection of more than 7,500 books.

- E-readers (Nooks) including training and a content management system.

- A bank of computers and other technological instructional devices.

- A "Parenting Corner" for parents/guardians

The library glows with warm wood and bright colors. Even the book cart was painted an accent color. The entry was created at the intersection of two corridors by clipping the corner and asserting the hierarchy of the library with colorful giant books, signage, color, lighting, changes in floor and ceiling geometry and materials. The "Rotunda" greets the kids on arrival, offering a bright and

cheerful refuge with bench seating and wooden risers that double as seating for children during story time and provide a stage platform for activities such as puppet shows. Benches and niches provide opportunities for small group learning or just to be alone with a book. A parent-child reading area with casual seating provides a place where adults can work one-on-one with students. Graphics and bright colors further enhance the experience and strengthen the concept that there is a world beyond waiting within the books on the shelves.

<http://www.jrsarchitects.com/projects/tj>

### [Edgecombe Circle Media Center, Baltimore, MD – USA 2011](#)

General Contractor:JLN Construction

The school library had not undergone any renovations since it was built over 50 years ago. Existing bookcases were replaced with new, richly colored casework. The low ceiling was raised and replaced with a metallic acoustical ceiling system, the floors with a colorful curving pattern and the yellowed lexan glazing replaced with clear glass. The result is a bright and playful space illuminated with natural light. The children's reading area is defined by globe lighting that is visible from the street and announces the space as visitors approach. The new storefront entry from the corridor creates an open and welcoming entrance.

<http://www.jrsarchitects.com/projects/edgecombe>

### [Baltimore Polytechnic Institute HS Media Center, Baltimore, MD – USA 2011](#)

General Contractor:Mid Atlantic Construction

The media center at Baltimore Polytechnic Institute, Baltimore's premiere engineering and technology high school, was loud, dim and drab. The design concept was to integrate the design into the educational theme of the school. The low ceiling was removed and the concrete T-structure exposed and inset with curved acoustical ceiling panels. The surface mounted lighting was all replaced and new appropriate lighting installed. The upgrades also included new windows, air conditioning, and new it infrastructure. The open seating area with integrated technology (laptop connections for power and data) reinforces the mission of the school.

<http://www.jrsarchitects.com/projects/polytechnic>

### [Booker T. Washington Library, Baltimore, MD – USA 2010](#)

GENERAL CONTRACTOR: Mirabile Construction

Thurgood Marshall and Cab Calloway are two of the more famous graduates who once walked the halls of Booker T. Washington Middle School. Built in 1895, the school has a rich history spanning over a century and is located in a historic building that is one of only two buildings in Baltimore designated a National Landmark. The school had seen a dramatic decline over the last forty years and had fallen into a considerable state of disrepair and neglect. After years of poor academic performance, the school was designated a Turnaround School and received federal funding for improvements. The first major transformative project at the school was the renovation of the library, which consisted of a stacks area and a separate computer room. The prior renovation in the early eighties had dropped an 8' ceiling, concealing the top panels of the windows. The window glazing had been replaced by Lexan that over time turned a cloudy yellow like cataracts. The project was to create a new, welcoming, library, an oasis of calm conducive to settling back with a book, including new fixtures, furniture, equipment, and reading materials: Informal reading areas with soft, comfortable chairs or other seating that would encourage students and their parents/guardians to read together.

A flexible floor plan with separate areas for study and research, instruction, and group discussion.

An administrative area with a circulation counter and librarian's desk.

Book shelving to house a collection of more than 7,500 books.

A bank of computers and other technological instructional devices.

Two smaller rooms were merged into one, connected by the recovered window wall. Dark stained wood bookcases customized to look like built-ins, coffered ceilings with indirect lighting, and a stainless steel circulation desk evoke a collegiate atmosphere. The original wood floor, overlaid with 3 layers of vinyl tile, was scheduled to be revealed and refinished, but had been too badly damaged by prior renovations; it was overlaid with a new tongue in groove birch floor. Plaster was removed from the end walls at either end to reveal the massive masonry walls beneath. The greatest transformation, however, was in the restoration of natural light by restoring the original ceiling height along the window wall, where the windows and casings were stained to match the bookcases.

### [Kallmann McKinnell & Wood Architects, Boston, MA – USA](#)

<http://www.kmwarch.com>

#### **Libraries:**

### [University of California San Diego, Graduate School of Management, La Jolla, CA – USA master plan](#)

(The future of the project is uncertain at this time)

135,000 sqf.

Overlooking the Salk Institute and Pacific Ocean to the west, the new Graduate Management School will be the University's first North Campus academic building, sited just north of the new Eleanor Roosevelt College (nearing construction completion), a part of the campus presently devoted to surface parking. The 135,000 gsf, four-story facility will house an entirely new program offering an education in management skills for a region regarded as an incubator for entrepreneurial high-tech and bio-tech companies.

Traversing a thirty-foot slope, the building's triangular plan defines the campus Landscape Master Plan's green "Wedge" north of the new undergraduate college. The Management School's entry porch engages the high point of the campus' historic Ridge Walk, where the University's founder would recruit potential faculty members with enticing ocean views. The "Wedge" walkway, per the Master Plan, is aligned with the summer solstice. Astride this defining edge, the building's main stairway affords dramatic views of the Pacific Ocean.

The public functions of the building - classrooms, library, computer laboratory, cafeteria, commons, and 300-seat auditorium - are organized on the first two levels, both entered from grade: Level 1 accessed from the new courtyard, and Level 2 from the entry porch at Ridge Walk. Levels 3 and 4 provide academic and administrative offices, including the Dean's administrative suite and an adjacent Multi-purpose Room. Included in the public functions are nine tiered case-study classrooms, each accommodating 60 seats, three flat-floor classrooms for 30 students each, 3 seminar rooms and 20 group study rooms. Nearly one-hundred faculty offices are provided, supported by spaces for ten assistants and fifty Ph.D. stations. A variety of conference rooms and lounges on each of the office floors provide facilities for formal and informal meetings. Classrooms and offices are linked to the most advanced digital and audio-visual technologies.

The building exterior features an advanced rain-screen terra cotta cladding system. A large portal on the north elevation provides access to the courtyard for students and visitors, as well as emergency vehicles. This entry anchors the Master Plan's north-south pedestrian pathway, intended to link future North Campus buildings. The courtyard provides both landscaped and paved areas, accommodating informal gatherings, study groups, cafe seating, and graduation ceremonies.

### [John M. Olin Library, Expansion and Renovation, Washington University, St. Louis, MI – USA 2004](#)

In association with Paradigm Architecture. (Kallmann)

184.000 / 16.000 sqf.

#### **Awards:**

2004 AIA St. Louis Chapter Design Award

Located at the heart of the Hilltop Campus, KMW's sixth building project for Washington University was the expansion and renovation of the existing central university library. The program called for a perimeter expansion at grade; the complete replanning and renovation of all of non-stack areas; and the redesign of the entire exterior to enhance the existing character of this vintage 1962 facility and bring more natural light to the redefined reading areas. The reworking of the exterior entailed the replacement of the solid masonry walls on the east and west sides of the top floor with a sun-screened curtain wall and an expansion of the number of windows on the floor below.

A new 7,000-sf Internet café now occupies the southeast corner of the building, where an existing outdoor courtyard was transformed into a three-story atrium, providing a fresh spatial focus for both the library and the café. As part of the complete reconfiguration of the ground floor, the entrance was moved from the east to the south side of the building, improving the controlled access through a common entry vestibule and consolidating the various user services – circulation, reserve, reference, inter-library loan – into a single shared-services and checkout desk. In order to increase the visibility of the most important holdings, the reading and work areas of Special Collections, which houses rare and archival materials, were relocated to the ground floor.

The dramatic transparency of the ground floor creates views to and from the rest of campus: an assertion of the connection between the cloistered study of the library and the rest of college life.

#### **Awards:**

1st Award Design. The Masonry Institute, Inc. 2001

The new library for Howard University Law School is a state-of-the-art facility supporting legal research and instruction. This four-story, 76,000 square foot building provides for a book collection of up to 215,000 volumes; seating for over 295 students, including 90 open carrels, with all locations wired for computer use; enlarged micro-form and audio-visual facilities; and distinctive rooms of wood and brick for special collections, newspaper and periodical reading, and the Rare Book Collection. The library is organized around the second floor triple-height Reading Room, which addresses the new courtyard and the existing Holy Cross Hall to the south. The tall windows of this 4,000 square foot space give views onto the landscaped courtyard and celebrate the display of readers and books to the campus. Table and lounge seating for 80 students are provided in this great room, as well as the 2,000 volume reference collection. The book collection and individual study carrels are distributed equally on Floors 2, 3 and 4, which open directly to the Reading Room. (Kallmann)

### [Washington University, Olin School of Business, Charles F. Knight Executive Education Center \(Resource Library\), St. Louis, MI – 2001](#)

#### **Awards:**

2001 AGC?Keystone Award for Masonry Construction

The new Charles F. Knight Executive Education Center has become an integral part of the Hilltop Campus of Washington University in St. Louis. The new building is located on the northern edge of the great lawn "quadrangle" that forms the heart of the campus. The building is located directly across the lawn from Simon Hall (also designed by KMW) that houses the full complement of the programs for the Olin School of Business.

As a center for executive education and campus conferences, one of the primary objectives of the Charles F. Knight Executive Education Center is to integrate executive students and conference attendees into the physical and social environment of the University. Towards this end the new facility has been designed to spatially reintroduce the executives to an academic environment. Upon passing through the double height lobby, a monumental stair, which fosters the student's progression through the program as well as through the building, is first discovered. This stair ascends through a three-storied atrium space, which gently navigates the

dramatic change in grade from the initial point of entry to the Hilltop Campus. Flanking this stair is the reception desk and the main bank of elevators. To the west, off the lobby, is the first of three well appointed student lounges.

This entrance floor offers an introduction to the both the academic and business functions of the school. Beyond the reception desk for the hotel and conference functions is the Student Resource Center. This facility provides a broad range of student support and placement functions for both the undergraduate and graduate programs of the School of Business. It contains a resource library, study rooms, placement offices and 24 individual interview rooms. There are significant recruitment programs for the school and this facility supports all related activities.

Ascending the monumental stair, flooded with natural light from the courtyard windows of the level above, to a generous landing at the second level affords the engagement of the second floor. The atrium serves to organize this, the main instructional level. Here, three state of the art tiered classrooms as well as a traditional classroom, supported by ample breakout rooms, a classroom lounge, and the student Business Center form the instructional core of The Charles F. Knight Executive Education Center. Finally, on the upper two floors of the building are 63 hotel rooms, fitness center, seminar rooms and Pub Lounge for the executive programs.

### [Washinton University, George W. Brown School of Social Work, Brown Hall Renovation, St. Louis, MI – USA 2000](#)

In association with Paradigm Architecture

#### **Awards:**

1999 Excellence in Masonry Merit Award, Mason Inst. of St. Louis

The new and renovated building allows the school to consolidate programs that have grown beyond the confines of Brown Hall and creates an efficient complex with state-of-the-art facilities.

The existing Brown Hall was completely renovated with new mechanical systems, carefully preserving and enhancing the character of its two significant spaces- the departmental library and the commons, and improved layout and configuration of administrative and teaching spaces.

<http://www.kmwarch.com/project.aspx?cat=1&id=81>

### [The Ohio State University, Max Fisher College of Business, Columbus, OH – USA 1999](#)

In association with Karlsberger Architecture & Cooper Robertson & Partners

192,200 sqf.

The U-shaped complex of 3 buildings is part of a new quadrangle of 6 buildings at the northern edge of the campus and is designed in collaboration with Cooper Robertson & Partners and Karlsberger Associates.

The 3-story high academic buildings around an open-ended courtyard define the eastern side of the quadrangle. Gerlach Hall is a 69,000 sq. ft. building of classrooms, administrative offices and student lounge for the graduate program; Schoenbaum Hall, 63,000 sq. ft. is the center of the undergraduate program providing 14 classrooms, administrative offices and a 270-seat auditorium, and Mason Hall 63,300 sq. ft. is the school's Main Library and Resource Center.

The brick-clad buildings present an edge of continuous height and cornice towards the city with dramatic portals framing entries to the campus. A low arcade of sturdy brick columns surrounds the courtyard, while a tall columnar façade marks the double height student lounge and the distinctive form of the Library Rotunda juts into the yard as an important feature of the quadrangle ensemble.

### [Yale University, Sterling Memorial Library, Law Building Renovations \(Library\), New Haven, CT – USA 1999](#)

....Rogers' Collegiate Gothic designs for Yale lent an air of instant heritage and authenticity to the campus. Rogers was criticized by other prominent Gothic-revival American architects, namely Ralph Adams Cram, for his use of steel frames underneath stone cladding, and tricks such as splashing acid on stone walls to simulate age. Rogers was also criticized by the growing Modernist movement of the time. The 1927 Sterling Memorial Library came under especially vocal attack from Yale students for its historicist spirit and its lavish use of ornament....

<http://www.answers.com/topic/rogers-james-gamble>

190,000 sqf.

The challenge of the renovation project for the Yale Law School was to accommodate an enlarged student and faculty population, to provide state-of-the-art teaching and research facilities, and to house one of the largest law libraries in the country while respecting and restoring the distinguished existing structure.

Built in 1930, the Sterling Law School was designed by James Gamble Rogers (\*03.03.1867 Bryan Station, KY - +01.07.1867 New York, NY) in the collegiate Gothic style utilizing such rich materials as granite, limestone, stained glass and carved oak woodwork. The original 250,000 sf structure, occupying an entire city block, had no available land for development. The completed project accommodates the program with only modest increase to the building envelope. Excavation of the existing basement and sub-basement, and utilization of attic and interstitial spaces for mechanical rooms provided the necessary areas for program expansion. The renovation provides new heating, air conditioning and fire prevention systems, as well as upgraded electrical and telecommunications services.

The library renovation included in a phased process the conversion of the Wall Street wing of dormitories to administration and student purposes, and the addition of a new entrance. In the second phase the focus being the renovation and expansion of faculty offices along Grove Street and finally, the largest phase, to improve the teaching spaces, faculty offices and the library with the Reading Room, memorable for its design and furnishings, largely restored and technically improved.

### [University of Kentucky, William T. Young Library, Lexington, KY – USA 1998](#)

351,350 sqf.

In the center of a 30-acre site for a major campus extension, the Library is a bi-axial symmetrical volume recalling neo-Palladian models. The enclosure of the building, the four emblematic facades of brick arches surrounded by porticos with slender branched columns under roof overhangs and eroded corners, is deliberately fragmented and deconstructed.

The spaces of the library are arranged around the square of the sky-lit interior court and a central rotunda with circular reading rooms, the upper under a lantern. Double height readers' galleries surround the court and extend to the periphery overlooking the campus on four sides. A monumental staircase ascends along one side of the rotunda and connects the lobby to the 'piano nobile' level with entry to the user services area. At the ground floor there are a reception, a lecture hall and cafeteria, with audio-visual and computer services at a lower level.

The library houses social sciences, humanities and life science collections, 1.2 million volumes, public seating for 4,000 and a state-of-the-art electronic infra-structure.

### University of Washington, Bank of America Executive Education Center, Seattle, WA – USA 1997

In association with Mahlum & Nordfors McKinley Gordon

56,000 sf

The project is comprised of The Seafirst Executive Education Center, which includes the T. Douglas Executive Forum, the Boeing Auditorium, and the Albert O. & Evelyn Foster Business Administration Library expanding the existing facilities by 56,000 gsf.

The building design features two components: an underground structure containing the library and auditorium, and a three-story pavilion housing the executive education center. The roof of the underground structure is a terraced landscaped open space combining plantings, paved areas and seatwalls which provides the school with its own outdoor meeting and activity space for the undergraduate, graduate and executive education programs. At the center of the underground structure is a skylight, 80 feet in length, which brings natural light into the double-height reading room of the library below. The library also features the media work stations, a Nexis laboratory, a periodical reading area, a faculty and Ph.D. research room and administrative offices. A second mezzanine level also overlooking the skylight space contains additional reading areas and group study rooms. The library shares a central lobby space with the 130 seat case study auditorium and also links to the new building with the adjacent existing Business School buildings.

Above the auditorium is the story brick pavilion that contains the executive education center. The first level is a reception area and administrative offices. On the second floor are two large 50-seat executive conference/seminar rooms arranged with case study tables and breakout spaces. Additional breakout rooms are also located on this floor. The top floor of the tower, with views onto the terraced landscaped structure below as well as the campus beyond, is the T. Douglas Executive Forum. The forum is a large multi-purpose room designed with wood paneling, a fireplace and an adjacent food service pantry for catering events. There is a lounge area and breakout conference rooms as well.

The new building supports a fully integrated computer network throughout, including the case study tables in the executive education center, the conference/seminar rooms and the 130 seat auditorium. Case study tables have been designed to provide each student with the ability to connect with the school or campus network. Each library carrel and table has been equipped with power and data outlets. In addition, group study rooms, offices and the multipurpose rooms provide students and faculty members the ability to access technology. The infrastructure of these rooms will accommodate a combination of both portable and fixed audio-visual systems, teleconferencing and video conferencing systems.

### Newton Public Library, Newton, MA – USA 1991

91,000 sqf.

#### **Awards:**

AIA New England Honor Award for Architecture 1994

#### **References:**

The Boston Globe, December 2003

Progressive Architecture, April 1994

The Boston Globe, November 1991

The Boston Globe, October 1991

The Boston Globe, September 1991

The library is a part of an urban composition which links the existing neo-Georgian City Hall, the Library and Olmstead Park into a single, interrelated administrative and culture complex.

The building is entered from a fore-court facing the pond, and across a small footbridge from a parking lot. A spacious lobby joins the two entrances to the circulation desk and the Reference Hall.

The three-story library is grouped around the triple height clerestory-lit Reference Hall which is surrounded at its upper levels by carrels and extends to an apsidal reader's space which on 3 levels overlooks a picturesque cemetery. Readers find themselves never remote from views of the central hall or the surrounding landscape of the park.

At the ground level there is a Children's Library, the Reference Hall, a community multi-purpose hall, exhibition space and staff support space, at the upper levels readers' spaces and audio-visual department. An oval staircase connects the front lobby with all the levels and a central staircase at the interior of the library makes for vertical connection.

### National Institute of Education, Phase I, Campus Master Plan & Design, Nanyang Technological University – Singapore 2000

In association with CPG Corporation

1,200,000 sf

Client Nanyang Technological University, Approx GFA 98,000 m<sup>2</sup>, Const. cost, S\$211 million, Lead Consultant Indeco Consortium Pte Ltd, Masterplan Consultant Kallmann, McKinnell & Wood Architects (Boston), Completion Date

July 2000

The National Institute has its four principal academic schools of Education, Arts, Sciences and Physical Education located on a central elevated plateau and grouped around a wedge shaped elongated greensward. At one end there is the gateway of the bar-like administration building at the other the segmental circle of the library with spectacular panoramic views over the Malaysian peninsular.

Each school is defined by its C-shaped volume around a large courtyard with stepped side wings descending the sloped terrain and embracing the location of occasional specialized structures. The buildings are long low-rise structures with 3 levels on the central green and up to 6 levels to the courtyards below. Future extension is envisaged by lengthening the side wings or adding other special use buildings, in the courtyards.

The academic spaces and office levels above are connected by a campus wide circulation system of covered walks, arcades, and all have facades with louvers and roof overhangs giving protection from the intense heat and rainfall of the region.

## **Kennedy & Violich Architecture (Sheila Kennedy, Franco Violich), Boston, MA – USA**

<http://www.kvarch.net>

### **Libraries:**

#### **Tozzer Anthropology Library, Harvard University, Cambridge, MA – USA 2014**

**Tozzer is the oldest library in the U.S. devoted to collecting ethnology, archaeology and related anthropological fields.**

Status: Construction 2012 – 2014 Client: Harvard University, Location: Cambridge, MA, Design Team: Frano Violich FAIA; Managing Principal, Sheila Kennedy AIA; Principal Consulting on Design, Greg Burchard, AIA, LEED AP; Project Architect J. Seth Hoffman, LEED AP; Project Manager, Justin Hui, Jungmin Nam, Charles Garcia, Daniel Sullivan, Alda Black Architect: Kennedy & Violich Architecture, Ltd., Structural Engineer: Lemessurier Consultants MEP and Envelope: Buro Happold Consulting Engineers, PC, Civil Engineer: Green International Affiliates Inc., Landscape Architect: Richard Burk Associates, Inc. Lighting Designer: Tillotson Design Associates, Code Consultant: Hughes Associates Inc., Acoustic Consultant: Cavanaugh Tocci Associates

As part of Harvard University's library consolidation program, Kennedy & Violich Architecture was commissioned to transform and expand Tozzer Library and its world-renowned anthropological research collection into both a library and faculty offices for the Department of Anthropology. To minimize site impact at the historic courtyard site, home to two nationally landmarked buildings, the Peabody Museum and Harvard Museum of Natural History, it was necessary to save both the foundation and two story steel structure of the existing building. In order to provide additional faculty office space, the library consolidated 50% of its collections and two floors were added to the building structure, the top floor concealed under an innovative roof form.

The new Anthropology Building integrates local materials, such as masonry and copper, and the scale of neighboring buildings to reflect the character and public image of Harvard University. The building is strategically massed at the roof level addition to protect the courtyard from unwanted shade while maximizing light to the building's three-story atrium space. This central "living" space will become an important meeting place for informal exchange, presentations, and events for multiple departments within the extended school. It also will serve a significant role in the recirculation of tempered air as part of an energy-saving ventilation system, a means to bring natural daylight deep into center of the building, and an acoustically treated space that will promote diverse uses. All faculty offices include large windows that are operable for natural ventilation and programmed to close during inclement weather. The project has been designed to achieve at a minimum LEED-NC Gold certification.

#### **Shady Hill School Library, Cambridge, MA – USA 2002**

Gross square footage: 8,000 sq ft

### **Awards:**

AIA / ALA Award 2003

**Information infrastructure within could provide interdisciplinary learning opportunities**

KVA worked with the Shady Hill School to create a new kind of library space that integrates digital learning tools with the physical intimacy of books and the pleasures of reading. The design provides a cross-disciplinary Learning Platform tailored to the School's Central Study based academic curriculum. Spaces in the Library are defined by the figure of a Learning Platform, an accessible, ramped landscape that organizes areas for the display and construction of student art projects, and spaces for storytelling, music and video centers, and tutorials. The Learning Platform integrates a raised floor plenum system that provides power and data raceways for the School's Intranet and the Internet. The edges of the Learning Platform establish a new wall typology that combines standard, adjustable bookshelves with electrical raceways, computer workstations, flat screen projection, and data ports. Artwork and cultural objects referenced by the curriculum are designed into the book stacks along with digital display surfaces. The Platform is clad with re-cycled wood pulp products that were shop built off site to meet the demands of a compressed construction schedule. These cladding materials are physical reminders of the relationships between manufacturing technologies, wood products and books. (KVA)

**Bruce T. Martin: A new and powerful trend combines cyber space with physical space**

The architect worked with the school to identify how information infrastructure within the library could provide interdisciplinary learning opportunities tailored to the school's curriculum. The design responds with a new kind of library which integrates digital learning tools with books. The library offers areas for the display and construction of student art projects, storytelling, music and video centers, tutorial rooms, and computer laboratories. A raised floor plenum provides power and data for the Internet and the school's Intranet. The digital platform is designed as an accessible, ramped topography that organizes the different activity areas of the open library loft space. Designed with lighting and wiring raceways, its edges combine industry standard, adjustable bookshelves, and digital learning tools, including flat screen projection, data ports, and workstations. Display areas for artwork and objects referenced by the curriculum are introduced into the book stacks along with digital display surfaces. The design creates different scales of space that allow students to develop age-appropriate independent research skills. The library provides spaces scaled for individual, team, and class group research projects. The circulation and reference areas are conceived as a living room with library navigation computers, oversized books, and reference book display areas. This living room provides a generous open space for special projects and meetings, and establishes a relaxed research atmosphere that redefines the public role of the library.

## **Killefer Flammang Architects, Santa Monica, CA – USA**

Wade Killefer, Barbara Flammang

<http://www.kfarchitects.com>

### **Libraries:**

#### **Lafayette Library and Learning Center, Lafayette, CA – USA 2009**

Client: City of Lafayette, 70,000 sqf. \$ 30,000,000

#### **Awards:**

**2011 California Redevelopment Association Award of Excellence Special Citation**

The buildings of the Lafayette Library and Learning Center embrace the sloped topography of the site, defining a pedestrian street which extends the full length of the site and features a landscaped amphitheater, intimate reading areas and outdoor cafe seating. The Community Building anchors the busy corner intersection and includes a large meeting area, platform and art gallery. The Main Library spaces are supported by wood paralam columns and trusses, defining a modern interpretation of the distinctive Bay Area architectural style. High clerestory glazing infuses the interior with natural light, and deep overhangs and sun shades provide protection from heat gain and glare. The Children's Library features a large shaded patio, reading nooks, a stepped storytelling corner, fanciful rCound windows in the shape of the Big Dipper and a multi-colored carpet tile floor pattern. The buildings' exterior is clad with amber gold granite, reclaimed teak siding and warm-toned metal panels. Photovoltaic panels above the surface parking lot will generate approximately 8% of the building's electrical needs.

<http://www.kfarchitects.com/libraries.php?nStartLinks=0&projid=12&catID=1>

#### **Thousand Oaks Library, Thousand Oaks, CA – USA 2006**

Client: City of Thousand Oaks, 22,000 sqf., \$ 11,000,000

The Children's Library addition to the 1982 Thousand Oaks Main Library respects the distinctive sawtooth massing of the existing building. High sloping ceilings and north facing clerestory windows flood the library with natural light, and a wood and glass paneled wall outlining the southern California coastline defines the spacious collection area. A saltwater aquarium nestled in a cozy space with multi-colored porthole lights and sea blue walls provides a dramatic link between the existing and new wings. Adjacent to the triangular shaped story telling room is an intimate children's garden, and an informal courtyard invites library patrons to enjoy coffee and reading in a shaded outdoor setting.

<http://www.toaks.org/government/depts/library/childrens.asp>

#### **Palisades Library, Los Angeles, CA – USA 2003**

Client: City of Los Angeles, 13,000 sqf., € 3,900,000

The design of the Palisades Library, set in a park and surrounded by large existing trees, derived from numerous community meetings, and was enthusiastically embraced for its rustic yet contemporary feeling and for its varied use of contrasting materials. The K-shaped plan provides an organizational structure for the different program elements. Centered around a circulation desk, the reading rooms for adults, young adults and children pinwheel into three wings. A fourth wing contains a multi-purpose room and kitchen. The interior features cork flooring and exposed glu-lam beams and acoustic wood ceilings. The exterior is partially clad in stone, grounding the library solidly at its base. Multiple patios for outside reading and public gatherings complete the integration with the surrounding park landscape. (Killefer)

<http://www.kfarchitects.com/libraries.php?nStartLinks=0&projid=13&catID=1>

#### **Haines Hall, University of California, Los Angeles – USA 2001**

Constructed in 1927 as the campus Chemistry building, Haines Hall is named for Charles Grove Haines, a political science professor who taught at UCLA from 1925 to 1948. Costing nearly \$2.5 million at the time, the building covers 133,851 square feet over the six floors. As with Royce Hall, Powell Library and the Humanities Building, Haines Hall was constructed in a way to emulate a Romanesque or Italian Renaissance style, with red brick, cast stone trim, and tile roofs.

<http://www.bruinwalk.com/places/ucla-haines-hall/>

\$ 14,300,000, 134,000 sqf.

Haines Hall, built in two phases starting in 1927, is one of four original UCLA buildings on the historic quad, along with Royce, Powell and Kinsey Halls. As part of a system-wide program of seismic upgrades to historic buildings, Haines hall's masonry walls were reinforced with concrete shear walls and steel tube bracing. Exterior stairs added in the 1970s were removed and the renovation also included fire life safety upgrades, disabled access improvements and air conditioning. The 134,000 SF building, housing liberal arts classrooms, faculty offices, and ethnic studies libraries, reopened for the 2001 academic year.

<http://kfarchitects.com/publicbuildings.php?nStartLinks=0&projid=24&catID=5>

#### **Jefferson Library, Los Angeles, CA – USA 1998**

Client: City of Los Angeles, 9,600 sqf., € 2,400,000

The Jefferson Library expansion adds 6000 SF to the original historic Spanish-style library built in 1921, and includes a community meeting hall, homework room, children's story room, expanded reading rooms, new stacks, and staff support areas. Part of the pre-design process included community workshops at the library to make planning recommendations to the design team. The resulting design follows the direction set at the workshops and preserves the building's character-defining features. Set back from the existing south facade, the new addition is clearly distinguishable from the original structure. The new entry and circulation spine run along the east side of the existing library, exposing portions of the original masonry walls. The existing patio is restored, bringing light into the library and providing a secure outside reading room.

<http://www.kfarchitects.com/libraries.php?nStartLinks=0&projid=49&catID=1>

#### **Mid-Valley Regional Library – USA 1994**

Client: City of Los Angeles, 28,000 sqf., € 4,100,000

#### **Awards:**

**1996 Merit Award Gold Nugget Awards**

**1992 Design Excellence in Architecture City of Los Angeles**

The Mid Valley Library includes the district's regional headquarters, a community meeting room, Friends of the Library bookstore and a bookmobile facility. The building, set in a neighborhood park, is organized in a cross axial format. At the important intersection of the building's entry axis and organizing long central axis is the reference desk, and floating above is a stepped pyramid roof, glazed in cobalt blue tile and topped by a translucent skylight. Small windows punctuate the pyramid, which sparkle at night with quartz lighting. At the north end of the axis is a light-filled reading area and clock tower, which announces the library to the street. At the south end is the children's library, where a storyteller's throne is positioned under a fanciful teepee and surrounded by an imaginative landscape mural. The landscaping features native and introduced drought-tolerant plants. Evergreen trees shade the parking areas while flowering shrubs and grasses serve as low screens. Existing trees were replanted to provide a mature landscape along the major boulevard fronting the property and along walkways leading from the neighborhood. Since its construction in 1994, the Mid Valley Library has become the center of the community it serves and enjoys high-volume usage.

## **Kimmel Bogrette Architecture + Site, Conshohocken, PA**

<http://www.kimmelbogrette.com>

### **Libraries:**

#### **Manheim Township Public Library, Manheim Township, PA – USA 2010**

<http://www.kimmel-bogrette.com/portfolio/port-muni-17-1.html>

The new Manheim Township Public Library, Lancaster, PA, consists of a series of “book barns,” to ape the area’s architectural heritage. Reminiscent of a traditional farmstead, the library’s exterior features low-maintenance stone, fibercement, metal roofing accented with wood brackets and beams. The elongated gable-end windows resemble ventilation slats in tobacco barns.  
<http://lj.libraryjournal.com/2011/12/buildings/library-building-2011/year-in-architecture-2011-fantastic-facades/>

For many years, a new Library for Manheim Township in Lancaster County has been a dream in progress. Now that dream has become a reality. Construction is complete on the 20,100-square-foot Library that has transformed its hilltop setting from a rocky knoll to a pinnacle of knowledge. The Library welcomed its first visitors in September 2010 to rave reviews. There were more library card sign-ups in one day than the old library saw in a typical month. Book check-outs have been off the charts since the opening. Between 1,000 and 1,500 people visited the new library in one day ... a number that far exceeded the expectations of the library staff and board. Library Board President Gary Graziano reported, “Our new piece of community architecture is working well. People are talking about it at Curves, in grocery stores, and with their friends and neighbors. Mouths drop open when people enter. Smiles come across their faces. Kids get excited. They clearly love the look and feel. It is casual and comfortable and inviting. This library is clearly a home run.”

#### **Gertrude Kistler Memorial Library, Rosemont College, Rosemont, PA – USA 2010**

<http://www.kimmel-bogrette.com/portfolio/port-edu-12-1.html>

The library was built (1926) as a gift from Mr. & Mrs. Sedgwick Kistler in memory of their 12-year-old daughter who drowned in the Merced River in Yosemite National Park while on vacation in 1920. She had been a student in the Holy Child St. Leonard’s Academy.

## **KKE architects, Minneapolis, Minn. – USA**

KKE Architects (formerly Korsunsky Krank Erickson Architects) was an architecture firm that serves in the fields of architecture, interior design and architectural planning. KKE is ranked one of the top 50 architectural firms in the country by Building Design & Construction and a Top 500 Design Firm by Engineering News-Record. They have offices in Minneapolis, Minnesota, Pasadena, California, Irvine, California, Phoenix, Arizona, Tucson, Arizona and Las Vegas, Nevada. KKE maintains licensure in every state of the United States. Staff architects are members of the American Institute of Architects and several hold National Council of Architectural Registration Boards (NCARB) certification and Leadership in Energy and Environmental Design (LEED) accreditation.

In July 2010, KKE Architects announced it was joining national design firm DLR Group. KKE offices in Minneapolis; Las Vegas; Tucson; and Pasadena and Irvine, California were merged into DLR Group and operate as DLR Group KKE.

#### **[The Rockefeller University, Welch Hall Library, New York, NY – USA 2013](#)**

<http://markuslibrary.rockefeller.edu/history>

40,000 sqf.

The \$50 million renovation of Welch Hall at The Rockefeller University in New York City has been awarded LEED Gold, as established by the U.S. Green Building Council and verified by the Green Building Certification Institute (GBCI). LEED is the nation's preeminent program for the design, construction, and operation of high performance green buildings.

The 40,000 square foot Beaux Arts building overlooking the East River on Manhattan's Upper East Side houses the Rita and Frits Marcus Library, a vital academic center since its opening in 1929. The design updates the Library for the 21st century, with state-of-the-art technology, high-density library stacks, and expanded study spaces, while preserving the iconic architectural details of the grand Reading Room, the Great Hall, and other meeting spaces.

LEED certification of Welch Hall was based on a number of green design and construction features that positively impact the project itself and the broader community. These features include:

Reuse of 95% of existing building structure and skin with improved efficiency of exterior

High efficiency mechanical systems provide 40% reduction in energy use

Occupancy sensors control lighting and temperature in all spaces

Daylighting in 90% of occupied spaces

Open space, landscaped with water efficient native plants, equals footprint of building

Finish materials have been salvaged or use recycled content

High efficiency plumbing fixtures provide 30% reduction in water use

Indoor pollutant and chemical control monitoring system

Welch Hall re-opened in April 2013 and was the final piece of a nearly five-year modernization process of the University's north campus.

#### **[Franklin D. Roosevelt Presidential Library and Museum, Henry A. Wallace Visitor and Education Center, Hyde Park, NY- USA 2003](#)**

<http://merchant.videotex.net/common/news/details.cfm?QID=1001&clientid=11005>

50,000 sqf.

A gateway to the Franklin D. Roosevelt National Historic Site, this building provides a visitor orientation space for the Presidential Library and Museum (1941), and an education and conference center for the Franklin & Eleanor Roosevelt Institute. The building, designed to achieve LEED certification, is composed of a series of gable-roofed pavilions that frame a courtyard facing the Library and Museum. Rainwater from the roofs is captured in cisterns and used to irrigate the courtyard gardens. The Center includes an orientation lobby; auditorium; gift shop; café; three multipurpose rooms for classes, conferences, and banquets; a multi-media conference room; and staff offices. Glass-roofed porches protect the building from summer sun while maximizing natural light inside, and provide gathering spaces for visitors. The materials and forms of the structure relate to those of the Library and Museum, which recalls the historic Dutch Colonial architecture of the Hudson Valley. The Douglas Fir used in the beams of the exposed vaulted ceilings was salvaged and/or purchased under the Forestry Stewardship Certification program and local fieldstone was used for the exterior cladding.

### [Arcadia University Landman Library – Glenside, PA – USA 2000 – 2003](#)

25,000 sf renovation, 25,000 sf new construction

#### **Awards:**

2005 AIA / American Library Association Award of Excellence

2003 Southeast Pennsylvania Chapter Associated Builders and Contractors Award of Excellence

The library, an existing building with a new addition, accommodates 150,000 volumes, study seating for 300 students, multimedia classrooms, and a trustees meeting room. The curved limestone south facade forms a memorable campus landmark, a distinctive presence defining the edge of the Campus Green. The library provides a variety of spaces for reading and study. A two-story reading room on the second floor extends the full width of the building and looks out over the Green. Daylight is admitted through monumental wood windows with adjustable sunscreens and shutters and high clerestory windows. At night the room is a lantern at the heart of the campus. The ground floor reference room faces the Green. The periodical lounge is a two-story space opening onto a garden and a grove of beech trees. The collection is housed in accessible stacks in the older portion of the building.

### [Yale University Sterling Divinity Quadrangle, New Haven, CT - USA 2000 – 2003 \(2009\)](#)

131,000 sf renovation

#### **Awards:**

2004 Associated General Contractors Award of Excellence

2003 AIA Connecticut Design Award

2003 Faith & Form Religious Architecture Award

Delano & Aldrich designed the multi-building Sterling Divinity Quadrangle in 1932. The adaptive reuse of the complex provides sacred, social and instructional spaces; a library; and offices for the Yale Divinity School, Yale Divinity Library, the Institute of Sacred Music, and the Berkeley Divinity School. The pavilions on the east and west side of the quadrangle, formerly student residences, were converted into faculty offices and instructional and administrative spaces. To create contiguous circulation and make the complex fully accessible, connecting ramps were added on the first and second floors between all of the pavilions, with new enclosures at the second floor. In three of the pavilions, portions of the second floors were removed to create double-height spaces for the Great Hall, an organ studio, and a lecture hall. Marquand Chapel, Day Missions Reading Room, and the Library rotunda were restored. The pavilions east of the Chapel were renovated for the Yale Divinity Research Center in a second phase of work.

### [Dartmouth College, Roth Center for Jewish Life, Hanover, NH - USA 1996 – 1998](#)

10,500 sf

#### **Awards:**

2000 Faith & Form Religious Architecture Award

1999 Chicago Athenaeum American Architecture Award

This building is shared by Jewish students and faculty at Dartmouth College and the Upper Valley Jewish Community, providing space for cultural, academic, and social activities. It includes a sanctuary divisible into smaller meeting and dining rooms, library, classrooms, nursery, double kitchen, student lounge, game room, and offices. On a residential street at the edge of the campus, the building is sited to maximize a grassy area to the north used as an outdoor gathering space and play area. The building is organized around the two volumes of the sanctuary and the library. They are joined by a wide, double-height gallery with clerestory windows that is a gathering space for campus and community. Designed before the LEED rating system, the building was planned to make the most of its natural environment by developing the least amount of the site, maximizing daylight for lighting and winter sun for passive heating, and using natural ventilation for cooling.

#### **Libraries:**

### [Library of Nashville State Technical Institute, Nashville, TN – USA 2010](#)

This \$6,000,000 project consisted of a new 65,000 sq. ft. library/classroom building and a 10,000 sq. ft. addition to the campus central boiler plant. The library was to eventually expand into the entire building and the classrooms relocated. The presence of the classrooms posed potential problems of library security and separation of functions. Through careful planning and a thorough understanding of the client's needs KSA was able to avoid these problems and provide a highly functional facility. (Kline)

<http://www.dosterconstruction.com/portfolio-education-nashville-state-tech.html>

### [Clayton Glass Library, Motlow State Community College, Tullahoma, TN – USA 2008](#)

This 45,000 sq. ft. library serves 3,100 students from rural counties near the Jack Daniels Distillery. The building's exterior blends with the 60's campus architecture of rectangular brick buildings with horizontal limestone bands and vertical floor-to-ceiling windows. The second-story of the central rotunda is surrounded by glass enclosed library rooms, which allow light from the exterior

to penetrate well into the interior spaces of the structure and accentuate the open plan of the facility. The Craftsman style of the interior was selected to harmonize with the building's pastoral setting. Accents of wood, stone and ceramic tile were utilized to provide warmth and texture.

### **Libraries:**

#### **Stephen M. Ross School of Business, University of Michigan, Ann Arbor, MI – USA 2008**

### **Awards:**

**Silver**

**Society of American Registered Architects Awards Design Award of Honor (2009)**

**Chicago Athenaeum: Museum of Architecture & Design International Architecture Award (2007)**

Anthony Blackett, Educational Programmer Education, Interiors, 280,000 ft<sup>2</sup> / 26,000 m<sup>2</sup>

In order to maintain its stature as one of the premier business school in the nation, the Stephen M. Ross School at the University of Michigan commissioned a master plan study to assess existing building capabilities and to determine whether the building should be renovated and rehabilitated or demolished and reconstructed. Challenges facing the program included providing a variety of instructional and meeting spaces to support the school's action-based curriculum, and the need to create a physical center of gravity for the school's intellectual and social life that would allow for informal as well as formal interaction between students, faculty, the university and the surrounding community. Essential to the success of the design of the new building was relating the typical tiered classroom to group study spaces. To do so, the design team developed a model for early site planning studies to address the pedagogical needs of the school, which focused on assessing the capacity of existing buildings to accommodate new teaching spaces. The results showed that to meet the school's program requirements, certain portions of existing buildings would need to be demolished. Complicating the matter further was the school's desire to remain in its current location on the university's central campus. As such, demolition and new construction had to be coordinated with relocation strategies that integrated Ross School faculty and students within existing buildings. Equally important was a sense of local identity, both for the building on the university campus and for distinct groups within the school. Respect for the language and history of nearby buildings on campus had to be balanced with the goal of projecting a forward-looking image for the school. At the same time, an internal arrangement of the building would need to create sense of community for the Ross School while serving the specific needs of its varied user groups. The new building meets these challenges set by the Ross School with an organization of elements around a central winter garden which opens directly to the street, providing a distinctive presence and a new "front door" for the school on the University of Michigan campus. Circulation patterns are refined to link both existing and new building components into this new heart of the business school campus. An auditorium, tiered and flat classrooms and group study spaces—all equipped with state-of-the-art technology—open directly onto the winter garden, taking advantage of central student lounge areas and café seating. Faculty offices are organized in neighborhoods which look down on the winter garden from above its glass skylight. The building culminates at

the top with a collection of major events and presentation spaces that look back over the university campus, taking advantage of spectacular views of surrounding buildings and campus open spaces. The building, which has achieved LEED Silver certification, includes numerous sustainable design features. The design includes three green roofs with drip irrigation, underfloor air system, energy efficient lighting design, low consumption plumbing fixtures and on-site water retention/reuse, and the use of recycled content and locally manufactured construction materials to the maximum extent possible.

<http://www.kpf.com/project.asp?T=3&ID=68>

### [Columbus Indiana LearningCenter, Columbus, IN – USA 2005](#)

**Ratio, Architect-of-Record**

123,000 ft<sup>2</sup> / 11,000 m<sup>2</sup>

#### **Awards:**

**AIA New York Chapter Project Design Awards, Citation 2001**

The Columbus Learning Center is a multi-tenant education facility and community resource center. The design of the two-story building is inspired by the surrounding landscape, which features the simple forms of industrial factories, farmhouses and silos. Each program component for the new facility is housed in a distinct brick and glass form. The shapes of these forms are influenced by the functions contained within them. The building's goal is to encourage people outside of the educational system to utilize the center's services to develop a personalized curriculum. In order to achieve this goal, the building's design must be visually accessible. With this in mind, the new facility is sited between two existing buildings. It acts as a bridge between the two, reducing their physical and psychological distance. The building's entry is an outdoor room framed by brick walls in the form of arms opening toward the community. As one enters the building, the interior opens up to the landscape beyond via a clear glass-enclosed public street that links the lobby to all services within the building. Along this light-filled spine are reception "intake" areas for the various users. "Wired" lounges are sprinkled throughout to facilitate social interaction in communal gathering spaces. Flexibility was extremely important in developing the design. A two-foot raised-floor plenum is provided to allow for flexibility in technology and mechanical distribution building-wide. As the program offerings change over time, spaces can be easily reconfigured without significant alterations to the building's support system.

<http://www.kpf.com/project.asp?T=3&ID=115>

### [Furman Hall, New York, University School of Law, New York, NY – USA 2004](#)

**Anthony Blackett, Educational Programmer**

175,000 ft<sup>2</sup> / 16,000 m<sup>2</sup>

This project consists of a master plan and new building for NYU's School of Law. Within the master planning process, the existing buildings were evaluated, a program of space requirements for an expanded curriculum was identified, and departments were reorganized for greater synergy within the overall Law School campus.

The new building is a nine-story mixed use facility whose lower floors are dedicated to academic and student space, whose middle floors house academic administration and Law Clinics, and whose upper floors provide Law School faculty apartments. The top floor of the building are split between faculty apartments and a large Colloquium Room. The classroom and social spaces in the lower portion of the building complement those in the existing academic building, Vanderbilt Hall, and are connected physically to them at the renovated Library under Sullivan Street.

In order to cultivate an 'around the clock' atmosphere on campus, much of the academic portion of the new building is devoted to continually available student spaces including a double height Forum which connects the two main classroom floors and faces Vanderbilt Hall, six group study rooms for small informal student meetings, and a Café and Study Lounge on the ground floor. The Law School worked with significant community input to develop a concept for the new building that would respect the concerns of the broader Greenwich Village community.

To maintain the scale and texture of an important historic context, the new building incorporates the reconstruction of two historic facades into its own: that of the Judson House, renovated by McKim Mead and White in 1899 just south of the church, and that of a typical row house from the 1830s located on West 3rd Street and noted for its occupation by Edgar Allan Poe during the early 1840s.

<http://www.kpf.com/project.asp?T=3&ID=96>

### [William H.Gates Hall, University of Washington, Seattle, WA – USA 2003](#)

**Mahlum, Architect-of-Record**

202,000 ft<sup>2</sup> / 19,000 m<sup>2</sup>

#### **Awards:**

**MCAA International Excellence Awards, Best of Show: Brick 2004**

Incorporating all the functions of the School of Law at the University of Washington into one facility, William H. Gates Hall is set on a gentle hillside bordered to the east by the tree-lined Memorial Way, a principal north-south axis within the campus. The new facility houses classrooms and seminar rooms, conference rooms and auditorium, a full research law library and law clinic, graduate program student center, student lounges, and faculty and administrative offices.

While many of the university's existing academic structures are arranged to form quadrangle spaces, the Law School stands alone at the northern edge of the university's core. The L-shaped building defines a courtyard and terrace that open south towards the greater campus. Beneath the terrace the library occupies the lowest two levels, providing a plinth for the composition. The scheme responds to the geometry of the old quadrangle and the surrounding urban grid of Seattle, creating a distinct identity for the school while grounding it firmly to the University.

The project provides teaching spaces appropriate to the modern law school curriculum, which emphasizes smaller classroom instruction, group discussion formats, practice skills training, and access to information technology. Classroom configurations were selected with pedagogical intent, from 25-seat seminar rooms with mock courtrooms to a 170-seat auditorium.

The concept of the school The concept of the school as community is vital to students and faculty. The spatial interpenetration between the two-story gallery, terrace and library invite interaction and reflection. The central focus of the library is the grand two-story reading room. It is flooded with light from four skylights at the terrace above and fritted glass at the south and east walls. Study rooms, computer consoles and lounge areas punctuate the reading room and stacked areas. The generous use of glass—unusual for this building type—allows for the extension of the landscape into the interior, wherein the conservatory-like quality of the space is reinforced and elaborated. Canopies and trellises protect benches at the gallery and perimeter from sun or rain and frame views in and out. The north and west façades act as a textured brick shell holding the layered, glassy volumes.

### University of St. Andrews, Library, Fife, Scotland – UK on design

118,000 ft<sup>2</sup> / 11,000 m<sup>2</sup>

The University of St. Andrews project is an 11,000m<sup>2</sup> refurbishment and addition to the University's Main Library. Home to the University's main collection and extensive special collection, the building sits at the centre of the town's conservation area overlooking the sea beyond. The proposal extends the original library, a pre-cast concrete building constructed circa 1975, to the North, creating a grand reading room with great views and establishing a new point of entry to the East, visible across the main square and street beyond. A new cladding system wraps both the old structure and the new extension creating a uniform image and identity for the building. The new façade delivers improved environmental conditions with the introduction of natural ventilation and light to a variety of study and working environments for both faculty and students. <http://www.kpf.com/project.asp?T=3&ID=304>

### London School of Economics, London – UK 2003

Client: Estates Office, LSE

162,000 ft<sup>2</sup> / 15,000 m<sup>2</sup>

Located close to Aldwych in the heart of London, the London School of Economics (LSE) is a world-famous academic institution. Its principal buildings, ranging in date from the 1920s to the 1960s, line the L-shaped enclave of Houghton Street/Clare Market. The School has grown through acquisition of new buildings and piecemeal additions to existing facilities, which has resulted in a disparate collection of spaces on a crowded site without clarity or coherence and lacking many amenities typically found on contemporary campuses.

The LSE's ongoing development program includes many commissions that will transform the school's working environment, including refurbishment of the main library and improvements to public spaces. KPF's work for the LSE has involved a number of renovations to the School's Old Building, including the upgrade of the main reception area and the conversion of a former light well space at the building's core to create a light-filled atrium space. The new atrium is covered by a lightweight roof fabric with six operable vents to further enhance indoor environmental quality. The atrium both serves to orient movement within the building and provide a focal gathering space for the school's community.

A major new entrance has been formed at Clare Market, which offers universal access for the disabled, which was not possible at the main entrance. Adjacent to the new atrium a "one-stop shop" student centre has been created in areas formerly occupied by lecture rooms, to handle student enquiries and improve on-site amenities.

### Rothermere American Institute, Oxford University, Oxford – UK 2001

#### **Awards:**

RIBA Award 2003

Civic Trust Award 2003

Oxford Preservation Trust, Environmental Award 2002

First Prize, International Competition Winner, Oxford University 2002

Word Architecture Award Finalist (Green Category) 2002

The Rothermere American Institute has been described in the British press as one of the most beautifully built modern buildings in Oxford. Dedicated by former President Bill Clinton in 2001, it stands in a leafy quarter north of the historic city center, close to Rhodes House, an institution with close American connections, and to the 19th century complex of Mansfield College. The Institute was created to serve as a center for research, teaching and discussion about America history, politics and government.

The basic parti is similar to that of Basil Champney's library at adjacent Mansfield College. In both structures, classrooms and ancillary spaces are arranged below a great reading room, overlooking and opening onto a shared private garden precinct. The new Institute building is sunk 11 feet below grade so that the eave line of the adjacent Mansfield College is maintained. The building's lowest level contains seminar rooms and opens out to a sunken terrace edging the lawn. The position of the building on the site and of its terraces allows all four levels to take advantage of natural daylight—especially the 23-foot-high reading room, the project focus. This double-height reading room, which faces south overlooking the garden-galleries, contains study carrels looking down into the main space. Behind the carrels are book stacks and offices. The vocabulary is that of exposed concrete and natural Bath stone cladding, which is used to frame finely detailed steel and glass. The principal façade is strongly modeled, with fritted glass louvers to control solar gain and reduce the need for mechanical ventilation. Air conditioning is eschewed in favor of nighttime cooling, which relies upon the thermal mass of the structure and an earth-connected heat exchange system set below the garden. (KPF)

### Amos Memorial Public Library, Sidney, OH – USA on design

Client: Shelby County Public Libraries

Amos Memorial Public Library plans to expand and improve its ability to serve the public by increasing its resources available and adding new spaces that are in high demand by the local community. With a focus on increasing technology, improving spaces for children, adding a young adult area, and increasing the size and comfort throughout nearly all departments, the library hopes to expand its facility as well as renovate its existing building. Schematic plans include adding 8,000-11,000 square feet to the north of the existing library and updating the existing mechanical and electrical systems that were original to the 1950's building. Currently, the community is raising funds to support this important project for the town of Sidney, Ohio.

The library has an excellent location on the north side of downtown Sidney which fortunately includes a site with room to grow. The building fronts East North St. and also invites patrons from Miami St. with a second entrance. The new addition is proposed to fill in the lawn space to the north of the building but preserve the limited alley parking that is dedicated to the library. It would be

preferred to leave space on site for future expansion space as shown. The library also owns the north portion of the quarter block to the west; over time the library will be able to use this site as needed. One idea shown is a small public open space that serves as overflow from the program rooms, storm water rain garden, additional parking, and some future development space.

### [West Lafayette Public Library, Lafayette IN – USA 2012 – 2013](#)

Client: West Lafayette Public Library, Project: West Lafayette Public Library New Construction

Brick and stone in harmony with aluminum and glass. Custom terracotta medallions. A welcoming terrazzo entryway. To casual visitors, these things could be interpreted as separate design features. But to discerning patrons, they're something more - a salute to the region's rich culture. The team who envisioned, designed, and built the new West Lafayette Public Library worked to understand this college town's past - as well as its promise for the future. The design was inspired by the library's collection of Frank Lloyd Wright furniture, as well as a neighboring building designed by Louis Sullivan. The building's exterior includes a plaza that serves as a gateway to neighboring Purdue University. The library's interior spaces were painstakingly designed to be of service simultaneously to community members, Purdue students, staff, and volunteers. The building even makes use of an automated materials handling system that allows staff members to focus on assisting patrons, rather than carrying books. In these ways and more, the West Lafayette Public Library is a warehouse of knowledge and a beneficiary of it. (KRM)

<http://krmarchitecture.com/portfolio/west-lafayette-public-library/>

### [Kokomo-Howard County Public Library, Kokomo, IN - USA 2010](#)

Client: Kokomo-Howard Cty. Public Library

Downtown Kokomo Library's Main Branch Renovation is an embodiment of the community's investment in their library, and their downtown economic development. In need of an update, the main library's primary design vision was to make this building highly intuitive and easy to use for patrons and staff alike. Access to the site was studied carefully to optimize efficiency in this area where pedestrian and vehicular traffic can often clash in a downtown setting. The resulting floor plan offers a lobby which spans through two main entrances and easily orients the user to the layout of the library, as well as function as a public gathering space. Clean lines, contemporary lighting, merged with exposed existing steel beams infuse history with innovation. A cork flooring underfoot is comfortable and reduces unwanted acoustics, while lending warmth and sustainability to the library. An angled wall carries and punctuates the path through the library and offers an opportunity to showcase etched glass which tells the history of the 'City of Firsts'.

The first main floor offers the highly accessible Audio-Visual materials as well as the Children's Space Department. Traveling up a new 3-story open-riser wood staircase which pierced through existing floors, the patron is offered easy views to all levels. The second upper floor houses the Main Collection, as well as the Youthtopia Area Space and main Computer Lab. On the lower level, art displays were integrated into the walls to create a gallery space with seating directly outside the dividable public meeting rooms. From this gallery, as well, Genealogy & Local History Department is easily visible and punctuated with its local and historic architectural detailing.

The only element truly recognizable in this full-scale renovation is the existing exterior brick. The existing brick shell remained while new windows delicately and deliberately push through and lean out to offer patrons perspective to the downtown from inside the library.

Of utmost importance in the design was offering daylighting to staff and patrons. Daylight can pool through the building, and sight lines are unobstructed reinforcing the library's mission 'to provide dynamic service that encourages the pursuit of education, information, research, and recreation in making the space inviting, and safe, and unintimidating environment.'

### [Tipton County Public Library, Tipton, IN – USA 2010](#)

Client: Tipton County Public Library, Project: Tipton County Public Library Renovation and Expansion

The concept is simple. It is also quite true. When libraries are well designed, more people take advantage of them. Therefore, it's critical that any library project receive the highest level of planning, foresight, and creativity. The natural outcome of the process is more people seeking knowledge, more people taking part in public discourse, and more children developing a love of learning. The Tipton County Public Library is now seeing the benefits of just such a project. More people use the library now than ever before. kRM led a complete interior renovation and building expansion that included an adult reading room, a children's program room, additional work and storage space, updated lighting, new HVAC systems, and various other features - all within a budget that didn't require raising local taxes. The building's interior celebrates the cyclical nature of libraries. Books are borrowed and returned. Ideas flow from person to person. As such, circles are integrated throughout the library's interior spaces. To the trained eye, these circles might also be reminiscent of the perfect flow of communication between architect and client.

### [Kokomo South Branch Library, Kokomo, IN – USA 2009](#)

New Construction, cost: \$2,400,000

The Kokomo-Howard County Public South Branch originally presided in a strip mall rental property. As their library service expanded, so did the need for a new building. The South Branch reflected the 'Prairie-Style' providing the community with interesting characteristics such as art glass windows. The large expanses of glass facing north with significant overhangs provide appealing reading spaces and allow natural light to penetrate deep into the library space.

<http://krmarchitecture.com/portfolio/kokomo-south-branch-library/>

## [New Castle-Henry County Public Library, New Castle, IN – USA 2006](#)

client: New Castle-Henry County Public Library

Old and new. Up and Down. Something for everyone.

The Library's challenge was unifying their two separate library buildings that were constructed at different floor elevations and connected by a 20 foot covered walkway. The new design seamlessly tied the two buildings and expanded the library's overall size from 35,000 to 71,000 square feet.

By creating an open, two-story circulation space with a large staircase to replace the existing 20 foot walkway, a connection was made between the original Carnegie building and the 1976 building. The upper floor is dedicated to public spaces, main stacks, audio visual, reference, teen spaces, computer labs, and the Indiana Room while the lower floor features public spaces such as the children's area, the 400 person auditorium, and two large meeting rooms.

Respecting the historical nature of the original architecture, details from the original Carnegie building guided the design of the overall project. Custom light fixtures, masonry fireplaces, re-used original stained glass, exterior columns, limestone bands, and interior display cases all respond to the building's original architecture. The result unifies design and purpose.

<http://krmarchitecture.com/portfolio/new-castle-henry-county-public-library/>

## [Hancock County Public Library, Greenfield, IN – USA 2005](#)

client: Hancock County Public Library, 39,800 sf New Construction

In response to rapid population growth in the area, the original Greenfield Public Library grew into a county-wide system and became the Hancock County Public Library. Because of this change, they could now reach beyond the city limits, extending their service to more residents.

krM began first with a feasibility study to help the library understand who these new additional patrons might be, how many of them there were and what type of facility would best serve them. Study revealed that the library would ultimately need 90,000 square feet, which was beyond the current financial abilities the library.

In response, krM developed a design that expands in phases, so that the library can grow without headache when their budget allows. The first phase was constructing a single-story structure with a 39,000 square foot footprint, positioned visibly on the busy intersection of Fortville Pike and McKenzie road. Space and flexibility were key drivers in the layout of the new library that would serve a significant larger population than it had prior.

In just its first year open, the library witnessed an enormous increase in use.

## [Noblesville Public Library, Noblesville, IN – USA 2005](#)

102,000 sqft., \$ 10,000,000

Client: Hamilton-East Public Library System, Project: Fishers and Noblesville Public Libraries Renovation and Expansion

When the population served by this library system grew by 98% in ten years, the need for expansion was obvious. But before the project could begin in full, serious questions had to be addressed: How do we honor our heritage while celebrating our future? How do we leverage today's growth to create new opportunities? How do we turn the two libraries in this system into true community destinations? We found the solutions, as we always have, through collaboration. Librarians themselves provided historic records that aided in the design process. We worked with stakeholders to assess the user needs. And our entire team researched ways the buildings could form a junction between the past, present, and future. The two resulting structures – one in Fishers, Indiana and one in Noblesville, Indiana - now serve as well-considered answers to those challenging questions. Each features new construction that flows naturally into existing architecture. They both feature dedicated spaces for children, teens, and adults, as well as computer labs and meeting spaces. Of course, we also made sure the buildings included something else – plenty of space for expansion in the future.

## [Anderson Public Library, Anderson, IN – USA 2001](#)

122,000 sf Expansion/Renovation

Starting in the late 1960's, the Anderson Public Library began considering options of expanding their Carnegie Building or building new facilities. In the early 1980's, the Library acquired the downtown Sears and Roebuck Store. The facility was a two-story and basement poured concrete frame building with masonry exterior walls. In addition, the structure was designed to accommodate an additional floor.

The resulting project is a facility with a new exterior and a major expansion to house the main stacks, reading areas, and lobby. The interior of the facility is designed to allow patrons entering the building the ability to easily understand its basic organization. All departments, including the ones on the upper levels, are visible from the entry atrium. In addition to the finished areas on the first and second floors, there are unfinished spaces available in the basement and attic for future library expansion or community facilities. A separate building on adjacent property was renovated to house Extension Services including bookmobile and outreach services.

„Wir brauchten einen dynamischen, empfangenden Ort.“ So begründet der Sprecher des Spertus Instituts in Chicago die Entscheidung für die facettenartige Glasfassade des Institutsneubaus, das von den lokal ansässigen Architekten Krueck + Sexton entworfen wurde. Am 30. November 2007 wird das neue „Spertus Institut für Jüdische Studien“ nun eröffnet. Der Neubau an der Michigan Avenue Nr.610 hebt sich deutlich von der traditionellen Bebauung seiner Umgebung ab: Rund 1,20 Meter wölbt sich die 49 Meter hohe und 25 Meter breite Fassade dem Straßenraum entgegen. Sie besteht aus 726 Teilen in insgesamt 556 Formen, die meisten davon Parallelogramme. Um die Sonneneinstrahlung zu verringern, sind die Gläser mit einer Spezialbeschichtung versehen. Aber nicht nur äußerlich ist der zehn Geschosse hohe und rund 14.000 Quadratmeter große Neubau anders als seine Nachbarn: Im Inneren erwartet die Besucher ein Tageslicht-durchfluteter Raum, bei dem Oberlichter und Glaswände Licht bis in die hintersten Winkel transportieren. Das Museum des Instituts, eine große Halle, ein 400 Plätze großes Theater, eine Bibliothek, Seminarräume, ein Geschenkeladen sowie ein Café mit kosherem Essen sind nur einige der Funktionen, die hier angeboten werden. Im Frühjahr 2008 sollen noch ein interaktives Kinderzentrum und ein pädagogisches Forschungszentrum für Erzieher und Eltern dazukommen. Die Baukosten für das Projekt beliefen sich auf rund 55 Millionen Dollar. (<http://www.baunetz.de>)

Like a cut diamond, Krueck and Sexton Architects' Spertus Institute of Jewish Studies fits seamlessly Chicago's downtown street wall.

By Blair Kamin –

This is an excerpt of an article from the May 2008 edition of Architectural Record.

Like the imposing towers lining the edges of New York's Central Park, the street wall of historic skyscrapers fronting on Chicago's Grant Park exist as built topography—a man-made cliff of stone and brick that includes such seminal structures as Adler & Sullivan's robust Auditorium Building. Now, with the completion of the Spertus Institute of Jewish Studies by Chicago architects Ron Krueck and Mark Sexton, this mighty street wall—a mile and a half long—has made a dazzling leap into the 21st century. The 10-story building resembles a shimmering piece of quartz exquisitely inserted into a great stone wall, its faceted, folded facade of glass glinting in the morning sun.

While Spertus may appear to be yet another one-off “icon building,” it actually imparts several broader lessons. It is, first, a cultural building on a budget, with a construction cost of just \$39 million—far less than the recent crop of spectacular museums whose price tags typically exceed \$100 million. It is, second, a creative essay in Jewish architecture, eschewing facile iconography or familiar historicism for its beguiling study in light. Lastly, it is, like Steven Holl's much-praised Bloch Building at the Nelson-Atkins Museum in Kansas City, Missouri, an exercise in complementary contrast, with the new subtly juxtaposed to the old instead of trying to shout it.

For both architect and client, the building represents a felicitous debut on a broader stage. Krueck and Sexton's commissions have tended to be quiet triumphs, like the firm's skilled 2005 restoration of Mies van der Rohe's Crown Hall. For its part, Spertus, a leading Jewish institution in the Midwest, with three interrelated divisions—Spertus College, the Asher Library, and the Spertus Museum—was stuck in a remodeled turn-of-the-century office building. In a move straight out of *The Fountainhead*, the building suffered an International Style makeover in the 1950s that concealed its cultural identity. Inside, the institute's three divisions were separated from each other by a conventional stack of office floors. “People would come in and they would say, ‘Spertus is dead. Why doesn't anybody come here?’” recalls the institute's ebullient president, Howard Sulkin. “There would be 700 people in the building. There was no way you could know that because everything was compartmentalized.” For its new home, located directly north of the old one on a former vacant lot, Spertus chose Krueck and Sexton over three highly regarded finalists—James Stewart Polshek, Tod Williams and Billie Tsien, and Rafael Pelli. The winning team wasn't just brilliant, they were the best listeners, Sulkin said at the time.

Nevertheless, it took Krueck and Sexton several tries to develop a scheme that achieved the delicate balance of form and identity the client sought: A bold contemporary statement that would, of necessity, respond sensitively to the Michigan Avenue street wall, which Chicago had declared a landmark district in 2002. At the same time, the building would seek to communicate the Jewish values of learning and culture through light while it expressed the institute's identity as a civic institution, “not a ghetto institution,” as Sulkin puts it. <http://www.archrecord.construction.com>

#### **Libraries:**

#### **Kean University, Human Rights Institute (Nancy Thompson Library), Union Township, NJ – USA 2009**

Kean University, Nancy Thompson Library, Union, New Jersey, FIRM KSS Architects LLP, CLIENT Kean University  
AREA 81,000 sq.ft., TOTAL COST \$5,000,000.00, COMPLETION DATE 4/1996, The addition, attached to a corner of the existing library, ADDITIONAL INFORMATION, COST PER SQ FT \$62.00, FEATURED IN 1998 Architectural Portfolio

Kean University wished to enhance the library's position as the focal point of academic life on campus. Encompassing 20,000 square feet of additional space on three floors, the renovation and addition expanded and reorganized the existing library to encourage more frequent, skilled library use by students.

Construction of the project was phased to keep the existing facility in continual operation during construction.

\* Architect/Engineer: KSS Architects, Reynolds Group, Vanderweil, CMX (previously named Schoor DePalma)

\* Construction Type: Renovation/Addition

\* Basic Information: 12, 500 square feet, 3 floors, New curtain wall façade, \* Status: Appropriate permits in place Anticipated Bid Advertisement—November 8,2007, Project Completion—Summer 2009

A new, highly visible entrance closer to pedestrian walkways. The first floor exterior walls adjacent to the main circulation spine of the campus were designed with extensive glazing, allowing glimpses of the library within and encouraging passersby to enter. Special study areas include the Holocaust Resource Center, featuring a suspended curved wood ceiling, and a casual lounge located inside the main entrance.

The reference desk was renamed the information desk and placed directly in front of the main entry so that students could seek assistance immediately upon entering. The stacks were completely reorganized in a main-street fashion to ease book finding.

Brick and cast stone were used for the addition and continued the strong grid pattern of the original structure. Aligned cast-stone bands connect the addition to the original building.

<http://kean.edu/admin/uploads/pdf/purchasing/forms/ConstructionProject.pdf>

Kean University conceived the Human Rights Institute as an educational center to promote global understanding and diversity through outreach to the academic and regional communities. The nature of the institute's mission to become a prominent, interactive repository of information, programs and resources made Kean's Nancy Thompson Library an ideal location because of opportunities to share references and spaces common to both programs.

The institute, an exciting addition to the library, conveys its mission while preserving its distinct but interconnected role. The institute and library will share a new light-filled entry finished with cast stone and wood panels, leading to three floors housing an open exhibition space, a large reading room featuring club seating and group work areas, study rooms, offices and two large seminar rooms that will accommodate lectures, classes and administrative spaces. The design incorporates bamboo flooring, recycled carpet tiles, and clerestory windows to reinforce the message of international and environmental awareness. Slate treads of the staircase leading to the institute's second-floor reception area will be engraved with universal messages from human rights leaders.

#### **Central Library Austin, Austin, TX – USA 2016**

Collaboration with: Shepley Bulfinch

250.000 sqf., \$ 90.000.000

It's an exciting time for the Library Foundation, the Austin Public Library and the entire community, as Austin builds a new downtown central library, scheduled to open in 2016. This new flagship facility, designed by Lake Flato Architects and Shepley Bulfinch, will sit prominently along Shoal Creek overlooking Lady Bird Lake.

The building's design employs ambitious sustainable strategies such as energy efficient integrated systems, extensive use of daylight, a rainwater harvesting system, a vegetated roof and other features that will establish Austin's central library as the most sustainable in the country.

The design also captures Austin's unique character and natural beauty by means of outdoor reading porches, a rooftop garden, a street level café, and a bike garage.

Update:

September 28, 2012: the Design Development Phase (60% Complete Design) was presented to the Austin City Council.

View the New Central Library presentation document [HERE](#).

October 20, 2011: Austin City Council approved the schematic design, clearing the way for the project to progress into the next phase of architectural development.

September 22, 2011: the Schematic Design Phase (30% Complete Design) was presented to the Austin City Council. Electronic drawings of the new facility were on view and comments on its developing design were provided to the consultant architects.

December 9, 2010: City Council approved the New Central Library Architectural Building Program and the recommended funding plan of \$120 million for the New Central Library Project.

2009 - *Architectural Record* (Jul)

Because the old library's fascia had partially rotted and seismic upgrades were necessary, the architects took the one-story building down to its posts and beams. They removed various accretions, restoring the massing's original simplicity. The spirit of Jones and Emmons, rather than slavish reconstruction, guided the adaptation of the old library to new uses, with skylights added and windows adjusted to enhance the quality of light and visual connection with the outdoors. Along the facing canyon wall, just a few yards away, the design team sited the new library and classroom building. A hinged pair of volumes flanking an upper-level bridge, it has classrooms on one side and the new library, with music and multipurpose rooms below, on the other. Like a treehouse hovering at the tree canopy, the structure — clad in cedar with stucco to blend with the surroundings — perches lightly on the ground, the library not exceeding the pad of its demolished predecessor. Long and horizontal, the new building continues the spine of the existing classroom structures, stitched along the canyon's face. While the original classrooms were accessed from the back, via a path between the buildings and canyon wall, the new structure offers entry from generous porches along its front, as well. Replacing single-story buildings, the new one rises three stories to accommodate the grandeur of double-height library space inside. The result is an architecture fully engaged with this small canyon, yielding views across it while inviting activity to flow between interior and outdoor realms. Paths, extending from outside in, thread through the upper campus. Gentle switchbacks, amid native, drought-resistant plantings, now replace a straight road uphill. The building's bridge feeds into its porches. Steel-grate rails and wood planks underfoot bring the language of the porches inside, through a long stair in the library's double-height space.

[http://archrecord.construction.com/projects/bts/archives/k-12/09\\_saintmatthews/](http://archrecord.construction.com/projects/bts/archives/k-12/09_saintmatthews/)

A challenging site meant that this building, which houses grades 1-4 and a new library, had to be built against the side of a hill. No taller than two stories, the low-scale porches and projected roofs keep the building in scale with the elementary school children. The wood, copper and smooth stucco blends into the canyon environment. Exterior walkways and bridges provide outdoor connections, promenades and second-story porches that take advantage of the area's climate and spectacular views.

#### **Great Northwest Library, San Antonio, TX – USA 1994**

### **Awards:**

AIA/ALA Library Building Award - 1997

Texas Society / AIA - 1997

AIA San Antonio – 1995

This branch library is located in a rural suburban area where the open, flat, south Texas plain meets the tree-covered, limestone-rich Hill Country. Located at a major intersection, the main entrance was oriented towards the neighborhood and away from the road to create a more tranquil atmosphere. Simple, indigenous building forms were used to reinforce the direct no-nonsense nature of the library. The quieter book stack areas are in low, limestone-clad "pods," while zones of public activity are in high vaulted spaces with clerestory windows.

2006 - AIA San Antonio Design Award

#### References:

2005 - American Libraries (Apr)

Exposed heavy timber construction and layered natural wood interiors reflect the forested location of Sierra Nevada College near the shores of Lake Tahoe. Nestled into its site, the building conveys the sense of shelter associated with the forest. Inside, a large reading room occupies the main level, with a stair ascending up to the floors of book stacks. Reading alcoves and study lofts perched above the book stacks take advantage of the voluminous, light-filled reading room. The three floors and two mezzanines also contain classrooms, meeting rooms, offices, exhibit space, bookstore and café.

<http://www.lakeflato.com/projects/prim-library/>

The library was conceived as the heart of the campus, fulfilling the College's vision of "high tech, high touch," bringing students together to learn and interact, and connecting to forest setting. Exposed heavy timber construction and layered natural wood interiors reflect the forested location of this liberal arts college near the shores of Lake Tahoe. Nestled into its site the building conveys the sense of the shelter associated with the forest. Inside the library, a large reading occupies the main level, with an ascending stair up to the floors of book stacks, mimicking the familiar act of climbing the slopes in this mountainous region. Reading alcoves and study lofts perched above the book stacks take advantage of the voluminous, light-filled reading room while providing views into the forest. The three floors and two mezzanines also contain classrooms, meeting rooms, offices, exhibit space, and a cafe.

#### Sustainability Description:

The architects worked with a sustainability consultant to incorporate a variety of green technologies, each designed to save energy and increase energy efficiency. Space Programming: Efficient planning of interior and exterior space minimized material, energy, and construction cost impact. Interior space program allowed for abundant use of daylight.

Heating/Cooling: The only air conditioning in the building is located in the computer server rooms. All other spaces are naturally ventilated via operable windows. Vents located in the floors exhaust hot air up from each floor and out through the high clerestories in the roof. Passive shading also helps keep building cool. An in-floor radiant heating system is used to warm spaces in the winter.

Lighting: Clerestory windows allow natural, yet controlled, light to spill into the circulation, exhibit and reading areas. Maximizing the use of daylight in this way increases comfort (and learning), while reducing energy load. Lighting control systems and efficient secondary/task lighting were also incorporated.

Local Materials: Extensive use of local and regional materials, such as Douglas fir and native stone, enhance the building's connection to its specific place.

Site Development: The ecologically sensitive site was developed using sustainable practices, in close coordination with the Tahoe Regional Planning Agency, including:

- Building orientation reduces heat gain/mechanical requirements during summer, but allows solar passive heating during winter.
- Construction waste management program
- Water conservation and re-use
- Landscape design elements incorporate low maintenance native vegetation.

<http://www.thelawrencegroup.com>

#### Libraries:

### **[Henry S. Terrazas Branch Library, Expansion & Renovation, Austin, TX – USA 2006](#)**

The library nearly doubled in size adding 4,600 square feet of community meeting space; separate adult, children's and youth services; computer technology; and staff support. We created a new entry that invites pedestrian traffic from the neighborhood and from new parking areas. Integrated into the front wall of the entry is a work by nationally recognized artist and Austinite, Connie Arismendi. The addition's roof design artfully suggests an open book metaphor. Historically the library is a community cultural mainstay. It was featured in Library Journal and in American School and University's "Architectural Showcase."

#### Libraries:

### **[North Beach Branch Library, San Francisco, CA – USA 2014](#)**

Located at the central crossroads of North Beach, with spectacular city views and lively urbanity, the new North Beach Branch Library creates a valuable civic amenity for the neighborhood. A two-story building with double-height reading rooms, its sequence of entry ways connects both Columbus Avenue and the proposed park expansion at Mason Street.

Generous glazing at the three corners of the building create a series of urban lanterns, while smaller scale openings connect to the outdoors. The design takes full advantage of the neighborhood views to the bay, Coit Tower, Saints Peter and Paul Church, and the TransAmerica Pyramid.

The project will integrate sustainable design strategies and targets LEED Silver certification

### **[Nueva High School, San Mateo, CA – USA 2014](#)**

A new independent high school campus for 600 students weaves together a collection of educational environments to form an "ecology of learning" for the 21st century student. Incorporating recent research into learner-centered pedagogy, the school is designed to adapt to changing educational needs while supporting creative inquiry and mind/body wellness.

Program amenities include flexible learning spaces; innovative science laboratories and tech shops; a 425-seat theater; dining facilities; athletic center; student center; and a unique Writing & Research Center. Located in the San Francisco Bay Area within a transit-oriented development and adjoining a public park, outdoor spaces include contemplative study courts, sport courts, outdoor lab areas and organic gardens.

Completion is scheduled for Fall 2014.

### **Libraries:**

[Massachusetts Institute of Technology MIT, Media Arts and Sciences Building, Cambridge,](#)

[MA – USA 2009 in collab. with Maki and Associates Tokyo – Japan](#)

Project Data: Gross Square Footage: 162,665 SF, Construction Cost: \$90,000,000, Year Built: 2009

MA – USA 2009 in collab. with Maki and Associates Tokyo – Japan

The Media Laboratory was formed in 1980 out of the work of MIT's Architectural Machine Group and was built upon the seminal work of the faculty, which included a variety of research disciplines including cognition, learning, music, graphic design, video and holography. The lab has pioneered a research environment where academia and industry collaborate and has cultivated a culture built around cross disciplinary research groups much in the spirit and vitality of architectural "ateliers." The success of the school now depends on a major expansion project that will provide additional space for expanding research as well as spaces that will support and intensify the interaction among the Media Lab community. The new Media Arts and Sciences Building will provide 163,000 square feet of additional space adjacent and connected to the current Media Lab building, designed by [I.M. Pei in 1985](#). In response to the Media Lab's spatial needs, Maki and Associates developed a building design concept with a multi-tiered atrium that will be the central hub of the complex and link to the existing building. The atrium will cascade and shift throughout the six floors and will serve as the primary space for moving vertically and horizontally through the building. Spaces for exhibition, performance, and social gathering will be located in various locations within the atrium, offering opportunities for the public to engage the activities and research conducted at the Media Lab.

Seven laboratories will be juxtaposed on alternating sides of the atrium and will range in size from 5000 to 8900 square feet. The laboratories have been designed with a rigorous modularity and deep floor plates to offer maximum flexibility and the ability to reorganize the space without major reconstruction. Six of the labs will be double height spaces and will alternate every other floor to allow the lower level of one lab to overlap with the upper level of the adjacent lab. The atrium space will cut between the adjacent laboratory spaces and will provide extended and elongated lines of sight to the various activities occurring throughout the building. This strategy will offer a high level of transparency and interconnection between the separate lab spaces, which is difficult to achieve in traditional research facility configurations. Furthermore, each lab space will retain its own unique characteristics given its placement within the vertical sequence of laboratories and its relation to the exterior.

The Media Lab is frequently toured by visiting academics, sponsors, and film crews eager to meet with researchers and to catch a glimpse of the latest research projects. The building will be crowned with a 12,000 square foot event, conference, and teaching center offering a panoramic view of the Boston skyline across the Charles River. In a reciprocal relationship, the new building will contribute to MIT's skyline with a soft and variegated silhouette that will glow within a framework of pastel masonry buildings. The building will be sheathed in an aluminum and glass façade with a second layer of louvered screens that will overlay the glazing of the double height lab spaces providing the necessary environmental controls. The laboratories will have an abundance of natural light and a variety of views to the exterior, which is in stark contrast to ordinary laboratory facilities that are often highly concealed. The exterior image of the building is expected to transform throughout the day with the changing sunlight conditions illuminating the varying levels of transparency and spatial depth occurring within the building.

## [HUL Administration, OIS & Weissman Preservation Center – Harvard University Library, Cambridge, MA – USA 2006](#)

### **Awards:**

**LEE Gold status**

On August 21, the US Green Building Council (USGBC) designated the University Library's multiservice facility at 90 Mt. Auburn Street a gold-certified, sustainably designed and constructed "green building." Through its LEED (Leadership in Environmental and Energy Design) certification program, USGBC recognizes concerted efforts to select sustainable sites, improve water efficiency, minimize energy use, select environmentally preferred building materials, provide an improved indoor environmental quality, and utilize innovative strategies to improve building performance. LEED certification is the nationally accepted benchmark for the design, construction, and operation of high-performance green buildings.

The University Library inaugurated operations from 90 Mt. Auburn Street in May 2006, uniting under a single roof HUL's Office for Information Systems (OIS), Weissman Preservation Center (WPC), and Open Collections Program (OCP), as well as Cambridge-based personnel for the Harvard Depository and HUL human resources. The facility, constructed and operated by Harvard Real Estate Services, was designed by Leers Weinzapfel Associates Architects of Boston, with an equally green interior fit-out commissioned by HUL and designed by Samuel Anderson Architects of New York City.

From the outset, 90 Mt. Auburn Street was conceived as a green building. Geothermal heat pumps heat and cool the building and provide its hot-water supply. While such systems have a fairly long history in residential construction, Harvard is a leader and innovator in installing ground-source heat pumps (GSHP) in institutional buildings, such as 90 Mt. Auburn Street.

Other green features include variable-speed drives on hot and chilled-water pumps, energy-efficient lighting, and "low-e" glazing in the windows, which together led to 90 Mt. Auburn Street's rating as 32% more efficient than a comparable building of standard construction. With its Energy Star roof and careful window placement—the majority of the fenestration has a northern exposure—the building limits its solar heat gain and lessens its cooling load throughout the year. Highly efficient sinks and toilets yield an estimated 43% reduction in water use.

According to Barbara Graham, associate director of the University Library for administration and programs, "The building exemplifies 'green' construction techniques and the University's commitment to them. HUL itself commissioned Sam Anderson's interior fit-out of 90 Mt. Auburn Street. We're proud to provide an unquestionably green environment as well as well-designed work spaces—notably the special collections conservation lab—that reflect the important nature of the work that HUL does every day." ### **Libraries:**

#### **Rock Valley College. Estelle M. Black Library Renovation, Rockford, IL – USA 2007**

[Rockford, Illinois] – A blank concrete wall. Last year, that was the “face” the Estelle M. Black Library displayed to the Rock Valley College (RVC) parking lot. Inside, the library was dark and outdated: few windows, dim lighting, and the same red carpeting since the library was built in 1971. In July, 2007, the library re-emerged as a campus destination. A new glass entry displays library activity to those in the parking lot. A glass wall and a skylight disperse natural light throughout the interior. And light beige carpeting inlaid with leaf patterns has replaced the gawky red. “The renovated space draws students and staff into a more welcoming building and library setting with plenty of natural light, a beautiful view of the Rock Valley campus, plus specifically designed group meeting space for students, additional technology accessibility, and wonderful quiet study spaces”, says Sam Overton, RVC VP of Administrative Services. He adds, “The door count data prove the new environment is making a difference.” The 60,100 square foot renovation was completed at a cost of \$81 per square foot. The Force behind the Change The project began in 2004 when RVC created a Task Force. Its goal: to bring more students, staff, and community members into the library. Working with designers at Legat Architects, the task force explored ways of responding to the needs of today’s community college user. Discussions covered programming, zoning, technology, and aesthetics. Throughout the project, the team refined the program and design based on input from many stakeholders: faculty, library and administrative staff, students, and community members. An Invitation to the Community Prior to renovation, visitors had trouble finding the library. There was no clear exterior identification. After passing through RVC’s main entry, users had to traverse a long corridor to find the library’s non-descript entry. Also, students often disturbed library activity as they passed through it to get to non-library classrooms. Today, the library’s glass-faced entry welcomes students and community. A light-filled commons area next to the library avoids disruption, and attracts students from the bordering classroom buildings. “The commons offers a coffee bar and lounge seating to promote student interaction, while a curved sheet of glass displays the library, visually connecting it to this campus life space,” says Greg Spitzer, project designer with Legat. Light and Views Previously, the main floor was windowless, and the few windows on the upper level only brought light to stacks. “Glass played an important role in achieving the Task Force’s goal of creating a much more open, connected feeling within the library,” says Jeffrey Sronkoski, director of higher education at Legat Architects. A floor-to-ceiling glass wall and a 20’ by 20’ skylight bring natural light to both levels. Stacks moved to the center, opening up spaces for study along the periphery. For instance, students had trouble determining where or if they could study in groups. Now the upper level offers bright study rooms with views of a “natural corridor” (i.e., trees and creek), as well as other campus buildings. Zoning also needed improvement; classrooms with non-library functions were dispersed throughout the facility. The renovations separate all library and non-library functions. Also, the layout offers strategically located campus life spaces with soft seating for collaboration, study, and spontaneous discussion. Blue accents within the carpet create a “main street” that starts at the entrance and passes through the main areas of the library. Evidence of Success Before renovation, library user door count averaged 3,165 per week during the early fall semester of 2005. After renovation, that number has grown to 3,889 – a 19% usage increase – in the fall of 2007. “Part of our mission is to foster innovative, collaborative relationships between students, faculty, and the community,” says RVC Administrative Services VP Sam Overton. “The Estelle M. Black Library, with its current technologies, interactive seating and study areas, and aesthetic statement, is a testimony to that mission.”

[http://www.ibhe.org/Media%20Center/NewsFromSchools/120307\\_RVC.pdf](http://www.ibhe.org/Media%20Center/NewsFromSchools/120307_RVC.pdf)

#### **University Center, College of Lake County, Grayslake, IL – USA 2005**

see also: **HOK**

91,000 sqf., \$ 19,925,000

A building combining higher education and workforce development shows its dual personality.

The first facility of its kind in Illinois, the 91,000-square-foot University Center of Lake County merges degree and workforce development programs from 18 higher education institutions. Legat and HOK set out to create a county hub for academic and professional advancement, while enhancing the client’s visibility. The primary design challenge involved harmonizing with other facilities on a community college campus, yet distinguishing the client as a distinct entity, and responding to a key audience of working professionals.

[http://www.legat.com/content/news/publications/publications\\_higher\\_education\\_1230587507.pdf](http://www.legat.com/content/news/publications/publications_higher_education_1230587507.pdf)

#### **Morton College. Library Renovation, Cicero, IL – USA 2004**

19,000 sqf., \$ 1,144,000

In order to respond to changing teaching and learning methodologies, as well as recent advancements in library technologies, the library at Morton College was renovated and reorganized. In addition to upgraded programmatic functions, the renovated space includes a new cyber cafe, group-study rooms, expanded technology-access areas, wireless internet capabilities, an gallery, a bibliographic instruction classroom, and an academic resource room for faculty and staff. The organization of the facility puts the public spaces adjacent to the all-glass entry, and the more private spaces are on the upper level. The circulation desk, with a large canted feature wall behind it, was moved to the center of the library, highlighting a north/south axis that runs through the space. This axis is expressed in the ceiling and floor patterns, and terminates at help desk “nodes.” Many of the design decisions were driven by the desire to create clear sightlines, a logical wayfinding system and a renewed sense of energy throughout the space. The new design has transformed the library at Morton College into a true destination point for students, faculty, staff and the community. "Great transformation, very mod!" --2005 jury .

## **Lerner, Ladds + Bartels, Pawtucket, RI – USA**

<http://www.llbarch.com>

### **Libraries:**

#### **Boyden Library, Boden, MA – USA 2013**

The existing Boyden Library in Foxborough, built from 1967-1968, is a surviving example of mid-century brutalist architecture. By its design and nature of untouched longevity, it is a beautifully honest representation of construction method and structural integrity, yet was in need of an expansion and reconfiguration. A proposed renovation of the existing 20,833 sf space included replacement of mechanical systems, roofing, windows, elevator, addressing all handicap accessibility issues, and removal of all asbestos.

Working closely with the trustees, building committee, and neighboring community, the new addition is designed to complement the original building geometry and material palette of concrete, glass and monolithic limestone panels. It takes cues in interpreting the original design by continuing the horizontal datum and patterns of fenestration for a unified building. The additional 13,800 sf provides much-needed space to the library's growing collection for the next 20 years. The top floor houses an inviting and accessible children's area which doubled the size of the existing area. Another program element in high demand from the community was a new books and media area which is located on the ground floor. Additionally, more than thirty computers are available to the public and an improved meeting room provides space for Foxborough's community groups and organizations.

The \$11.6 million project is partially funded through a \$3.6 million construction grant from the Massachusetts Board of Library Commissions and an additional \$7.5 million of town-approved funding. Other funds will come from a fundraising campaign and private funds which includes money from the library's trust fund and donations.

<http://llbarch.com/projects/featured/boyden-library/>

### **[Walpole Public Library, Walpole, MA – USA 2012](#)**

In the historic context of New England, the Walpole Public Library is a rare new building sited adjacent to the town hall and historic Blackburn Hall and just steps away from downtown. LLB Architects had been working with the Walpole community since 2007 when we were asked to re-envision and improve upon the previous library design, accepted for a construction grant from the Massachusetts Board of Library Commissioners. After a long, twenty-year process and funding approval by a slim margin, the community of Walpole can be proud of their new library.

The design of the new 32,000 sf building uses traditional architectural textures, colors, and fundamentals of traditional architecture to respond to the New England context. The library program is organized around four masses encased in fiber cement panels which anchor the building's entries. In between them, generous circulation paths, a sculptural staircase, and skylights create a feeling of openness and lightness. The difference in treatment and fenestration on each side of the library appropriately responds to its site orientation and the environmental effects on them.

On the interior, service desks for circulation, reference, and the children's area are centrally located for the highest visibility and security with the minimum number of staff. There are areas dedicated for young children, which includes a program room for community events; young adults, with computers and comfortable seating for lounging; and patrons looking for new books and media, or reference materials, or any of the 110,000 items (and counting) in the library's collection. One of the areas in the library that has grown in popularity is the quiet study rooms, designed with floor to ceiling glass, which allow for a sense of privacy and territory, but a sense of security as well.

The building is expected to receive LEED Silver certification and makes use of both passive sustainable strategies as well as active strategies. The incorporation of a green roof over the one-story wing creates a better insulated space for the program area. Natural light floods the interior spaces through the surrounding glazing and skylights and reduces the need for artificial lighting. The use of a photovoltaic panel system has assisted in generating over 5% of the building's utility features onsite, as well reducing the baseline energy use by nearly 25%. A rain garden at the entry of the building creates a small stream of rainwater from the roof to feed native plantings and remain within onsite in a retention pond. To further promote sustainable design, significant efforts were made to use both local and high-recycled content materials.

The library's past location was built in 1903 thanks to a grant from Andrew Carnegie, land donation by Walpole natives, and town money. Like then, Walpole's new library, with a project budget of \$11.2 million, has been made possible by various contributions including a generous grant from the MBLC, charitable donations from the community, and optimism from the taxpayers of Walpole. Since its dedication in April 2012, the Walpole Public Library has seen circulation levels dramatically increase and continues to welcome patrons offering endearing compliments. (Lerner)

<http://llbarch.com/projects/libraries/walpole-public-library/>

### **[North Scituate Public Library, Scituate, RI – USA 2011](#)**

In this classic New England village setting, the North Scituate Public Library holds the memories of all the residents of North Scituate who have used it since 1925. The modest 1,600 sf addition and renovation to the original building retain the beauty of the library's historical charm while bringing it into the 21st century to support the growing population.

The exterior prominently features the archive room which is clad in slate panels to portray the importance of the collection within. Another feature of the project is the addition of a large meeting room which will not only serve as a gathering place for events for the community but also as an art gallery where local artists can display their work. Large windows on each side of the library allow the community to look in and provide framed views of the village center from inside. A centrally-located circulation desk and a new books and media at the entrance provide a flexible space for visitors to encounter and interact with each other.

The library worked with local organizations and individuals to create new garden areas which enhance the beauty of the village, including the rain garden, designed to blend seamlessly into the traditional New England landscape. Through a careful renovation of the existing space and a modest but thoughtful addition, the library will continue to be a vital resource for the town for decades to come.

<http://llbarch.com/projects/libraries/north-scutuate-public-library/>

### **[Milford Town Library, Milford, MA – USA 2007](#)**

The Milford Town Library was opened in 1986 providing an open-plan facility. The building served the community well, but in recent years the staff realized it had become difficult to meet the increasing needs of the community in the space with its current configuration. LLB Architects was hired to remedy the situation. Through program diagrams, such as the chosen scheme pictured below, LLB was able to create a new layout which met the demands of both the budget and the staff. The original plan had a number of deficiencies, accentuated by two main flaws. The Young Adult Area (located on the main floor) was separated from the basement Meeting Room typically used by the teenagers, resulting in a constant flow of traffic which disrupted patrons who were using the reading areas or computers. The layout of the Reference Section was inefficient; the desk was located in the center of the reading area, while the office was located along the back wall. By reorienting the reference section and locating the desk along a wall adjacent to the reference office, the reference librarian now has control over the entire main floor. The reorientation of stacks and the relocation of the Young Adult Section to the lower floor next to the meeting rooms solved several of these key issues. Librarians are strategically located throughout both floors to ensure control of each area. The Milford Town Library project was completed in October 2007, providing the Town of Milford with a library which meets both current and future needs. Although not pushed to receive certification, the Milford Public Library was designed to LEED status.

<http://www.milfordpubliclibrary.org/photos/>

### **Maynard Public Library, Maynard, MA – USA 2006**

The total estimated \$5.7 million project cost of converting the Roosevelt School on Nason Street into the Library's new home was raised from a combination of state, local, and private funds. The Massachusetts Board of Library Commissioners awarded the Board of Trustees of the Maynard Public Library a state library construction grant of \$2.1 million and in May 2003, Maynard voters approved a debt-exclusion measure to allow borrowing of up to the remaining \$3.6 million. The Friends conducted an ambitious capital campaign to help defray the cost to taxpayers. Over \$500,000 in pledges and contributions were collected. The new Maynard Public Library was inserted into the shell of the formerly abandoned Roosevelt School, a locally significant and historic three story New England brick school. The 24,000 sf building serves as a spacious new home for the growing library collection. Due to the severe weather damage and water infiltration of the abandoned school, only the historic facades and entrances were preserved in the renovation. Lerner | Ladds + Bartels developed a sculptural curtain wall design on each end to allow for light to penetrate through the fire stairs and into the collection areas. The interior was reconstructed with a completely new concrete and steel structure and organized around a central opening and skylight that is occupied on the lower level by a monumental staircase. Each floor is also enhanced with the adaptation of a loggia-like central spine that beckons back to the arched ceiling of the original school's hallway. The site received a new parking lot and an accessible entrance, as well as a reading garden and seating area.

### **Watertown Free Public Library, Renovation-Expansion, Watertown, MA – USA 2006**

Architects Shaw & Hunnewell (George Russell Shaw 1848-1937 / Henry S. Hunnewell 1851 – 1931) designed the original Watertown Free Public Library in 1884. Located prominently on Main Street in the heart of Watertown, this French Renaissance style structure has undergone several additions and renovations over the years. The most significant expansion occurred in 1956 with a modern brick and glass structure. The new design by Lerner | Ladds + Bartels, fully implemented by August 2006 at a cost of \$9 million, removed the later additions and restored the historic 6,000 sf red brick and brownstone library. The new 38,000 sf addition connects its main entrances with a two-story corridor/central spine that is washed with natural light from a skylight above, and provides a monumental stair connecting the two levels. The scale and materials of the addition are sensitive to the existing historic buildings. The design also reestablishes the street edge and creates a vibrant new urban green space showcasing the historic library structure.

### **The Providence Athenaeum, Providence, RI – USA 2005**

Over the past 250 years The Providence Athenaeum has enjoyed a vibrant history in remarkable settings. Founded in 1753 as an independent member-supported library, it has been located on Benefit Street on the historic East Side of Providence since 1838. Situated between Brown University and the Rhode Island School of Design, the Greek Revival building, designed by William Strickland (1788 – 1854), is the only example of his work in New England and is credited with promoting the style throughout the area. Subsequent additions by Norman Isham and William Platner allowed the library to expand its collection and storage capacity as well as provide additional spaces for the members; including a children's area, a climate controlled rare book room, and additional office space. The Athenaeum contracted Lerner Ladds + Bartels to address structural and life safety deficiencies prevalent throughout the building, as well as refine their existing master plan. The "Bound," located directly below the circulation desk, (named for its traditional use as a bound-periodical storage area) was experiencing significant structural failure in the ceiling joists. Temporary steel columns filled the room in attempt to curb settling. LLB was charged with finding a permanent structural solution which would also eliminate all intermediate structure from the space. The removal of the existing columns and stacks, along with the subsequent finishes renovation, provided the Athenaeum with much needed flex-space usable for a range of functions. In conjunction with the structural renovation, LLB and their consultants identified all existing life-safety violations existing throughout the building. A report was compiled and presented to the Board of Directors which suggested ways to conform to current building codes while maintaining the historic integrity of the library. Construction was scheduled to coordinate with the Athenaeum's annual summer shut-down, which allowed all of the heavy work to occur without interruption to the library staff and patrons. Not only was the primary goal to assist in the stability and integrity of the building itself, but also to maintain distinct coordination between consultants, and ensure that full operation of the Athenaeum was maintained throughout its project timeline. Phasing proved crucial to the project's success, along with many protective measures to guard from debris, noise and other discomforts. (Lerner)

### **Nevins Memorial Library, Methuen, MA – USA 2002**

Work performed by principal R. Drayton Fair, LEED AP, AIA, while employed at Tappe Associates. The Nevins Memorial Library is not only listed on the National Register of Historic Places; the benefactors are actually buried on the property. Juggling the complex siting issues of the building, grave site and specimen trees planted by David Nevins Jr., the design of the addition is sympathetic to the original Richardsonian Romanesque style of the exterior. The design brings complete new handicapped accessibility to the entire building for the first time and provides 17,000 additional SF for library services. The interior of the addition contrasts the original ornate oak with a lighter design and wood finish while still complementing the proportions of the original. Architect designed furniture pulls the design through to the details, while the new stained glass windows in the Children's Library, also designed by the architect, carry an original theme throughout. (Lerner)

[http://www.tappe.com/Nevins\\_Memorial\\_Library.html](http://www.tappe.com/Nevins_Memorial_Library.html)

### **Bolton Public Library, Renovation-Expansion, Bolton, MA – USA 2000**

Built in 1902, the original Bolton Public Library has been in operation for over a century without a single major renovation. The historic library had grown in other ways, however, requiring a new course of action. The abundance of materials gained over the years led to a general lack of space for other traditional functions. Increased technology needs, such as internet access and security measures, also needed implementation. For such a heritage-centric town as Bolton, demolition of the existing building in favor of a larger facility was out of the question. The key issue facing LLB centered around developing a design for the addition that was at once interconnected to the original through forms yet distinguished and functional. Several distinct styles were taken from the

original structure and fused together, replicating materials to accurately reflect exterior themes. Repetition of dormers serve for both form and function, creating pop-out areas to maximize usable areas. The addition is linked to the original library through a glass connector, centralized with the new main entry and stair. This connection falls upon the new building's central axis, simplifying circulation and program distinction. Capitalizing upon the dichotomy of history and technology, program themes for each division relate back to the structures themselves. The cozy original building houses reading spaces, meeting areas, and historic materials. Elements in the addition include technology spaces, a separate children's room, and an expanded administration branch.

<http://llbarch.com/projects/featured/bolton-public-library/>

#### **Gleason Public Library, Carlisle, MA – USA 2000**

The historic Gleason Public Library of Carlisle, Massachusetts, built in 1895 and renovated/expanded in 2000, has an unfortunate history of water penetration and infiltration. Limited repair work addressed gutter replacement and slate roof maintenance, without long-term correction. Lerner | Ladds + Bartels, along with Envelope Preservation Consultant Simpson Gumpertz & Heger Inc., conducted a full site analysis to determine existing breaches and deficiencies as well as the best methods of repair. The entire foundation will receive new waterproofing equipment, and a perimeter drain shall be installed to prevent buildup of standing water. The exterior will receive full brick and granite repairing and repointing, complemented by a full slate roof and flashing repair/replacement. Window restoration throughout includes wood rot repair, glazing and hardware repair, and sill replacement and painting. Existing damage is addressed with Interior drywall and flooring replacement. (Lerner)

<http://llbarch.com/projects/libraries/gleason-public-library/>

#### **Billerica Public Library, Billerica, MA – USA 2000**

Work performed by principal R. Drayton Fair, LEED AP, ALA, AIA, while employed at Tappe Associates. The original Billerica Town Hall sat vacant for over 10 years on the Town Common before the Billerica Public Library expansion project was able to bring the building back to life. The original cupola had been struck by lightning and removed, vandals had destroyed the grand staircase, and the windows had been broken and boarded up. The design fully restored the original building and expanded the square footage by 25,000 SF by duplicating the mass and roof forms of the historic building and connecting them with a new entry piece, providing full handicapped accessibility for the first time. Inside, the original Town Hall meeting hall on the second level was restored for use as the new reference room. The addition is open in plan, allowing a new three story bay window to allow natural light deep into the building. The full design is carried throughout with architect designed furnishings and a rich pallet of color finishes. (Lerner)

<http://www.billericalibrary.org/about-the-library.html>

#### **Acton Memorial Library, MA – USA 1999**

Work performed by principal R. Drayton Fair, LEED AP, ALA, AIA, while employed at Tappe Associates. The original Acton Memorial Library, built in 1889 by Hartwell & Richardson, is a wonderful example of the Richardsonian Romanesque style and sits on the historic Acton Town Common next to the Town Hall. A 1966 addition expanded the original 1800 SF by more than 10,000SF but was built in a modern brutalist style. As requested by the client, the addition completely reclaims the 60's addition with a design more sympathetic to the Historic District. The new addition connects the original main floor level to the grade level expanded parking with a new accessible main entrance. The new entry facade continues and expands upon the design of the original building, blending old and new, without overpowering the original design. The interior design further expands upon the craftsman motifs utilizing woods and a classic color scheme throughout. The design was further enhanced by architect designed library furnishings and signage. (Lerner)

#### **Kingston Free Library, Kingston, RI – USA 1994**

Work performed by principal R. Drayton Fair, LEED AP, ALA, AIA, while employed at Tappe Associates. The original building, built in 1776, is one of the five original statehouses of Rhode Island. The project featured a new accessible entrance, elevator and egress stair discreetly attached to the rear of the building and allows for full handicapped access to the entire structure for the first time. The entire historic post and beam heavy timber frame of the building was reinforced with new steel to support current library loading without compromising the historic integrity of the original structure. New casework and millwork were designed to enhance the design of the original building. The second level was also brought up to code as a meeting hall for the community. Complete new systems including HVAC, fire protection, electrical and technology systems were fully integrated into the structure. The interior and furnishing design was coordinated and prepared by the architect to complement the original architecture. (Lerner)

[http://commons.wikimedia.org/wiki/File:Kings\\_County\\_Courthouse\\_\(Kingston\\_Free\\_Library\).jpg](http://commons.wikimedia.org/wiki/File:Kings_County_Courthouse_(Kingston_Free_Library).jpg)

#### **Middleborough Public Library, Middleborough, MA – USA 1992**

Work performed by principal R. Drayton Fair, LEED AP, ALA, AIA, while employed at Tappe Associates. Originally built in 1903, the Middleborough Public library is a classic example of a turn of the century Carnegie Library built in the classical style. Built of buff color brick with a limestone base, the building had never been updated until the 1992 addition. Incorporating complete new services, the new addition reinforces the design of the original on a very tight urban site, bringing the total building square footage to 25,000. On the interior, the new circulation desk bridges both the new addition and grade level entry with the original building and entry on North Main Street. The original building was completely renovated to restore original elements of the main skylight and salvaged brass light fixtures and features a public meeting room seating 130 and a climate controlled genealogy room for the Cranberry Collection. Although the original stack wing was demolished, Mr. Fair designed end tables for the building to incorporate pieces of the original glass floor along with designing the complete furnishing and finish package for the building. **Line and Space, LLC Tuscon, Arizona – USA**

<http://www.lineandspace.com>

**Libraries:**

**City of Phoenix Cesar Chavez Regional Library, Phoenix, AZ – USA 2007**

Designed to accommodate up to 40,000 visitors per month, this new 120,000-volume library for the the City of Phoenix is located adjacent to an existing lake in a public park. A large roof shades floor-to-ceiling glass from the harsh summer sun and collects

rainwater (stored in the existing lake) to be reused for irrigation, while earth berms surrounding the library, provide thermal mass and quietly integrate it into the park-scape. The Children's Area has an overhead sculptural "kite" which lowers the ceiling plane to a child-appropriate scale, and features an interactive display wall for kids ages 0-3, 9 dedicated computer stations, a "homework help" area with tables and chairs, and secluded story room.

An area for teens, christened "R3" for "read, relax rejuvenate" by local high school students, includes printed material in addition to high-tech amenities such as MP3 listening stations, a plasma-screen TV for viewing DVDs in a semi-enclosed lounge, and 12 dedicated computer stations. The building also provides spaces useful for the surrounding community such as a computer classroom, tutoring room, a 75-seat public meeting room, wireless internet access, and general computer areas (a total of more than 60 computers).

Extending the usability of exterior space for readers to enjoy during the summer, at the north end of the building, a large covered patio is tempered with recycled HVAC exhaust air and protected from the sound emanating from the busy street by an earthen berm. Along the west, 5,000 sf of private staff offices and workrooms are separate and secure.

### University of Arizona, Poetry Center, Tuscon, AZ – USA 2007

Poetry is the food of the spirit, and spirit is the instigator and flow of all revolutions." Since its inception, the Poetry Center has strived to live up to these words from founder Ruth Stephan. With nearly 70,000 items related to poetry in its collection, the Poetry Center is a living archive, a place where the spirit of poetry has served members of the community just like you for over 50 years. Within this single space you will find opportunities to enjoy readings and lectures, classes and workshops, library exhibitions, field trips, K-12 educational resources, discussion groups, or just a quiet place to sit and read a book. It is, as beloved teacher and friend Steve Orlen said, "The best living room in America for reading poetry." Welcome; we hope you stay awhile and return often.

#### Mission

- The Poetry Center is a living archive, founded in 1960 to maintain and cherish the spirit of poetry.
- The Poetry Center promotes poetic literacy and sustains, enriches, and advances a diverse literary culture.

#### Activities

An internationally renowned poetry library, the Poetry Center sponsors numerous University and community programs, including readings and lectures, classes and workshops, discussion groups, symposia, writing residencies, poets-in-the-schools, poets-in-the-prisons, contests, exhibitions, and online resources, including standards-based poetry curricula. An area of special emphasis within the College of Humanities, the Poetry Center is open and fully accessible to the public.

<http://poetry.arizona.edu/about>

The University of Arizona's Helen S. Schaefer Poetry Center was opened to the public as well as writers, faculty and students in October 2007. The building creates a landmark facility where the mission of providing an outstanding research collection, quite possibly the most outstanding collection of contemporary poetry in America, and meeting place for writers and readers of poetry can be fulfilled.

Founder Ruth Stephan's concepts of accessibility and the connection between reader and poetry are overarching and drove the design for the building. Outdoor gathering and comfortable places of solitude and contemplation are an integral part of this project. The program includes stacks, controlled rare book collection, archives, administration, space for the Humanities Seminar Program and areas for discourse in both small and large groups. Integrated housing, one of the truly unique aspects of the center, is provided to honor and support the tradition of interaction among established poets and students as well as total immersion for those just emerging.

### Peggy J. Slusser Memorial Philatelic Library (Western Philatelic Museum) Tuscon, AZ – USA 1996

The Slusser Memorial Philatelic Library contains a collection of over 30,000 books, journals, catalogs, photos, maps, and other reference items related to philately and postal history. Our archival collections focus on the postal history of Arizona and the Southwestern United States. The library also houses a collection of Civil War literature and material.

Dedicated in October 1996, the library is adjacent to the Postal History Foundation in the unique West University Historic Neighborhood District. Its aesthetic appeal and architectural features have received national distinction. It features a spacious reading room, exhibit area, book, and catalog sections. Most importantly, it has become one of the most recognized repositories of philatelic literature in the United States. Its material is an excellent resource for students, educators, historians and researchers. A trip to the Slusser Library is guaranteed to be worthwhile. We look forward to your visit!

<http://www.postalhistoryfoundation.org/slusser-library.html>

Located in an historic Tucson neighborhood and designed as an addition to the Western Philatelic Museum, the Slusser Memorial Library houses one of the most important collection of philatelic research materials in America.

Adjacent to but separate from the Museum's existing building, the Library provides a forum in which postal history is organized, preserved and provided, placing a premium on flexibility and maintaining special areas for users and collections. The expansion includes a circulation desk, work/storage area, card catalog, collections (stack/flat file), multi purpose reading/meeting, bathroom, technical services, vault and service spaces.

The Library's scale and material palette evokes a strong reference to its historical context; its construction places value on quality. Establishing a sense of unity with the surrounding neighborhood, and providing a low maintenance and cost-effective structure were important. Concrete block is clad with stucco to help the building blend into its residential context. Natural stone veneer for the angled entry wall evokes a strong reference to the historic use of this material, enticing patrons from the existing postal facility to the interior of the new Library. Openings and concrete projections provide an exciting visual dynamic, reinforcing the desired connection with the historical.

### liollo architecture, Charleston, SC - USA

[www.liollo.com](http://www.liollo.com)

#### Libraries:

[St. Helena Branch Library at Penn Center Campus, St. Helena Island, SC – USA 2012](http://penncenter.com/)

<http://penncenter.com/>

Modern, yet warm, the architecture reflects the unique attributes of Gullah-Geechee Sea Island culture & the vibrancy of the library as a 21st Century gathering place. Prior to design, community workshops were held to gain insight into the context of the Gullah Geechee culture. The building was designed to utilize very simple forms & construction methods to provide the iconic features that symbolize the shared values of the library & St. Helena community. The Gullah Geechee context is revealed in several aspects of the architecture, including the woven nautilus of the special collections area located at the heart of the library, suggesting the forms of marine life & traditional net making; raised wood “stomping” floor in the community meeting room that provides the percussion for sea island spirituals & the “tree” columns reflective of historic images of learning at Penn Center under the massive live oak trees. This project was funded through CDBG & USDARD grants & loans.

## **LiRo Architects + Planners, New York, NY – USA**

<http://www.liro.com>

**Libraries:**

**Bronx High Bridge Library, New York, NY – USA 2010**

2.100 sqm. Addition, \$ 7.400.000

Thanks to the inspired work of LiRo Architects + Planners, the dark and oppressive building that once housed the High Bridge branch of the New York Public Library in the Bronx has been transformed into a welcoming space permeated by daylight. The New York Public Library specified that the renovated library become a neighbourhood landmark and gathering place. In response to this charge, LiRo Architects, who provided both Architecture and Interior Design services for the renovation, literally raised the roof of the building to allow natural light to flood in creating a luminous and expansive space that inspires gathering and learning. In homage to the neighbourhood’s defining landmarks, LiRo’s in-house talent created watercolour murals of the High Bridge Aqueduct and Water Tower for the library’s main entrance, lobby and Children’s Reading Room. A whimsical three-dimensional illustration of a tree emerges from the mural to shelter the Children’s story area in which children gather on a circular amphitheater covered in grass-imaged carpeting. Bright green circles of flooring denote gathering areas in both the Children’s and Adult Reading Rooms while brightly-coloured modern furniture creates a cheerful atmosphere in a clean, modern space welcoming to adults and children alike. “I believe that we are standing in the most beautiful urban library in America,” said Paul LeClerc, president and CEO of the New York Public Library, at the grand opening of the High Bridge branch and also called the Children’s Reading Room “the single most beautiful space in New York”. LiRo Architects strive to make spaces that support, sustain, and inspire, and the High Bridge Library redesign meets, and exceeds all of those goals. (LiRo)

## **Litman Architecture, Warren, RI – USA**

<http://www.litmanarchitects.com>

**Libraries:**

**Jesse Smith Memorial Library, Harrisville, RI – USA 2008**

<http://www.litmanarchitects.com/gallery.php?c=48&p=31>

New modern library will replace cramped facility at 144 Main Street in Harrisville.

Project includes a spacious second floor children’s library with its own activity room; on the first floor, a young adult area, expanded adult fiction and reference areas, comfortable staff work areas, a community meeting room that will seat 133, and a cafe.

Community space includes an outdoor river walk and patio and an interior walkway with space to display permanent exhibits depicting the heritage of the Stillwater Mill complex.

Project is cornerstone of the historic Stillwater Mill Redevelopment Zone, a growth center identified by the Governor’s Growth Planning Council. The library is the first phase of a development that will include a senior center, affordable housing, and commercial enterprise. The library will be new construction; other projects will rehabilitate existing structures. The library’s exterior design will reflect the old mill buildings that previously occupied the space, and will complement the restored mill buildings.

## **LLP Architects see: Lerner, Ladds + Bartels, Pawtucket, RI – USA**

## **Lohan Anderson Architecture, Chicago, IL – USA**

Dirk Lohan left his native Germany to begin his architectural studies at the Illinois Institute of Technology under the tutelage of his grandfather, Mies van der Rohe. He returned to Germany and finished his studies in architecture and planning at the Technische Hochschule (Dipl.-Ingenieur) in Munich in 1962. When Mr. Lohan returned to Chicago, he worked closely with Mies on such projects as the New National Gallery in Berlin, the IBM office building in Chicago and the Toronto Dominion Centre.

<http://www.lohananderson.com>

**Libraries:**

**St. Charles Public Library, St. Charles, IL – USA 2012**

110.000 sqf., 2 stories, Client: St. Charles Public Library Board of Trustees

Located along the Fox River on the edge of downtown St. Charles, the library as it exists today is too small and inefficient to serve its community. The current library consists of an historic building built in 1908, with funding from a Carnegie grant, and two

expansions completed in 1964 and 1988. Due to significant growth in St. Charles, located about 45 miles west of Chicago, IL, there is a significant need to expand their space and program offerings again to accommodate current community needs and anticipated growth for the next 20 years. An in-depth needs analysis and programming study were completed to create a plan for the next steps. A building design concept has been developed to present to the public-at-large in preparation for a referendum vote to move forward with the expansion and renovation of the library. Rather than introducing a new architectural vocabulary, the expansion and renovation will be developed in a manner that is respectful and appropriate to the library's existing architecture, while still being of its own time. The expansion along with remodeling of the existing facilities, will also increase the library's visibility and civic presence within the community.

### [West Humboldt Park Branch Library, Chicago, IL – USA 2010](#)

16,300 sqf., Client: City of Chicago Public Building Commission

Leopardo has initiated the construction work at the \$6.4 million West Humboldt Park Branch Library in US recently.

Located at 733 N. Kedzie Ave., the 14,800 square-foot, one-story, full-service branch library is one of the first using a prototype design by Lohan Anderson. Leopardo is serving as the general contractor. Seeking LEED Silver certification (Leadership in Energy and Environmental Design), the library will utilize geothermal systems for heating and cooling, resulting in dramatic reductions in energy consumption. Additionally, a prevegetated modular green roofing system will reduce the urban heat island effect, conserve water and decrease storm water runoff. The West Humboldt Park Branch Library continues the Chicago Public Library's effort to create a standardized system of neighborhood resource centers that are flexible, convenient and inspirational. The library, which will be completed in December 2010, will also feature community meeting space with computers and internet access.

<http://leopardo.com/tag/west-humboldt-library/>

The West Humboldt Park Branch Library is one of the first new branch libraries of the Chicago Public Library to be built utilizing the prototype designs and guidelines developed by Lohan Anderson. As part of this program managed by the Public Building Commission of Chicago, our team will complete one branch library of each of the three prototypes to adapt to the urban fabric of the Chicago's diverse neighborhood. Additional branch libraries will be completed by prequalified architecture and engineering teams with review by the Lohan Anderson team at milestone dates throughout the Design Development and Construction Documents phases. These branch libraries continue the Chicago Public Library's effort to create a standardized system of neighborhood resource centers that are flexible, efficient and inspirational. Throughout the City of Chicago, these new stand-alone branch libraries are replacing inefficient facilities that do not offer patrons most of the amenities sought in dedicated modern-day libraries such as community meeting space. Computers with internet access or adequate patron seating. One of the City of Chicago's goals is that all City buildings should achieve at least a LEED Silver Certification. Designs for the new branch libraries were developed to achieve LEED Gold Certification.

### [Orland Park Library, Orland Park, IL – USA 2004](#)

93,000 sqf., 2 stories, Client: Orland Park Public Library Board of Trustees

The design for the Orland Park Public Library simultaneously relates to its setting while establishing a new landmark of culture, knowledge, and communication for the entire community. The architecture is suitable appropriate for its location in the Village Center District, and layout of the spaces take full advantage of views to the adjacent landscape. Large by windows add a civic scale, while also providing visibility of the library's offerings within. A monumental stair tower acts as a visual anchor, while the sky-lit entry canopy is an open invitation to the residents of the community.

#### **Libraries:**

#### [Safety Harbor Public Library Expansion, Safety Harbor, FL – USA 2009](#)

Date Bid: Feb 2008 Construction Period: Feb 2008 to Apr 2009, Total Square Feet: 25,000 Site: 2.7 acres., Size: Renovation 14,900; addition 10,100; total, 25,000 square feet. Building Height: First floor, 12; total, 35'. Basic Construction Type: Type II/Addition/Renovation. Foundation: Cast-in-place. Exterior Walls: CMU. Roof: Built-up & clay tile. Floors: Concrete.

Interior Walls: Metal stud drywall. Construction Team Structural & MEP Engineer: Long & Associates Architects/Engineers, Inc. - Tampa, FL General Contractor: Biltmore Construction Company, Inc., Belleair, FL

This popular public library is a focus of community activity and a source of strong civic pride. Located along historic Philippe Parkway, it reflects the small-town charm of Safety Harbor and connects the pedestrian oriented Main Street with the surrounding quiet residential neighborhoods.

The expansion of this facility required the rehabilitation of the facade and roof systems to restore the building's original character as well as the creation of new space to meet the growing needs of library collections and public service expectations. The design also responded to the potential need for further growth on a constrained site by providing the option to build a second floor addition on the new South wing.

Community needs dictated that this facility remain functional throughout the construction process. The project was designed and the work was phased to accommodate and maintain adequate public service. The design and construction teams worked closely with library staff to minimize disruptions to public access, and to provide for temporary relocation of collections and service desks.

Library interiors were designed to reflect a civic commitment to preservation of natural habitats and environmental stewardship. Design of the project supported this commitment through the use of environmentally friendly interior finishes and energy efficient air-conditioning and lighting systems. The indoor environment is controlled for both humidity and temperature to provide for human comfort as well as long-term protection of the various materials in the library collections.

Sustainable design elements are included throughout the project. Use of natural clay tile provides a very low-maintenance long-life roof system. All existing windows were replaced with new energy-efficient units incorporating insulated glass. New landscaping uses

native plant species to minimize water consumption and blend the facility into the local ecosystem. Expanded parking facilities consist of both turfgrass areas with subsurface reinforcing structures and porous concrete pavers to reduce stormwater runoff.....  
[http://www.dcd.com/case\\_studies/1001/100106.html](http://www.dcd.com/case_studies/1001/100106.html)

Retained to help direct the expansion of this facility to serve a growing & vibrant community Long & Associates developed the building program, in concert with library staff, based on an analysis of existing conditions, community use patterns, and the 2004 State of Florida Public Library standards. We are also responsible for the Master Site Redevelopment Plan to address traffic, parking, open space, utilities, site amenities, integration with Downtown Streetscape systems, and Growth Management Plans of the City of Safety Harbor.

The 9,300 sf additions include a new children's wing with story-hour room and special deaf literacy program, meeting spaces and staff offices. The 15,970 sf renovation houses a collection of 120,000 volumes, 150 patron seats, and public computer access.  
<http://www.longandassociates.com>

### **Gainesville High School, Media Center Addition & Renovations, Gainesville, FL – USA 2008**

Date Bid: Mar 2007 Construction Period: Mar 2007 to Mar 2008, Total Square Feet: 15,489 Site: 1 acre., Building Size: First floor, 15,489; total, 15,489 square feet. , Building Height: First floor, 18' . , Basic Construction Type: Addition/Renovation/Type IIB. Foundation: Cast-in-place, reinforced concrete, slab-on-grade. Exterior Walls: CMU, brick. Roof: Built-up. Floors: Concrete. Interior Walls: CMU, metal stud drywall. Construction Team Structural, Mechanical & Electrical Engineer: Long & Associates Architects/Engineers, Inc. Tampa, FL , General Contractor: The Alexander Group, LLC , Ocala, FL , Civil Engineer: Dyer, Riddle, Mills & Precourt, Inc. , Gainesville, FL

The objective of this project was to convert a disjointed 1950s era building into a technologically advanced, state-of-the-art media center. The original structure featured low ceilings and few windows, creating a dark and outdated space ill suited to the users' needs. The renovation and addition of 4,500 square feet transformed the space into a light-filled library and gathering space with increased patronage.

A significant decision was made early in the design phase to relocate the existing entry, which faced the rear of a classroom building, to the opposite side of the library. The new entrance is now positioned on the campus mall, sharing frontage with the auditorium, administration, cafeteria, and gymnasium buildings. This move reasserts the library's importance on the campus. The repetition of classically proportioned bays and a cantilevered roof system engages the mall and creates a dynamic new exterior space. Brick columns offer an easily identifiable point of access. The brickwork gives the building a timeless aesthetic that relates to the rich palette of masonry found throughout the campus.

The new programmatic needs were seamlessly woven into the existing shell. The remodeled building provides equipment storage, office space, archival space, small group areas, computer stations, and a multimedia presentation area. A new circulation desk welcomes visitors. Time zone clocks create a backdrop, reminding students that knowledge and technology make them citizens of the world now more than ever. The desk location provides staff with a vantage point from which to monitor the entire media center, as well as a central location to greet and direct people. ....

[http://www.dcd.com/case\\_studies/1007/100728.html](http://www.dcd.com/case_studies/1007/100728.html)

The challenge was to convert a disjointed 1950s era building (with a 1969 addition), into a technologically advanced, state-of-the-art media center. The original structure featured low ceilings and few windows, creating a dark and outdated space ill suited to the users' needs. The renovation and addition of 4,500 square feet transformed the space into a light-filled library while maintaining load-bearing walls and columns.

The entry, originally located on the south side, was relocated to the north for a more prominent presence on the campus mall. The relocation of the entrance reasserted the library as a vital component at the heart of the institution, thus completing an agora that accommodates the auditorium, gymnasium, administration and cafeteria.

The new addition, with its repetition of classically proportioned bays and cantilevered roof system, engages the mall and creates a dynamic new exterior space. The brickwork gives the building an immediate timeless aesthetic that relates to the rich palette of masonry found throughout the campus.

With its north facing glazing, the new addition provides an open space filled with natural light. All of the steel wide flange columns were left exposed and softened with oak trim running parallel to the web, matching the furnishings. The exposed steel beams span 46 feet and cantilever 12 feet beyond the north wall, blurring the line between inside and out.

The circulation desk is positioned to address the entry and provide a vantage point to monitor the entire media center. Time zone clocks behind the circulation desk remind visitors that knowledge and technology make them citizens of the world, now more than ever.

<http://www.longandassociates.com>

### **Library West, University of Florida (Gainesville - Main Campus) Addition/Remodeling, Gainesville, FL – USA 2006**

DATE BID: Dec 2003, Construction Period: Dec 2003 to May 2006, Total Square Feet: 176,700 SITE: 4 acres., Building Size: First floor, 42,500; 2nd floor, 42,500; 3rd floor, 42,500; 4th floor, 19,800; 5th floor, 17,600; 6th floor, 11,800; total, 176,700 square feet. Building Height: First floor, 14'; second floor, 13'6"; each additional floor, 13'6"; floor to floor, 10'4"; penthouse, 7'; total, 85'4". Basic Construction Type: Addition/Renovation. Foundation: Cast-in-place. Exterior Walls: CMU, brick, curtainwall. Roof: Built-up. Floors: Concrete. Interior Walls: Metal stud drywall.

LIBRARY DESIGN CONSULTANT: Ross Barney Architects, Chicago, IL , GENERAL CONTRACTOR & COST ESTIMATOR: Biltmore Construction, Belleair, FL, STRUCTURAL/MECHANICAL/ELECTRICAL ENGINEER: Long & Associates Architects/Engineers, Inc., Tampa, FL LANDSCAPE ARCHITECT: McClain Design Group, Inc., Gainesville, FL

The 24.2 million dollar LEED® Gold Certified project expanded, reprogrammed, and refurbished a 40-year-old facility to respond appropriately to contemporary library needs in the availability of technology, user functionality, material collections storage and access, staff operations, and client service. The primary design objectives were to house 1.6 million volumes under strict environmental control and provide for a minimum of 1,600 user seats with a wide variety of configurations and information technology applications. The goal was to create comfortable settings for both private study and group interaction with broad access to many media sources. The design process integrated the key library issues of wayfinding, access to services, security and control with the differing spatial and environmental requirements of patrons and collections. The collections are housed at 70o F temperature and 50% relative humidity.

The academic nature of the facility called for an inviting and stimulating interior to promote the development and sharing of ideas. This concept was carried into the development of custom furniture to outfit the entire facility as a cyber cafe responding to the campus social culture. The existing building was gutted and transformed into an open plan layout around a central circulation and

service core, maximizing the availability of daylight and views for both users and staff. Functional elements of the building program were organized around a tightly controlled and clearly defined system of circulation paths. Uniquely applied materials and textures were used to define spaces and elements, to promote movement and to highlight library operational systems.

A 3-story addition on the North side was conceived as a "Book Box" dedicated primarily to collection storage with reading spaces around the perimeter. Compact mobile shelving was used to maximize storage in the smallest possible building volume. The immense weight of this shelving system precluded its use in the upper floors of the existing structure. This area required a reinforced concrete waffle-slab system to minimize the depth of new floor structure needing to match the elevations of existing adjoining floors. Vertical space was at a premium and the design team was challenged to integrate all new building systems with the limited floor-to-floor heights of the existing structure. Mechanical and electrical systems were left largely exposed in the addition to create a sense of larger spaces. Backlit suspended plastic ceiling panels and finished wood shelving system end panels were used to define circulation and seating spaces.

The design of the addition completes the public urban edge of the historic campus core and establishes itself as a new landmark while reflecting the scale, texture and character of the original campus Gothic style buildings flanking each side of the site. The secure main entrance to the library maintains a strong connection with the major exterior student gathering space on the South side of the existing building. The South facade of the existing building was opened up dramatically on the lower two floors to make the facility more inviting as well as more dynamic.

[http://www.dcd.com/case\\_studies/0711/071154.html](http://www.dcd.com/case_studies/0711/071154.html)

Library West is the premier library collection for the University of Florida. This \$ 24.2 million project reprogrammed and refurbished an existing 40-year-old building to respond to contemporary library needs in technology, information, materials, and staffing, and created a 60,000 square foot addition to hold 1.6 million volumes in compact shelving stacks. The facility provides 1,600 seats for both private and group study using all types of media, and wide access to computing and technology, to facilitate student interaction and sharing of information and ideas.

The design process integrated the key library issues of wayfinding, access to services, security and control with the spatial requirements of collections and patrons in an inviting and stimulating environment using materials and textures to define space and promote movement. Functional elements are clearly organized around an articulated circulation system.

The addition completes the public urban edge of the historic campus core, while reflecting the scale and character of the original Campus Gothic architecture, and establishes a new conceptual campus Front Door on the North. The secure functional entry addresses the primary campus greenspace to the South, linking the library to active student life.

Library West achieved a LEED Gold rating through the United States Green Building Council.

**National Commercial Builders Council Awards of Excellence**

- Grand Award

Envisioned as an "information town hall" rather than a traditional depository for books and archives, the Memphis/Shelby County Library is designed to function as a public Internet café, gathering place, and community center. Open floor plans accommodate changing technologies and provide maximum efficiency for future needs. Collections, reading rooms and services with the highest traffic are located on the first floor; research-oriented functions and archives are located on upper floors.

## **Loysen + Kreuthmeier, Pittsburgh, PA - USA**

<http://www.lk-architects.com>

### **Libraries:**

**Carnegie Library of Pittsburgh, Brookline, Pittsburgh, PA – USA 2004**

The existing structure was an ordinary 1950's concrete box, with few windows and little connection to its neighborhood business district context. New links are created with a storefront approach, opening views into and out of the library. Book displays and seating in the front windows provide opportunities for customers to see and be seen along the street, strengthening the library's presence in the community.

A grand public reading room and popular library create a new community gathering place and focus for the building. Assemblies of birch and metal peel back from the inner shell of the concrete box, giving it an interior form that is independent of the original. Tinted plaster ceiling shapes redirect daylight from clerestory windows to this new public forum.

The library's mid-block location only allowed windows at the front and rear of the property, and the resulting lack of daylight required a major intervention to overcome. Floor and roof plates were pulled back from one side of the building, and a continuous skylight added. This multi-story light wall knits the two floor levels together, and allows daylight to permeate deep into the interior. In order to transform a low-ceilinged basement into an enjoyable children's library, several elements are combined: mesh ceiling surfaces give a veiled view into the joist space to dissolve the perceptions of height; plaster areas tilt slightly to conceal mechanical equipment, and child-scaled shelves and furnishings maximize the perceptions of space.

### **Libraries:**

**North Long Beach Library, Long Beach, CA – USA 2015/2016**

December 20, 2013

Signal Tribune Newspaper

A rendering by architect and designer LPA, Inc. shows what the new north Long Beach library will look like once completed. Construction is expected to start in spring 2014.  
Sean Belk, Staff Writer

Planned for more than a decade, a project to construct a new north Long Beach library— anticipated as the “largest branch library” in the city and an “anchor” for the community— will begin in late spring next year, city officials said.

The library will be built on the site of the abandoned, historic Atlantic Theater, which for more than 70 years has been a local landmark with its tall spire on the 5800 block of Atlantic Avenue.

Seyed Jalali, project officer for the Long Beach Development Services Department, said the theater will be torn down in late January to make way for the public facility. Ninth District City Councilmember Steven Neal is sponsoring an event on Jan. 25 to herald the launch of the long-awaited project, after which work on tearing down the theater will commence.

The more than \$16-million project is continuing after the State Department of Finance gave its stamp of approval in April this year that a \$16-million bond issued in 2010 by the City’s former redevelopment agency to fund the library’s construction was an enforceable obligation under the State’s redevelopment-dissolution law.

A rendering by architect and designer LPA, Inc. shows what the new north Long Beach library will look like once completed. Construction is expected to start in spring 2014.

A rendering by architect and designer LPA, Inc. shows what the new north Long Beach library will look like once completed. Construction is expected to start in spring 2014.

“I’m very glad that it’s moving forward,” said Glenda Williams, director of the Long Beach public library system. “This community has been wanting this library for about the last 10 to 12 years. It’s getting so close. I’m very happy that we’ll be able to provide library services for that part of the community that really needs it.”

At 24,500 square feet, the new library is expected to be the largest in the city and the newest branch in the north Long Beach area, which currently only has the North Neighborhood Library on Orange Avenue that was built in 1951, she said.

Most libraries in Long Beach are about 7,000 square feet and were first built in the 1950s, outside of the Main Library in downtown Long Beach that was constructed in 1977, Williams said. Currently, the newest and largest library in the city is the 16,000-square foot Mark Twain Neighborhood Library on Anaheim Street that opened in August 2007.

“The new north library will be the largest branch library in the system,” Williams said.

The new facility, just blocks from local schools including Jordan High School, will have space for 70,000 print titles and media as well as three community-meeting area that the public will be able to rent out, she said. The library will also include a 3,800 square-foot community center, an outdoor patio and space for public art.

The structure is also expected to have 48 computers, including those designed for people with disabilities, and Wi-Fi capabilities.

Williams said Long Beach public library currently has downloadable e-books, audio books and music as well as online subscription databases that are all available at the 12 library locations in the city.

Jalali said demolition of the historic theater, which was built in the early 1940s, will likely take about four to five weeks and is being funded by about \$300,000 in federal community development block grant funds. He said the City plans to preserve various historical artifacts of the theater by incorporating them into the new library.

Designs of the new north Long Beach library depict an outside view of the facility that is expected to include an outdoor patio and space for public art.

Certain elements of the historic Art Deco-style theater, including the spire, which resembles the famous RKO-Radio Pictures trademark, will be incorporated in the new library that has been designed by LPA, Inc., Jalali said.

Local historic-building preservationists fought to save the now condemned and seismically outdated theater, which is a remnant of the golden era of “movie palaces.” The theater was designed by prominent Los Angeles architect Carl Boller and built by the Stivers Brothers, according to historical references. The theater has been closed and vacant since the 1970s.

Jalali noted that the diamond at the top of the tower is in “a good condition” but the tower itself is in “a very poor condition.” Other pieces of the theater building, including the terrazzo floors and a fountain, will likely be put in an on-site display area, Jalali said.

As far as the theater’s seats, he said they were transported to the Expo Building in Bixby Knolls. Though the seats got wet during a roof leak when it rained, Jalali said they are still in “pretty good condition” and will be incorporated into the Expo’s rehabilitation and may be used as seating for a teenage center at the new library.

Jalali said he expects construction of the new library to take about 18 to 24 months to complete and work will start shortly after the City Council awards a contractor. He said all bids for the project should be in by April.

Once completed, city officials expect the new north library to be a “focal point” for new developments in the community and the North Village business district.

Jalali added, “This project will serve as a major catalyst and anchor for future development opportunities in the Uptown area.”

### [e3 Civic High \(Central Library\), San Diego, CA – USA 2013](#)

Tracking LEED Gold, e3 Civic High—which stands for Engage, Educate and Empower—is creatively co-located inside a downtown San Diego public library in a unique collaborative setting. While library patrons don't have access to the school, they can catch a glimpse inside the project-based educational environment as they ride a glass elevator through the building's sixth and seventh floors. The transparent design and unique location, which capitalizes on the library's existing infrastructure, was chosen to foster team-based, experiential-learning opportunities with the help of movable glass walls, modular furniture, a demonstration kitchen, break-out learning spaces and a plaza area for assemblies and dining. "Studios are organized in villages clustered around a shared commons and teaming rooms," explains LPA Associate and Interior Designer Kate Mraw. "The design principles for the learning environment centralized around three ideas; personalization, social connections and flexibility. For learning to happen everywhere, we understood that movement mattered—regardless of the primary function, secondary uses were explored, developed and designed." LPA also engaged the community in the design process through workshops, charettes, image sharing and building tours to help promote the school's partnership with the city and library foundation in linking education into the urban culture. Additional design highlights include a "living room" setting with comfortable furniture and controllable lighting called the Park; a central staircase which doubles as a social learning space; an interactive wall that students can write on, display projects and even sit on; and a centrally-located gallery lined with whiteboard surfaces and specialty lighting where students can share their work.

### [Malibu Library Renovation, Malibu, CA – USA 2012](#)

The existing Malibu Library experienced only minor modifications in its 50-year existence. While not an inspiring space, it overlooked an amazing, new city park, about 500 feet from the coast. The City of Malibu and the Los Angeles County Public Library System sought to transform the structure into an exciting, functional, and sustainable civic statement.

To make the space feel three times larger, lighter and brighter, designers created a plan to hollow out the existing library building shell, and reinterpret the space to accommodate a modern, high tech facility.

With a single glazed opening at the far south end of the building, several round clerestory structures were added to allow natural light to filter deep into the space. Fixed windows were removed and replaced with glass bi-fold doors that open and connect the interior with a new, 3,500-square-foot library garden.

The garden features a small presentation stage, a reading orchard, and can be used as a venue for functions and special events. Inspired by the Malibu Coast, the garden's design incorporates an abstracted wind sail, water metaphors, and undulating shapes and forms.

The outside of the library is clad in large-scale, sustainable, pressed panels detailed in varying shades of blue to simulate the colors of the sea. A dramatic wave inside the library is made from recycled milk-bottle acrylic panels recycled materials exceed 20% of everything used and more than 20% of the materials were manufactured within a 500-mile radius. The library is on track to receive LEED certification from the U.S. Green Building Council.

<http://www.lpainc.com/projects/malibu-library-renovation>

### [Fullerton Public Library, Fullerton, CA – USA 2011](#)

This renovation and expansion includes the addition of a 6,000-square-foot conference center and renovation of the existing 50,000-square-foot facility, built in the early 1970's.

Sustainably designed to meet LEED Silver requirements, the conference center addition supplements the library's public meeting space and growing need for community meeting places with a 2,300-square-foot, 192-seat conference room and an 850-square-foot cafe. The cafe and conference room have access to a pre-function lobby area and restrooms. The renovation offered the library an opportunity to reorganize its collection, introduce new naturally-lit reading areas, provide additional meeting rooms, and upgrade the building's infrastructure to accommodate current and emerging technology.

Additionally, the renovation provides new space for the library's precious local history collection, passport offices and dedicated areas for public computers and teenage patrons.

### [Mt. San Jacinto, Menifee Campus Technology Center, San Jacinto, CA – 2008](#)

The Technology Center at Menifee Community College provides the college with much needed computer labs, digital classrooms, faculty offices, and a 200 seat assembly space. The 35,000-square-foot structure is a two-story configuration. The campus educational mission is to ensure state-of-the-art learning environments for all Menifee College students. The new Technology Center will be an icon for future digital learners. The Menifee College Technology Center is shaped in response to campus context, program uses, and the natural environment and client expectations for a digital classroom building. The campus is located in the high California desert exposing the buildings and outdoor spaces to strong winds and hot summer sun. Located on the valley floor provides the college panoramic views to the surrounding mountain ranges. An undulating profile of the distant ridge line creates a scenic backdrop to the campus and its buildings. The original campus buildings were designed to complement its natural setting. The Technology Center balances nature and technology continuing the campus tradition of building forms inspired by campus context and environmental conditions. The building program consists predominately of a wide spectrum of computer labs ranging from computer aided drafting, multi-media, graphic design, business labs as well as digital photography and arts labs. Instructional labs are protected from the environment by controlling and minimizing any natural light. The expectation of the college for this building is that no direct sunlight reaches into teaching spaces. All visual access into teaching spaces will be provided from within the building itself through a central circulation element. Continuous skylights above the circulation space will flood the public spaces of the building with natural light. Daylight from the second floor skylights will filter into the lower level through a translucent catwalk in the floor illuminating the public space on the ground floor. The two building entries are designed as gathering spaces where social interaction will take place. Visually these transparent lobbies will act as the windows into the technology center displaying students interacting with technology. Additional windows are provided on the north side of the building framing views to the mountains in the faculty offices. A roof garden allows students to gather outside under a perforated metal canopy protected from both the sun and wind. The sweeping curve of the building in plan faces directly into the strong winds. The opposite side of the building protects outdoor spaces and entries. The architectural expression of the technology center exaggerates the ornamental curved details of the existing campus buildings. The technology center boldly transforms building details into larger campus gestures leaving the impression of digitally enhanced higher learning.

### [Redding Library, Redding, CA – USA 2007](#)

Funded in part by the California Library Bond Act of 2000, the Redding Library embodies the aspirations of the Town of Redding, the County of Shasta, and the State of California. This 55,000-square-foot public library features: an outdoor community area, an expanded local history area, a 200-seat community room, heritage room, teen center, children's library and garden, technology training center, book store, coffee bar, and drive-thru book drop.

Owing to an abundant county and regional history and a progressive, responsible attitude toward sustainable design, the Redding Library proves to be a project rich in historical references and sensitive to energy efficient design strategies as well. The green elements of the library include a 7,000-square-foot vegetated green roof, photovoltaic power, thermal energy storage, indirect lighting and extensive use of recycled and recyclable materials.

### [Temecula Library, Temecula, CA – USA 2006](#)

This 33,000-sq.-ft single-story library sits on two-acres of land in the heart of Temecula. The library is located near Temecula's Community Recreation Center and Sports Park, and the local high school. The facility, with panoramic views, features a 200-seat community room, small-group workrooms, a children's reading area, a heritage room and a "Friends of the Library" bookstore. From the reading porch, one can look out over the dramatic views of the city and the Temecula Valley. (LPA)

### [Santiago Canyon College, Library, Orange, CA – USA 2006](#)

The 39,900-square-foot facility includes a library, audio visual and information technology support services, faculty resource center, library instruction computer lab, and computer commons. Energy efficient Low-E glazing, skylights, perforated metal solar fins, and the deep metal panel roof all help protect and control direct sunlight while allowing natural daylight to permeate into the building interior and inversely becoming a beacon in the darkness. The linear layout of the palm trees address the orientation of the building's main entry and extend out to Chapman Avenue. This gesture responded to the formality of the campus gateway as a first impression for students and visitors, and unfolded like arms that welcome the community.

The library building earned a merit award from the American Institute of Architects' Committee on Architecture for Education. The library, which opened in 2006, is 40,000 square feet (3,700 m<sup>2</sup>) and holds 100,000 books. It was designed by LPA Architecture. The Library offers not only a wide selection of books, but computer access, private study rooms, and educational media.

### **Mission Viejo Library, Mission Viejo, CA – USA 1997**

A library to serve Mission Viejo was built in 1971 by the County of Orange on land donated by the Mission Viejo Company. This library branch was operated by the Orange County Public Library System and was approximately 9,000 square feet in size. As Mission Viejo grew, and incorporated in 1988, this small library branch quickly became too small to serve a community of over 60,000. In 1995, the Mission Viejo City Council successfully negotiated with the Orange County Board of Supervisors to withdraw from the county library system and operate its own city library.

Ground for the new Mission Viejo Library was broken in September 1996, and the new 27,500 square foot library opened to the public in October 1997.

In October 2000, the Mission Viejo City Council voted to approve construction of a 14,400 square foot expansion to the Mission Viejo Library. This project was completed in March 2002 to bring the Library to its present size.

Responsible for the design of the original 26,000-sq.-ft. library and the addition, LPA expanded this library to a total of 42,000-sq.-ft. The 16,000-sq.-ft. addition included a local television station studio, an expanded children's area, an enlargement of the library's data capabilities providing more computers in a new area with greater public access to technology, additional study rooms and a larger local history and genealogy area. The original library features specialized technology for on-line research, young adult programs, children's story-time theater, local historical research and display, cultural events, and Friends of the Library retail space.

<http://www.lubetz.com>

**Libraries:**

**Carnegie Library of Pittsburgh – Squirrel Hill, Pittsburgh, PA – USA 2006**

**Awards:**

**2007 AIA Architectural Honor Award**

It reinvents the library from a place to go to a place to be. It defines a new experience to attract and engage users. The library is a singular open space in an expansive light-filled volume. Spaces are defined by the porosity of books, changes in materials, and varying acoustic and light levels. Continuous bench seating facing the streets allows people to participate in the activity below. Individual seating in window boxes provide memorable framed views of a neighborhood church. This \$ 4,7 million renovation and addition project is the busiest library in the CLP system. The library experienced a 74% increase in visitors since its reopening. It uses state-of-the-art ideas about building performance, systems integration, and its LEED™ certified. The library is adaptable & flexible to accommodate shifting patterns of use over time. A raised access floor system allows the library to modify data systems and technological upgrades. Lightweight furniture, wheeled shelving, and display panels facilitate continual reconfiguration of the space. Every visit is potentially a fresh experience.

### **The Lukmire Partnership, Arlington, VA – USA**

<http://www.lukmire.com>

**Libraries:**

**South Bowie Library, Bowie, MD – USA 2011**

This 44,000 SF library, designed by The Lukmire Partnership, was constructed as part of a retail and housing complex. As a civic building, it is the focal point for the complex. Taking its cue from its railroad heritage, all of the structures in the complex utilize railroad design elements as a theme. The library supports traditional library services as well as provides a five meeting room complex for residents.

### **Falls Run Library, Fredericksburg, VA – USA 2010**

The Lukmire Partnership, based in Arlington, Va., has designed the new \$6.6 million, 30,000-square-foot Falls Run Library in Stafford County, Va. The new library blends traditional elements with the latest trends in public library design and is expected to be completed in summer of 2010.

The Falls Run Library will be located on 6.2 acres in Stafford County, the newest branch in Virginia's Central Rappahannock Regional Library system. The Lukmire Partnership's design for the library combines the traditional elements of library service, such as large book collections and reference services, with new trends in public libraries, emphasizing customer service, displays, new media formats, and comfortable browsing and seating areas. It features electronic monitors corresponding to collection areas, dispersed service desks, a café, and a bookstore-style media and reading area.

The lead architects for the project are Gregory S. Lukmire, AIA, and Robin Puttock, AIA, LEED-AP. "This library will offer the old with the best of the new, says Lukmire, principal of The Lukmire Partnership. "The library will include the use of electronic media, group study rooms, self-checkout stations, a reading room with a fireplace, and a special 'beehive' children's story room. Today's libraries are being used as information and educational centers as well as unique community and social centers. They also lend themselves to following sustainable design principles."

The Falls Run Library is The Lukmire Partnership's fourth project for the Central Rappahannock Regional Library system, which serves Spotsylvania, Stafford, and Westmoreland Counties and the City of Fredericksburg. The Lukmire Partnership has completed many projects for government entities throughout the mid-Atlantic region in recent years. It has designed more than 40 libraries in the past 20 years and won the 2000 AIA CES Award for Excellence.

### [Rust Library Renovation & Expansion, Leesburg, VA – USA 2009](#)

The original Rust Library was one of the first libraries designed by The Lukmire Partnership. It was not envisioned to be expanded, but due to the growth in the County the pressures to enhance library services dictated an expansion from 23,000 SF to 40,000 SF. In addition, the County wanted to include a Teen Center which, while part of the library, would also be able to be accessed after normal library hours. A meeting room double the size of the existing one was also needed to accommodate neighborhood groups and library programs such as the summer reading program.  
<http://www.lukmire.com/libraries6-1.html>

### [Fairfax City Regional Library, Fairfax, VA – USA 2008](#)

The Lukmire Partnership was asked to prepare a space needs analysis and program and then to design a new library two blocks away on a site that is a gateway to downtown. The new library, housing approximately 220,000 volumes, is approximately 43,000 SF including a 13,000 SF Virginia Collection. Constructed over a 200-car, two-level parking garage, the library is the initial component of the new downtown and was designed to be compatible with the historic character of the area.  
<http://www.lukmire.com/libraries3-4.html>

### [England Run Library, Stafford, VA – USA 2008](#)

This new, 30,000 SF library designed by The Lukmire Partnership, is constructed on a heavily wooded and sloped parcel adjacent to a residential neighborhood. The library is intended to be a community focus, follow sustainable design principles, and to emulate the character of retail book stores. The library takes its curved shape from the site topography as well as from the desire to minimize the apparent size of the footprint by creating specialized collection areas and vistas "around the corner" as patrons walk down the bookstore "street".  
<http://www.lukmire.com/libraries2-1.html>

### [Higher ED Learning Resource Center, Southwest Virginia Community College, Richmond, VA – USA 2008](#)

The Earl E. and Dorothy J. Dellinger Learning Resource Center at Southwest Virginia Community College in Richlands, Va., is the centerpiece of this mountainside school. Designed by Arlington, Va.-based The Lukmire Partnership, the 50,000-sf, two-story building connects the upper and lower campuses, which are separated by a 70-foot vertical grade change. The complex houses a 15,000-sf library, a fireside student activity area, the distance learning department, and the school's television and radio studios. The center's extensive windows capture views of the surrounding landscape, and an interior waterfall that adds to the indoor-outdoor feel. - See more at:

### [Finksburg Library, Finksburg, MD – USA 2007](#)

This 15,000 SF, multi-use facility serves as a branch library for the Finksburg community and is planned to have a gymnasium at a later date. The site is a 10-acre, rural parcel located 7 miles east of Westminster. The building is located on the highest part of the large sloping site and is easily seen from Route 140 entering into town. There is a glass walled reading room facing the road, allowing the structure to serve as a gateway to the community.  
<http://www.lukmire.com/libraries4-1.html>

### [C. Burr Artz Library Renovation & Expansion, Frederick, MD – USA 2002](#)

The continued viability of the C. Burr Artz Library on Carroll Creek in downtown Frederick was dependent upon a major renovation and expansion to the existing facility. The site borders Carroll Creek, a major waterway meandering through downtown Frederick. Its urban design goal was to create a public presence on the canal by building right up to the promenade. The general character of the new library combines modern forms with materials and detailing that are reminiscent of Frederick's traditional industrial architecture. The exterior of the building, with its brick, precast concrete and steel details, references the City's past while juxtaposition of modern forms will look to the City's future.

[http://www.lwpb.com/#portfolio/community/Northwest Library](http://www.lwpb.com/#portfolio/community/Northwest%20Library)

Owner: City of Oklahoma City and Metropolitan Library System, 35,000 sf.

### **Awards:**

**ARCHITECTURE | MERIT**

The first branch library constructed by the Metropolitan Library System in over 30 years, the Patience S. Latting Northwest Library combines imagery of the Oklahoma prairie with the technology and purpose of a modern library. Only the second City of Oklahoma City project to be registered for LEED certification, sustainability drove many design decisions. Energy demand was decreased by 30 percent with a ground-source geothermal system and generous natural day lighting. Heat gain was decreased with deep roof overhangs and reflective roofing materials.

The design concept for this new and long anticipated library was completed in association with Richard+Bauer.

### [Malaga Cove Library, Palos Verdes Estates, CA – USA on design](#)

The Palos Verdes Library District concern was to develop a master plan type approach to the rehabilitation of the Malaga Cove Library, a 3-story, 20,000 SF National Register building designed by Myron Hunt. The PVLD had several programmatic issues about access, increasing computers and media materials as well as concerns about life safety. They also wanted to develop a rehabilitation and restoration plan for care taking of the building which had suffered minor alterations over the past eighty years. The result was first a Master plan with several areas of "projects or phases". These were fire and life safety, main library, lighting and restoration, and special little projects for improving the tower, mezzanine and periodical rooms that are under utilized. The first of these Phases was completed in 2008. While completing the fire and life safety improvements this phase managed to remove some of the conduit alterations, provide for future lighting upgrades and create a sensitive periodical room in an under utilized former porch entry.

### [Miraleste Library Expansion, Palos Verdes Estates, CA – USA on design](#)

The Miraleste Branch Library, sited in a pastoral setting overlooking the San Pedro Harbor, serves the City of Palos Verdes Estates. Originally constructed in 1967, the branch library program had long since outgrown its existing structure's limitation and had become overcrowded and technologically outdated. In 2007, working with the Palos Verdes Library District, the Library Board and the public through presentation meetings, M2A analyzed the existing facility and developed five master plan options ranging from very low impact to full reconstruction. From these, M2A developed one preferred option in response to the outreach process requirements. The resultant scheme creates a new dual Library entrance, and will add a new Youth Wing including new Children's Room with Storytelling area, Teen Collection, new Staff areas/lounge, clerestory windows and a new outdoor Storytelling Terrace. The existing branch layout will be reconfigured to include a new expandable meeting room, adult reading areas, new toilet facilities,

and new reference and circulation areas. The branch will have 14 new computers, flexible expansion and 30% more collection capacity. Site renovations include an additional 16 parking stalls, storm water bioswale, botanical garden path and compliant ADA accessible entrances.

[http://www.m2a-architects.com/PORTFOLIO/institutional/Miraleste%20Library/miraleste\\_09.htm](http://www.m2a-architects.com/PORTFOLIO/institutional/Miraleste%20Library/miraleste_09.htm)

### [Silver Lake Branch Library, Los Angeles CA – USA 2009](#)

Serving as a gateway to the community, the Silver Lake Branch of the Los Angeles Public Library seeks to carve out a corner at a busy intersection with a channel glass spine to create a public plaza, which embraces the larger community and creates a welcome backdrop for the primary literary and social gathering functions of the building. The plaza, raised above the adjacent street, incorporates traditional references to the ascent to knowledge while creating a gathering place previously non-existent within this community. The fully glazed reading room and a glass garden dematerializes the definition between interior and exterior space, opening up this “living room space” to the plaza. The central spine also brings natural light into the center of the building and, with its photovoltaic skylight helps the facility attain its LEED Gold certification. A continuous clerestory window around the building allows the roof plane to float above the stacks bringing in natural light and affording views of the adjacent hills and sky. The split level design incorporates the subterranean garage while opening the Multi-purpose room at the plaza level for a clear connection to the street, book fairs and other community activities.

[http://www.m2a-architects.com/PORTFOLIO/institutional/Silver%20Lake%20Library/silverlake\\_08.htm](http://www.m2a-architects.com/PORTFOLIO/institutional/Silver%20Lake%20Library/silverlake_08.htm)

### [Arroyo Seco Regional Branch Library, Renovation, Highland Park, CA - USA 2003](#)

#### **Awards:**

Highland Park Heritage Trust, 2004 Award of Merit

The project design reflects the community of Highland Park and the Highland Park Heritage Trust's great pride in its wealth of historic turn of the century Mission and Craftsman style civic and residential structures. The site is located on a triangular portion of the park at the intersection of Figueroa Street and Piedmont Avenue and the 14,000 sq. ft. facility replaces the 10,200 sq. ft. library built in 1960. The project includes a large wall mural painted by the artist, Luis Becerra, which was relocated from the original building to a prominent location directly opposite the rear entrance. The new facility continues this tradition by utilizing indigenous arroyo stone and brick materials and traditional building forms, volumes and details. At the triangular corner, a thirty-five foot high stone tower announces the library location and frames the low entry vestibule. From this low entry, a simple and traditional, large open reading room with heavy timber wood trusses is sited along the street wall on Figueroa Street. Along this street a long massive stone “garden” wall punctuated by a variety of window openings and bay windows reflects the craftsman tradition represented by stone buildings and separates the busy street from the quiet of the inside functions. Inside, the adult, reference and teen reading room is organized around a central axis, which terminates in a large bay overlooking the adjacent park. A variety of various bays, alcoves and mezzanine reading rooms provide outside vistas and intimate seating areas for the patrons. Small book alcoves along the outside walls interrupted by chance views, give an immediacy to the book collection while orienting the people back to the surrounding outer world. New computer tables share the central space with traditional reading tables. The separate children's reading room features a skylight filtering down and a private storytelling area set in a large bay element which overlook a landscaped garden area of the park. Facing the corner and reminiscent of the original Carnegie library is a large circular trellis structure, dark brick wainscot, and decorative iron balcony leading to the public meeting room and Friend's Bookroom.

### [North Hollywood Regional Branch Library, North Hollywood, CA – USA 2002](#)

#### **Awards:**

California Preservation Foundation, 2004 Preservation Design Award

State of California, 2003 Governor's Award

Los Angeles Conservancy, 2003 Preservation Award

#### **Publications:**

Clean, Well-Lighted, Los Angeles Time Magazine, July 13, 2003

The North Hollywood Amelia M. Earhart Regional Branch Library is located at the intersection of Tujunga Avenue and Magnolia Avenue occupying a rectangular lot at the corner of the North Hollywood Park. The original facility is a single story brick building in the Spanish Colonial Revival style of approximately 4,300 square feet, designed by Weston & Weston Architects. It was built in 1930 as one of several branches funded by revenue bonds voted by the citizens of Los Angeles in the 1920's. In 1956, an extensive addition in the same style by John Landon increased the library area to approximately 12,500 square feet. In 1984, the 1930's URM building was seismically reinforced to Division 88 standards. This project incorporates a second addition of approximately 2,500 square feet and the addition of new parking areas. The 1930's portion of the facility is a clerestory volume with seven multi-pane windows centered over the entry. The clerestory has a shallow hip roof of red Spanish tile and two chimneys at the south end. On the south and east sides, a second tile roof below the clerestory windows extend over offices and a porch that asymmetrically covers three-quarters of the front. The porch roof is supported by a row of stylized concrete columns and capitals resting on a two-foot high concrete wall finished by a brick course. Entry is through a small rectangular vestibule, decorated with wrought iron gates, grilles, and Mexican tile. Doors of oak and leaded glass lead into the circulation and adult reading area with open wood trusses and a fireplace at the south end. The 1956 addition encompasses the existing reference area, staff area and children's area and matches the original exposed brickwork, clay tile roof and exterior detailing.

### [John C. Fremont Library, Renovation, Los Angeles, CA – USA 1996](#)

#### **Awards:**

Los Angeles Conservancy, 1997 Preservation Award, City of Los Angeles, Historic Preservation Award of Excellence

M2A completed the rehabilitation, seismic upgrade, and 2,000 sq. ft. addition to this historic branch library. All work on this Los Angeles Cultural Monument No. 303, constructed circa 1927, was designed to meet the Secretary of the Interior's Standards. Organized around a new entry/reading court, the existing library and new support and community spaces are fully accessible. A new entry "drum", separated from the existing structure by skylights, leads into the restored reading room complete with truss ceilings, fireplace and recreated chandeliers. Original stenciling was restored; original colors were researched and recreated. A new landscaped parking lot integrates existing trees to maintain the context of the residential neighborhood. The completed project was the recipient of a 1997 Design Award from the Los Angeles Conservancy.

## [Pico-Union Branch Library, Renovation, Los Angeles CA – USA 1993](#)

### **Awards:**

City of Los Angeles, Cultural Affairs Commission, 2003 Architectural Excellence Award

Located within the historic Pico-Union neighborhood, the community requested that the building design respond to the turn of the century building type and style predominant throughout their area. The design recreates a Carnegie Library prototype with traditional reading rooms set behind a formal monumental brick and clay tile building form. The building is set back from the dense street trees with a decorative plaza and formal stairs leading to an arched entry porch. The facade features a triple arched entry porch at the center of the main mass and smaller decorative view windows at the axis of each room. On the interior a lobby leads through arches to a traditional book lined main reading space with a large central skylight and built-in computer work carrels. Arched openings lead to each of three separate beamed reading rooms for Teens, Children and Adults and rear stack room. Each room opens onto a tiled courtyard with seating and specimen trees. (M2A)

Honor Award, AIA New England 2002

Honor Award, Boston Society of Landscape Architects 2002

Willard J. Walker Hall is designed to accommodate both recent and future growth anticipated at the Walton College of Business at the University of Arkansas in Fayetteville. The building showcases state-of-the-art teaching classrooms and student learning spaces, teaming rooms, spaces for industry partnering, and a trading room. Walker Hall takes advantage of its hillside location to project a contemporary image visible from downtown Fayetteville. It presents itself as a solid mass with a series of protruding glass boxes that express key interior spaces. Inside, four architectural staircases connecting the five floors lead one through a succession of double-height spaces that are nodes for the primary programmatic elements of the building. Red, ochre, and gray stained concrete floors visually define a hierarchy of plazas, avenues, and streets. The vertical organization of the program promotes connections between undergraduates, graduate students, and the various research centers. The largest of these double-height volumes is the forum, which links together Shollmier Plaza, café seating areas, a 150-seat auditorium and the trading center. Other double-height spaces are adjacent to undergraduate classrooms, research center meeting rooms, and a graduate reading resource room. Walker Hall, along with the adjacent Center for Academic Excellence building, frames a new academic quadrangle. The strong massing, materials, and landscape tie together the previously undefined campus precinct.

## [Rice University, Wiess College Residence and Dining Hall, Houston, TX - USA 1998-2002](#)

The Rice University Wiess College comprises a variety of phases and program pieces. The scope of work began with a master plan phase for siting two colleges, a new access road and gateway, an individual masters house, a University-wide health clinic and the reconfiguration of the existing intramural fields.

The Wiess College project itself includes two dining halls, a servery, and a 228-bed dormitory surrounding a central public courtyard. The rooms are designed with primarily suite-type arrangements that are distinct between doubles for freshman and sophomores, and singles for juniors and seniors. The program also contains a variety of common spaces such as a library, computer rooms, seminar rooms, recreation rooms, etc. The plan locates most of these common rooms near the dining and kitchen facilities, but also spreads some throughout the dormitory itself to encourage a mixing of students.

The building takes the form of a single-loaded corridor type, in which the suites are located on the peripheral edge of the building, accessible by means of open-air corridors shaded by ivy-covered metal screens along three courtyard walls. A new dining hall for Wiess College defines one edge of the courtyard. This hall is part of an integrated complex of new facilities that includes a second dining hall for the adjacent Hanszen College and a servery surmounted by a large public terrace overlooking the nearby playing fields. The building's architectural language is contemporary but developed from the historic character of the campus.

Machado and Silveti are nothing if not tasteful. Their architecture is one of refinement. They offer exquisite materials, elegant detailing, a delicate sense of history. The secret is that they are also sensitive urban planners. History and taste are only tools in their attempts to shape the urban drama.

Nicolai Ouroussoff

Architecture Critic

## [Boston Public Library – Honan-Allston Branch, Allston, MA – USA 1998 – 2001](#)

### **Awards:**

2004 AWARD FOR DESIGN EXCELLENCE, Boston Society of Architects

2003 AIA NATIONAL HONOR AWARD FOR ARCHITECTURE, National Association of the American Institute of Architects.

HARLESTON PARKER MEDAL, Boston Society of Architects

2002

HONOR AWARD, Boston Society of Architects

HONOR AWARD, AIA New England

HONOR AWARD, Boston Society of Landscape Architects

The new Honan-Allston Branch Library is a single story 20,000 square foot building along a prominent neighborhood street. The building addresses issues that are important to the Boston Public Library, including maximum visual control within the library, a reading garden that serves as many spaces as possible, off-hours access for community use, and a prominent reading room on the front of the building. The scheme divides the building into three parallel zones. The front zone contains all the active, information-gathering program components, including the stacks. The rear zone contains all of the meeting and program spaces, which have off-

hours community use. The middle zone is very transparent, with alternating gardens and glass pavilion reading rooms. By creating several small garden spaces rather than a single large garden, each reading room is able to have a garden on both sides. This organization allows a beautiful specimen Beech tree to be preserved in one of the gardens. The warm material palette is made up of slate shingles and panels, rough slate blocks, and wood cladding. Natural finished wood windows are used with a combination of fixed and operable units. The interior floors are a combination of wood and cork which shares the same warm tones of the exterior materials.

The Machado and Silvetti design team actively engaged the community in every aspect of the design process. Their participation in numerous meetings and community events helped to develop a design scheme that not only addressed the multitude of tasks and services provided by our public library today, but also transformed a site into an inviting and vibrant new civic structure. The end result is a fantastically well-received building now being overwhelmed with significant public use.

(Bernard A. Margolis, President The Boston Public Library)

During the post World War II building boom on the University of California Berkeley campus, an "Arts Quadrangle" was established on a former playing field uphill from Hearst Gymnasium. Quickly, three sides were filled—a fine arts building to the south, an architecture building to the east, and two music buildings, one for classrooms and one a performance hall, to the north. To the west, the quad was left open to a view framed by Hearst Gymnasium and native vegetation to hints of the East Bay and sunsets beyond. Campus building did not stop, however, and the fourth side of the Arts Quadrangle was soon coveted as one of the last unbuilt sites on campus.

The Jean Gray Hargrove Music Library, actively assembling the most extensive public collection of original scores, rare manuscripts and regional music on the West Coast, quickly outgrew its facility on the upper floor of the 1947 classroom building. It had been bursting at its seams since the seventies. The campus approved the placement of a new music library on the fourth side of the Arts Quadrangle in 1998.

That the Music Library now inhabits its own structure on this site brings two important culminations to the campus. Finally, the Music Department is gaining a third building to symbolically complete the triad of its interests—teaching, performance and research. Finally, the Arts Quad is gaining the completion of its fourth side with a visibly and symbolically prominent library.

The Music Library is an environmentally sensitive project, designed to exceed California's already strict Title-24 energy requirements by 10 percent, a mandate of the University of California system. To achieve this goal, while maintaining a strong sense of openness and connectedness with the surrounding site and context, a combination of clear, Low-E glazing and sun shielding louvers are employed to reduce the absorption of solar heat. The highly efficient interior lighting system is designed to double task as the site lighting – sending a soft glow from the interior egress lights through the glazing onto the surrounding network of campus paths. These strategies save on the library's energy consumption and life-cycle costs, while enhancing the architecture and the role the building plays in its environment.

Atlanta Journal-Constitution, "Groundbreaking set for new Riverdale Library." 31 October 1996

Within earshot of the Atlanta airport, the Library Board was given a leftover site wedged between properties slated for development; to the north, a future gas station and convenience store; to the west, a proposed strip mall; to the south and east, a long-promised parkway. Corralled by sprawling suburbia, the little library asserts itself with quietude within a rapidly changing landscape, harnessing the mundane to invoke the abstract and the sublime.

Not unlike the nearby Wal-Mart or the neighboring metal shed that houses the Living Waters Assembly of God, the library has thin walls and flat facades. Its construction techniques are evident and familiar. Yet while its neighbors announce themselves with bold signage and clarify their functions with familiar forms, the library confounds the easy read—over scaled but dainty, bold but serene. It is a stealth building in an ocean of obviousness, a mysterious brushstroke against a background of predictability. And its curiosity becomes its invitation to the passerby.

Curious? Well, come inside. Along with a library's store of knowledge, you will find an oasis of variegated space and light. Those curious patterns on the outside are actually giant pennants of glazing that invite daylight to wash the stacks and ceilings. The grand tapered geometries of the facade actually mirror the slope of ordinary roof trusses inside. But these trusses, which give shape to the ceiling, are installed in groups with alternating slopes to provide an undulating play of space, rising and falling with multiple facets for bouncing light and dispersing sound. The dappling of daylight is further encouraged by skylights atop each column, and artificial uplight is thrown from 40 foot floating steel fixtures and bounced off of the many planes to provide a well-dispersed light for browsing and reading.

Most functions of the library (adult stacks, children's collections, casual reading and study tables, public computers, reference area, circulation and staff lounge) share space under the expansive trellis-like ceiling. Excluded are the barrel-shaped public meeting room to the south and the outdoor reading garden to the north. These two exceptions appear as solid masses outside the building, but inside they are habitable discoveries and moments of repose, one step further from the day-to-day.

The exterior is clad with unpainted fiber cement board attached with exposed fasteners. Glazing frames are redwood or aluminum. Inside, the ceiling is painted gypsum board, and walls are gypsum board or natural birch veneer plywood. Floors are integral-colored concrete or carpeted. Custom casework includes unpainted hot-and cold-rolled steel sheet, aluminum, lacquered medium density fiber board, redwood, cherry and fiber cement board.

The Arizona desert landscape provokes mis-readings. Plants look like animals, animals look like rocks, rocks look like animals, plants look like rocks, animals look like plants . . . eye foolers. The sun bursts over the horizon not bothering with some filtering effect of east coast greenery, but immediately filling an enormous sky with incredible light. Textures and colors vibrate. On the ground plane and along the horizon every form takes on a hyperness, incredibly legible and overly important.

The site of the law library expansion is on the fringe of the orthogonally planned campus of Arizona State University. The Arizona landscape, the curve of the east property line, and the geometrical determinism of the existing law school building and a number of other buildings scattered at the campus edge all communicate permission for exuberant form-making. The dynamic forms of the new law library both contrast and compliment the existing building, Armstrong Hall. When seen together, neither building is dominant; rather, the two are harmonious unconventionalities, forming a College of Law campus within the greater university campus.

An oasis-like plaza links the existing building and the new building. The portion of the site south of the new building is desert-like, with "magic mountain" on a north-south axis with the core collection dome and on a east-west axis with Lemon Street and the business school beyond the playing fields.

The forms and spaces of the scheme are organized over and around the distinct functions of the library: technical services, circulation services, the core collection and the other discrete collections. The exterior forms and interior spaces work in concert to modulate the intense Arizona sunlight providing myriad architectural experiences.

The library, named in memory of two prominent Phoenix attorneys, has one of the finest law collections in the Southwest with over three hundred ten thousand volumes and microform volume equivalents. The collection includes a broad selection of Anglo-American case reports and statutes, as well as legal treatises, periodicals, encyclopedias, digests, citators and administrative materials. It includes growing special collections in the areas of international law, Indian law, Mexican law and law and technology. The library is also a selective U.S. government depository.

Accessible shelving for the library's expanding collections and study space at carrels, tables and lounge seating are located throughout the library. The library has a thirty station computer lab, as well as LEXIS and WESTLAW rooms each containing ten stations. The new library also has twenty-seven meeting and study rooms, a microforms facility and a classroom.

The Morrow Branch Library; a 10,000 square foot fifty-nine thousand volume community facility; is an institutional loner in a horse pasture bounded by a strip shopping center, a wet weather draw, a busy county road and subdivision houses that are sideways-facing and self-concerned, that refuse to acknowledge the road's existence. The site is flat, filled with heat, and yellow topped bitter weeds, loblolly pines and june bug beetles. Its most extraordinary feature is its ceiling of blue sky and bright clouds brushed by pine needles.

The 1 acre site is consumed by the program of building and parking—the best view is up. The scheme reflects this feature with glass and views high up and enclosing walls down low. Other influences are more abstract, distant connections, such as the headquarters library, the county courthouse, the close-by neighborhoods Rex and Ellenwood and the cardinal points of the compass. Along with the property lines, the lines of influence from these entities give form to the building.

The building plan is, in effect, an asymmetrical, skewed dogtrot with a dividing breezeway / corridor with rooms off both sides. To the north of the corridor are the public meeting room, toilets and administrative services. Intruding into the corridor is the circulation desk with visual access to both building entrances, the restroom and the public meeting room entrances. The children's collection and the general collection are to the south. Along the south property line, just outside of the children's and general collection is a small garden with a depressed area that will hold water and act as a reflecting ditch

A vertical steel and glass tower marks the center of the site and of the building signifying the center of a new reality for the branch library. It is a negative center support from which the mushroom-like ceiling / roof forms emerge and rise toward the perimeter and rest on a simple post and beam steel structure. Exterior walls are of glass and Georgia red-clay-colored synthetic stucco. The roofs are tire tread rubber.

The Atlanta Northstar, "\$2 Million Buckhead Library to Replace Ida Williams Facility." 26 February 1987

The Buckhead Branch Library is a 22,000 square foot neighborhood facility located in a unique nouveau riche strip of Atlanta. The Buckhead neighborhood is the foreground of a cultural shift where the boutique succeeds the pool hall. The neighborhood is a rupture, showing signs of a downtown with growing pains.

The existing Ida Williams Branch was a parking meter... past expired... unable to communicate with speed and clarity. The function of today's public library: a locus for knowledge within a civic landscape bounded by mobile sprawl and strip shopping. The particular site is atop a crest that commands a spectacular view of downtown Atlanta. The new building consumes the large narrow portion of the site in-between the distinct frontages while perching itself in full view towards downtown. An array of canopies intensifies the pedestrian scale relationships along Buckhead Avenue and deposits the reader at the helm of the spectator city, air-conditioned and detached.

The plan organization is linear: sidewalk, entry sequence, circulation desk, reference and main reading room. Children's services, public meeting room and periodicals are located in "saddle bags" off the main linear circulation path.

Building materials and systems include structural steel frame, painted metal roofing, slate siding, and cast-in-place concrete foundation walls.

Jonesboro, Georgia—the project's location—is wedged in-between the southeast end of Hartsfield International Airport—one of the busiest airports in the world—and Tara, the mythical home of Scarlett. The strip between the two is folksy, hand painted (not all mass produced), a place where one is apt to pull along side a pick-up with a rack and ZZ Top coming at you through the open windows. It is a place where information is sought for practical reasons and history is personal. Scholars will not seek out obscure dissertation-supporting materials here. This library is more a filling-station for information for living life. A puppet show, a cooking class, a seed catalog . . . Easy parking. Come on in. A K-Mart for information . . .

The site proper is bounded on the north by Battlecreek Road, on the east by Jester's Creek and its associated flood plain—a wooded area lush with hardwoods and pine—and on the south and west by other county facilities. The building is located on the south portion of the site at an elevation higher than the parking lot, directly in front of the building. The entrance elevation is at the eye level of a seated driver traveling along Battlecreek Road.

The plan is organized around two axes. The north-south axis connects the parking lot, the entrance, the circulation desk and the board room. At the circulation desk, this axis intersects an east-west axis at ninety degrees. The east-west axis connects the woods and flood plain east of the site, the genealogy collection, the circulation desk and one director's office.

The building is organized functionally into two areas: the administration facilities and the public areas. The public areas occupy a large, open room which is oriented to the woods and creek. A monitor divides the space, emphasizing the line of travel toward the genealogy collection. The roofs of this space spring toward the east and the woods and are arranged to fan up toward the south allowing north light to enter at each "step". The children's services are located in the lower space, while the general collection with the tallest stacks is located where the roof is the highest.

The structure is steel frame with long span truss joists of wood and galvanized steel. The foundations are concrete footings. The exterior skin is a combination of metal sidings with a variety of textures and patterns. The general tectonic is industrial grade.

## **Mahlum Architects, Seattle, WA – Portland, WA – USA**

<http://www.mahlum.com>

### **Libraries:**

[Suzzallo Library, University of Washington, Seattle WA – USA 2002](#)

### **Awards:**

2002 NW Construction Consumer Council Distinguished Project Awards, Honorable Mention  
 Suzzallo Library Renovation, University of Washington, Seattle, Washington

Suzzallo Library's importance to the psyche of the University of Washington is profound. A powerful symbol of learning, it is monumental in scale and magnificently ornate. Successful restoration and rehabilitation of this landmark involved discreet integration of structural, technology and life-safety upgrades without interfering with the Library's aesthetic integrity. Great care was taken to preserve historic interior finishes, particularly within the entry lobby, grand stair, octagon and reading room. The new design introduces an exposed batwing-shaped steel strut that grasps existing trusses over the reading room and anchors them to the core structure. Aside from this dramatic intervention, the new steel bones, structural bracing and seismic upgrades are hidden, restoring the building's historic beauty and preserving its legacy. Scope: \$47.3 million, 318,000 SF (Cardwell)

Completed in association with Cardwell Architects, see Cardwell Architects

## **Marble Fairbanks Architects, New York – USA**

<http://www.marblefairbanks.com>

### **Libraries:**

[Glen Oaks Branch Library, Queens Borough Public Library, Queens, New York, NY – USA 2013](#)

### **Awards:**

Design Excellence Program, NYC DDC

Art Commission Award, NYC

Merit Award, NYC AIA

Glen Oaks Branch Library replaces an existing one story facility with a new 18,000sf high performance, LEED certified building located at the juncture of a low scale commercial/institutional area with a suburban residential neighborhood. The program includes reading rooms on all three levels, a cybercenter, and community meeting spaces. As the building area required is double that allowable by zoning, half of the interior spaces are placed below grade. A double-height space adjacent to the building entry and strip skylights in the plaza bring light through a contoured ceiling to define specific reading areas located below. The profile of the contoured ceiling is read at the double-height space, making a visual connection between the plaza and ceiling surfaces, accentuating the artificiality of the ground. The landscape strategy acknowledges the ground surface's dual role as an outdoor public space and its inversion as the roof of the cellar below, exploring the relationship between artifice and nature.

Above grade massing and material treatment respond to differing site conditions on each elevation. A large picture window along the front elevation provides views into and out of the second floor children's area, while providing a civic identity to the community.

Exterior materials merge the scale of the library to Union Turnpike and the residential context.

## **Slides Library, Department of Art History and Archaeology Columbia University, New York, NY – USA 2008**

### **Award:**

Honor Award, New York City AIA

ID Design Award, Honorable Mention American Architecture Award

This project was completed both as a prototype research project to test computerized fabrication techniques, and to fulfill the immediate program needs of the client as the first phase of a longer-term master plan. The design consists of four walls defining the space of the slide library and lit by the skylight above. The east wall is made up of 435 sandwiched layers of 1" thick ultralight (lightweight mdf). Occasional viewing portals are formed by carved layers on opposite sides of the wall where two 1/2" thick glass panels are inserted. The middle of the east wall curves into the space to capture light in the hall outside from a skylight above. The edges of the glass panels refract and glow from natural light. The north, south and west walls are patterned with 1/4" perforated lines outlining the actual tooling paths for each of the layers of the east wall – these lines are illuminated by the light of the skylight in the slide library. As part of the rigor to digitally draw, fabricate and manage the entire project, every component of the design was milled regardless of its complexity to enable the walls to be assembled like furniture.

## **Marpillero Pollak Architects, New York, NY – USA**

<http://www.mparchitectsnyc.com>

[Queens Public Library Network, Elmhurst Library, New York, NY – USA 2008 – 2013](#)

\$ 11,328,000, Sqf. 30,515

The existing Elmhurst Library is the second busiest circulating library within the Queens Library (QL) network. MPA's design for a new building more than doubles the size of the existing building and triples usable program space. It will provide state-of-the-art technology, including more public computers, wireless internet access, self-check out capabilities through radio frequency identification technology, and a 24 hour book drop, as well as the Adult Learning Center, one of six in the QL system, which offers classes, video and writing groups, and technology-assisted education. The new library creates a number of inviting, comfortable spaces with careful consideration to material qualities, durability, acoustics, and color. Respecting and engaging the neighborhood context, the new library will acknowledge the larger massing of contemporary buildings, while relating to the smaller scale fabric of historical architecture through the design of two special glass enclosed reading-room spaces, one in the park and one above Broadway. The project maximizes green space and connection to the outdoors, using the constraint of a rear no-build zone as opportunity for a garden which connects visually to open space at the interior of the block. Transparency through the glass-enclosed reading room at the center of the building provides a visual connection between existing park and new garden. The library has a new presence on Broadway, contributing to the quality of the street and announcing itself to the community. As a DDC High Performance Pilot Project, Elmhurst Library's integrated building design balances energy efficiency, accessibility, spatial quality, daylight, thermal and acoustical comfort, and maintenance. (Marpillero) (30,515 sqf.)

### [The Horticultural Society of New York, Library, New York, NY – USA 2008](#)

The new headquarter builds upon the Horticultural Society's (HSNY) 106 year historic legacy, and contribute to its ongoing mission concerning education and outreach of the organization. The flexibility of the space with a movable panel and sliding panels allows a dynamic transformation from full-length Library to Gallery and large scale Lecture space. The design approach which accommodates a high environmental quality by maximizing daylight through the planter screen and natural ventilation provides the feeling of a park in the middle of a part of the city dense with office spaces. Conference room, offices and workstations all have direct light and views to the outside, and are accessible from the Library/Gallery to support the vibrant future of the institution. Simple and sustainable design strategies were implemented within a landlord's build-out limited budget, yet promoted a clear identity by also integrating in the space a small but focused amount of custom furniture.

### [PS1 Bergen School Library, Robin Hood Foundation, New York, Brooklyn NY – USA 2004](#)

**Awards:**

Citation Award 2005

The PS1 Bergen School Library is part of the Robin Hood Foundation Library Initiative, a program whose long term mission is to have all NYC children reading at grade level or above. MPA was part of a small group of architectural firms selected to design one of the libraries, each of which must accommodate 10,000 new books, an instructional area with tables and seating for thirty-two second to fifth graders and a reading aloud space for 30 younger children. MPA's design creates an integral assembly of custom designed work tables, a "stage" for the younger children, and a frieze of children's drawings. Elements of the new library extend outward into the corridor and stairwell to construct a strong identity within the overall space of the school. (\$ 428 000)

**Libraries:**

#### [Naslund Study Lounge at Armacost Library, University of Redlands, Redlands, CA – USA 2010](#)

The Naslund Study Lounge at the Armacost Library offers students a comfortable "home away from home." The design of this 8,700 SF entry addition features the 'Grand Living Room' gathering space as the formal entrance to the newly renovated campus library. It was important to maintain the library's circulation and operations while giving the students a much-needed place to study, collaborate, and hang out. The look and feel of the 'Grand Living Room' had to reflect the University's classic, timeless aesthetic while being modern, youthful and relevant to the students.

Library users are welcomed with custom-designed furniture, lamps and ottomans that can be quickly rearranged, creating a highly flexible gathering space. The grand staircase leading into the space includes double-height steps lined with floor pillows on either side of the center circulation, providing more informal lounge and study space. The study lounge includes computer labs, classrooms, group study rooms and a café. Open 24 hours a day, this library entry way has become a destination unto itself—a memorable space and image for the University.

<http://www.acmartin.com/portfolio/naslund-study-lounge-university-redlands>

#### [Library and Learning Resource Center, Rio Hondo College, Whittier, CA – USA 2009](#)

The design for the Library and Learning Center on the campus of Rio Hondo College, is a response to the building program, the master plan for the college, the site topography and natural amenities of the area. The new structure was also designed to seamlessly blend with the context and character of the existing campus.

The campus master plan anticipated a significant entry for the building on axis with the existing lower quad. The building entry is on this axis, and was developed as a visible beacon, both during daylight hours and at night. This main entry leads to a two story, day lit, atrium space. Within the atrium is a resin "curtain," rising two stories within the space. The curtain adds a tremendous amount of interest to the space, as well as aiding noise control from the atrium into the library. The curtain also helps to define the periodical reading space located directly behind it to the south.

Both floors are organized by a main corridor, or boulevard. On the library floor the curving clerestory lit boulevard ends in a grand reading room with views to spectacular landscapes to the west and north. The south facing stacks and reading spaces respond to the organic nature of the topography with a gently curving glass wall that takes advantage of the views and daylight. This space has a sloped ceiling with exposed structure to create a dramatic sense of place.

<http://www.acmartin.com/portfolio/library-learning-resource-center-rio-hondo-college>

#### [Henry Madden Library, California State University, Fresno, CA – USA 2008](#)

Partners: RMJM (UK)

325.300 sqf., € 78.800.000

Mediamesh® became the canvas of the modern artist with this art installation by Susan Narduli.

Owner California State University, Architect Narduli Studio, Dimension 16.6 ft. wide x 32 ft. high, Total Area 531 ft.2

Total Pixel 14,028 Px, Pixel Pitch Ver. 60mm / Hor. 60mm, Application Indoor / West (behind glazing façade), Brightness 1,940 Nits  
Completion December 2008

AC Martin, in association with Hillier Architecture, designed the new library at Fresno State University, home to the largest collection of volumes in California's Central Valley. The new design provided innovative solutions to the existing library's limited capacity for its rapidly expanding collections.

This project, which included a 283,000 GSF addition and 80,000 GSF renovation of the Madden Library, was a collaborative effort between AC Martin, Hillier Architecture, and CSU Fresno Librarian and President of the American Library Association, Michael Gorman. The team fused their collective expertise to create the 'library of the future', a building that brings together students and residents from the surrounding community.

The new Madden Library provides more than just a learning experience for students, faculty and the Fresno community; it is a destination containing a variety of special spaces. One such space is the large translucent sculpture at the entrance which creates a strong exterior image and defines the library's source of organization. Other features include a café on the second level and a rooftop terrace adjacent to University administrative offices.

The library has primarily open floor plans, but incorporates a variety of seating areas, including comfortable places tucked away where patrons can retreat for quiet reading and studying and built-in seating on the grand staircase.

Situated on the central campus adjacent to the Peace Garden, a unique feature of the library is its entirely transparent façade on the north elevation, which allows abundant light into the building while providing a beautiful view of the garden. Extensive use of natural daylight, natural ventilation and the use of recycled products during construction have resulted in a highly sustainable building.

Library experts at AC Martin and Hillier Architecture understood that the 'library of the future' must use technology to enhance rather than replace traditional library functions. The technological innovation employed in the new library aids librarians in creating a more efficient system and helps patrons utilize resources more effectively. Technological innovations include embedded microchips for book tracking, advanced cataloguing databases to simplify the research process, and compact moveable stacks that create more space for the library's ever-expanding collection of volumes.

The new library is a powerful resource for the University and the surrounding Fresno community. It is a significant landmark that informs the campus plan and shapes the future of the California State University, Fresno. The fusion of cutting-edge technology and traditional library values have resulted in a facility with the potential to re-define library design in the next century.

<http://hothmong.com/WDJ3S21Ud1FLZzQz>

This project renovated an existing 85,000-square-foot structure and added 240,300 square feet to it, creating a five-level structure with a transparent north facade that brings light into the library while offering users a view of the neighboring Peace Garden. The building's internal circulation is organized around a series of stairs and landings, with the main stair traversing the entire northern wall and guiding visitors through the heart of the library. Other features include a café on the second level and a rooftop terrace adjacent to university's administrative offices. A variety of seating areas include built-in seating on the library's grand staircase and comfortable places that are tucked away so patrons can retreat to read or study.

<http://chronicle.com/blogPost/Campus-Architecture-Databas/21109/>

In the course of the renovations to the California State University library in Fresno, ag4 media facade GmbH in collaboration with A2aMEDIA Inc. and GKD USA have realized a 50 m2 media facade made of Mediamesh®, a product developed by ag4 and GKD Düren. Mounted behind a glass wall, the media facade is part of an artistic installation set up throughout the entire university building. Not only the media facade is integrated into the mediatectonic overall concept, but also its content. The media facade displays an installation that runs day and night, depicting in real time the traditional basket weaving process by a Native American Indian woman. Fresno's new Henry Madden Library was built by AC Martin Partners and includes a video installation by the artist and architect Susan Narduli. The installation shows a basket weaver at work. Susan Narduli filmed the basket weaver during the course of 12 months. From this material, an installation was created that shows the complete process of creating a basket from start to finish in real time running over a two-week period, making this undoubtedly one of the longest art films ever made. The installation is displayed through Mediamesh®, a transparent stainless-steel wire mesh panel with embedded high-luminosity LED profiles. This innovative technology makes it possible to medialize the entire surface of large facades, displaying brilliant image quality both by day and by night. Be it for high-resolution images, videos or live broadcasts: the configuration of Mediamesh® is determined by the planned application, the location of the structure, and the image resolution, and is based on the specifications of the project and the customer. The quality of the images is determined by the viewing distance and by the interplay between the horizontal and vertical distances between the pixels. The denser the alignment of the pixels, the higher the resolution and the more detailed the image display is. For the installation in Fresno, a distance of 6 centimeters both horizontally and vertically was selected, guaranteeing a high transparency of the system. Minimal power consumption, long life span and durability, weather and temperature resistance covering a range of -20° C to +70° C as well as the ability to easily exchange the profiles or the control elements when needed further demonstrate the innovation of the overall concept. "One of the reasons we chose the co-operation is because its technology is above and beyond what is available in the marketplace today. Of all the companies our team looked into, it was the only one that could apply futuristic technology to bring a historic tradition to life in a genuine and realistic format", said Cynthia Teniente-Matson, Vice President of Administration at California State University in Fresno. "Our goal for the Henry Madden Library expansion project was to blend the ancient Native American heritage of the Central Valley of California into the state-of-the-art facility." The 50m2 large media facade will be mounted in the interior of the building behind a large glass facade with its brilliance radiating outwards onto the planned "Peace Garden". Students and visitors walking past the garden or the library will thus be able to view the basket creation process. This is a significant aspect of the installation. Dr John D. Welty, President of the University, explains, "As we move into the future, it is very important that we never lose sight of the past. The contributions, wisdom and connection to the land of the entire Native American community in our region need to be cherished, recorded and passed on to future generations. This technology allows us to do that." The team, consisting of ag4, GKD, A2aMEDIA and Susan Narduli, have created an installation that successfully demonstrates how the past and the future can be woven together in an interesting way, thereby creating new and enlightening associations.

### [Leatherby Libraries, Chapman University, Orange, CA – USA 2004](#)

This replacement building includes six libraries - Arts and Letters; Science and Technology; Business and Economics; Music; Education; Film and Television. Each library occupies a distinct location marked by a unique portal. Every portal is a symbolic representation of the disciplines.

The library was planned to be readily understandable, with an inviting entry leading to circulation desk, reference desk, quick look-up stations and elevators and stairs to allow easy access to upper floors.

The building was conceived as the intellectual heart of the campus—a place where knowledge is plentiful and easily accessible.

## [Paulina June and George Polack Library, Expansion, California State University Fullerton, Fullerton, CA – USA 1996](#)

1966 Risely Gould, Van Heuklyn

This project is an addition to an existing six-story library located in the center of the Cal State Fullerton campus. The 188,000 SF addition is four stories plus a basement. The north glass wall is a serpentine design, bringing soft north light into the reading areas, as well as providing a focal point for internal organization of the building. Reader stations follow the curve of the north wall. Stacks are oriented perpendicular to allow light to penetrate deep into the building.

Furthest from the north wall are the fixed partition elements such as the building core and administration offices. These areas are adjacent to the existing building for ease of circulation. Most of the plan is partition free space that can be rearranged and adjusted to suit the needs of the library in the future. The addition is clad in precast concrete panels to complement the existing building and curving curtainwall areas are used as contrast and accent. A three-story atrium provides entry to both buildings and separates the existing building from the new addition.

## [Martinez + Johnson Architecture, Washington DC – USA](#)

<http://www.mjarchitecture.com>

**Libraries:**

### [Georgetown Library, Washington DC – USA 2010](#)

The design objectives for the Georgetown Library were to provide a state-of-the-art library facility that would meet the program needs of the twenty first century user. Set within the historic Georgetown community, this 80 year-old building suffered greatly when a fire tore through the structure in early 2007 damaging much of the original oak woodwork and historic elements.

M+J worked very carefully to restore the significant architectural details of the building and provide a setting for new activities. To achieve some of these objectives M+J sought to reintroduce the original reading terrace that once sat on the south side facing historic Book Hill Park. While maintaining minimum impact to the historic fabric, this allowed for the expansion of the building - accommodating the library program and allowing for a new public meeting room. Additionally, the generous height of the original roof provided the opportunity to add a third level that now houses the Peabody reading room and historic collection. The third level Peabody reading room sits neatly within the roof restoration under the new cupola and takes advantage of the views of Georgetown through the new dormers.

As a contributing structure to the Georgetown Historic District, the design for the Georgetown Library had a number reviews to undergo. M+J shepherded the design through an extensive series of neighborhood meetings, fully vetting both the interior design as well the exterior restoration design with neighbors and the ANC. Formal reviews took place with the Old Georgetown Board, the body that handles reviews in Georgetown for the US Commission on Fine Arts. Reviews with the Historic Preservation Office were on an informal basis, but just as rigorous as if the project were to go before HPRB.

<http://ascribehq.com/martinezjohnson-architecture/portfolio/libraries/5065>

### [Takoma Park Library, Washington DC – USA 2009](#)

Takoma Park Library has been serving this community since first opening in 1911. This historic building was a Carnegie-funded facility, set in nationally registered historic district. In recent years it became the goal of the DC Public Library system to restore and renovate many of their libraries so that they can continue to meet the demands of the District's residents. In 2008, Martinez+Johnson Architecture, as a part of a design/build team was asked to provide interior and exterior renovations for this historic structure, all within an exceedingly exacting budget. The DC Public Library (DCPL) and the supporting neighborhood groups had a vision of what they wanted to accomplish at the site, complete with some initial design parameters. M+J was able to successfully work with all of the parties involved to further define the scope of the project, given the budget that had been established when DCPL accepted the design/build proposal. The exterior design effort required a working relationship with the Historic Preservation Office in order to develop the most appropriate restoration scheme.

The interior of the building did not have an official DC landmark designation, never the less, M+J's design had to maintain the original interior aesthetic while adapting it to the technologies and services required by a modern library user. Designs were drawn for new HVAC and lighting systems, library stacks, security desk, and computer stations. In addition all the finishes in the building were upgraded according to M+J's design. This project was completed in March of 2009.

## [Maryann Thompson Architects, Cambridge, MA - USA](#)

(formerly Thompson and Rose Architects)

<http://www.maryannthompson.com>

**Libraries:**

### [The Atlantic Center for the Arts, New Smyrna Beach, FL. – USA 1997](#)

**Awards:**

Two State of Florida grants

1998 American Institute of Architects National Honor Award for Design Excellence

1997 I.D. Magazine Annual Design Distinction Award

1996 Boston Society of Architects Design Honor Award

1995 American Wood Council Honor Award

the 1995 Progressive Architecture Citation Award

1993 Boston Society of Architects Unbuilt Architecture Award.

The project has been featured in several publications including the September 2001 issue of A+U, the June 1997 issue of Architectural Record, the June 1996 issue of Architecture, the February 1994 issue of Progressive Architecture, the March 1994 issue of INSITE magazine, and the November 1994 issue of Architectural Record. The project was included in the Norton guide to 250 key 20th Century American buildings.

The Atlantic Center for the Arts offers artists residency programs in a lush Florida jungle setting. The Center offers residencies to writers, dancers, visual artists, composers, choreographers, and actors. Past participants include Allen Ginsberg, Lukas Foss,

Robert Rauschenberg, Edward Albee, Alice Aycock, and other nationally known artists. The program includes a black-box theater, painting and sculpting studios, recording studios, a dance studio, a library and various support spaces. The design includes six buildings interwoven into an indigenous Florida jungle landscape, linked by an elevated boardwalk, and made of wood, glass, and metal. The project completed an intensive value engineering process, and the design team worked closely with the construction manager to refine building costs so that the project came in below budget. Construction was completed in 1997. (Maryann)

### **McMillan Pazdan Smith, Spartanburg, SC - USA**

<http://www.mcmillanpazdansmith.com/>

#### **Libraries:**

#### **[Jackson County Library, Sylva NC – USA 2011](#)**

Renovation and Expansion, Architect: McMillan Pazdan Smith, LLC, Cost: \$7.3 million, Size: 26,000 sq. ft. total, 20,000 sq. ft. expansion.

Perched majestically 107 steps above Sylva, NC's Main Street, the historic Jackson County Courthouse (1914, Smith Carrier <http://ncarchitects.lib.ncsu.edu/people/P000224>) presided for nearly 100 years over this small mountain community and remains one of the state's most photographed buildings. Listed on the National Register of Historic Places and serving as a courthouse for 80 years before being replaced by a new County Justice Center, Jackson County asked McMillan Pazdan Smith to author a feasibility study to evaluate the potential for restoration and possible alternative uses.

The firm concluded the most appropriate use for this civic icon would be to renovate the existing structure into office, meeting and program space for local non-profit organizations including the Jackson County Genealogical Society, Arts Council and Historical Society, and add a new two-story, 20,000SF addition to house the Jackson County Public Library.

McMillan Pazdan Smith's complete restoration of the original architectural elements magnified the building's historic grandeur, and it is a huge benefit for area citizens that this community structure has been preserved with a new mission.

<http://www.mcmillanpazdansmith.com/portfolio/jackson-county-library>

Reuse and Restoration: Jackson County Library renovated a hundred-year-old courthouse and added 20,000 square feet that connects to the original building by a glass atrium. A special challenge to the project was the restoration of the building's signature cupola, which had to be removed during construction and suffered water damage due to significant rainfall in the initial stages of construction.

#### **[Hal Kohn Memorial Library, Newberry, SC – USA 2009](#)**

Downtown Newberry was one of South Carolina's best kept secrets until word got out. Nationally recognized in the New York Times, Wall Street Journal, Atlanta Journal Constitution, and Southern Living as a city "in the midst of an economic and cultural renaissance," Newberry is a town steeped in history with a downtown district lined with quaint shops and restaurants, showcasing numerous buildings on the National Register of Historic Places. As one of the state's cultural and historic treasures, Newberry turned to McMillan Pazdan Smith to design their new County Headquarters Library in the heart of downtown.

In a rare collaborative effort involving both city and county leaders, McMillan Pazdan Smith designed the Hal Kohn Memorial Library to expand the downtown business district, blend with its historical architecture and reclaim one of the city's blighted brownfield sites. This new structure is a key step in the revitalization and urban renewal of this eloquent historic community.

#### **[The Getty Center, Los Angeles, CA - USA 1984 – 1997](#)**

The Research Library at the Getty Research Institute focuses on the history of art, architecture, and archaeology with relevant materials in the humanities and social sciences. The range of the collections begins with prehistory and extends to contemporary art. Presently, the collections are strongest in the history of western European art and culture in Europe and North America; however, in recent years, they have expanded to include other areas, such as Latin America, Eastern Europe, and selected regions of Asia.

The general library collections (secondary sources) include over one million volumes of books, periodicals, and auction catalogs. The literature of art history, the methods and materials of artistic production, and conservation are core areas of the holdings in classical antiquities, medieval and Renaissance art, sculpture and the decorative arts, prints and drawings, and photography. The conservation collection includes more than 45,000 titles and 60,000 volumes of primary and secondary sources related to the conservation, management, and protection of cultural property from paintings to architecture.

The special collections contain rare and unique materials in selected areas of art history and visual culture. Predominately works on paper, these collections include rare books, prints, and photographs. Archives, manuscripts, sketchbooks, and albums provide perspectives on artistic production, illuminating intellectual exchanges that fostered creative collaborations. More recent acquisitions focus on art and architecture in Southern California, revealing Los Angeles's significant role in the postwar era.

The Photo Archive contains approximately two million study photographs of art and architecture from the ancient world through the 20th century. The library also maintains a copy of the Princeton Index of Christian Art, an iconographic index of Early Christian and medieval art objects. The Research Library supports its own conservation laboratory dedicated to the preservation of Research Institute collection materials, and is home to the Getty Institutional Archives. <http://www.getty.edu>

### **The Hamburg-America-Center, Hamburg – Germany 2009**

Project development: DS-Bauconcept GmbH, Start of construction: September 2007, Completion: Spring 2009, Total rental space: approx. 7,950 m<sup>2</sup>, 8 storeys plus stepped storey, Common roof terrace for all tenants, Private roof terrace for the 8th floor, Underground parking. <http://www.hamburg-america-center.de>

In der HafenCity am Sandtorpark entwickelt DS-Bauconcept das Hamburg-America-Center. Das neue internationale Zentrum wird unter dem Motto "Business & Culture - Amerika in Hamburg" amerikanische und internationale Firmen und Dienstleister in einem Haus vereinen. Gebäude mit qualitätvoller Architektur, geplant vom bekannten New Yorker Architekturbüro Richard Meier, bieten den zukünftigen Mietern attraktive Büroflächen in bevorzugter Lage. Kultureller Kern des Hamburg-America-Centers wird das Amerikazentrum. Aufgaben des dort einziehenden Vereins Amerikazentrum e.V. sind der deutsch-amerikanische Bildungs- und Kulturaustausch, Beratung zu Ausbildung, Sprache, Stipendien und Veranstaltungen im Kunst-, Kultur- und Musikbereich. Der American Businessclub bietet neben Konferenz- und Besprechungsräumen ein Restaurant in anspruchvollem Ambiente und rundet damit das Business & Culture-Angebot des Hamburg-America-Centers ab. <http://www.ds-baukonzept.com>

Im Februar 2004 wurde der Wettbewerb entschieden (siehe BauNetz-Meldung vom 10. Februar 2004), nun ist endlich auch Baubeginn: Mit der Grundsteinlegung hat am 6. Dezember 2007 in der Hamburger Hafen-City der Bau des neuen Hamburg America-Centers offiziell begonnen. Der Entwurf für das Gebäude am Sandtorpark mit viel Glas und weißem Putz stammt unübersehbar von Richard Meier & Partners (New York). Unter dem Motto „Business & Culture – Amerika in Hamburg“ wird hier neben Büros für Unternehmen, die den Vereinigten Staaten verbunden sind, der Verein Amerikazentrum e.V. ein neues Zuhause finden. „In Zukunft werden hier eine große Bibliothek, eine Videothek und viele kulturelle Veranstaltungen uns die amerikanische Lebensart näher bringen“, freut sich Hamburgs Erster Bürgermeister Ole von Beust. Bis Ende 2008 entstehen Am Sandtorpark 48 etwa 8.440 Quadratmeter Bruttogrundfläche auf acht Geschossen plus Staffelgeschoss und einer Tiefgaragenebene. 30 Millionen Euro investiert die Norrporten AB aus Schweden in das Hamburg-America-Center. In 1987, after a competition full of fireworks, the American architect Richard Meier beat the favourite (OMA) to collar the commission to build a new City Hall. Three years later construction began on a mixed-use building. Combining shops, rentable office space, a public library and the City Hall itself, it is the hub of the redevelopment of this part of the city centre. Two office wings lie along the long sides of the available plot, separated by a vast public atrium sporting a glass roof. A key attention-grabber is the cylindrical library at the building's head end on Spui.

#### **Libraries:**

**Daniel J. Evans Library Phase I (2007) and II (2009), The Evergreen State College, Olympia, WA – USA 2009**

Services: Architecture and Master Planning, Size: 330,000 SF Total for Phase I and II, Project Cost: Ph I \$14 Million; Ph II \$15 Million

Our master planning and predesign for this building aimed to reinvigorate the 38-year-old, 330,000 SF, 4-story structure to support an active and multipurpose learning environment that incorporates traditional library services with new media technology into a “one stop shopping” configuration.

The entire building was gutted to its concrete structure and the new remodeled library constructed within three different floors of the existing 1970's building. Renovations included, improving the overall space program and building layout, and examining ways to

improve the building's exterior, entry, and landmark clock tower. Additional improvements included, increasing seismic resistance, HVAC upgrades, and completely new finishes and furnishing replacements.

The largest building on campus, the Daniel J. Evans Library is the campus' most visible landmark. Renovations not only updated the library's services, but also revitalized the campus as a whole.

### **Libraries:**

#### **Tulsa City-County Library, Tulsa, OK – USA 2015**

In November, 1961, Tulsa County voters approved a bond issue to build a new central library and three branches plus a 1.9 mill levy for funding the system. Charles W. Ward and Joseph Koberling were named as architects, and in the summer of 1965, the new 135,000 sq. ft. library opened with a grand ceremony including Governor Henry Bellmon, Mayor James Maxwell, and James Webb, Director of NASA. –

See more at: <http://www.tulsalibrary.org/central#sthash.GV3RkGQp.dpuf>

....Nearly 50 years ago, the Central Library opened to anchor downtown Tulsa as a symbol of education, literacy and the future of a burgeoning city.

Architects and librarians had a vision for a new way to use public libraries.

Charles Ward, a retired architect who designed the Central Library in 1965, said libraries worked differently before that time.

People would find their book in a card catalogue, then ask a librarian to retrieve it from a stack that ran from floor to ceiling. Some libraries completely blocked off access to books, he said.

But the Central Library was designed as a gathering space to inspire ideas and public discussion.

"In the '60s, this was a very unique take on libraries - that people could walk through, pull books for themselves and look around,"

Ward said. "The open and low stacks were revolutionary. It allowed people to browse for themselves."

Ward, 87, recently visited the Central Library to retell how he conceived of the building's original design. As he walked into the second-floor atrium, he smiled as he looked up at the two-story "quote wall." A plaque with the names of those who had a hand in constructing the library is located next to bronze words and includes Ward's name. It hides a time capsule, which he said includes newspapers and some photographs.

"This looks like the day it opened," he said. "Some of the floor plan is different. But you could walk in here after 50 years and think you'd never been gone. It's very complimentary."

Ward pointed to the travertine marble, saying it was chosen for durability and color, and the blue tile as accents throughout the building.

Ward said the Central Library was going to be placed in the former downtown courthouse. But once plans started rolling on creating a civic plaza, Tulsa leaders changed their minds.

"They thought, 'We can do better for our library than a renovated building,' " he said. "The Tulsa visionaries saw the library as the way Tulsa was going - a new city.".....

[http://www.tulsaworld.com/article.aspx/Central\\_Library\\_architecture\\_made\\_it\\_a\\_trendsetter/20111220\\_11\\_a9\\_cutlin159710](http://www.tulsaworld.com/article.aspx/Central_Library_architecture_made_it_a_trendsetter/20111220_11_a9_cutlin159710)

Projects that depend on fundraising campaigns and donations are best accomplished when they engage the community. We have learned over the years that deep listening, thoughtful exploration, and compelling explanations of ideas are critical to gaining the confidence and support of both project stakeholders and the larger community.

Our experience includes preliminary project planning for a broad range of public and private clients. We have worked with more than 150 communities and institutions across the United States helping them raise funds and prepare for legislative funding requests.

A recent example of this experience is our work with the Tulsa City-County Library. The Library is currently raising funds for the renovation of its central library, a Tulsa landmark built in 1965. The renovation will position the building to serve the needs of county residents, organizations, and businesses for generations to come. As the system's flagship, the library will be designed to meet LEED Silver certification and serve as an example to educate the public about best building practices and sustainability.

As part of this process, we created the following video with the Library and videographer Ryan Siemers. This fundraising tool establishes the importance of maintaining the library's role in the city's urban center; demonstrates how to address current deficiencies such as parking, entry to the building, and internal circulation; and illustrates how to transform the building while preserving its mid-century modern aesthetic.

Other examples of fundraising tools that we provide include:

- Creating programming and other predesign documents, including drawings, illustrations, and models that convey the proposed project.
- Developing promotional literature, display boards, and PowerPoint presentations.
- Preparing speakers' packets and press kits.
- Conducting board workshops to explain the project's financial and technical fundamentals.
- Presenting the project to public groups.
- Conducting workshops with special interest groups—such as children, teens, and seniors—to gain feedback on their space needs.
- Developing websites to promote the project and gain feedback.
- Providing interviews to local newspapers, radio, and TV shows.

#### **Madison Central Library Addition and Renovation, Madison, WI – USA 2013**

The library renovation was never supposed to happen. Madison officials had their hearts set on a whole new building and almost got their wish.

After a competitive bid process, the Common Council accepted a proposal by Fiore Companies to construct a grand \$37 million, six-story library in the 200 block of West Washington Avenue. The project was going to be part of a larger redevelopment of the block. But the city failed to reach a deal with Fiore over the project. Then-Mayor Dave Cieslewicz regrouped and moved ahead with less expensive plans to renovate and expand the existing building.

Ald. Larry Palm, who sits on the Madison Public Library Board, says he's thrilled with how the project has turned out. "I love it," he says. "There were a lot of people who said, 'Tear it down.' But it shows you how good, sturdy buildings have a lot of life in them." Palm says a new six-story building would have been a lot more complicated for the staff to manage. And the current building is in a better location.

The renovation has also been much cheaper. The budget for the project - including an 8% contingency for unexpected costs - was \$19,320,000, says Michael Dailey, assistant city engineer. There have so far been 112 change orders, eating up about half of the contingency.

The private fundraising for the project has gone well, says Jennifer Collins, executive director of the Madison Public Library Foundation. The foundation has raised about 82% of its \$9 million goal for the project - a little more than \$7.3 million.

"This is definitely the hardest part of a capital campaign," she says. "You get more gifts, but they tend to be smaller. On the other hand, people get excited as they see the progress on the building."

A tour of the building last week showed the space greatly transformed. The space is much brighter, with large windows along Henry and Mifflin streets, bringing in natural light, even down to the basement. Many areas that were formerly off limits to the public have been opened up. The basement area will be a large children's room, with some unique features, like cushion-lined cubby holes carved into the concrete walls that kids can crawl into and read. Quiet study rooms are sprinkled throughout the library.

The heating and cooling systems have been installed in the floors. The building will have at least silver-LEED energy efficient certification, but possibly gold, Collins says.

The building will have two entrances and two checkout desks: one at the corner of Mifflin and Fairchild, and a new one on Mifflin closer to Henry. Bookshelves are already being installed because they include motion-sensitive lights that have to be wired into the floors. But books won't arrive until this summer.

The new library will have a notable policy change, advocated by library director Greg Mickells: Food and drink will be permitted within its walls.

Mickells says that many public libraries now allow food and drink. "Initially, there's always a reservation from staff that drinks will get spilled and books destroyed," he says. "But it just doesn't happen."

## [McAllen Main Library, McAllen, TX – USA 2011](#)

### **Awards:**

AIA Honor Award for Interior Architecture.

ALA/IIDA Library Interior Design Awards: Best Overall. Best of Category (Public Libraries Over 30,000 SF).

AIA Minnesota Honor Award.

IIDA Northland Chapter FAB Award.

After Walmart abandoned one of its retail stores in McAllen, Texas, the city decided to reuse the structure as a new main library. The primary challenge of reusing the building was to create a highly functional, flexible library of 124,500 square feet on a single level. This area is equivalent to nearly 2 1/2 football fields, making the new library the largest single-story library in the U.S. To meet this challenge, the designers had the old store interior and new mechanical systems painted white to form a neutral shell for new patron and service areas, which are designated with color. Primary program areas – including community meeting rooms, the children's library, adult services, and the staff area—are located in quadrants of the building. This clear organization allows easy wayfinding and patron access from a central service spine, delineated by a patterned wood ceiling that runs the length of the building. A secondary spine in orange bisects the first to further distinguish the public community meeting rooms from the private staff area and the children's from the adult services areas. MS&R led the design of the building interior and furniture selection and design as part of a team led by Boultinghouse Simpson Architects of McAllen.

IIDA Northland Chapter FAB Member's Choice Award.

Despite being the busiest library in Minnesota, this building was dark, unwelcoming, dated, and inefficient. A much-needed renovation and second floor expansion completely transform the 1990s building.

“There’s no doubt that Roseville [Library] is, in the words of the [LJ New Landmark Libraries] judges, ‘an amazing transformation’ and a ‘dynamic improvement to an old-fashioned civic building.’ The designers broke through the design template of the 21st-century’s first decade—and it is popular. Visitors pour in from all across the Twin Cities, the number of cardholders is nearly triple the population serviced, and circulation has soared since opening.—Library Journal Library by Design Supplement Marketplace

<http://www.msrltd.com/projects/ramseycountyrosevillelibrary>

Despite being the busiest library in Minnesota, this building was dark, unwelcoming, dated, and inefficient. A much-needed renovation and second floor expansion completely transformed the 1990s building. Meyer, Scherer & Rockcastle’s design, LEED Gold certified, uses the addition of daylight open spaces and views to the outside to accomplish this transformation. More photographs following the break. Conveniently located off the major highway that runs through this community (a first-ring suburb of the Twin Cities) and also near the area’s popular shopping destinations, the library is nestled into a dense residential neighborhood of 1950s era homes. The context shaped the form and orientation of the building. Instead of expanding to the north on land purchased by the library for this purpose, the architect suggested expanding upward, an option that the library had not previously considered. This space-saving alternative allows much-needed additional parking for the busy library and saved money as well. The most sustainable building is one that can be reused. Because the community considered the existing building an eyesore, reusing it was not a popular decision. But reusing the existing building was a sustainable choice. One of the key sustainable strategies entailed reinvesting in the existing site and reusing 75% of the existing structure. The refreshed exterior and new native plantings and rain gardens for on-site stormwater management have proven to be an attractive addition to the neighborhood. To transform the inward-looking existing building and its dark interior, the new design focuses on incorporating daylight and views to the outside. Located in an established first-ring suburb, the renovated building offers views that frame the mature tree canopy and screen the public’s view into adjacent residential backyards. Clerestories also provide ample daylight. Other sustainable strategies included selecting regionally-produced and recycled materials, as well as high efficiency systems to save water and energy. The building is LEED-NC 2.2 Gold certified. The library is designed for maximum efficiency. The most popular services—computers, audio/visual materials, and the cafe—are located on the main level in a central marketplace. Open sightlines and clear wayfinding allow patrons to easily find what they are looking for. Within the bright, white interior, select application of color designates program areas to provide easy wayfinding for children (magenta), teens (orange), and adults (green). These primary service areas are arranged compactly around the central marketplace. Self-check stations are provided throughout the library. This approach to design for self service, combined with technologies such as RFID tagging and automated materials handling, helps staff to focus on interaction with patrons and provide excellent service with limited resources.

<http://www.archdaily.com/107762/ramsey-county-roseville-library-meyer-scherer-rockcastle/>

### **[Hennepin County Maple Grove Library, Maple Grove, MN – USA 2008 – 2010](#)**

Size: 40,000 square feet, Sustainable design: LEED Gold compliant

“The long winter must feel a lot shorter in the dynamic and surprising spaces in this branch built for one of the fastest growing Minnesota communities.”—Library Journal Library by Design Supplement

Responding to the community’s desire for a gathering space and seizing the potential of the site, this new library is designed as a pavilion in a park. A seamless design fully integrates the library and park, while a lake provides renewable, hydrothermal energy for the building. The design integrates outdoor views and spaces (such as a reading porch) to create a strong inside-outside relationship and extend the experience beyond the walls of the library. The building was designed in accordance with the Buildings, Benchmarks, and Beyond (B3): State of Minnesota Sustainable Building Guidelines.

<http://www.msrltd.com/projects/hennepincountylibrarymaplegrove>

.....The design team’s goal was to create a community living space, shaped by knowledge and technology. The design integrates outdoor views and spaces, such as a reading porch, which creates a strong inside-outside relationship and extends the experience beyond the walls of the library.

Energy conservation was a driving force in the design. The building was shaped to maximize daylight. An estimated 22.8% energy savings comes from daylight harvesting and another 24% from renewable energy sources. Designed to exceed the Minnesota energy code by more than 40%, the library provides an annual energy savings of more than 1,329,100 kWh. The building was designed in accordance with the Buildings, Benchmarks, and Beyond: State of Minnesota Sustainable Building Guidelines

<http://www.archdaily.com/109062/hennepin-county-library-maple-grove-meyer-scherer-rockcastle/>

### **[Dakota County Westcott Library, Eagan, MN – USA 2009](#)**

Type: Interior renovation, Size: 30,500 square feet

Designed to reflect a community library’s changing service model, this renovation of a county branch library breathes new life into the public areas, adds color and vibrancy to the interior, takes full advantage of natural daylight, and replaces worn and outdated furniture.

MS&R was initially hired to prepare a needs assessment to evaluate options for creating flexible space and updating technology and systems throughout the building, prior to providing full design services. We conducted a visioning session with all stakeholders to uncover broad goals for the library and detailed goals for the project.

### **[Dallas Public Library Lockwood Branch, Dallas, TX – USA 2009](#)**

#### **Awards:**

**AIA Minnesota Honor Award**

“A great example of an economy of means generating an economy of form. We applaud all the effort that went into making this budget-conscious project so appealing.”—AIA Minnesota Honor Awards Juror

Bounded by a strip mall, apartment complex, and residential neighborhood (and including an existing YMCA gymnasium), the site for this new branch library presented significant contextual opportunities. The design centers on addressing each context through directing and screening views and considering varied levels of scale. The zinc-clad library hovers above a glass base, a contrast to the solid form of a black box theater (within the old YMCA). Views focus on the tree canopy and foreground landscape, avoiding less favorable context and providing privacy to neighboring homes. Open sightlines provide easy wayfinding for patrons and supervision for staff.

<http://www.msrltd.com/projects/dallaspubliclibrarylochwoodbranch>

## **Bud Werner Memorial Library, Steamboat Springs, CO – USA 2008/2009**

Size: 9,000 square feet (renovation); 25,000 square feet (expansion), Sustainable design: LEED Silver certified

September 12, 2008 marked the grand opening of the newly expanded Bud Werner Memorial Library! The Library showed commitment to sustainable building design by earning a Silver LEEDs certificate. This effort will possibly make the Bud Werner Memorial Library the first public library in Colorado to have achieved such a high level of certification. Echoing the intent of the present library to serve as a memorial to local ski legend Buddy Werner, the main floor of the old library will be renovated into a beautiful community meeting room while a 25,000 sq. ft. addition will be added to accommodate inviting public spaces and vibrant collections. Renovations planned for completion in Winter of 2009.

<http://www.steamboatlibrary.org/about-us/building/2008-2009-expansion-project>

“[The renovation] came out great. . . . I am very pleased with the overall result. . . . This project is my one and only so I am biased, but I think we out-did ourselves.”

—Chris Painter, Director, Bud Werner Memorial Library

The design of this two-story addition to a community library strikes a balance between adhering to the city’s old town architectural standards and creating a unique, 21st-century civic gathering place. With its surrounding context of adjacent parks, Soda Creek, the Yampa River, and mountain views, the site is an idyllic setting. The addition responds to the ski chalet architectural style of the existing library, while appropriately blending old and new. Sustainable strategies include solar panels, innovative use of daylighting, highly efficient mechanical systems, water-saving fixtures, and sustainable materials.

<http://www.msrltd.com/projects/budwernermemoriallibrary>

## **Fargo Public Library, Main Library, City of Fargo, ND – USA 2009**

Type: New construction, Size: 52,620 square feet

The new Fargo, ND central library will open to the public at the end of April. In advance of this opening, the local newspaper, The Forum, asked for us to answer a few questions about the design of the building. Listed here are the responses to these questions as prepared by Jeffrey Mandyck, the Project Architect. Please discuss the design: The Fargo Main Library is the result of community process; a community seeking an enlarged, resource-rich library acting as an indoor town square taking full advantage of its location on the civic edge of downtown Fargo a mere block from the Red River. The building presents itself to the city with a pair of brick facades acting as book ends supporting daylight filled spaces: community meeting rooms, a gallery, reading/study areas, staff spaces and book stacks. Daylight and views of the surrounding city and river guided the design. Large windows in the brick façade frame views of the Red River. These articulated openings in the brick were derived from the building traditions of downtown Fargo and the legacy of Carnegie Libraries. To fully engage the Red River vista a two-story glass bay, containing the Children’s Reading Area and the Fireplace Room, protrudes through the east “bookend.” These light-filled rooms present the community activities to passers-by and are an integral part of the library’s identity. Within the building, daylight guides patrons through their experience of the library; from the entry gallery looking upon the civic plaza, to the daylight-filled stair (with treads of granite salvaged from the old Main Library) leading visitors to the voluminous second-floor, and to reading spaces along the windows. The broad length of windows makes the interior spaces and the internal activities a visible part of library’s identity. What colors were chosen, and why? The vibrancy and richness of North Dakota’s varied landscape were the inspiration for the library’s color palette; from the flora and fauna of the springtime grasslands and agricultural fields to the warm autumn tones of autumn to the serenity of winter whites that cover the Great Plains. I overheard the building went through a major change. Why was this? The previous design intended to salvage the existing structure and portions of the exterior facade of the old main library while expanding the building’s footprint and adding a second floor to it. The technical complexities of this approach were compounded by the poor soils of the site and ultimately were more costly than the estimated construction cost. The revised design retained the plan layout and design concepts of the previous design all within an entirely new structure and building envelope. This design came in under budget. How do you feel the building and design turned out? We, as this is a team endeavor, are proud and elated to have worked with the citizens of Fargo and the dedicated people of the Library to envision and to realize a building that will become an integral part of ones experience of the City of Fargo. Personally, I feel joyful. Standing in the new library, I feel the openness, connectedness, warmth and delight that were always part of our conversations and explorations of the library’s design. Other comments: There is a sustainable story embedded in the library’s design. Selecting the old Main Library’s site was only the first step in reusing Fargo’s resources. Salvaged granite from the existing building became the treads of the main stair. A bio-based material created from sunflower hulls was used for selected pieces of the library’s casework. And designing and thinking locally, regional woods like ash and maple are used throughout the library. Outside, native grasses and plants surround the library. Creating a transparent and open library creates its own unique challenges for a building’s performance. The ample daylight in the building allows for daylight harvest, which reduces energy consumption by automatically turn of the lights when photo-sensors read sufficient sunlight levels. The large expanse of glazing utilizes high performing insulated glass. In addition, a computer controlled shading system tracks the sun’s movement and adjusts the shades accordingly. These shades allow daylight into the library and views to the exterior, yet they block the majority of the sun’s rays, which increase the building’s internal temperature during the summer and can cause glare on computer screens. During the off hours of operation the shades can be programmed to be down and this increases the insulating properties of the building envelope. As a result of this, the energy loss through the glazing is decreased and the amount of heat or cooling the building needs to do is decreased as well. Moreover, the heating and cooling system were designed to perform above current energy standards. (Meyer)

<http://msrlibraryworld.wordpress.com/2009/04/05/the-fargo-public-library/>

“The public loves the building. It has fulfilled our dreams of how the new library would be used by our customers.”

—Beth Postema, Deputy Director, Fargo Public Library

The result of an extensive community process, this new main library serves as an indoor town square that takes full advantage of its downtown location. The building presents itself to the city with a pair of brick facades that act as bookends, supporting spaces such as community meeting rooms, a gallery, reading/study areas, staff spaces, and book stacks. North Dakota’s vibrant and varied landscape provided inspiration for the library’s color palette. Sustainable design features include reusing salvaged granite from the old library for the main stair’s treads, use of a bio-based material created from sunflower hulls for pieces of the library’s casework, daylight harvesting, and a high-performance heating and cooling system.

## **Drake Community Library, Grinnell, IA – USA 2009**

“Our experience working with MS&R on the new library building has been truly rewarding. One of our primary concerns has been to build a green, sustainable library that will be a model for our community and for other libraries. The team from MS&R could not have been more responsive and enthusiastic about this goal. . . . They have taken our project well beyond the elements of sustainable design that we had envisioned.”—Lorna Caulkins, Director, Drake Community Library

MS&R's involvement in the realization of this new community library included preparing various feasibility studies, leading a series of public meetings, guiding the site selection process, helping with fundraising, and providing full design services. LEED-NC 2.2 Gold certified, the project incorporates daylight harvesting, geothermal heating and cooling, and a 50 % energy savings over the base code requirements for building performance.

<http://www.msrltd.com/projects/drakecommunitylibrary>

### [St. Cloud Public Library, St. Cloud, MN – USA 2008](#)

#### **Awards:**

**IIDA Northland FAB Award**

The Saint Cloud Public Library received an IIDA Northland Chapter FAB award for its welcoming, transparent spaces that people love to use. The FAB Awards, which gets its name from the acronym for “Fresh, Artistic and Brilliant,” are presented by the Northland Chapter of the International Interior Design Association. The Saint Cloud Public Library won in the government/institutional category. Jurors were impressed with the amount of daylight flooding the library's two large floors and how the design firm, MS&R, seamlessly integrated architecture and interiors. They specifically noted how the library was about people actively using, not merely visiting, the space. Since opening in September, the library has seen its patronage increase by 65 %, and library card renewals and registration numbers are up over 200 %. According to deputy library director, Verne Oleksowicz, the most popular spaces are the community meeting rooms, children and teen areas, and the many reading spaces aligning the library's expansive windows. ( <http://msrlibraryworld.wordpress.com> ) (MSR)

“We are still getting so many wows every day on the building design. We truly have become a destination location in our metro area.”

—Verne Oleksowicz, Former Deputy Director,  
Great River Regional Library

Housing the library and administrative offices for the Great River Regional Library, this new two-story library serves as a gateway to Saint Cloud's historic downtown. A clerestory and granite stair create a central circulation spine. All service points are located along this daylight/stair axis, which simplifies orientation and provides intuitive wayfinding. A combination of clerestories, a canted multi-level ceiling, expansive window walls, transparent rooms, and translucent end panels allows daylight to fill the interior. These measures reduce energy consumption by 37.5 % compared to conventional libraries.

### [Stillwater Public Library, Stillwater, MN – USA 2006](#)

13,128 sqf.

#### **Awards:**

**AIA/ALA Library Building Award.**

**AIA Minnesota Honor Award.**

The Stillwater Public Library was established in 1897. The original building was constructed in 1902 on the current site with funds provided by Andrew Carnegie. An addition was built in 1973 with financial support from the Margaret Rivers Foundation. The building was completely renovated in 1987.

In March 2005, the City Council formally approved a resolution to provide City funds of \$5 million towards a library renovation and expansion project, and authorized the Library Board to proceed. Matching funds to complete the project came from the generous support foundations, corporations, and individuals in the Stillwater community. Groundbreaking for the project was in September 2005. Construction was completed in the fall of 2006. The library reopened at the Third Street site on September 18, 2006, after over a year in temporary quarters at the Valley Ridge Mall.

[http://www.stillwaterlibrary.org/index.asp?Type=B\\_BASIC&SEC=%7B07739C27-21B4-4944-8EC7-3204E0377AE9%7D](http://www.stillwaterlibrary.org/index.asp?Type=B_BASIC&SEC=%7B07739C27-21B4-4944-8EC7-3204E0377AE9%7D)

“One of the oldest Carnegie libraries in Minnesota glows again.”

—Architecture Minnesota

“The Board of Directors was extremely excited about the renovation. That's one of the things I liked about working with MS&R—not only do they design witty, elegant structures, which are also functional buildings, but they take such pains to encourage those who use or will use the building to participate in the process, to contribute, to criticize, to get excited about the possibilities.”

—Lynne Bertalmio, Director, Stillwater Public Library

An elegant Carnegie library built in 1906, the Stillwater Public Library needed to increase its flexibility to accommodate a wider variety of services. MS&R's renovation upholds the integrity of the existing building. The new layout embodies many of the Beaux Arts tenets held by the building's original architects, including axial sight lines, circulation, and detailing.

<http://www.msrltd.com/projects/stillwaterpubliclibrary>

### [New Orleans Public Libraries, Masterplan, New Orleans, LA – USA 2006](#)

see also: <http://demcointeriors.com>

This facilities master plan outlines \$650 million in aggressive renewal for the library system.

The system-wide master plan and separate main library master plan call for strengthening the area's 13 public libraries and reimagining the system after Hurricane Katrina. MS&R's long-term relationship with the client began with the pro bono restoration of the Alvar Street Branch Library after Hurricane Katrina, continuing with this master plan, and including the conceptual design of the new Jazz Branch Library. The overall recommendation for the system is to provide facilities, staffing, and funding to enable it to achieve far-reaching but attainable service goals. These goals are entirely achievable with leadership from the board, foundation, staff, and City of New Orleans. If achieved, the NOPL can become a world-class organization, providing first-class service to all of its residents (regardless of economic social status) and paving the way for the city's renaissance.

<http://msrltd.com/projects/neworleanspubliclibrarymasterplan>

### [Rancho Mirage Public Library, Rancho Mirage, CA – USA 2006](#)

45,092 sqf.

“The community is in love with your library. . . . In addition to the excitement about the external appearance, the patrons and visitors are so pleased with the way it works. . . . What a gem you have created.”

—Dr. Charles Monell, Chair, Library Building Committee,

### Rancho Mirage Public Library

This new library accommodates a widely diverse demographic population, ranging from more than 50% seniors to the children of the service population. The library includes outdoor program areas for adults and children, an audiovisual services area, and a 350-seat auditorium for programs and events. The design reflects the special environmental conditions of the desert, including provisions for daylight harvesting and control, energy conservation, and drought tolerant landscaping.

### [Minneapolis Public Library, Franklin Community Branch, Minneapolis, MN – USA 2005](#)

Size: 12,149 square feet (renovation); 880 square feet (expansion)

#### **Awards:**

City Pages' 2010 Best of the Twin Cities: Best Library.

City Pages' 2006 Best of the Twin Cities: Best Architectural Renovation of an Old Building.

Built in 1914 with a grant from Andrew Carnegie, the Franklin Community Library is Minneapolis' oldest library. Today it thrives as an active community resource for people of all ages. The popular Phillips Computer Center and Franklin Learning Center, located within the library, add value to this essential neighborhood gathering place. The historic building however, has been stretched beyond its capacity for programming and library materials and is in need of repair. The architectural beauty and distinctive features of the building are being carefully retained and preserved with the renovation under way. The renovation will include restoration of the library's distinctive stone and masonry features and also the alignment of the lower level floors (which were added over time and do not presently align). This alignment increases the program area—allowing increased usage of the lower level area—without expanding beyond the perimeter of the library's exterior walls. Size: 14,500 sf (renovation), 4,000 sf (addition). "The atmosphere in the Franklin Library is jubilant. . . . The brightly painted library is consistently bustling with kids and adults taking advantage of its more accessible offerings. . . . Franklin lives up to its name as a community library."—City Pages  
Built with Carnegie library funds in 1914 and listed on the National Register of Historic Places, the Franklin Library is the oldest and longest continuously operating public library in the city. The renovation retains and preserves the architectural beauty and historic details of the building, including restoration of distinctive stone and masonry features. On the interior, previously covered skylights have been uncovered and restored.

### [Fayetteville Public Library, Fayetteville, AR – USA 2004](#)

#### **Awards:**

US Green Building Council

Thomson Gale / Library Journal Library of The Year 2005

Following a national search, the Library Board hired MS&R to complete a comprehensive master plan, provide a feasibility study and full design services for a new central library. Because Fayetteville is a very public-participatory community, MS&R conducted a series of thirty-seven public forums to address the issues of expansion versus building a new facility, with a final decision to build a new 83,000 squarefoot facility. The design of the new library extends the historic fabric of Fayetteville's town center and incorporates the newly established downtown design guidelines. The urban texture and figure-ground of the library ensure that the building reinforces the fabric of the city. The building will be placed on the northeast quadrant of the site to take full advantage of the site's topographical shape, preserve as many trees as practical, provide easy access to parking and to place the entrance to the library at the highest point on the site. The library is the first LEED-certified building project in the State of Arkansas. (MSR) "Hip and environmentally friendly."—Library Journal

MS&R was hired to complete a comprehensive master plan, prepare a feasibility study, and provide full design services for this new central library. MS&R conducted a series of 37 public forums to address the issues of expansion versus building a new facility, with a final decision to build a new facility.

The library building was the first LEED certified building for MS&R and the first LEED registered project in the State of Arkansas. Based on the success of the building's first five years, the library is now seeking to upgrade the LEED certification to a Gold rating by adding such sustainable design features as LED parking lights, solar collectors, more efficient operating systems, and revamped cleaning procedures.

### [Mount Prospect Public Library, Mount Prospect, IL – USA 2004](#)

MS&R provided pre-design and full architecture and interior design services for the extensive renovation and expansion of the Mount Prospect Public library, which will reopen its doors this weekend. Tied to the original structure with a completely redesigned exterior facade, a new 50,000-square-foot second-floor addition doubles the size of the library. Large openings cut into the existing exterior walls convey a new identity for the library and provide additional daylight. The redesigned main entry serves as an anchor for a new public exterior space, which extends from the proposed Village Hall (to be constructed to the south of the library). The renovation also includes new HVAC, electrical, technology, and security systems and new interior finishes and furniture. A new central stair provides a visual datum around which public service desks are organized. Larger, reorganized staff areas increase functionality and efficiency. Size: 50,000 sf (renovation), 55,000 sf (expansion). (MSR)

"You guys did it the right way—you listened to us and really worked at finding the right solution. And because of that, the library not only looks beautiful, it really functions."

—Marilyn Genter, Director, Mount Prospect Public Library

Tied to the original 1970s concrete structure with a completely redesigned exterior facade, a new second-floor addition doubles the size of the library. Floor-to-ceiling windows cut into the exterior brick panels, combined with rooftop light monitors, bring a flood of natural light into the building. Featuring a striking exterior scrim resembling leaves of a book, the redesigned main entry serves as an anchor for a new public exterior space. The interior concept centers on the interplay of light box and jewel box metaphors as it gives functional organization to the floor plan.

<http://www.msrltd.com/projects/mountprospectpubliclibrary>

Bulley & Andrews served as general contractor for the addition and renovation to the Mt. Prospect Public Library. The project involved the renovation of the existing building and a second-story addition.

The project required the existing penthouse be removed to make way for a second story addition and new penthouse. Tied to the original structure with a completely redesigned exterior façade, the 50,000 SF second-floor addition doubled the size of the library for a total of 98,000 SF. Large openings cut into the existing exterior walls convey a new identity for the library, as well as provide additional daylight.

The new space includes areas on the first floor for circulation, registration and youth services and provides space for meeting rooms, a computer training room, administrative offices and other staff department work areas. The second floor houses the reference department, popular materials department, as well as computer services. Renovations to the space included new HVAC, electrical, technology and security systems and new interior finishes and furniture.

### [Denton Public Library, North Branch, Denton, TX – USA 2003](#)

#### **Awards:**

**AIA Minnesota Honor Award**

The Denton Public Library System hired MS&R to convert an existing grocery store building into a new branch library. Design challenges include reconfiguring the site to provide a foreground for the building that supports its reuse, visually transforming the building from a grocery store into a library, and successfully adapting the existing building footprint into a functional library. Inserted planes and volumes enhance the building by reducing and breaking up the mass and monotony of the existing building shell. The addition of a translucent glass bar and entry canopy transforms the entry facade, while linear strip windows are introduced on the other facades. Functional areas of the library are arranged around the building entry for easy orientation and wayfinding. The site now also includes linear rows of trees that, when mature, will create exterior spaces consistent with the concepts of the new building plan and exterior. Size: 32,000 sf. (MSR)

“We wanted a warm, inviting place so people wouldn’t just check out a book and leave. Much to our delight, this new library is a place people come to and stay. . . . It’s alive and extraordinary.”

—Eva Poole, Director, Denton Public Library

This project reinvents an abandoned grocery store into a library. The design adapts the existing footprint into a highly functional library and reconfigures the site to provide a foreground for the building that supports its reuse. A new glass curtain wall, composed of both transparent and translucent glazing, visually transforms the building from a grocery store into a library. These design goals were accomplished within a construction budget of approximately \$100/square foot.

### [Saint Paul Central Library, Saint Paul, MN – USA 2002](#)

In 1912, Electus Litchfield

(\* 25.04.1872 New York, NY – 27.11.1952 New York, NY <http://www.fairview.was/beginnings/lichfield.html>)

was chosen to design a new St. Paul Central Library. The task he was given was to design a building that would house not only the Central branch of the St. Paul Public Library, but also the privately endowed James J. Hill Reference Library. Prior to getting this commission, Litchfield had worked with the architecture firm of Carriere and Hastings, the firm behind the acclaimed New York Public Library. Construction began in 1914 and was completed in 1917, at a total cost of \$1.5 million.

Originally designed as a “closed stack” system, the library was renovated in 1949 to allow for open stacks. This brought stacks into the impressive main reading room, somewhat diminishing the effect of Litchfield’s design.

In 1975, the Central Library was placed on the National Register of Historic Places.

1985 saw some small renovations that made all areas of the library accessible to those with a disability.

Architecture

Plan for Central Library. From the Saint Paul Public Library Website, permission pending.

In terms of architectural style, the Central Library has been referred to as both Beaux-Arts and Italian Renaissance Revival . Not highly ornamented, it relies on clean lines, columns and arches for its ornamentation. Its symmetry and horizontal feel create a sense of weight and permanence. In the end, it is as architecture critic Larry Millett says “what most people think a library should look like.”

[http://libraryarchitecture.wikispaces.com/St.+Paul+Central+Library,+St.+Paul,+MN+\(remodel\)](http://libraryarchitecture.wikispaces.com/St.+Paul+Central+Library,+St.+Paul,+MN+(remodel))

A historic landmark building in downtown Saint Paul, constructed in 1917 and on the National Register of Historic Places, the Saint Paul Central Library was undersized, inefficiently organized and technologically out of date. The renovation increases public accessibility to the collection, consolidate service points, upgrade power, data and communication systems, and restore historically significant interior spaces. The design both respects and enhances the historic and aesthetic nature of the building. The renovation also creates a new entrance addition on Kellogg Boulevard. A major renovation of the West Wing features four new floors to accommodate periodicals and books, study carrels, and computers to access electronic library catalogs. The existing stone and plaster surfaces were cleaned, and new ceiling and lighting systems, new flooring, new accessible and flexible systems for power and data, new HVAC distribution, and new fire suppression system have been added. Renovation of the East Wing entailed remodeling the interior partitions and spaces, cleaning the existing stone and plaster surfaces, new electrical and mechanical systems, and a new access ramp system for the Lower Level Youth Services. Size: 81,500 sf (renovation)

“Repainted, buffed up and shining with new life, the building’s signature spaces. . . look simply wonderful.”

—Larry Millett, Saint Paul Pioneer Press

A downtown landmark, constructed in 1917 and listed on the National Register of Historic Places, this central library faced space constraints, inefficient organization, and outmoded technology. The renovation consolidates service points; increases public accessibility to the collection; upgrades power, communication, and data systems; and restores historically significant interior spaces. Respecting the historic building’s aesthetic, the design features a new entry pavilion with a coffee bar; extensive remodeling of the East Wing; four new floors in the West Wing to accommodate books and periodicals, study carrels, and computers; a new access ramp for youth services; new mechanical and electrical systems; and cleaned and restored stone and plaster surfaces.

<http://www.msrltd.com/projects/saintpaulcentrallibrary>

### [Carthage College, Hedberg Library, Kenosha, WI – USA 2002](#)

#### **Award:**

**Wisconsin Library Association Library of the Year 2004**

Located on the heavily-wooded site of a former city park, the new Hedberg Library replaces Carthage College's original library with a state-of-the art facility adjacent to the Siebert Chapel and Johnson Art Center complex. To work more effectively with patrons, staff areas are located on both levels. Public areas include the collection and browsing areas, reading and study spaces, individual and group study rooms, electronic classrooms, and a presentation room. The design features two state-of-the-art technological areas. The Information Commons—the center of activity of the library—functions as an updated reference area where reference materials previously housed on shelves, are now accessed electronically. The Cyber Cafe offers a 24-hour gathering place with food and laptop hookups with Internet and campus network connections. Size: 65,000 sf. (MSR)

“The Hedberg Library truly is a high-tech facility, proactively providing a large superb array of information and technical services.”

—Wisconsin Library Association Library of the Year Award Committee

This new library replaces the college's existing library, which was housed in a cramped and inefficient space. Articulated as a series of volumetric and planar elements, the design serves to break down the apparent mass and scale of the building. The layered approach provides inside/outside connections and access to daylight. Significant features include two state-of-the-art technological areas: a cyber cafe (including a 24-hour gathering place with food service, a mix of desktop computers, and hookups for laptops with full campus network and Internet connections) and an information commons, designed to be the center of activity within the library.

### [Fort Smith Public Library, Fort Smith, AR – USA 2001](#)

Total Square Feet: 67,675, Construction Period: July 1999 to Feb 2001, Construction Team, Associate Architect: MAHG Architecture, Fort Smith, AR , General Contractor: Van Horn Construction, Inc. Russellville, AR , Structural Engineer: Meyer, Borgman & Johnson, Inc. Minneapolis, MN , Electrical & Mechanical engineer: TME, Inc. Little Rock, AR , Landscape Architect: Howell & Vancuren, Inc. ,Tulsa, OK

MS&R evaluated seven sites for a new main library and three branch libraries in Fort Smith, resulting in the selection of a historic intersection overlooking Creekmore Park for the main library and central locations in the eastern, northern, and southern communities for the branches. These new facilities emphasize patron and customer service by building upon the library's traditional resources simultaneously with the library's goal of expanding its use of newer, electronic information resources. New features and services for the main library include a large electronic meeting room to seat 150 people for community use; an enhanced genealogy center and Arkansas/Fort Smith history collection; youth services for ages preschool through high school; an expanded reference section with more computers for internet access; “smart” carrels for laptop computer use; and a computer lab for training classes. Size: 67,000 sf (main library), 11,720 sf (each of 3 branches) (MSR)

In 1997, the residents of Fort Smith approved a capital improvement program for the Fort Smith Public Library. The plan called for the construction of a new Main Library and three Branch Library facilities. The new facilities emphasize patron and customer service by building upon the library's traditional resources, yet still providing a setting that will allow the library to implement and extend its use of newer, electronic information resources. The new buildings support and facilitate an effective blend of the library of today and the library of tomorrow. The new main library features the following:

Approximately 64,000 square feet, distributed over two floors that will support library services to a projected population of 102,500 residents;

Shelving space for more than 246,000 books, 496 periodicals, an expanded genealogy and local history collection, and almost 15,000 non-print items such as CD-ROMs, DVDs, video and audio cassettes;

The use of the latest information technologies with over 80 on-line computer stations for public access to the catalogue, Internet and other databases;

A multi-purpose public meeting room with seating for 150 people;

A comprehensive children's area including a technology center and story hour room and a young adult area specifically for teenagers;

A customer service oriented facility with generous aisle widths, group study rooms, specialized lighting and acoustical control.

The library is designed as a bridge between the past and the future, placing a design emphasis on the patron and customer experience by building upon the library's traditional resources, yet still providing a setting that will allow the library to implement and extend its use of newer, electronic information resources. Given the rich history of brick structures in Fort Smith the character of the building is inspired by vernacular tradition.

The intent, however, is not to replicate buildings of the past, but rather to establish a strong and memorable physical image of the library within the community. The Main Library achieves this through a delicate mixture of design, material, and details. Brick, stone, and copper are used extensively as exterior materials, and are detailed in a similar way to the craftsmanship of the late 19th century.

The interior is organized around the main entry and monumental stairs. From the main public entrance, patrons move through the brick arched portico, pass the circulation desk, and arrive in front of the monumental stair at the confluence of a main aisle leading to the Children's New Book, Audio-Visual, and Fiction collections on the first floor. Periodical, Genealogy, Nonfiction and Reference areas on the second floor are highlighted by a two-story central space with clerestory windows to the East. These clerestory windows provide gentle, even and comfortable daylight throughout the second floor of the library. The interior design makes use of retailing strategies to encourage self-service awareness and access to the collection by the public.....

### [United States Senate Library, Renovation, Washington, DC – USA 2000](#)

Located in the United States Capitol Building, this project involved the restoration of the United States Senate Library reading and reference rooms with the partial relocation of the collection to the Russell Senate Office Building. The design restores the Reading and Reference Rooms back to the period of initial occupation (c. 1870), featuring a Neoclassical design. New mahogany shelves line the walls, original rugs have been recreated, Minton tile and wood floors have been repaired and restored, and the furniture has been replicated or rejuvenated. The Senate Curator, along with MS&R and The Architect of the Capitol, have archivally restored fireplaces and decorative murals that were discovered during the renovation. The relocated Senate Library in the Russell Building houses on-line reading and research areas. As the first project on Capitol Hill to be networked into the new Capitol Hill computer mainframe and Senate Array, the new location offers cutting edge technology in addition to its historic book and document collection. Size: 10,000 sf (MSR)

“I would like to congratulate the entire MS&R team for the fine work you have done. The Senate Library has received many favorable comments.

... [It] achieved a first-class appearance.”

—Kara Schonberger, Project Manager, Architect of the Capitol

Located in the United States Capitol Building (listed on the National Register of Historic Places), this project involved the restoration of the Senate Library reading and reference rooms with the partial relocation of the collection to the Russell Senate Office Building. The design restores the reading and reference rooms back to the period of initial occupation (c. 1870). As the first project on Capitol Hill to be networked into the new Capitol Hill computer mainframe and Senate Array, the new location offers cutting-edge technology in addition to its historic book and document collection.

### **Wilkinson Public Library, Telluride, CO – USA 2000**

see also: **U+B Architecture** <http://www.uplusb.com>

After only ten years, the community of Telluride outgrew its library facility and hired MS&R and library consultant Andres Dahlgren to evaluate the feasibility of expanding the existing facility versus building new, ultimately deciding to build a new facility. Because of site constraints and land costs, the library extends vertically onto two floors with underground parking, required by city zoning laws. From the vigorous review process conducted by the local historical preservation board arose colors and detailing that abstractly recall telluride’s early prosperity as a flourishing mining town. The central feature of the library a two-story rotunda surrounded by a reading plaza-borrows its design imagery from a historic railroad water tower. Functionally, the new facility better accommodates today’s technology, including a separate room for computer research. Size 21,000 sqf., 15,000 sqf. Underground parking ramp. (MS&R)

### **Carmel Clay Public Library, Carmel, IN – USA 1999**

see also: **Browning** <http://www.bdmd.com>

Architect Meyer, Scherer & Rockcastle, LTD. Location: Carmel, Indiana Total Square Feet: 117,285 Construction Period: July 1997 to June 1999

Construction Team Executive Architect: Browning Day Mullins Dierdorf, Inc., Indianapolis, IN Construction Manager: Geupel De Mars-Haggerman, Indianapolis, IN Civil/Structural Engineer: Congdon Engineering Associates, Inc., Indianapolis, IN Electrical & Mechanical Engineer: Rotz Engineering, Inc., Indianapolis, IN Telcom/Data Consultant: Harvey Freeman, Hopkins, MN 55343 Library Planning Consultant: Library Planning Assoc., Madison, WI Manufacturers/Suppliers: Exterior Walls -- Brick: Endicott Clay Products Co.; Wall Panels: Alusuisse Composites, Inc.; Glazing: Viracon; Curtainwall: Kawneer. Roof -- Mechanically Fastened EPDM: Carlisle Syn-Tec, Inc.; 16-inch Double Lock Standing Seam Copper: Revere Copper Products, Inc. Floors -- VCT: Mannington; Terrazzo Installer/Fabricator: Santarossa Mosaic & Tile Co.; Terrazzo Epoxy: TEC Inc., an H.B. Fuller company. Interior Walls -- Gypsum Board: National Gypsum, Inc.; Special Coatings: Duraplex, by Triarch Industries, Inc.; Paint: Benjamin Moore & CO. Elevators -- Schindler.

The new Carmel Clay Public Library serves as a physical and metaphorical bridge between many different constituencies frequenting the building. The form and siting of the building intentionally respect the street grid (a prominent gesture in Midwestern cities) and are inflected with a concave space that uses “open arms” as the welcoming metaphor. The exterior form reflects the needs of a civic building-gravity, order, proportion, and substantiality. The internal public “street” created by the curved physical gesture includes access to the coffee shop, public meeting rooms, and rest rooms and serves as a gathering/waiting area for patrons. While maintaining a simple and classical ordering of space, MS&R balances tradition with playfulness, symbolizing the joy in discovery. The overall design considers the need for both open spaces and sequestered nooks. Size: 113,600 sf

The Carmel Clay Public Library is designed to be an enduring yet dynamic civic resource for the residents of Clay Township, located in Carmel, Indiana. To accomplish this goal, a s.f. building was constructed to offer diverse spaces and modes of information for community students and residents of all ages.

For example, the leading program requirement was that this public resource incorporates the latest information technologies to meet educational objectives. Hence, Carmel Clay Library provides numerous modes of current, useful, and accurate information. More than 300,000 books and 655 periodicals with back issues are accessible to the public. As well, almost 46,000 non-print items such as CD-ROMS, video and audiocassettes are shelved here. And, the latest information technologies are offered with over 120 on-line computer stations for public access to the catalog, Internet, and other databases.

As a dynamic civic resource, these spaces provide high-demand and high-interest material that also stimulates the interests and appreciation for reading and learning.

Therefore, a variety of users are addressed with special areas. For example, a 25,000-square-foot comprehensive children's area includes a technology center, a large storytime room, a puppet theater, two murals with nature scenes, a parent resource center, its own audio-visual collection, and 3 separate rooms for group study. The young adult area offers popular materials collections including best-sellers, magazines, tapes, and CD-ROMS. As well, extensive business reference area is equipped with a nonfiction technology center.

To sustain this library as a dynamic place, it is first of all built to accommodate new, evolving formats. Secondly, it is built to serve customers with generous aisle widths, group study rooms, specialized lighting, and acoustic control. Finally, products were chosen according to their durability and maintenance requirements, so that Carmel Clay Library can be a public resource, built to last a lifetime.

### **Kendall Young Library, Webster City, IA – USA 1998**

Size: 9,000 square feet (renovation); 12,000 square feet (expansion)

**Awards:**

**AIA Iowa Chapter’s “One of the 50 Most Significant Iowa Buildings of the 20th Century.”**

When Kendall Young passed away in 1896 the citizens of Webster City were surprised to learn that Mr. Young had left his estate valued at \$150,000 to the City of Webster City, in trust, "for the establishment and maintenance of a free public library." The construction of the Beaux Arts style library was completed in 1905 at a cost of \$50,000. Special features included gold marble columns from Africa, terrazzo and mosaic floors, stained glass windows and a stained glass dome.

In 1984 a fundraising campaign was started to raise money for an addition to the library. After receiving two donations, each in excess of one million dollars and many smaller gifts, the architectural firm of Meyer, Scherer and Rockcastle was hired to design a

seamless addition. Construction began in March 1997 and was completed in November of 1998. The original library was 9600 sq. ft. and the expansion increased the size to 22,300 sq. ft. The beauty of the original building was maintained and stained glass windows and terrazo floors were included in the expansion to enhance the appearance of the seamless addition.

(renovated Carnegie library building). “Your attention to detail played a large part in the success of the building. All your little touches help make the addition feel like a natural extension of the original structure.” —Cynthia Weiss, Director, Kendall Young Library.

<http://www2.youseemore.com/KendallYoung/about.asp?loc=18>

“We certainly accomplished our mission of a functional seamless addition that maintains the historical integrity of the original structure. . . . Your willingness to readdress your ideas that didn't seem quite right for Kendall Young Library made it clear we had selected the right person for the task.”

—Cynthia Weiss, Former Director, Kendall Young Library

Housing nationally recognized collections of Native American artifacts, sculpture, and regionally unparalleled genealogy materials, this expansion almost triples the size of a 1904 Beaux Arts style library. The design balances the respect for historical precedent with the demands required of a modern library facility. A new entrance rotunda offers clear patron self-service.

<http://www.msrltd.com/projects/kendallyounglibrary>

### Sahara West Public Library and Fine Arts Museum, Las Vegas, NV – USA 1996

122,000 sqf.

Regional, civic, and site phenomena informed the design of the building's articulated mass, compound spaces, and expressive details. Unique programmatic components, a sensitive response to the harsh climate, and our interest in representing a variety of metaphorical and symbolic ideas, underlie much of the building and site design. Inside, the entry court creates a shared entry for the two separate institutions and is spatially continued by an internal atrium that unites the library and museum. Appropriate shared functions (assembly hall, board meeting room, used book store, fine arts reading room, visiting artist studio, and museum store) all gather around this center. The library is formed as a stable, plain container for the gridded stacks of books it holds. It is crowned by a telescoping gaze to the east, toward the world famous gaming “strip” and Sunrise Mountain. An arched “celestial wall” marks seasonal, mythic and celestial events as “concrete” or built story. Harsh southern sunlight is shielded by broad overhanging screens to protect the windows facing the sculpture garden, and is scattered and driven down through the central spine of the library on the north side of the central vault of the upstairs reading room. The result is gentle, even, comfortable daylight throughout the library. Size: 122,000 sf (MSR)

“Rather than make the building the amalgam of two distinct functions and parts, [MS&R] conceived a 122,000-square-foot whole that responds to site conditions such as views of downtown to the east and mountains to the west with an attempt to mitigate the effects of the harsh Nevada climate.”—Karen Stein, Architectural Record

Regional, civic, and site phenomena informed the design of this new joint public library and fine arts museum. A courtyard creates a shared entry for the two separate institutions and is spatially continued by an internal atrium that unites the library and museum. Spaces for shared functions are arranged around this center.

### MGA Partners, Architects, Philadelphia, PA – USA

<http://www.mgapartners.com>

**Libraries:**

#### New Main Library and Cultural Center Masterplan, County of Greenville, SC – USA 2002

Area: 120,000 SF, Completion: Fall 2002, Cost: \$17.8 Million, Associate Architect: MGA Partners

**Awards:**

First Place Hospitality/Public Space Category 2006, StarNet

Merit Award 2004, AIA South Carolina

Honor Award 2004, Brick Association of the Carolinas

Honor Award 2003, AIA South Carolina

Honor Award 2003, AIA Greenville

Client Website: <http://www.greenvillelibrary.org>

CGD's 3rd contribution to Heritage Green, Greenville's downtown cultural campus, the 120,000 SF Hughes Main Library serves to expand Heritage Green and promote further downtown development. Utilizing a design-build delivery system, Greenville County required that the library be programmed, designed, constructed, and opened to the public in 20 months or less. As the lead architect of the selected design-build team, CGD was responsible for programming, architectural design, interior design and coordination of all architectural and engineering disciplines, including specialty lighting, library technology and building security design. In order to meet this aggressive schedule, the Team utilized a “fast track” approach that required the early release of construction packages during the design process to allow construction to commence before the entire library was designed and documented.

### MHTN Architects, Salt Lake City, UT – USA

<http://www.mhtn.com>

**Libraries:**

#### West Jordan Library & Event Center, West Jordan, UT – USA 2012

Location: West Jordan, Utah, Size: 71,000 SQ. FT., Cost: \$14,000,000, Date: 2012

Viridian is the color between green and cyan on the color wheel, and comes from the Latin viridis, meaning ‘green’. We often associate green with a verdant garden, and cyan (blue) with the sky. Most simply, these two elements are the design informants of this library/event center. The building poses a long transparent face along the edge of the city's park, allowing library and event patrons to feel connected to the most significant green space of the community. Connections to the sky occur via three ‘light boxes’ – basically, incisions through the center of the building, from roof to ground level, that reflect and bounce sunlight to internal spaces. The 70,000 sf project uniquely combines a community event component with a library and headquarters for the administrative offices and data center of the county library system. The library's vision is that the written word is a community-builder that can be extended into the spoken and performed word, and that this place will become a vibrant forum of exchange utilizing all of these modes.

During largest seasonal events, like the Annual Summer Reading Kick-Off, a bi-folding glazed wall is designed to open to the outdoor amphitheater, linking outside and inside ongoing performances, presentations, and activities. (MHTN)

<http://co.scolibrary.org/libraries/wjoPictures.cfm>

### [Tooele Community Learning Center, Tooele, UT – USA 2010](#)

Size: 97,000 SQ. FT. , Cost: \$17,900,000, Services: Master Plan, Program, Space Plan, Architecture, Interior Design, Landscape

The Community Learning Center in Tooele was conceived by the Tooele County School District to provide the community of Tooele County with a state of the art learning center for technically oriented careers preparing Utah's work force for the 21st century.

The facility will provide students with a world class education in the technical fields of:

- Health Science (Medical Assisting, Certified Nursing Assistant, and Dental assisting)
- Engineering Sciences
- Information Technology
- Biotechnology
- Culinary Arts
- Child Development (Early Childhood Assistance and Training)
- Graphic Arts and Design
- Cosmetology

This facility provides Lab, Classrooms, Educational Testing/ Assessment Center, Community Multi-Purpose Center and other spaces to support research and collaboration educational methods that help students learn a technical career for life.

The facility will also provide an adult education learning center component that will not only provide adult students with the opportunity to complete their high school diploma, but also provide them the basis for a viable long term career. In addition the CLC-Center will be the new home for the Alternative High School and also share space with Utah State University, Salt Lake Community College and Tooele Applied Technology College.

The Community Learning Center will provide the people of Tooele County with greatly enhanced educational opportunities for the next 50 years and beyond.

### [LDS \(Latter-day Saints\) Church History Library, Salt Lake City, UT – USA 2009](#)

Size: 265,000 SQ. FT., Services: Master Plan, Architecture, Interior Design, Landscape, LEED Status: LEED Silver Certified

#### **Awards:**

2010, American Council of Engineering Companies (ACEC) "Engineering Excellence Honor Award" - Structural Systems

2009, Mountain States Construction, "Best Architectural Design"

2009, Utah Masonry Council, "Honor Design Award of Excellence"

2008, Excellence in Construction, Associated Builders & Contractors of Utah "Landscape"

This Church History Library was designed to house the Church's unique historical collection. The Library provides a resource for those who wish to learn more about Latter-day Saint history and will allow researchers to enjoy expanded, more comfortable research facilities and enhanced access to the collection.

Focusing on materials that relate to the history and ongoing development of the LDS Church, the collection includes 3.5 million manuscripts, 210,000 publications, 100,000 photographs, and 50,000 audio-visual productions in a variety of media formats.

Consuming over 18,500 linear feet of shelving, the collection also demands precise environmental control systems to reduce airborne pollutants, regulate relative humidity, and maintain specific temperatures.

Located on a prominent corner of the Campus, the new five-story Library is designed to visually complement its neighbors while providing a unique identity for the collection.

### [Salt Lake County Draper Library, Draper, UT – USA 2005](#)

Location: Draper, Utah, Size: 21,000 SQ. FT., Cost: \$3,000,000, Date: 2005

#### **Awards:**

2008, AIA Utah, Sustainable Design Merit Award

2006, Intermountain Contractor Best of 2006 "Best Green Project - Merit Award"

2006, Utah Masonry Council and AIA Utah "Excellence in Masonry"

With a concerted focus toward the utilization of sustainable elements, this project was a nod to Draper's historic agricultural context informed by the iconography and composition of specific forms and materials.

One of the primary challenges of the project was to site the building for best balance of sunlight, views, wayfinding, and energy performance. To overcome a property boundary with a minimum area of street frontage and a majority of level grade sitting lower than the street itself, the building is oriented with its entry facing the neighborhood and the reading areas facing a south garden, east mountain views, and neighboring park.

Strategic siting and 3D modeling studies allowed the building to be oriented on an east-west axis for optimum sun-light/sun-control in the form of horizontal light fins

and roof overhangs which also direct roof water through the landscape. The Children's collection environment remains one of the most popular in the County Library system because of its tactile interior and window benches that connect children with the garden immediately outside. This library is a modern narrative to historical Draper. Even the west shading arbor has re-assembled and detailed the mayor's salvaged barnwood – homage to the original builders of this community. (MHTM)

## **[Miller Hull Partnership LLP, Seattle, WA – USA](#)**

<http://www.millerhull.com>

### **Libraries:**

#### [Powell River Library, Powell River, BC – Canada on design](#)

Given a mandate by the client to maintain the design on one level, the team nestled the library into the 26-foot change in elevation between the street corner and the park level at the location of a former community-built ice rink. Earth-sheltered on two sides, the building reuses existing retaining walls and building pad from the previous structure. To transition from the street elevation down to the building entry, tiered grass and concrete steps create an informal amphitheater or outdoor seating area.

The steel beams and exposed concrete recall the industrial language of the historic paper mill town and create a floor plan that is open and regular with no column obstructions. This free span allows the library to be flexible and adaptable throughout the lifetime of the building.

By twisting the structural bays from a traditional sawtooth along the eastern edge to a flat overhang along the western edge, the building responds to each orientation in a unique and optimum way. The deformation provides north facing clerestories to bring in soft natural light to the reading room, while the large overhang mitigates direct sun to the western facade. This allows for full transparency along the western face of the building and takes advantage of the site's magnificent views.

Large operable walls allow the exterior spaces under the western overhang to become an extension of the reading room and the interface between the park and the library. A single interior courtyard provides natural light and an intimate scale to the Children's Collection area as well as a sheltered outdoor space for library programming.

### [Newport Way Library, Bellevue, WA – USA 2011](#)

The expansion and renovation of the Newport Way Library was completed in April 2011. The \$3.4 million project added more space to the meeting room and reading area, increasing the size of the library to a total of 8,690 square feet. Noticeable from the exterior, the renovation work included a relocated entrance that is closer to the parking area. The interior of the library features enhanced public spaces with additional seating, including a new windowed reading porch and a cushioned children's window seat with views of the surrounding wooded area. The enlarged meeting room opens up to the central area when not in use with a large sliding glass door featuring artwork by glass artists Stuart Keeler and Michael Machnic. The Children's Area was enhanced with computers and child-friendly furniture. An automated materials handling system, which allows people to return items via Self Check-In stations outside the building, helps return items to shelves more quickly. Updated carpeting, shelving, new furniture and renovated restrooms complete the public area enhancements. Sustainable practices included adding a well-insulated cedar shake roof and new insulated walls as well as double-paned windows and energy efficient light fixtures. Carpet and paint with low levels of Volatile Organic Compounds (VOCs) were used, which improve the quality of air inside the library. The computer Cyber Bar and Self Check-In counters were built from reclaimed hardwood from fallen urban trees in Seattle. The facility features more than 6,000 new books, magazines, movies and CDs.

### [Vancouver Community Library, Vancouver, WA – USA 2011](#)

#### **Awards:**

2011 Honor Award, AIA Seattle

## 2009 National AIA BIM Award, Honorable Mention

An almost 200-foot long, four-story atrium serves as Vancouver, Washington's new civic gathering space, and provides the backdrop for the new Vancouver Community Library. Containing comfortable seating and a coffee shop, the light-filled space features a sculptural concrete stair uniting the library's five floors of program. A 50-foot high "Knowledge Wall" installation symbolizes the collection of information and ideas in the building.

The new central library aims to significantly increase services and play a more central role in the community, after almost five decades at a site cut off from the city by the freeway. The new building more than triples the current space (to 80,000 square feet). As part of the urban core of Washington's fourth largest city, the building serves as the cornerstone of a planned four-block 600,000-square-foot mixed-use development, including a public plaza that will spill out from the library's atrium to host a series of community events.

In response to the community's values and in an effort to market the library's services to the next generation of users, the youngest patrons and families are featured prominently in the building. More than 4,000 square feet of children's museum-like interactive displays (the largest such installation in the country) provides a focus on early literacy and a (free) place for children and their caregivers to come and build the skills that contribute to learning to read. Additionally, a state-of-the-art (and fully-enclosed) Teen Space was created providing dedicated computers, lounge seating, monitors for gaming, as well as an audio/ video system designed to allow teens to bring their own music into the space.

To facilitate community dialogue and discussions, the library includes both indoor and outdoor meeting and presentation spaces. All of these areas are available for community use, including a large roof deck with commanding views to the Columbia River and Mount Hood beyond.

The Vancouver Community Library was designed for long-term flexibility and adaptability as libraries change over time. Large open floor areas and a flexible raised access floor, containing mechanical and electrical systems, allow for easily rearranged spaces in the coming years and contribute to the overall sustainable design goals and projected LEED Gold certification. The use of natural daylight was a key design strategy, and the narrow building and arrangement of shelves maximizes north and south light. Carefully sized overhangs and the strategic use of clear and shaded glass (both a stainless steel mesh shade and ceramic frit) control heat gain and glare.

As the role of the library changes, including the evolution of how we consume books and media, the Vancouver Community Library stands out as the library of the future — anticipating that we cannot and do not know what to expect, but designed to adapt and respond when that future (and the next future) arrives.

## [Black Diamond Branch Library, Black Diamond, WA – USA 2009](#)

Miller Hull and BNBuilders formed a design build team for the design & construction of 5 King County Libraries: Location: King County Library System, Washington

### **Awards:**

2008 AIA BIM Award, Honorable Mention

2008 DBIA NW Design Build Awards, Best Overall Building Project

- [Muckleshoot Library - 6,000 square feet \(expandable to 10,000\)](#)
- [Snoqualmie Library - 6,000 square feet](#)
- [Black Diamond Library - 5,000 square feet](#)
- [Fall City Library - 5,000 square feet](#)
- [Carnation Library - 5,000 square feet](#)

Each library replaces an older, outdated building. Some have been located in the exact same place as the original, some were sited elsewhere on the same property, and others were design designed and constructed on a different piece of property that better serves its growing community. Each branch devotes space to collections for adults, teens and children. Also included are new technologies, public space (and meeting rooms), and customer service. Behind the scenes areas include administration work space and maintenance functions.

The modern library functions more like a community center and gathering place than the library of the past. Learning and exploring are still the main functions, but the way they are achieved is more open and inclusive. The new libraries serve as the "heart of the community," a place where local organizations meet, citizenship classes are taught, political activity takes place, KCLS programs are conducted, materials are lent, and used books are purchased. Meeting rooms function as quiet study areas when meetings are not being held.

Though the branches are small, they are vital to each community and have been designed to have significant street presence, a transparency that advertises goings on and invites the user. Each branch is designed for its population and reflects the distinctive character of each community. (Miller)

<http://www.valleyrecord.com/news/30173624.html>

## [Northgate Library and Community Center, Seattle, WA – USA 2006](#)

MillerHull worked with the Seattle Department of Parks & Recreation and Seattle Public Libraries on a joint venture project in the Northgate neighborhood of Seattle. The 3.5 acre site for the new civic center is across 5th Avenue from the Northgate Shopping Center. The east side of the property is adjacent to a residential neighborhood and the Thornton Creek watershed park. This project creates a pedestrian link between the hardscape retail development, and the wooded, residential community it serves. Consisting of a 20,000 s.f. community center, a 10,000 sf library, and a civic green, shared design elements, create a sense of a larger, civic development: a modern town center for the community. The central plaza links both the Library and Community Center, and forms an entry for both. The new center gives the neighborhood more than just an entrance on the street: it creates a place between buildings for people to congregate, for activities to take place. Multiple pedestrian entrances to the site allow the project to act more as a node of activity, (both a thoroughfare and a destination) rather than a one-stop destination. The design language consists of solid, brick-clad forms contrasted against soaring roof planes with glazing and skeletal steel forms below. Windows at street level are plentiful in order to convey both a storefront (retail) appearance, and to allow the community to see the activity within the buildings. <http://www.millerhull.com/html/nonresidential/northgate.htm>

### [King County Library, Service Center, Issaquah, WA – USA 2000](#)

The MillerHull Partnership designed an 80,000 s.f. service center located in Issaquah, Washington. Designed to serve the library system's 180 person headquarters staff, the facility houses administration, training, book processing, information services, maintenance, a traveling library program and includes space for a new West Issaquah Branch Library. A large 2000 s.f. public meeting space for community use is included in the building. The three story building mass is configured to engage the main arterial in the area, Newport Way. The north-south oriented building screens the 100 car parking area from passing vehicles on Newport Way. Pedestrians and bicyclists using the planned bike trail on Newport Way can view the activities going on inside the building, a rare occurrence in this suburban business office zone. A preserved wetland on the east edge of the property can be viewed from the office space on all three floors as well as from the building's board room and staff lounge. Construction bids to build the \$10.5 million facility came in well under budget and allowed the owner to select all of the alternates. <http://www.millerhull.com/html/nonresidential/kcls.htm>

### **David Milling Architects, Ann Arbor, MI - USA**

<http://www.dmaa.com/>

#### **Libraries:**

### [Marion Public Library, Expansion and Renovation, Marion, OH – USA \(1997\) on design](#)

The Marion County Library selected DMA to evaluate their existing historic structure, provide preservation services, and to develop a schematic design for the significant renovation and expansion of the County Headquarters Library to 21,975 square feet.

In working with the Library and public, DMA developed a design that respects the existing building while providing a new main entry in the form of a temple facing north. This form serves as a link between the existing building and the new grandly-scaled Reading Room with fireplace to the east. The temple form, clad in a white limestone tile, provides a clear icon of entrance once the existing entry to the library faces a proposed garden to be surrounded by a cast-iron fence.

Total Size 21,975 SF

### [Lodi Library - Medina County District Library, Lodi, OH – USA 2006 / 2014](#)

The Library's five-acre site is located a short distance east of town. The 14,000-square-foot Library is located at the highest point on this sloping, wooded site. The exterior of the building is brick and the main interior spaces are heavy timber construction. Local citizens and library staff asked DMA for a Library design that takes maximum advantage of views available from the sloping site while providing spaces that feel like a community living room. These objectives were addressed in this new facility, which features a naturally-lit, timber-framed Reading Room, a Quiet Reading Area with stone fireplace, and a high-ceilinged Multi-purpose Room.

Size 14,000 SF

### [Medina County District Library \(Franklin Sylvester Library\), Medina, OH – USA 2009](#)

1904 - Franklin Sylvester a Medina County businessman, gave \$10,000 to be used for a library. Mr. Sylvester and his wife, who had no heirs, decided to build a library in Medina to keep his name alive.

1905 - The corner of Washington and Broadway Streets was chosen as the site for the library.

1907 - The Franklin Sylvester Library opened in September with 2,000 volumes. Unfortunately, Mr. Sylvester died before his library was completed.

The Medina Library, also known as the Franklin Sylvester Library, was the original facility within the county-wide system. The library's trustees chose to maintain and expand the original 20,000 sq.ft. facility. The 55,000-sq.ft. expansion is visually expressed as three separate buildings, each uniquely relating to the others. The library provides an entrance at the parking lot, skylights to take advantage of natural light, ample views to the outside, a fireplace, a open two-story reading room, and children's area placed along the sidewalk of East Washington Street.

Total Size 76,000 SF, Addition Size 60,000 SF, Renovation Size 16,000 SF

<http://www.dmaa.com/projects/publicLibraries/mcdMain/>

### [Highland Library - Medina County District Library, Medina, OH – USA 2008](#)

This project is one of six libraries designed as part of a comprehensive program of improvements within the Medina County District Library system. This new 12,300-sq.ft. branch library, perched near wetlands at the edge of the Highland High School campus, is located in a rural portion of Medina County. The building's form is punctuated by a tower with clerestory windows that invite the sun to play across its interior walls while introducing diffuse natural light into the center of the library.

The building was designed to offer serene views of the nearby wetlands from most of the major interior spaces, including the adult collection, children's area and story room, and the quiet reading area with stone fireplace. The interior features sustainable materials such as cork flooring, recyclable carpeting, and natural wood products.

Total Size 12,300 SF

<http://www.dmaa.com/projects/publicLibraries/mcdHighland/>

<http://medinagazette.northcoastnow.com/2008/03/13/final-library-to-open/>

### **Brunswick Library - Medina County District Library, Brunswick, OH – USA 2008**

Historically, the Brunswick Library has had the largest branch circulation in the MCDL system, with students depending heavily on library space after school and with families visiting the campus to participate in its several activity centers. DMA designed a sizable addition that provides three bays of glass with high, raised, pitched roofs that let in light, and offers views both out to nature and to the bustling interior.

Each bay is designed for a particular patron group -- children, students and adults -- and gives each of the many occupants of the building a place to call their own. A new Entry pavilion serves as a beacon of light that welcomes citizens to the municipal campus, as well as patrons into their Library. The Library has come to refer to these additions -- the bays and the entry pavilion -- as offering fitting "lift and grace" to a building that has served the community for 25 years, and will now continue to do so for the next several decades.

Total Size 29,900 SF

### **Seville Library - Medina County District Library, Seville, OH - USA 2007**

History of the Seville Library

1950 - The Bookmobile started making stops in Seville.

1961 - The Seville Community Library was established. The Friends of the Seville Library, the Seville Lions, and Dandy Lions were instrumental in making the library a reality, but it was a total community effort.

1985 - Irene Welday bequeathed \$100,000 to build an addition.

1986 - The Irene Welday wing was opened.

2003 - The MCDL bond issue passed allowing for construction and expansion of libraries in Medina County.

2007 - The renovated Seville Library opened in September.

This project is one of six libraries designed as part of a comprehensive program of improvements within the Medina County District Library system. The Seville Library had not been updated in many years, and as part of the library system's \$40M improvement campaign, this small Library received a complete interior and exterior renovation. The design places a sun-filled children's story room to the south of the building, provides additional computers beneath a new central skylight, and locates the meeting room with new bay window at the end of the eastern-most wing facing the street.

Total Size 3,100 SF

<http://www.dmaa.com/projects/publicLibraries/mcdSeville/>

### **Alma Powell Branch Library, Kalamazoo, MI – USA 2006**

This project consists of interior architecture and interior design for the existing Alma Powell Branch of the Kalamazoo Public Library System. The library is located at the southern portion of a well used neighborhood recreation center. The population served by this facility is primarily children and young adults within a predominantly African-American neighborhood.

Every surface of the interior was refinished and all casework and furnishings are new. Automation was introduced to the library with this renovation, and the mechanical and electrical systems were updated at the same time. The color palette for this library was derived from a wall-hanging -- woven in Ghana, Africa expressly for this renovation -- and from the dappling of rainbow colors introduced by the new holographic film of the skylight.

Total Size 4,000 SF

<http://www.dmaa.com/projects/publicLibraries/kplAlmaPowell/>

### **Buckeye Library - Medina County District Library, Medina, OH – USA 2005**

Preliminary design concepts for this 27,000-sq.ft. facility were prepared in response to meetings with Library personnel and with the general public during several Workshops. This new facility, located on a five acre site adjacent to an active railroad, includes a 9,000-sq.ft. branch library, as well as an 18,000-sq.ft. central library services and outreach facility for the entire county system. These two functions are expressed through the use of a blue tile wall that slices through the building as a dominant design element.

Size 27,200 SF

<http://www.dmaa.com/projects/publicLibraries/mcdBuckeye/>

### **Grosse Pointe Park Public Library, Grosse Pointe Park, MI – USA 2005**

DMA worked with the library's building committee and members of the public to design a building unique to the Grosse Pointe Park community. The library's site, the former Ewald Chevrolet Dealership, located adjacent to the City's municipal buildings, offered a design opportunity to create a municipal campus with a Community Building planned for the parcel nearest Jefferson. Clearly visible from Jefferson and other locations, the Library's entry tower announces the Library's presence and provides an icon and place of entry. The building's design inspires a sense of wonder that appeals to the young and the young-at-heart by equally embracing progressive design and romantic tradition.

Total Size 15,500 SF

<http://www.dmaa.com/projects/publicLibraries/grossePoint/>

### **Harper Woods Public Library, Harper Woods, MI – USA 2005**

DMA, in working with the City of Harper Woods to maximize their existing site, designed a 6,000-sq.ft. addition and 12,000-sq.ft. renovation for their public library. The plan adds larger windows and a barrel vault with clerestory windows that brings light down to the lower level of the building. The expanded and relocated children's area includes a craft and story room, a computer area, with adjacent family restroom, and a crawl-in reading cubbies for children. The Library was honored to become the first LEED public library in Michigan, having achieved LEED-Silver in September, 2007. Green design principles informed all project decision making including placement of sensors to turn off lights when natural light is abundant and requiring mandatory recycling on the construction site.

Total Size 18,000, Addition Size 6,000, Renovation Size 12,000

<http://www.dmaa.com/projects/publicLibraries/harperWoods/>

### [Mount Clemens Library, Mount Clemens, MI – USA 2004](#)

In June of 2004, DMA completed a renovation of the Mt. Clemens Public Library, originally built in 1960. The program called for an increase in the number of public computer stations and better visibility of library services for teens and adults. Organic shapes, flowing space, and festively painted skylights encourage library patrons of all ages to explore the library. As a method of way-finding, the interiors are painted with light - a lighting concept that offers intimacy to library spaces while intuitively guiding the patrons.

Renovation Size 10,750 S

<http://www.dmaa.com/projects/publicLibraries/mtClemens/>

### [Michigan Avenue - Ypsilanti District Library, Ypsilanti, MI – USA 2003](#)

The Ypsilanti District Library on West Michigan Avenue was originally the main post office building for the City. It is, without question, a structure of associative and architectural importance. The Library can be classified as representative of the Classical Revival Style.

The Needs Assessment documented the need for expanding and updating this facility to 11,200 sq. ft. In compliance with guidelines from the Secretary of the Interior, it is clear that any new addition should be constructed so that there is the least possible loss of historic materials and so that character-defining features are not obscured, damaged, or destroyed. Placement of the addition was located at the rear of the original facility and its size and scale limited in relationship to the original building; it has been designed in a manner that makes clear what is historic and what is new.

Total Size 11,200 SF

<http://www.dmaa.com/projects/publicLibraries/ydlMichiganAve/>

### [Oxford Library, Oxford, MI – USA 2002](#)

Comprised primarily of brick, cedar shakes, and concrete masonry units, the design direction chosen for Oxford Public Library reflects the vocabulary of buildings found in the rural countryside of Oakland County. Upon entering the building through a walled-garden entry, the visitor is greeted by a gabled foyer that admits sunlight from the east and the west, and which contains the circulation desk.

The Reading Room's clerestory windows are glazed with holographic Spectralite glass which, on sunny days, creates geometric rainbows of color among the exposed timber trusses that support the ceiling of the room. Beyond the freestanding fireplace is a pocket of lounge seating that allows a panoramic view of the wetlands and mature forest growth that thrives beyond the great bay window to the south.

Total Size 23,400 SF

<http://www.dmaa.com/projects/publicLibraries/oxford/>

### [Whittaker Road - Ypsilanti Distric Library, Ypsilanti, MI – USA 2002](#)

On May 5, 1998 voters approved a \$17.6 million bond issue and an increased millage rate of .85 in order to build a new library, renovate downtown and purchase a new bookmobile. Ground was broken on the new facility in April 2000 with construction continuing through 2001. The Whittaker Road facility, designed by David Milling and Associates, was opened to great acclaim in January of 2002. The facility boasts 60,000 square feet, over 250,000 titles, 197 places to sit, and 231 parking places.

The Library's ten-acre site shapes the triangular form of this new facility featuring a continuously sloping roof plane that soars from its lowest point near the western entry, to its highest point against a stand of old-growth forest to the east. Views from both levels of the interior focus on the woods. This 60,000 square foot library is the first phase of a construction program that is designed to be 88,500 square feet when completed. This Library is one of two facilities designed for the Ypsilanti District Library System

Size Phase 1 60,000 SF

Size Phase 2 88,500 SF

### [Central Library, Kalamazoo Public Library Kalamazoo, MI – USA 1998](#)

This is one of five libraries designed by David Milling Architects for the Kalamazoo Public Library System. The scope of this project involved comprehensive architectural and interior design services in the renovation of this 1959 two-story, urban library while expanding it from 80,000 to 100,000 square feet.

Unique to this facility was the use of reflective materials in conjunction with natural and artificial lighting to create compelling spaces within the library. A skylight encircled by holographic mirrors provide a gem-like focal point to the dome's interior, and creates an ever-changing ambiance by casting rainbows on the walls of the rotunda. Neon lighting concealed within the recesses of the rotunda walls emit a turquoise glow, contributing to a magical sense of place.

Total Size 100,000 SF, Renovation Size 80,000 SF, Addition Size 20,000 SF

### [Washington Library - Kalamazoo Public Library, Kalamazoo, MI – USA 1997](#)

Established in 1910.

Library services to Kalamazoo's south side opened in 1910 in the basement of the old Portage Street School and later moved to a store front on Portage St. The present British Arts & Crafts-style building was dedicated in 1927. Restoration of this neighborhood treasure in 1996-97 included updated electrical and HVAC, a new lift to help patrons reach the community meeting room, and new ADA-compliant restrooms. The library site was recontoured to facilitate better drainage and the 42-car parking lot was finally repaved--possibly the most popular improvement!

DMA was commissioned by Kalamazoo Public Library to restore its 1929 Washington Square Branch, built in the English Arts & Crafts Style. Since this is a neighborhood treasure that patrons have always loved, it was of utmost importance that the character of the building be preserved in the process of creating a modern library.

During the course of renovation, the existing woodwork was cleaned, repaired and refinished. Plaster walls and ceilings were repaired and glazed to suggest a patina developed over time. All furnishings are new, and fabrics were selected to reinterpret the spirit of 19th century English interiors. Tables and carrels were selected to reflect the time period, yet have been updated for CPUs and wire management to fully integrate data and power capabilities.

Total Size 8,000 SF

<http://www.dmaa.com/projects/publicLibraries/kplWashington/>

### [Oshtemo Library - Kalamazoo Public Library, Kalamazoo, MI – USA 1997](#)

In response to Library Staff's request that their library be a visual landmark that is "Fun, with a capital F," a forthright attempt was made to create a facility that appears vast, ancient, and romantic - the Camelot metaphor of a mythical, walled complex, built around a central courtyard. The complex itself is comprised of four interlocking building forms, each of which is detailed inside and out with masonry units whose colors are exclusive to the particular form. Employing a combination of masonry and color-coding techniques allows visitors to identify the distinct architectural forms and bring clarity to key elements within the program.

Size 17,100 SF

<http://www.dmaa.com/projects/publicLibraries/kplOshtemo/>

### [Eastwood Library - Kalamazoo Public Library, Kalamazoo, MI – USA 1997](#)

Established in 1912.

The East Avenue School, later known as Roosevelt School, hosted library services from 1912 to 1940, when the East Side branch moved to a storefront on East Main. In 1974, the Eastwood Community Center donated their Strand Hall on Gayle Ave. to the library. The current building on the Gayle Ave. lot was built in 1995-6, and re-dedicated on August 12, 1996.

Residential in scale and detailing, the Eastwood Branch represents the idealized model of a small neighborhood library. The bottom of its classic L shape features the children's area and enclosed story room. A vestibule elevator and stairwell lead to a community reading room on the lower level. A cupola skylight and iridescent entry glazing dramatize the rose brick exterior. Cheerful colors delight the eye in interior finishes and furnishings.

The brick exterior of the Eastwood Branch enhances its residential image and gives this library a feeling of permanence. The same brick is carried into the building, creating the walls of the entry lobby and forming an entry portal to the library spaces beyond.

As a focal point within the interior of the building, the ceiling planes above the circulation desk create a pyramidal void culminating in a skylight that crowns the building's roof line with a prismatic-shaped cupola. The circulation desk is defined by four free-standing polychrome columns that suggest an Egyptian influence. Opposite the circulation desk is the children's collection, with an adjacent story room to the west featuring original watercolor illustrations for children.

Total Size 10,700 SF

<http://www.dmaa.com/projects/publicLibraries/kplEastwood/>

<http://www.kpl.gov/powell/about.aspx>

### [Howell Carnegie Library - Howell Public Library, Howell, MI – USA 1991](#)

The firm Osler/Milling Architects was selected from a field of over 70 architectural firms that applied to design a 22,000-square-foot addition and to restore the 8,000-sq.ft. original turn-of-the-century library structure. A major challenge regarding this commission was to preserve the strong historical image of the existing building while providing an addition nearly four times its size.

This expansion on a cherished downtown site was to respect the original building -- any "muscle-flexing" would overwhelm the historic library structure. A ramp allowed the designers to "tuck" the addition behind the original structure, thus allowing new traditionally-designed cornices and belt courses to align with those on the existing building while assigning a lesser status to the building addition.

Total Size 30,000 SF, Renovation Size 8,000 SF, Addition Size 22,000 SF

### **Dennis Mires, The Architects, Manchester, NH - USA**

<http://thearchitects.net/>

**Libraries:**

#### [Jackson Public Library, Jackson, NH – USA 2010](#)

The Architects were hired by the Jackson Public Library to refine a program and develop a new building to be located on the Gray's Inn property, the same site where the Town Offices and Police Department are located. While finalizing the schematic design, the Town was engaged in building a new community center next to the school, which meant the historic Trickey Barn needed to go. The Historic Association managed to save the barn and have it dismantled and numbered and stored with the hopes of finding a viable and appropriate use. The Library and the Historic Association came together to raise money to erect the barn for use as the library. The Architects helped site the building on the Gray's Inn property and worked with the Community in developing the contract documents to provide a high performance envelope, energy efficient lighting, and geothermal HVAC system. The two level building is fully accessible and retains the visual interest of the exposed barn frame in the reconstruction. The building was dedicated in the Spring of 2011.

<http://thearchitects.net/portfolio/jackson-public-library/>

read more:

<https://libraryarchitecture.wikispaces.com/Jackson+Public+Library,+Jackson,+New+Hampshire,+Building,+Repurpose>

#### [Fremont Public Library, Fremont, NH – USA 2002](#)

The Architects assisted the Building Committee to bring a proposal for a new library to the 2001 Town Meeting. Patience Jackson, Wellesley, MA, had completed a Needs Assessment Program for the Library. The School Board agreed to deed a parcel of land on Route 107 to the library as a site for the new library building. Using the Building Program, The Architects designed an approximately 7,700sf building with new access, parking, walks, utilities, and landscaping. The project was completed Spring 2002.

<http://thearchitects.net/portfolio/fremont-public-library/>

#### [Baker Free Library, Bow, NH – USA 2000](#)

The Architects were selected and provided a feasibility study to determine program needs for expansions over a twenty-year period. The project includes space in the unfinished lower level for additional expansion as site size does not permit further additions to the building. The brick, fascia, and trim were all selected and designed to match the existing. The junction between old and new consists of green reflective glass and spandrel panels for a clean transition. The building was completed in 2000.

<http://thearchitects.net/portfolio/baker-free-library/>

read more:

<http://www.bowbakerfreelibrary.org/baker/history.asp>

### [Nesmith Library, Windham, NH – USA 1997](#)

The Architects worked with the Building Committee to refine the building program, develop schematic site design and building design for a new 12,000sf library that will be the first building in the new Town Center Complex. Comprehensive services included assisting the Committee with various educational efforts that resulted in a positive town meeting vote. The project was completed August 1997.

<http://thearchitects.net/portfolio/nesmith-library/>

### [Bedford Public Library, Bedford, NH – USA 1996](#)

The Architects, in association with Aaron Cohen & Partners, New York <http://www.acohen.com>, assisted the Building Committee to refine the program, and develop designs and budgets for town meeting vote. The Town approved the project to build a new 20,000sf library on the existing site in Historic Bedford Center. An appropriate architecture has evolved which provides for emerging and changing technologies. The architectural team provided comprehensive architectural, engineering and interiors services for a June 1996 dedication.

<http://thearchitects.net/portfolio/bedford-public-library/>

## [Mithun Architects, Seattle, WA - USA](#)

<http://mithun.com/>

### **Libraries:**

#### [Seattle University Lemieux Library, Seattle, WA – USA 2010](#)

Specifications: Client: Seattle University, Start: 2009, Completion: 2010, Size: 135,000 sf, Certifications: LEED® Gold Certified

#### Overview

Built in 1964, Seattle University's 100,000 sf Lemieux Library needed renovation and additional space to meet increased demands for 21st century learning spaces. The University's goals for the project were to create a model college library, showcase cutting edge audio-visual technology and provide students with much-desired spaces for study.

The renovated Lemieux Library and McGoldrick Learning Commons, which included a 35,000 sf addition, became an instant success for the campus. The combination of open learning spaces, traditional reading rooms, group and individual study spaces of varying sizes, a multimedia center and café, have offered each student and faculty member an opportunity to find the right kind of space for their particular learning or work style. The abundance of controlled natural light and views, the variety of flexible furniture arrangements, 24/7 access to most of the learning areas, strong integration of audio-visual technology and an art collection have resulted in comfortable and engaging spaces. Mithun served as Executive Architect for the project in collaboration with Design Architect Pfeiffer Partners and Landscape Architect The Berger Partnership.

[http://mithun.com/projects/project\\_detail/seattle\\_university\\_lemieux\\_library/103/#ixzz2z1nIzwCJ](http://mithun.com/projects/project_detail/seattle_university_lemieux_library/103/#ixzz2z1nIzwCJ)

#### [Federal Way Regional Library Renovation, Federal Way, WA – USA 2010](#)

Specifications: Client: King County Library System, Completion: 2010, Size: 35,000 sf, Civil Engineers – KPFF, Structural Engineer – KPFF, M/E/P Engineers – Flack+Kurtz, Geotech – Landau Associates, Inc, Construction – Kirtly Cole

#### **Awards:**

2011 AIA Washington Civic Design Awards – Merit and People's Choice

2010 IIDA INawards – Public – Honorable Mention

Building upon the library's rich natural setting, Mithun's design team drew upon principles of transparency, daylighting, and connection in order to visually open the building to the outdoors while enhancing the functionality of the spaces inside. With a guiding concept of the library's addition as a "Lantern in the Forest," designers added a series of new skylights, daylight harvesting pavilions, and movable glass panels so that visitors can better see one another, work more efficiently and view the site's wealth of trees, rain gardens and native plants.

Natural materials—including wood reclaimed from trees on site—create a warm palette within that is not only beautiful but reduces noise and contributes to a healthier indoor environment. High performance glazing and a radiant floor heating system provide a balance between comfort and energy savings, while an expanded system of seating, study areas and collections alleviates congestion and improves functional efficiency for patrons and staff alike.

### **Libraries:**

#### [Kenmore Branch Library, Akron-Summit County Public Library, Akron, OH – USA 2008](#)

2.150.000 \$, 12.000 sqf.

Situated within a redeveloping business district and well established urban neighborhood, this new library serves as an anchor for the surrounding community. The materials and colors selected blend in well with the surrounding buildings and are durable in nature. The facility has both small and large meeting rooms that accommodate anywhere from 20 to 100 people and are available for use by local organizations and non-profits. The library also consists of separate children, teen and adult reading areas. Scattered throughout these areas are more than 20 public access computers with free internet connectivity. (Moody)

<http://www.akronlibrary.org/construction/kenmoreconst.html>

#### [Helen E. Arnold Community Learning Center, Akron Public Schools, Akron, OH – USA 2007](#)

The Helen E. Arnold Community Learning Center is a two-story educational facility at Vernon Odom Boulevard and Rhodes Avenue. A masonry veneer wraps the exterior in two rich, natural brick shades. A sweeping curve on the west side of the building envelops the administrative suite, media center and art room. The curve is penetrated by the main entrance and leads to a corridor bathed in sunlight courtesy of clerestory windows. From this corridor, students can access the 8,000-square-foot gymnasium and student dining areas. The Helen E. Arnold CLC shares the site with the Urban League, but the facilities will function independent of one another. (Moody)

[http://www.moodynolan.com/#portfolio/project\\_c2aebc5c-938c-4c70-a34c-375db9a390fc](http://www.moodynolan.com/#portfolio/project_c2aebc5c-938c-4c70-a34c-375db9a390fc)

### Linden Branch Library, Columbus Metropolitan Library, Columbus, OH – USA 2004

1.800.000 \$, 12.000 sqf.

Set in an urban environment, this new library fits into the surrounding area not only aesthetically but functionally. The 12,000 sq. ft. branch sits right up to the property line taking full advantage of the site area. One of the design challenges in marrying building and site was creating an easy circulation path around the building, accommodating a drive-thru book drop and providing adequate parking. (Moody)

[http://www.moodynolan.com/#portfolio/project\\_d3eb1160-474e-4aad-a1c9-0c597e3957fd](http://www.moodynolan.com/#portfolio/project_d3eb1160-474e-4aad-a1c9-0c597e3957fd)

### Library and Classroom Building, Ohio State University, Marion, OH – USA 1996

12.000.000 \$, 56.350 sqf.

#### **Award:**

**Design Excellence. National Organization of Minority Architects (NOMA) 1996**

The central defining feature of the design is the large entry rotunda which is topped with a clerestory window and decorative metal clad sunscreen. This rotunda serves both as the public entry and the link between the three distinct functions of the building: library, classrooms and computer laboratories. The library and classroom wings each are accessed on the ground floor of the rotunda, while a sweeping monumental stair leads from the entry up to the computer laboratories on the second floor. (Moody)

### Moore Ruble Yudell, Santa Monica, CA – USA

<http://www.moorerubleyudell.com>

AIA National Firm Award 2006

#### **Libraries:**

### Santa Monica Public Library, Santa Monica, CA – USA 2006

Despite a great many environmentally conscious architects calling Santa Monica home, green building on a large scale hadn't occurred until the new library was constructed in 2006. Great care was taken in all of the building systems to use as little external energy as possible, no small feat for a building type that requires constant air quality for maintenance of books. The skin of the building is tilt-up concrete composed of fly ash and recycled glass. And unusual for a library, there is a lot of windows, allowing a lot of natural light without exposure to the books. The roof is designed as an impluvium, an ancient Roman system of draining rainwater to a cistern. The water is later used for all of the sites irrigation.

<http://www.moorerubleyudell.com/projects/santa-monica-public-library>

read more:

<http://www.mimmoa.eu/projects/United%20States/Santa%20Monica/Santa%20Monica%20Public%20Library>

This new main Library reflects the character of Santa Monica as a place and as a community, supporting a well-informed public in the comfort of the benign coastal climate of southern California. Seeking to enhance community awareness and encourage public use, the design presents a building of approachable scale and civic proportions, opening in all directions to access, daylight, and views into and out of the building.

Designed through a series of community meetings, the 110,000 square foot library responds to Santa Monica's breezy-but-enlightened culture by incorporating large, sun-shaded windows, colorful pocket gardens, and a broad spectrum of sustainability features—ultimately winning the project LEED™ Gold certification. One of the many sustainability measures is the use of an inverted “impluvium” roof and underground cistern to collect rainwater for landscape maintenance.

At the center of the whole is a large enclosed garden court containing a small café with wireless connectivity. The north court and central garden/café combine with a 200-seat auditorium and multi-purpose rooms to offer a dynamic venue for public use. In addition, a small museum and flexible spaces can alternately accommodate exhibitions and informal presentations. The building serves as an urban oasis at the center of fast-paced residential and commercial redevelopment, earning its title as the “Living Room of the City.”

<http://www.moorerubleyudell.com/projects/santa-monica-public-library>

### Hugh & Hazel Darling Law Library, UCLA School of Law, CA – 1998

Our design for this 130,000 sf library takes full advantage of its restricted site as it establishes a strong identity for the entire Law School. The library is composed of places that function at multiple scales for individuals, group study, and events. The formal renovated main reading room and other public areas are located on the main level adjacent to the collection, while more secluded study areas at upper levels provide space primarily for the Law School community. The core collection is now organized as centrally as possible to minimize direct outside light and is arranged for continuity with the existing stacks. A corner tower with spectacular views to the city and mountains creates a major icon for entry into this district of the campus.

The massing of the building is carefully sculpted to mark the eastern corner of a major east-west campus axis while transitioning back to the scale of the adjacent Law School buildings. New faculty offices are located next to the library on upper floors and link to existing faculty offices. All of these enjoy mountain and courtyard views and share a rooftop trellised patio. The library's exterior composition offers a fresh interpretation of the University's traditional scale, massing, and materials, including patterned brick, precast concrete trim, and glass.

### Stadtbibliothek Reinickendorf (Tegel), Humboldt Bibliothek, Berlin – Germany 1989

Associate Architect: Abeln Lubitsch Skoda

Im Rahmen der Internationalen Bauausstellung IBA 1984 – 1987 ist mit der Humboldt-Bibliothek am Tegeler Hafen ein besonders einprägsamer Ort entstanden. Ein langgestrecktes Gebäude, von außen klassizistisch und zurückhaltend, bietet es im Innern ein beeindruckendes Raumerlebnis: ganz im Sinne des Architekten Charles Moore zieht die Architektur die Menschen an, erzählt und weckt Erinnerungen an bereits erlebte und gesehene Bauten, schafft Freiraum für die Phantasie und stellt die Verbindung her zu bereits vergangenen Zeiten. Die meisten Besucher lassen sich ein auf dieses Erinnerungs-Angebot, entdecken ihren persönlichen Ort, mit dem sie sich identifizieren und an dem sie gern verweilen. Die eingebauten Bücherwände über zwei Etagen erinnern an barocke Klosterbibliotheken, und die großzügige dreischiffige Halle fordert verschiedene Vergleiche heraus: vom Sakralbau bis zur Industriearchitektur. Seit Eröffnung im Jahr 1989 wird die Bibliothek von ca. 1.500 Lesern täglich besucht, denen ein vielfältiges Medienangebot zur Verfügung steht. Sie hat sich aber

auch zu einem kulturellen Ort entwickelt, denn Moores Architektur bietet den idealen Rahmen für Ausstellungen, Lesungen, Konzerte und Preisverleihungen. Die zahlreichen Fachbesucher und Architektengruppen aus dem In- und Ausland, die in den letzten Jahren die Bibliothek besichtigt haben, zeugen von dem großen Interesse, das dieses postmoderne Bauwerk hervorgerufen hat.

<http://www.blickpunkt-tegel.de/php/Object.php?ObjectId=3361&Action=Overview&session=714005b015d05ca44f6f6630b5f3efc7>

This 48,000 sf branch library forms the first phase of the Cultural Center for the Tegel Harbor Master Plan, created by Moore Ruble Yudell after winning an international design competition. The library covers a full range of related activities, from music, graphic art, lending children's programs, and youth programs, to general public use. Its design brings this varied program together in a loft-like building which combines industrial and classical elements. Its classical façade is broken by a glassy entrance bay framed by a pair of free-standing portals. These lead to a central rotunda encircled by an arcaded balcony at the second floor. From the rotunda, a grand wall of books meanders along one side of the main reading room, and gives access to the open stacks and smaller reading alcoves beyond. A double-layer, vaulted ceiling lit by a clerestory window brings light through the lower vault. On the north side, the light is balanced by a series of bay windows and doors that alternate with niches for books.

The industrial toughness of the exposed steel and concrete frame on the interior is contrasted with a playful, almost baroque set of details for the arches and ceiling. The metal sash, stucco and standing seam zinc roof on the exterior combine with spare classical elements of precast concrete. High volume spaces and natural ventilation provide controlled cooling as the combined thermal mass and insulation of heavy masonry construction greatly enhance heating. Use of a carefully baffled south-facing clerestory provides daylight in all seasons, minimizing the need for artificial lighting in the reading areas and reducing energy consumption.

## **Morphosis Architects, Los Angeles – USA**

<http://www.morphopedia.com>

### **Libraries:**

[\*\*Dr. Theodore Alexander Science Center School, Los Angeles, CA – USA 2002 – 2004\*\*](#)

196,000 gross sq ft / 18,208 gross sq m Program: K-5 elementary school and Science Education Resource Center Design: 1993 - 2001 Construction: 2002 - 2004 Type: Educational, Project Credits Morphosis Team, Mechanical Electrical Plumbing Engineer Donn C. Gilmore Associates, Structural Engineer Englekirk and Sabol Consulting Engineers

The Armory's Main Hall, converted into a flexible, open two-story atrium and dominated by a large interior bamboo garden, is the heart of the Science Education Resource Center. Libraries, labs, meeting rooms, and classrooms flank the atrium's perimeter and are provided access to the new North school building via a pair of bridges that lead across an outdoor garden lunchroom. The interior bamboo garden, pierced midway up by skywalks and punctuated with meeting spaces is meant to bring a piece of nature into this somewhat blighted inner city environment. It is possible, once the bamboo is fully grown to find a space of respite among the plants or to use areas carved into the midst of the planted space as an experiential teaching opportunity.

The new North building burrows into sculpted earthworks along Exposition Boulevard; its landscaped roof is perceptually an extension of the garden. Classrooms are grouped in clusters of four that share a common room, to provide an open and flexible teaching environment. In response to the Exposition Park master plan and to highlight the historic Armory, this "non-building" nestles into excavated land below grade, its program essentially tucked and embedded into the park. The structure emerges quietly from the adjacent Rose Garden — a welcoming and protective environment for children that has forgone the traditionally overt sense of enclosure of most public schools. From the vantage point of the Rose Garden, the roof appears as ground plane, whereas from the heavily trafficked Exposition Boulevard, the building appears autonomous and active. The project engages the site and the community and is perceived as both an intervention and a connection between the disparate adjacent conditions.

## **Moseley Architects, Richmond, VA - USA**

<http://www.moseleyarchitects.com/>

### **Libraries:**

[\*\*Lyman Beecher Brooks Library, Norfolk State University, Norfolk, VA – USA 2012\*\*](#)

Serving the university's students, faculty, staff, alumni, and community, the new library is located at the geographic heart and pedestrian crossroads of the campus and creates a new destination for learning and scholarship. The building's glass entrance rotunda creates a welcoming "lantern" for students to learn and gather and also functions as a venue for events and exhibits. The Information Commons serves as a formal computer lab as well as an informal gathering place and internet café with food service. In addition to a circulation collection of 500,000 volumes, Brooks Library offers archive spaces, computer resource labs, media services/copy center, group study rooms, student multi-media lab, technology classroom for library instruction, and technology assistance spaces.

[\*\*Patriot High School, Prince William County Public Schools, Nokesville, VA - USA 2011\*\*](#)

As the county's eleventh high school, students benefit from a dedicated culinary arts area with commercial kitchen, a television studio, and a complete media center containing computer areas for research and instructional use. State-of-the-art technology is incorporated into the building, including a fully functional local area computer network; wireless access; classrooms equipped for interactive white boards; and video and remote computer monitor use within the classroom. A computerized temperature control system with remote monitoring and reporting offers energy efficiency and cost savings. The site includes a wet pond for use in environmental science, a football stadium with artificial surface, as well as competition baseball/softball fields and tennis courts.

<http://www.moseleyarchitects.com/k-12-education-projects/high-schools/patriot-hs/>

[\*\*Carrboro High School, Chapel Hill-Carrboro City Schools, Carrboro, NC – USA 2007\*\*](#)

Carrboro High School's 1,800-student design is contextually appropriate for architectural character of the town and marries its regional characteristics of liberal arts and southern hospitality. This educational environment was designed to welcome learning and

create a sense of place for students and staff. The heart of the school is the library learning center, the physical and intellectual centerpiece of the school. Serving as a model of sensible energy use, environmental protection, and community stewardship, this school earned LEED Silver certification in 2008 and was designed according to Chapel Hill-Carrboro City Schools' High Performance Building Design Criteria policy.

## **MSKTD & Associates, Inc., Fort Wayne, IN, Indianapolis, IN – USA**

<http://www.msktd.com>

### **Libraries:**

#### **Concordia Theological Seminary – Walther Library, Addition and Renovation, Fort Wayne, IN – USA** 2011 1<sup>st</sup> Phase, 2<sup>nd</sup> Phase on design

\$ 8,000,000

The existing Walther Library, designed by Eero Saarinen (\*20.08.1910 Kirkkonummi, Finland - + 01.09.1961 Ann Arbor, MI USA) as part of the 1958, "New Campus", has received no major addition or renovation since its construction. The new addition and existing building renovations are designed to extend and complement both the original Saarinen campus and library.

The building addition will provide a quieter and more reflective environment. Constructed along the shore of the existing Campus lake, the addition will complement the Chapel which remains the campus focal point.

This \$8,000,000 project will add 40,000 gsf to the existing Walther Library's current 15,000 gsf.

#### **Allen County Public Library, Fort Wayne, IN – USA 2007**

Design Architect :: Gwathmey Siegel & Associates Architects

At the center of Allen County's system, the Main Library in downtown Fort Wayne is one of the busiest in the nation; however, its size was inadequate to handle the library's ever-increasing collections and demands for services. With the 127,000 s.f. addition and 240,000 s.f. renovation, the new building should accommodate growth for twenty years, and hopefully beyond.

In addition to allowing the main library to expand its open shelf capacity, some of the highlights of the completed project will include:

A patron parking garage for 130 cars

Full accessibility to people with disabilities

More reader seating

Self-service checkout stations

New entrance on the west with drive-up access

New plaza at the east entrance

280-seat auditorium

An exhibit gallery

Library cafe

New flexible public meeting rooms

New lighting, data and telecom systems

Integrated HVAC system.

Children's Services area.

Construction started May 2004; facility will be turned over to the Owner December of 2006.

<http://www.msktd.com/project/civic-project-1/>

#### **Indiana University, Southeast Library, New Albany, IN – USA 2005**

74,600 sqf., \$ 10,900,000

The new 75,000-square-foot library for the Indiana University—Southeast Campus enhances the learning experience for students by providing a dramatic visual and campus-life focal point. Situated along a major pedestrian axis, the library has copper roofs, brick walls and gray-tinted glass that harmonize with the existing campus architecture. The main entrance, with its limestone clad reading room cantilevered above the vestibule and marked by a copper-clad cylinder lighting the entry rotunda beyond, sets this design apart. The 24-hour student lounge/coffee area and computer classroom make the library an inviting student destination. Built into the hillside, the four-story building's main floor and entrance are at mid-level. Here, the dramatic top-lighted entrance lobby/rotunda and adjacent monumental stair provide focus for the entire facility. Fully integrated into the building systems, robust high-tech infrastructure supports all the technology required for study, research, information storage, collection access and retrieval. These activities are complemented by the colorful and light-filled interior spaces, which provide wonderful vistas to the surrounding countryside. Functionally, the main floor includes administration, circulation, reserves, reference collections, reading and study areas. The floors above and below contain the bulk of the library's circulating collection. The lowest level is dedicated to receiving, storage and mechanical support.

### **Libraries:**

#### **[New Law Library of Harlem, New York, NY – USA 2012-2016](#)**

Project Team: Daniel Holguin (lead designer), Adriana Campmany, Maya Nakamura and Glenn Fulk.

#### **PROJECT DESCRIPTION:**

Envisioned as a center where the community can convene to learn how to become empowered; to know how to defend itself against injustice of all forms, the Law Library setting its roots in Harlem, the historic heart of the nation's African American community, was the natural choice.

Located in historic brownstones that speak both to Harlem's famed Renaissance and its forthcoming Renaissance in the 21st century, the library will be situated across the plaza of the Adam Clayton Powell State Office Building, at the center of the island, ready to take its place among venerable Harlem institutions like the Studio Museum of Harlem, the Apollo Theater, the National Black Theater, Lenox Lounge, Sylvias among others.

In light of the drop-out and incarceration rates within minority communities, the library will seek to redress the shortcomings of an educational and legal system that is not adequately serving the needs of minority communities. It will seek to be a venue with an open door to all of its neighbors—from those seeking legal counsel to those interested in learning about the law as a career path....

## **Murphy / Jahn, Chicago – USA**

<http://www.murphyjahn.com>

### **Libraries:**

#### **[Joe and Rika Mansueto Library, University of Chicago, IL – USA 2008 – 2010](#)**

In late September, the University of Chicago broke ground on a \$42 million addition to its Regenstein Library. Designed by Chicago's Murphy/Jahn, it is not a wing, per se, but rather a bunker of books topped by a glass dome. In 2005, the university commissioned Murphy/Jahn to design an addition to the Regenstein, a Walter Netsch–designed Brutalist work (**compare with: Northwestern University Main Library, 1970; Regenstein Music Library, 1977**) that anchors this predominantly Gothic campus. Although Netsch had created expansion plans for the five-story limestone building, those were nullified by a new dormitory, designed by Ricardo Legorreta Vilchis, that took over the site Netsch had wanted. Architects Helmut Jahn and Scott Pratt sketched various appendages for the Regenstein, but its self-contained form seemed to resist any attachments, says Pratt, principal architect for the project. What they settled on was a solution that was as “as minimal as possible,” Pratt says. In the new facility, called the Joe and Rika Mansueto Library, a 25,000-square-foot ground level will contain a 160-seat reading room and preservation operations, all topped by an elliptical glass dome that reaches 36 feet at its apex. Books will be stored in a double-layered underground vault consisting of a 30-inch thick slurry wall, a 5-foot-wide buffer space, and a hermetically sealed liner wall—a design that best ensures the constant humidity and temperature required of fragile tomes, Pratt says. Any book can be retrieved via an automated system and delivered to patrons in a few minutes. The facility will hold 3.5 million volumes, enabling the university to be one of the few remaining American schools to house its entire collection of academic research on campus. Visually, the building will look strikingly different than its neighbor. Where the Regenstein sports narrow windows, the new structure will be sheathed with glass. Where the Regenstein's interior is dark and heavy, the dome will convey openness. And in contrast to the Regenstein's blocky, dominating profile, the Mansueto's elliptical form will enhance the open character of the site, while preserving green space around the library complex. The facility is scheduled to open in 2010.

### **Libraries:**

#### **[Washington State University, Academic Center, Spokane, WA – USA 2006](#)**

\$ 33.850.000

Located at the heart of the Riverpoint Campus, the Academic Center houses a number of academic programs and administrative units, as well as the [Riverpoint Campus Library](#). The 106,000 square foot building showcases the [14,660 square foot library](#), 15 classrooms, two auditoria, a computer lab and 18 academic and administrative units. WSU Spokane is the urban campus of WSU, a land-grant research university founded in 1890. The campus features advanced studies and research in health sciences and health professions, the design disciplines, education, social and policy sciences, and science and technology. WSU is one of just 95 public and private research universities with very high research activity, according to the Carnegie Foundation for the Advancement of Teaching classifications. In addition, U.S. News & World Report ranks WSU as one of the top public research universities in the nation.

<http://spokane.wsu.edu/services/Facilities/buildings/Academic.html>

The 106,000-square-foot Academic Center, which is the centerpiece of the campus, houses student services, other student activities, the library, administrative offices, conference facilities, program incubator spaces, tiered lecture facilities, distance learning classrooms, computer labs and numerous academic departments.

Beyond providing replacement space for programs previously occupying leased or temporary space, the Academic Center provides area for new programs, expansion of programs offered at the Riverpoint Campus, and space for programs relocated from WSU in Pullman. Convenience, collaboration, cooperation, and resource-sharing opportunities are fostered by the appropriate consolidation of functions within the Academic Center.

As part of the predesign service, the entire campus master plan was also updated. The Academic Center is one of the first buildings designed to address the governor's focus on sustainability by state facilities. Led by NAC|Architecture, the Academic Center team included associated architect THA Architecture.

### [Woodrow Wilson High School Library, Tacoma – USA 2006](#)

#### **Awards:**

**AIA Seattle Honor Awards 2008**

**Learning in Design, Citation of Excellence 2008**

([learningbydesign.biz](http://learningbydesign.biz) – Green School Buildings )

**Primary challenge:** Rejuvenate an aging campus with a single building intervention broader issues: The new building, conceived as a site intervention, seeks to re-engage the school with its site and poses the question, “Can a high school campus provide some measure of meaningful public space that is so invariably absent from our typical single family residential neighborhoods?” Is rejuvenating our aging campuses a vital issue of urban sustainability both in the terms of energy and materials conservation, as well as for preserving the role of the civic space? **Matrix alteration:** The building seeks to transform a campus where “site” has long been relegated to the “space between building modules.” Plaza, yard, stairs, bridge, and walk are carved out of both site and building and visually and experientially intertwined, creating not only “public” space but real “community.” The project alters the site’s spatial matrix and transforms its scale and character from uniform and predictable to varying and experientially stimulating. The new design stimulates social interaction by redefining and animating exterior campus spaces and by establishing engaging transitions from “private” campus spaces to the broader public domain. The scope: The new three-story building replaces five existing buildings and eight portables, consolidating and opening up the campus. The regained site area is developed with planting, plazas, and parking. The new building houses: general classrooms, science and computer labs, a therapeutic learning center, the library, and administration and guidance centers. This high-performance facility features integrated design strategies providing both functional classroom daylighting and displacement ventilation.

### [Shadle Library, Spokane, WA – USA 1997](#)

#### **Awards:**

**Award of Merit AIA Spokane 1998**

The largest of Spokane Public Library's branches, this 17,847-square-foot facility serves northwest Spokane from the northwest corner of Shadle Park. The gentle curve of the floor plan focuses the user on the park setting and activities to the south. The main entry was emphasized by creating a glass vestibule that has a dramatic angular shape. The dark-green roof parallels the sloping ground plane, allowing the low south eave to control the amount of sun entering the reading areas, while the north side of the roof is lifted to allow north light into the interior and create a segmented rolling edge that becomes a part of the tree canopy when viewed from the park.

<http://www.nacarchitecture.com/portfolio/ShadleLibrary.html>

### [Spokane Downtown Library, Spokane, WA – USA 1994](#)

The collaborative process used to design Spokane's 126,000-square-foot, three-story main library encompassed a series of sessions with the library board and director as well as user groups, making the final building organization a reflection of the collective wisdom of dozens of participants. Led by NAC|Architecture, the Downtown Library team included associated architect THA Architecture. The ground floor provides spacious, flexible public meeting spaces and a large grand stairway leading to the library's public service spaces on the second and third floors. To provide maximum flexibility within the floor plates, the library spaces are organized by an open-column grid. The southern edge of the grid features large masonry openings that provide framed views of the historic section of Spokane. The northern edge is a full glass wall showcasing an expansive view of the Spokane River Falls below. A large roof monitor fills the central volume with natural light, augmenting the lighting system. A grid of ducting for power, data and telecommunications weaves through the floors of both public service levels, providing ample flexibility for future access.

<http://www.nacarchitecture.com/portfolio/DowntownLibrary.html>

### [Withworth University, Cheney Cowles Library, Spokane, WA – USA 1992](#)

The second addition and complete remodeling of this centerpiece building includes 25,000 square feet of new space added to the existing 27,800 square feet for a total of 52,800 square feet. This building houses a traditional academic library, research facilities, archives, archival reading room, education curriculum library, audio-visual department, academic computing with two micro-labs, word processing, and administrative computing for the campus. (NAC)

<http://www.nacarchitecture.com/portfolio/WhitworthLibrary.html>

## **[Nacht & Lewis Architects, Sacramento, CA – USA](#)**

<http://www.nlarch.com>

#### **Libraries:**

### [Natomas Public Library, Sacramento, CA – USA 2009](#)

The Natomas Public Library is a joint-use effort between the City of Sacramento, Natomas Unified School District and the Los Rios Community College District. Located on the Natomas Education Center site, this 23,000 s.f. branch library facility will serve not only the growing Natomas community, but will serve the adjacent Inderkum High School and American River College's Natomas Center. The library will be the centerpiece of the Natomas Education Center and is organized along the axis of the adjacent Natomas Town Center's main street. The building's entry plaza addresses the neighboring community and encompasses the library's two primary entrances. Marked by a clock tower, the library faces the community and emerging Natomas Town Center and forms the western boundary of the Education Center's central courtyard. The library entrances connect to a vaulted reading room thru a public gallery designed for community events and the display of school art projects. The reading room is flooded with controlled

natural daylight through clerestory windows. In addition to the usual library functions, the facility includes shared computer labs, distance learning center, study rooms and interior and exterior meeting spaces. The building incorporates numerous sustainable features and is on track for a LEED Silver rating from the United States Green Building Council.

<http://nachtlewis.com/portfolio/north-natomas-public-library/>

### Cosumnes River College Learning Center, Los Rios College District, Sacramento, CA – USA 2004

#### **Awards:**

AIA – Central Valley Chapter Merit Award  
46,000 sqf.

In 1968 Nacht & Lewis Architects developed the master plan for Cosumnes River College campus, part of the Los Rios Community College District. Nacht & Lewis continues to add to the campus with their design of the Instructional & Library Facility, set for construction in Spring of 2004. This is a 2 story, 43,000 s.f. building that provides two 90 seat lecture halls, classrooms, learning resource centers, faculty offices and program administrative areas. The building design fits tightly within a formal masterplan and utilizes brick and concrete in a contemporary manner to respond to an established campus architecture. The site development and landscaping introduces informal pedestrian circulation and outdoor gathering areas which encourage the student and faculty use of outdoor spaces. At night the top of each stair tower will glow as lanterns to anchor the building within the campus, and the grounds will be accentuated with low level and LED lighting. The interior of the building utilizes extensive natural daylighting and is divided into recognizable patterns of horizontal and vertical circulation. Some of the design challenges include providing privacy for the staff and faculty while maintaining open public space for student use. The facility also incorporates extensive data and technology distribution for support of computers and learning spaces.

<http://nachtlewis.com/portfolio/learning-resource-crc/>

### Nagle Hartray Danke Kagan McKay Penney, Chicago, IL – USA

<http://www.naglehartray.com>

#### **Libraries:**

[DeKalb Public Library, DeKalb, IL – USA on design](#)

Area: 53,875 s.f. addition

**Site and Program:** The DeKalb Public Library is an architectural gem that is on the National Register of Historic Places. It was constructed in 1930 in a Deco-Moderne style with funds donated by a local barbed-wire magnate. The Library's space needs long ago outgrew the building's modest size.

The Library tried to negotiate the purchase of land on which to build a new, larger library, but this proved unfeasible due to its cost. Prompted by Nagle Hartray, the Library decided to expand on its current site, tripling the size of the current building.

**Design:** The primary design challenge was to allay Library and community concerns about adding onto its historic building without compromising the efficiency of an expanded floor plan. The design addresses these concerns by repeating the rhythm of the existing building plan, defining a new central building entry that makes all areas of the expanded floor plan equally accessible, and using the language of the existing architecture as a basis for the new without the type of simple imitation that would confuse old and new.

<http://www.naglehartray.com/portfolio/current-work/dekalb-public-library.htm>

### Chicago Theological Seminary, Chicago, IL – USA 2011

Area: 78,000 square feet

**Site & Program:** The new home for the historic Chicago Theological Seminary is on the campus of The University of Chicago. The program includes administrative and faculty office, classrooms, meeting rooms, a chapel, a library, a reading room, and computer/learning commons within the first three floors. The fourth floor is dedicated for the Seminary community, housing a larger chapel and a dining space for 300 people each. This level features terraces and green roofs to reinforce a connection to the Midway Plaisance.

**Design:** Exterior design takes into consideration the surrounding campus context by incorporating stone as the primary exterior material, in keeping with the majority of University buildings. Metal panels wrap the second and third floors on the west and south facades. The LEED Gold building expresses its environmental stewardship in the form of green roofs, a bioswale at grade level, and the use of local natural materials to express and enhance the connection between the spiritual and the secular.

### Fountaindale Public Library, Bolingbrook, IL – USA 2011

Area: 98,200 square feet plus basement

#### **Awards:**

AIA Chicago Distinguished Building Award;

Best in Class - Municipal Category, Brick In Architecture Awards

First Place - Institutional Category, American Society of Interior Designers Design Excellence Awards

#### **References:**

Library Journal "Year in Architecture 2012"

American Libraries Magazine (online version), "Library Design Showcase 2012: Youth Spaces"

ILA Reporter, "New Library Buildings", Volume XXX, Issue 1

Chicago Tribune, March 7, 2011; Herald News, March 7, 2011

Bolingbrook Patch, March 8, 2011 and March 30, 2011

Providing a new main library facility with ample space to serve the many needs of the community, while fitting into an otherwise residential area, was the challenge faced by the architects for this project. The new \$25-million, three-story 96,000 s.f. facility with an additional 13,000 s.f. of basement space is the result. The site plan and building footprint are organized to create a presence for the library along the primary access, Briarcliff Road, while maximizing views of the existing park in which it is being constructed. The size of the floor plates approach the maximum size recommended by library planners with proportions that will provide flexibility for the future. Plans feature green roofs that further reinforce a connection with the building's park setting. The building has been designed to achieve a prestigious LEED 2.2 Gold Certification. The planning for the building began as with any other, with rectangular floor plates. As the process evolved pieces of the floors were carved away to provide a less formal form with the result that no two floors in the building have the same footprint and the total three-dimensional volume becomes a very organic element

that fits well into the park setting. Given the varieties in the floor plates and the complexities of the shapes, reinforced concrete proved to be an ideal structural system. Typical interior bays measuring 24'-6" x 30'-0" resulted in the selection of a two-way flat slab system with capitals at the interior columns. The use of the concrete floor system also helped to minimize the overall structure depth which was critical in controlling the overall height of the building. The use of high strength concrete made it possible to limit maximum interior column size 24" x 24". The exterior wall system chosen included a masonry veneer with light gauge stud backup construction. The use of downturned beams at the perimeter of the floor plates allowed for the installation of a continuous shelf angle at each floor to support the masonry veneer at the level of the window heads. The beams also helped to minimize the deflections in the slab, a critical consideration in supporting the masonry veneer. The concrete slab system easily accommodated the use of the selected green roof system. The sloping concrete slab of the main roof with an upturned curb at the perimeter proved ideal for directing the required drainage to interior downspouts. In conjunction with relatively slender circular concrete columns along the perimeter curtain wall the system provides for very dramatic stack spaces for the libraries materials. In order to provide for resistance to lateral wind and seismic forces it was decided to include a limited number of cast-in-place concrete shear walls at the elevator shafts and stairwells. The combination frame/shear wall structure proved to be a very efficient and economical lateral load system. The building is supported by conventional spread footing foundations. At the ground level the floor slabs are conventional slab on grade construction with the exception that in place of traditional welded wire fabric to control random shrinkage cracking, the concrete mixes include micro-fiber reinforcement. The building is currently under construction with completion anticipated in early summer of 2011. <http://www.cement.org>

**Site & Program:** The site plan and building footprint are organized to create a presence for the library along Briarcliff Road while maximizing views of an existing park. The size of the floor plates approach the maximum size recommended by library planners. The proportion of the floor plates provides flexibility for the future.

The building plan began with rectangular floor plates which were carved away to provide a more organic form. Each floor plate is unique and the total three-story volume fits well into the park setting. Extensive green roofs further reinforce a connection to the park.

**Design:** Our favorite stories often bridge familiarity and fantasy to deepen our understanding of our place in the world. Interior design for Fountaindale Public Library aspires to similar relevance.

Overlapping ideas inform the design. One is an 'opening up' that unfolds between the intimate lobby environment and the airy reading room above. Another is the manifestation of community identity through materials fashioned to simulate a natural environment. Another is variety in library environments to serve an increasingly diverse population, an emerging trend among suburban public libraries.

These ideas are manifested in a variety of design elements. Upon entering, a tree-like wood canopy creates an intimacy that is echoed in "caves of wood" study rooms above. The Children's area is a collection of interior parks organized around interactive, tectonic tree exhibits. The Teen area is a world unto itself intended to foster life-long library users among an age group often neglected in library design. The stair wraps an LED-lit glass 'tube' that cycles through color displays according to the clock to orient visitors in time and space. Glass patterning, which is traced from tree shadows, has a transformative effect. Cumulatively, these environments create a library environment both familiar and otherworldly.

The library is LEED Gold certified.

### [Warren-Newport Public Library, Gurnee, IL – USA 2011](#)

Area: Renovation – 50,000 square feet light and heavy; Expansion – 5,000 square feet

**Site & Program:** The building that Nagle Hartray was selected to expand and renovate consisted of the original 1970s Library with two additions including a 1996 addition that doubled the Library's size. This last addition did much to create a 'modern' identity for the library, but little to untangle the rabbits warren of overcrowded staff spaces out of public view. The primary purpose of the new project was to address these unmet needs.

**Design:** The scope of work involved 18,880 s.f. of light remodeling, including the replacement of carpet, lighting, and paint while 31,000 s.f. involved heavy renovation. 5,000 s.f. of new space was added in the form of a community meeting room. The most substantial work was the renovation of back of house spaces that included the creation of an internal corridor system to foster staff interaction not possible before. On the public side, new group study rooms, a computer lab, a teen room and a storytime room brought the Library up to date in public library design.

The Library's neighbors include village hall, the police station and the local high school, all of which are rendered traditionally in red brick. Nagle Hartray bridged the aesthetic divide between the Library's modern building and its civic neighbors by repeating the Library's sloped roof form and cladding the addition in red rain screen panels that complement its brick-clad neighbors and recall the agrarian architecture of the community's past.

<http://www.naglehartray.com/portfolio/current-work/warren-newport-public-library.htm>

### [Evanston Public Library, Evanston, IL – USA 2003](#)

115,000 sqf.

#### **Awards:**

Chicago Building Congress Award

Excellence in Masonry Gold Award

Evanston Preservation Award

ALA/IIDA Library Interior Design Award for The Loft

Chicago AIA Interior Architecture Award for The Loft

**Site & Program:** The urban site is centrally located in downtown Evanston. The building is the result of a national competition won by a young architect who chose to team with Nagle Hartray to execute the project.

**Design:** The design conveys the library's civic importance. The arrangement of building massing, particularly masonry piers, create strong shadows that provide the architecture an unusual depth. The architecture strikes a balance between monumentality and human scale appropriate to its purpose. Library interiors are organized around a central open stair that provides orientation to visitors as they move between floors. The main reading room on the top floor is a primary feature. It is larger than usual for a public library in order to serve both citizens of Evanston and students from nearby Northwestern University. We recently completed the renovation of the existing Children's Room and the build-out of The Loft – a dedicated space for teens. We collaborated with architectureisfun, Inc., a firm that specializes in designing environments for children, on the development of age-specific zones that include interactive, museum-like elements.

<http://www.naglehartray.com/portfolio/civic-cultural/evanston-public-library.htm>

### [Oak Park Public Library, Oak Park, IL – USA 2003](#)

104,000 sqf.

**Awards:**

**Chicago Building Congress Award of Merit and Midwest Construction Magazine's Best of 2004 Award for New Library Construction**

**Site & Program:** The site is a transitional location in central Oak Park. It is across from Frank Lloyd Wright's Unity Temple and other similarly monumental and formal buildings. It also fronts the Jens Jensen-designed Scoville Park, which is informal by comparison. The program called for doubling the size of the former library on the same site. **Design:** Nagle Hartray led a community-wide design process through 20 to 25 public meetings. The resulting library truly reflects the community's values, which include respect for architectural heritage, diversity and sustainability. A paved plaza replaced the street between the library and the park, increasing library flexibility through larger floor plates and providing the Park District an amenity for summer festivals. The stone-clad street façade reinforces the formal architecture of neighboring buildings. The undulating, copper-clad façade reflects the informal and organic nature of the park. The architectural "style" is intentionally non-referential to reflect the community's diversity. Sustainability goals were achieved within a limited project budget. Flooring consists of recycled rubber sheet goods. A green roof increases insulation and roofing life, and reduces storm water drainage demand. Copper cladding consists of about 75% recycled material. Stone cladding is quarried within a 500 mile radius.

**Neumann / Smith Architecture, Southfield, MI – USA**

<http://www.neumannsmith.com>

**Libraries:**

**Holocaust Memorial Center, Library, Zekelman Family Campus, Farmington Hills, MI – USA 2003**

Amid nondescript office buildings, small strip shops, coffee shops, banks and restaurants, the Holocaust Memorial Center commands attention. Everything about the 50,000 sf structure evokes powerful emotions. The gray and blue striping on the second story reminds visitors of the camp clothing Holocaust prisoners were forced to wear. The cables criss-crossing the exterior brick represent concentration camp fencing. Even the shaggy greenery around the perimeter is reminiscent of the meadow grass that flourished near the camps. All of this uncomfortable imagery is deliberate to convey the great destructive force of intolerance. Juxtaposed against these images of pain is the rounded enclosure for the International Institute of the Righteous. The only soft form in the building and the only white color in the composition, the ellipse attempts to express the purity and the elusiveness of altruism. Six white glass pyramids, fifteen feet in height, serve as skylights by day. Illuminated flames by night, they pay homage to the six million Jewish lives lost.

**Newman Architects, New Haven, CT – USA**

<http://www.newmanarchitects.com>

**Libraries:**

**Samuel Slover Memorial Library, Norfolk, VA – USA 2015**

Newman Architects has recently won a design competition for the new Slover Memorial Library in Norfolk, Virginia. The approximately 137,120-square foot Slover Library is scheduled to open in 2013. The project will entail the renovation and restoration of the historic Seaboard Building and will add a new wing that will connect to the Seaboard by a glass atrium. When completed, the library will be one of the most technologically advanced in the world.

For additional information on the project, please click here to view a press release, newspaper coverage, and selected images of the preliminary design. For video news coverage, please click here.

<http://www.npl.lib.va.us/about-npl/hours-locations/new-slover-branch>

**Richgefield Library, Richgefield, CT – USA 2014**

Set in a park-like setting on a bucolic small town main street, the original library, built in 1903, is red brick, Beaux-Arts, and simultaneously diminutive and monumental. Behind the 1903 building lie a series of additions, defer in material and overall scale to the original.

As a library for the future, our design proposes a melding of town fabric with town life. The new library addition forms connections. Large windows will frame views so that the townscape becomes part of the interior architecture. In plan and section, the new locks into the topography of the site, the street, an adjacent building façade, and the old library. There will be multiple points of entry – from Main Street, a side street, parking lot, and lower parking lot. All lead directly to a central organizing node in which the many components of the library intersect.

Sustainable design elements include the use of geo-thermal and photo-voltaic energy sources.

**John Jermain Memorial Library, Sag Harbor, NY – USA 2011**

**Sag Harbor Votes to Restore and Expand Library**

(The John Jermain Memorial Library is the public library in Sag Harbor, NY. Founded in 1910, the library building and initial collection was a gift from Margaret Olivia Slocum Sage to the people of Sag Harbor).

The citizens of Sag Harbor, New York, voted resoundingly in favor of restoring and adding to its John Jermain Memorial Library. In August 2009, design work will begin to create a 21st century library for this historically significant eastern Long Island town. The deteriorating fabric of the existing Beaux Arts building will be restored. A new addition will express the new relationship between the institution of the library, information media, and the community. Richard Munday is partner-in-charge. Michael Scott is the project manager.

<http://www.newmanarchitects.com/project.html?pid=189>

By Amanda Wyatt

The year 2012 was a whirlwind for John Jermain Memorial Library (JJML), but don't expect it to slow down too much in 2013. In fact, the library is moving full speed ahead with its renovation and expansion during this new year.

Already, scaffolding is being slowly taken down from the historic building, which has been undergoing a massive renovation since last spring. And if all goes according to plan, JJML will be able to break ground on its new, modern addition to the 102-year-old structure later this month.

The multimillion-dollar construction project has been years in the making, and was approved for funding by library district voters in 2010, but as Catherine Creedon, JJML's director, explained this week, the library really kicked the project into high gear last March.

That was when JJML received its building permit from the Village of Sag Harbor, as well as a construction loan from the Bridgehampton National Bank.

"Those two things really allowed us to begin the project in earnest," Creedon said.

For Creedon, nine months ago feels more like "a million years ago," considering all of the work that has been accomplished in such a small amount of time.

The exterior bricks at the historic building have been restored with a new roof currently in the works. The restored stained glass lay light — one of the architectural gems of the library — will also be installed soon.

All of the windows have been restored, and new mahogany storm windows have also been fabricated for the outside of the building.

The library's lighting fixtures, which were originally wired for gas, are being cleaned and rewired by a master craftsman in Connecticut.

The building's "crown jewel" — the terracotta dome designed by the R. Guastavino Company and located on the third floor rotunda — has also been restored after a rather anxiety-provoking discovery this summer.

"We took off the old copper dome and it was in very bad shape, corroded in a variety of places, worn very thin and quite grayed out and green," said Creedon.

But when workers began to take off the terra cotta tiles to replace them, they discovered that the steel compression ring — which went around the base of the dome — had been corroded. As a result, they built a temporary shoring ring which was used until the new compression ring was built.

"We knew we would discover the unexpected, and indeed we did. So that was a time delay and an extra cost," Creedon said.

"I've been told that most of the surprises will be behind us. The old building held a lot of mystery, but the new construction should be a little bit more straightforward," she added.

But as Creedon noted, the library's "ongoing priority is to restore and stabilize the historic structure before we break ground [on the new addition], before we do any on-site vibration that could further damage it."

And while the library's exterior might be the most visible part of the John Jermain building project, its interior renovation is just as exciting to Creedon.

The library is looking into purchasing small, freestanding charging stations that are solar operated, which Creedon noted will be useful during power outages. These stations would be able to "power up a cell phone, a laptop or an espresso maker — depending on what you feel your critical needs are," Creedon joked.

Currently, Trunzo Builders, the Wainscott-based company heading the renovation, is finding ways to rewire the historic building to improve wireless communication. Pat Trunzo III said his firm was picking out special floor boxes to be installed on all three floors that would allow for patrons to both charge their laptops and hardwire them to get internet access.

JJML is also planning to put in place a LOOP hearing-amplification system throughout the building for the hearing impaired, as well as computers with specialized voice recognition software, movie and music-editing software and more.

In the new building, there will be less space for DVDs, which Creedon likes to call "the VHS tapes of the very near future."

The library, said Creedon, is seeing an increase in the number of people asking for help with digital downloads, e-book devices and specialized computer applications.

"We're really looking at the new space and saying how can the library fulfill its mission of providing information to the community by being a teaching institution, by making sure that if more and more information is available only electronically, that we've not only provided access to that information, but we've given our community the skills with which to access it. So that has been key as we look at the design of the building," she said.

"We're always responding to changes in culture."

### [Ferguson Library, Stamford, CT – USA 2010](#)

The library, located in the heart of downtown Stamford, has long been a vital and popular resource for the community. The building program posed several challenges to our design team. The library's interior, furnishings and equipment were long overdue for renewal and replacement. IT infrastructure required substantial expansion and refreshing to meet the needs of a growing tech savvy patron base. The Children's Services program was poised to double in size and numerous ADA issues needed to be addressed. In addition to updating MEP infrastructure and implementing state of the art information technology, a new space plan was developed to enhance Ferguson Library's long standing goals of providing an environment of sociability and community within the library. The character of the library as a family center, information hub and portal to knowledge was enhanced through a thoughtful reconfiguration of existing spaces, restoration of historic rooms, and careful implementation of new technology.

<http://www.newmanarchitects.com/project.html?pid=202>

### [Dana Addition Case Library, Colgate University, Hamilton, NY – USA 2007](#)

30,000 sqf

**Awards:**

**Honor Award for Design Excellence AIA / ALA  
Architectural Citation National School Boards Association  
Honor Award for Design Excellence AIA Connecticut**

When it was built in 1958, the Case Library conformed to the notion of a library as a warehouse for books, and its architectural treatment reflected that idea. With our addition, we give it a heart, reflecting its importance as the center of learning at the University, and a place for imagination. Our solution hides the existing library behind a 30,000 square foot addition, treating it like a “bustle” behind the new mass. This gives the library new prominence on the campus, forming a stone and brick façade that makes it compatible with the surrounding mid-nineteenth century Georgian and Victorian architecture. A new two-story central reading room is now its heart, offering views to the north and a variety of reading rooms, ranging from alcoves to an attic loft, allowing students to choose from many group or single study spaces.

**Sterling Law School Library, Yale University , New Haven, CT – 2004**

**Awards:**

**National Honor Award for Design Excellence AIA, ALA  
Excellence in Architecture AIA Connecticut**

One of the most elegant interior spaces on campus, the Yale Law School Library was designed by James Gamble Rogers in 1932. However, by the late 1970's the Library had grown shabby, overcrowded, and noisy with the influx of copying machines. In addition, one of the lecture halls at the school put students at an awkward distance from the speaker. The law school asked us to make both of these spaces more amenable.

Our intervention restores the shell of the Library and its rich detailing, shifts the photocopiers to adjacent areas and replaces most of the reading tables with oak carrels and comfortable chairs. The card catalog is relocated to the center of the room for better visibility and access. The new design of the carrels provides task lighting below, while up-lighting the lovely, restored painted wood ceiling beams and gargoyle capitals.

<http://www.newmanarchitects.com/project.html?pid=138>

**Eugene M. and Christine E. Lynn Library, Lynn University, Boca Raton, FL – USA 1998/1999**

**Awards:**

**Honor Award for Design Excellence, American Institute of Architects/ Connecticut  
National Publications Awards, Post-Secondary Citation, American School & University Architectural Portfolio**

The Lynn University Library is classical in form and monumental in scale, but the materials and building details follow the regional vernacular. The columns and walls are unadorned stucco in the manner of contemporary Florida construction, and windows are set deeply into the walls and shaded with metal screens. Screened, shaded porches at the front and rear also reflect the climate and local patterns of building use.

The major information hub is placed at the entrance to the library so that users can easily find their way to reference librarians, reading rooms, meeting rooms and support staff. A circular stairway marks this major point of confluence and is illuminated with a skylight. Rather than one main reading room, smaller reading and study areas are interwoven among the open stacks. They are positioned near windows to provide readers with natural light and views of the outdoors.

<http://www.newmanarchitects.com/project.html?pid=77>

**Westport Public Library, Westport, CT – USA 1998**

**Awards:**

**Connecticut Award for Excellence in Public Library Architecture, CT Library Association 2003**

Our addition and renovation responds to programmatic requirements that require discreet spaces for the complex needs of today's library.

A town library is an emblem of civic pride. The Westport Library has long been an important town resource and meeting place, but its structure was lacking appropriate circulation and space to meet enhanced use, and required expansion. Our solution was to renovate the original library, and design a new addition that will meet the needs of its growing community and new technology.

[http://www.newmanarchitects.com/projects/Westport\\_Westport/Newman%20Architects\\_Westport%20Public%20Library.pdf](http://www.newmanarchitects.com/projects/Westport_Westport/Newman%20Architects_Westport%20Public%20Library.pdf)

**Jewish Religious Center and Library, Williamstown College, Williamstown, MA – USA 1990**

**Awards:**

**Design Award, AIA New England Regional Council  
Honor Award for Design Excellence, AIA Connecticut  
International Honor Award for Design Excellence, Interfaith Forum of Religion, Art and Architecture AIA 1991**

Located on residential street on the edge of the campus, the Center is house-like and provides a setting for activities that are religious, scholarly and familial. We wanted the students who used the Center to feel at home in their heritage - as a place of identity, a place from which to draw strength and to find support. We also wanted the building itself to look 'at home', while expressing its

religious, academic, and community purpose. And fundamentally, we wanted the building to convey the spirit of the Jewish experience.

<http://www.newmanarchitects.com/project.html?pid=113>

### [Guadalajara Public Library, Guadalajara, Jalisco, Mexico, Jalisco State Library – USA Design Competition](#)

For this competition for a new public library in a university town, our design began with a simple, old idea: of a library as a room with books, a chair, a table, and window to read by. We looked for a way to make that idea real at a large scale and in the context of new and shifting media growth patterns in knowledge and information.

Our solution for this project was the concept of the continuous strand, which weaves the book – whether paper or virtual – like filaments through a continuous, linear field of readers - bringing media and reader close together. The strand spirals up through space to create a broad central courtyard open to the elements. The courtyard creates sheltered outdoor space and acts to induce natural ventilation within the library. A plaza passes below the spiraling strand to link exterior open space to interior open space. Masonry shields clad the spiral circumstantially to block or admit natural light.

#### [Levi Watkins Learning Center, Alabama State University, Montgomery, AL – USA 2012](#)

Owner Alabama State University, Architect NHB Group, LLC, Engineering Consultants MBA Structural Engineers, Structural Engineer Zgouvas, Eiring & Associates, Contractor Rabren General Contractors, Square Footage 46,000 SF Addition, 86,964 SF Renovation, Costs Total \$ 16.700.000, New \$ 7.800.000

The new addition and renovations to the Levi Watkins Learning Center consist of a five floor addition to the existing library as well as complete interior and exterior renovation to the existing library. Renovations include installing new electrical and Mechanical systems to bring the existing building into full compliance with the 2006 International Building Code, a new HVAC system, furniture, carpeting, shelving systems and staff office renovations. The addition allows the library to be a resource to the 21st Century student by providing the technology, research facilities and academic support that will serve current and future ASU students and faculty for years to come. Once the project is completed, the library will have the capability to expand the archives and special collections and will house new information commons areas, group study areas for faculty and students as well as an internet cafe with outdoor seating. The addition will also increase shelving space to accommodate ASU's nine new academic programs.

<http://www.nhdm.net>

#### **Libraries:**

#### [Nam June Paik Library, Nam June Paik Art Center, Yong-In – Korea 2011](#)

The Nam June Paik Library is a new public art library in Nam June Paik Art Center in Yong-In, Korea, open to general public on April 15th, 2011. The library was designed by a U.S. based design and research collaborative N H D M / Nahyun Hwang + David Eugin Moon. The library collects, preserves, and provides access to historical and contemporary material related to Nam June Paik and his art. It offers to scholars a space for professional research, and to the local community an open forum for cultural engagement. The library houses and circulates the Center's Nam June Paik Archives Collection, Nam June Paik Video Archives, and a rare Fluxus Footages Collection, as well as the user generated materials. The design and construction of the library was made possible by City of YongIn and Gyeonggi Province Government's Small Library Fund. Inspired by Nam June Paik's artistic processes, the goal of the project was to design a multi-functional spatial device, which redefines the relationship between library users and information. While the conventional library is characterized by the one directional transmission of information, where the static, centralized, and predefined content is passively received by the readers, the Nam June Paik Library aims to promote non-linear and random access to information, to stimulate production of information beyond consumption and advocates spontaneous expression and juxtaposition of ideas. The Library Machine located in the center of the library deploys the following 6 architectural and programmatic devices.

##### 1. Scattering

The juxtaposition of the dispersed information produces complexity that contrasts the simple geometric initial form.

##### 2. Non-Textual Content / Off-Site

Objects related to Paik's work are scattered, plugged, and mapped throughout the surface of the machine. Reprogrammable dynamic media can communicate Paik's previous works, as well as information on artistic and other happenings from the off-site locations of interest.

##### 3. Physical Engagement

Additional storage areas and unique shelving in the long drawers are incorporated to help the future expansion of the collection, while inducing curiosity, interactivity, and playful engagement.

##### 4. Production Lab

Inside the machine is reading, installation, video laboratories, and a space also for debates and group workshops.

##### 5. "Representation Cells"

Content is also generated by users who can contribute to the information exchange. Small spaces or vitrines are made available for public display.

##### 6. Library "Machinettes," The Propagation Aides

Parts of the machine can detach as independent modules and can freely travel to other rooms or even outdoors to perform communicative functions, such as video projections or sound performances.

The design attempts to make the intangible physical and to turn a personal experience to a collective and interactive one.

Through the Library, the contents become dynamic, and the consumer of information becomes the producer. The collective generation and appreciation of information makes the library experience multi-directional and reciprocal.

<http://www.dezeen.com/2011/12/21/nam-june-paik-library-by-n-h-d-m/>

Inspired by Nam June Paik's artistic processes, Nam June Paik Library was designed as a multi-functional spatial device,

which redefines the relationship between library users and information. In contrast to the conventional library characterized by the one directional transmission of the static, centralized, and predefined content, the Nam June Paik Library aims to promote non-linear and random access to information, and its production beyond the prescribed consumption. Through spontaneous expression and juxtaposition of ideas, the consumer of information becomes the producer and the static contents of the library turns dynamic. The collective generation and appreciation of information makes the library experience multi-directional and reciprocal. opening/institution info

## **Noll and Tamm Architects, Berkeley, CA – USA**

Cris Noll, Janet Tam

<http://www.nollandtam.com>

### **Libraries:**

#### **Los Gatos Library, Los Gatos, CA – USA 2012**

Client: Town of Los Gatos, Construction Cost: \$ 18,000,000

Nestled at the foot of a wooded hillside, the two-story, 30,250-square-foot Los Gatos Library provides a visual connection between the Town's historic Pageant Park and the adjacent Civic Center. The design concept is based on the lantern, which in architectural terms suggests an open, light-filled structure. Daytime illumination optimizes the use of natural daylight, with glazing on the north wall, skylights at the stairway well, veiled glazing on the south wall, and use of louvers to bounce light into the library. At night, white and colored artificial light allows visibility from the street and views into the library.

The site is at the edge of the existing Civic Center and abuts a steeply graded hillside, so building footprint options were limited. To eke out the maximum possible square footage, the architects designed a rectilinear building, then added cantilevered "pop-out" elements to break up the static shape. The steel-frame building is clad with stone veneer, porcelain tile, a wood veneer composite panel rainscreen, honeycomb core aluminum panels, and an aluminum solar shading system. The materials and exterior colors take inspiration from surrounding natural elements and buildings.

Inside, the low lobby ceiling opens suddenly onto the two-story main staircase, giving a sense of airiness and arrival. This stair is the central focus of the library and a feature design element. An etched glass art installation by Sheri Simons decorates the back wall of the staircase, alternating transparent and frosted panels and graphic elements.

While the open floor plan celebrates large spaces, the design also incorporates more intimate reading areas. Special attention was given to design elements that make each program space unique. The periodicals reading room, located behind the stairwell on the main floor, has a dark-paneled clubby adult atmosphere, with a gas-lit fireplace. A moveable window wall opens onto a patio, creating an outside room in the warmer months. Off the main floor lobby, a brightly colored sign denotes the children's library. Entering the children's area, visitors find themselves beneath an undulating starry sky, with glowing back-lit cutouts of celestial swirls and planets. On the rear wall, recycled transparent plastic has been fashioned into luminescent circular artwork by Benjamin Phipps. Smaller circles act as wall sconces, while larger circles are recessed to serve as reading nooks. A door to the outside leads to a secret garden, where larger-than-life books sculpted in cement represent favorite classic children's literature.

Like a hip treehouse, the teen area is located on the second floor in the cantilevered "pop-out," which gives it views to outside as well as visibility from the street. Teen lounge-style seating offers a group gathering area. The ceiling is detailed with Interlam, painted a vibrant red. The second floor also features a Local History Center, with exhibit cases and a video screen to display artifacts of note. The design team is aiming for a LEED Gold certification, emphasizing visible sustainable systems and educational display features.

#### **Alameda Branch Libraries, Alameda, CA – USA 2011**

City: Alameda Free Library, City of Alameda, Construction Cost: \$ 2,000,000

After a feasibility study for the City of Alameda, Noll & Tam was hired to renovate two branch libraries. We worked closely with library administration and city staff to give them the most "bang for the buck," resulting in upgrades to accessibility, electrical and data systems, HVAC, new furniture, lighting fixtures, and finishes. The historic West End branch received structural and seismic improvements.

[http://www.nollandtam.com/portfolio/libraries/alameda\\_branch](http://www.nollandtam.com/portfolio/libraries/alameda_branch)

#### **Valley Hi North Laguna Library, Sacramento Public Library, City of Sacramento, CA – USA 2009**

Construction Cost: \$ 10,800,000

This new high-performance, LEED Gold-certified branch library for the City of Sacramento pushes the envelopes of sustainability and design. The 20,500-square-foot building has been embraced by the community, offering an expanded collection, community meeting room, technology center, self-service checkout, study rooms, a Teen Area, and Children's Library. Valley Hi-North Laguna library won a Design Excellence Award from the AIA San Francisco in 2011.

[http://www.nollandtam.com/portfolio/libraries/valley\\_hi](http://www.nollandtam.com/portfolio/libraries/valley_hi)

#### **Castro Valley Library, Alameda County Library, Castro Valley, CA – USA 2009**

Client: County of Alameda General Services Agency, Construction Cost: \$ 12,200,000

A light-filled, ultra-modern facility, the 34,000-square-foot Castro Valley Library offers a flexible design that accommodates a variety of community needs. Preschool-aged children, teens, and seniors all have their own reading/study areas, and a Friends of the Library bookstore and café offer a sophisticated way to enjoy a good read. Abundant natural light and an efficient heating and ventilation system contribute to the building's LEED Gold rating.

[http://www.nollandtam.com/portfolio/libraries/castro\\_valley](http://www.nollandtam.com/portfolio/libraries/castro_valley)

#### **Portola Branch Library, San Francisco Public Library, City of San Francisco, CA – USA 2009**

Construction Cost: \$ 3,400,000

The 6,300-square-foot building is the culmination of creative collaboration between the joint venture of Noll & Tam Architects and Stoner Meek Architects, the San Francisco Public Library, and the Portola community. The new library offers designated teen space, a children's room, and flexible space to support events after hours. An open book motif is represented in the sunshades along the building's southern wall. (Noll)

<http://www.nollandtam.com/portfolio/libraries/portola>

Program: A single-story, 6,300-square-foot public library on a residential street, with stacks and periodicals along the south wall and a children's room, a program room, and staff offices along the north. A side garden borders the children's room and program room, which also has a separate entrance from the outside. Design concept and solution: To integrate a civic building into a residential context, the architects wanted to strike a balance between exposing and obscuring: much as a house does, the library brings in light without fully revealing the activity within. On the southern facade, a sequence of tall "shutters" resembling the pages of open books offers shade and privacy, while tall windows tucked behind the folds bring in a play of daylight that changes throughout the day. The shades' interior bays double as private reading spaces that together form a kind of indoor porch. A stretch of skylights spans the length of the library and divides the public program from staff spaces. To underscore the residential motif, the architects clad the library with shiplap wood siding, which they also used on the interior in rust red and in a natural wood stain.

<http://archrecord.construction.com>

### [The Bancroft Library, Doe Library Annex, University of California, Berkeley, CA – USA 2008](#)

Construction Cost: \$ 42,000,000

Noll & Tam Architects served as the Associate Architect with Ratcliff (Prime Architect) for the seismic and programmatic improvements of The Bancroft Library, which houses UC Berkeley's rare book and manuscript collections. The scope of work included a complete re-design of the building's 217,500-square-foot interior to meet current and projected needs. Noll & Tam's programming capabilities, group facilitation, and interior design expertise were central to the renovation of this historic building.

<http://www.nollandtam.com/portfolio/libraries/portola>

### [Marina Branch Library, City of Marina, CA – USA 2007](#)

Client: City of Marina, Construction Cost: \$ 6,200,000

Noll & Tam Architects designed the new 20,000-square-foot Marina Branch Library and administrative offices for the Monterey County Library system. In addition to a children's library, periodicals room, and general reference, the new facility provides study rooms, a large community meeting room, and a homework center. Careful attention was given to siting the building among the natural features in this coastal city.

<http://www.nollandtam.com/portfolio/libraries/marina>

### [Morgan Hill Library, City of Morgan Hill, CA – USA 2007](#)

Construction Cost: \$12.9 million, Completion Date: July 2007

The new 28,000-square-foot Morgan Hill library began with a master planning exercise that sited the new building in the Civic Center complex. Using a visioning workshop, we achieved consensus on scaling the library to complement the surrounding neighborhoods and using materials that reflect the setting. The main reading room is framed with graceful trusses and is lit by tall window bays.

[http://www.nollandtam.com/portfolio/libraries/morgan\\_hill](http://www.nollandtam.com/portfolio/libraries/morgan_hill)

### [Contra Costa College Library Renovation, Contra Costa Community College District, San Pablo, CA – USA 2007](#)

Construction Cost: \$4.3 million

Noll & Tam's work on the Contra Costa College Library, a 1960s-era building, involved a complete renovation including a seismic and life-safety upgrade. We transformed under-utilized office space into a state-of-the-art Skills Center, allowing the Library to better serve current student needs. The library is the focus of a reconfigured quad area which now serves as a central meeting point for students and faculty.

[http://www.nollandtam.com/portfolio/higher\\_education/contra\\_costa\\_college](http://www.nollandtam.com/portfolio/higher_education/contra_costa_college)

### [Cañada College Library & Student Resource Center, San Mateo Community College District, Redwood City, CA – USA 2007](#)

Construction Cost: \$22.5 million, Completion Date: June 2007

Noll & Tam's design for a three-story Library/Learning Resource Center at Cañada College facilitated a new point of entry for the campus, linking student parking lots to the campus quad. The 72,000-square-foot center allows library collections to expand, while incorporating tutorial and writing centers, computers, offices for instructors and faculty, and, on the ground level, consolidated student services.

[http://www.nollandtam.com/portfolio/higher\\_education/canada\\_library\\_resource](http://www.nollandtam.com/portfolio/higher_education/canada_library_resource)

### [Carmichael Branch Library, Sacramento, CA – USA 2006](#)

Client: Sacramento Public Library, City of Carmichael, Construction Cost: \$ 4,700,000

Noll & Tam Architects designed the renovation and expansion of the Carmichael Branch of the Sacramento Library, transforming an outdated design. The open layout features expansive window walls and a series of light wells. An expanded children's area, adult reading room, teen area, technology center, special collections area, community meeting room, and staff and support spaces serve the local community.

<http://www.nollandtam.com/portfolio/libraries/carmichael>

### [Rohnert Park Library, Sonoma County Library System, Rohnert Park, CA – USA 2003](#)

Construction Cost: \$6.4 million, Completion Date: September 2003

#### **Awards:**

This library was the recipient of the Best of 2003 California Construction McGraw Hill Award.

Developed from a broader master planning exercise, Noll & Tam's design for the new 24,000-square-foot Rohnert Park Library anchors a highly visible corner in the City. As a county library, it sets a new standard with regard to its innovative technology, relaxing fireplace, and ample reading rooms for adults and children.

[http://www.nollandtam.com/portfolio/libraries/rohnert\\_park](http://www.nollandtam.com/portfolio/libraries/rohnert_park)

## [Fong Library, School of Optometry, University of California, Berkeley, CA – USA 2002](#)

Construction Cost: \$ 1,200,000

Noll & Tam Architects transformed the 4th floor of Minor Hall into a state-of-the-art student resource center for Optometry students, comprising a new library, lecture theatre, teaching computer laboratory, and meeting rooms. The Optometry School wanted to unify these spaces into an active student center and focal point. The project required careful coordination with existing conditions to provide upgraded systems routed through the concrete structure.

[http://www.nollandtam.com/portfolio/higher\\_education/fong\\_optometry](http://www.nollandtam.com/portfolio/higher_education/fong_optometry)

## [American Canyon Library, Town of American Canyon, CA – USA 2001](#)

Noll & Tam's renovation of the American Canyon Library, a branch of the Napa City-County Library system, includes spaces for children, young adults, general reference, periodicals and computers in a compact 5,400 square feet. The building was originally a bank before serving as City Hall. A new skylight has transformed the interior and a community meeting room is available to the public for meetings and special events after the library is closed.

[http://www.nollandtam.com/portfolio/libraries/american\\_canyon](http://www.nollandtam.com/portfolio/libraries/american_canyon)

## [TeenZone, Rockridge Branch Library, Oakland Public Library, Oakland, CA – USA 1996](#)

The Rockridge Branch Library, constructed in 1996, sought to establish a dedicated teen area with a modern programming approach. Noll & Tam's design carves out a corner for two conjoined rooms, one for quiet study and one for noisier group interaction. The new 650-square-foot TeenZone is delineated acoustically and aesthetically with a glass wall topped with a bright orange soffit. Casual café seating is interspersed with lounge chairs and a desk-height bar for computer stations. The furniture is mostly moveable, so that the space can be flexible in use. Retail-style slatwall shelving displays current materials.

<http://www.nollandtam.com/portfolio/libraries/teenzone>

## [NTD Architecture, San Diego, CA – USA](#)

<http://www.ntd.com>

### **Libraries :**

#### [Mary L. Stephens Branch Library, Expansion, Davis, CA – USA 2010](#)

The Mary L. Stephens Branch is part of the Yolo County Library system. It used to be known as the Davis Branch but the name was changed in December 2006 to honor the former Yolo County Librarian who served from 1969-2006

The Yolo County Library is undertaking a major expansion and interior renovation at its Stephens-Davis Branch in the City of Davis. Local bond funds are being used to add space for collections, improve staff work areas, refurbish interior finishes, provide new furnishings, and upgrade technology and building system infrastructure.

The open floor plan maintains clear yet subtle zoning separations between the various collection types, computer centers, and reading areas. Open view corridors throughout the space serve supervision requirements. Acoustical control is managed by placement of glazed panels and absorptive material at noise generating areas such as the (very popular) young adult center. The lobby that separates the main library from the children's library and meeting rooms is the central organizing element, and is also browsing, gallery, and reading space that terminates in a cyber-café garden room and 'Friends' bookshop. Activity and story time rooms will be expanded at the children's library along with more collections, computer, and reading areas.

Special attention is being paid to increasing the efficiency, comfort, and productivity of library staff. A major goal is to improve service to the Public with quicker check-in and account management, employing automation where appropriate to handle a very large turnover of collections.

New finishes are being selected based on acoustic, durability, maintain-ability and sustainable qualities, as well as color and texture character that will bring richness and warmth to the space. New lighting will contribute to these qualities and also improve energy efficiency.

<http://www.ntd.com/portfolio/davis-library-branch-expansion/>

#### [Winters Library, Winters, CA – USA 2010](#)

Client County of Yolo | City of Winters | Winters Joint Unified School District, Size 10,800 SF

### **Awards:**

**2011 CASH, Leroy F. Green Design Award**

As a joint-use facility, the Winters Library is a major hub for community events, activities, and gatherings.

The open floor plan maintains clear zoning separations between the young adult, children's, and general public dedicated areas by use of subtle differentiation of character. Exterior materials take their cue from the local surroundings. Golden tan colored brick has significance in the region due to its local quarry and manufacture. Corrugated metal siding is heavily used in the local vicinity's agricultural-industrial buildings. Smooth, coated plaster serves as the primary base material due to its ease of maintenance and freedom of color choices. These primary materials are highly cost-effective as well.

Sustainable design concerns drove many design decisions. The building form responds to site orientation to gain the optimum advantage in reducing energy costs. Selection of light-colored materials for roofing shingles and site paving minimize heat gain.

<http://www.ntd.com/portfolio/winters-library/>

#### [Lincoln Public Library at Twelve Bridges Learning Center, Sierra Community College District, City of Lincoln, CA – USA 2007](#)

CLIENT City of Lincoln | Sierra Community College District | Western Placer Unified School District, SIZE 39,311 SF 39,311 sqf., \$ 11,136,000

This library is housed at a unique shared-use campus developed by Sierra Community College, Western Placer Unified School District and the city of Lincoln. In addition to supporting blended programs that involve all students, the facilities will serve the individual needs of Lincoln citizens, college students, high school students and business partners. The Lincoln Library represents the first joint-use building design to emerge from the master plan. The curriculum and planning process represents a community effort that involved all three agencies and local citizens. The library exists as a pivotal point on the site, acknowledging the space where all

parties come together. The library houses a comprehensive, multi-generational collection. This public facility is designed to be a beacon of lifelong learning for the entire community.

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3437](http://schooldesigns.com/Project-Details.aspx?Project_ID=3437)

read more:

[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3210](http://schooldesigns.com/Project-Details.aspx?Project_ID=3210)

The Lincoln Public Library at Twelve Bridges will serve as the new main library for the City of Lincoln. Designed as part of the Twelve Bridges Learning Center masterplan, the 39,311 square foot facility includes designated areas for adults, young adults, children and periodicals, as well as a computer lab, a homework center, media and reference areas, group study areas, and a community room.

Designed as a joint-venture between the City of Lincoln, the Sierra Community College District and the Western Placer Unified School District, the full-service library will function as a learning resource center for the future adjacent developments of the Sierra College campus and Twelve Bridges High School.

<http://www.ntd.com/portfolio/lincoln-public-library/>

### [College of the Sequoias Learning Center, Visalia, CA – USA 2007](#)

Client College of the Sequoias, Size 38,000 SF

The College of the Sequoias outgrew its existing Library. The new Multi-Media Learning Center seeks to integrate the college Library, Learning Skills Center, Audio/Visual Media Services, and offices into one facility. This project was comprised of two phases consisting of new construction of the new Multi-Media Center, and the remodel of the existing Library building into a bookstore.

Phasing of this project provided the most cost effective and least disruptive method of Library expansion and remodeling.

<http://www.ntd.com/portfolio/college-of-the-sequoias-multimedia-learning-center/>

### [Julian Branch Library, Julian, CA – USA 2004](#)

Client San Diego County Library | Julian Union High School District, Size 9,500 SF

This project was developed jointly between the Julian Union High School District and the San Diego County Library system. The library design was forged out of a design symposium that included input from the Julian community, the Julian High School District, and San Diego County Library system officials. The architecture compliments the aesthetic of the small mountain community, while meeting the needs of all the varied interests.

The 9,500 square foot facility will serve as the branch library for the community of Julian and the learning resource center for Julian High School. This is a Proposition 14 funded public library project.

<http://www.library.ca.gov/newsletter/2005/2005spring/julian.html>

### [Cal Tech Millikan Library Renovation, Pasadena, CA – USA 2003](#)

Client California Institute of Technology, Size 60,000 SF

The Robert A. Millikan Memorial Library, Caltech's only high-rise building with 9 floors and a full basement, opened in 1967. Library Services are the prime occupants with Development Offices occupying 2+ floors. With much of the collection becoming digital, this will free up space in Millikan and provide the opportunity for consolidation of more efficient library related functions and the re-purposing of space within the building for multi-use for the entire Caltech Community.

Through a series of workshops and programming interviews with various departments, a program for building has been created. Various stacking scenarios were tested as to how the library functions best fit with the proposed departments that will share the building.

<http://www.ntd.com/portfolio/cal-tech-millikan-library-renovation/>

## **OCO Architects, San Antonio, TX - USA**

<http://www.ocoarchitects.com>

### **Libraries:**

#### [Patrick Heath Public Library, Boerne, TX – USA 2011](#)

Size: 30,000 SF

This project was unique in that the entire site was master planned as a civic center at one end of the "Boerne Mile" district. The library occupied a portion of the property which we master planned. New library includes:

- Main circulation desk and separate information desks
- Multi-purpose meeting rooms with A/V systems
- Children's area with collections
- Adult collection area
- Screened porch and quiet reading areas
- Computer labs and print center
- Local and family history collections/archives
- Young adult lounge
- Comfortable seating, private reading areas and study rooms
- Popular materials collection with vending area I
- Staff and volunteer workspace, lounge, kitchen and storage
- OCO worked with the City of Boerne to evaluate and select library furnishings

## Office dA, Inc., Boston, MA

### Libraries:

### Fleet Library at the Rhode Island School of Design, Providence RI – USA - 2007

### Literature:

Architectural Record, June 2007

Office dA inserts a new sensibility within a historic shell to create the Fleet Library at RISD  
By Clifford A. Pearson

How do you turn a Renaissance Revival banking hall from 1917 into a 21st-century visual-arts library and do it on a tight budget? That was the challenge facing Office dA, the Boston-based architecture firm headed by Nader Tehrani and Monica Ponce de Leon, when it started work on the 55,000-square-foot Fleet Library at the Rhode Island School of Design in Providence. Designed by York (Edward York 1863 – 1928) & Sawyer (Philip Sawyer 1868 – 1949) and listed on the National Register of Historic Places, the old building features an interior space 180 feet long and 114 feet wide and topped by an elaborately coffered, barrel-vaulted ceiling. The banking hall might easily have served as a magnificent reading room, if only the school had the luxury of devoting all of it to one use. But the library's program called for 90,000 books in open stacks, seating for 250 people, 400 periodical titles available for browsing, and a variety of different study, administrative, and multimedia support spaces. Even with a balcony running along one side of the banking hall and a second floor wrapping around the vaulted ceiling, there wasn't enough space for all of the programmatic elements. "We had to make the height of the space work for us," says Tehrani, who studied at RISD and, like his partner, has taught there. Despite initial resistance from the client's design-review committee to interrupting the hall's impressive volume, Office dA developed a "double-decker" strategy that inserted a two-level study pavilion and a single-level circulation center within the grand space. "We wanted to maintain the scale of the banking hall," states Ponce de Leon, "so we decided to install two objects as if they were informal elements in an ancient ruin." The old bank building was actually in good condition—hardly a ruin—but the architects imagined their project as adding a new layer to a historic place, much like the multiple strata we see today at the Roman Forum. Rather than obscuring the past, the new elements add a modern resonance. Office dA also wanted its work to have a temporary quality that contrasts with the more permanent nature of the Italianate setting. To respect the old building, the architects developed three different strategies for the elements added inside it. The largest pieces—the study pavilion and the circulation center—are designed as insertions, milled by computer-numerical-controlled (CNC) machinery off-site, and then assembled quickly inside the banking hall. Their prefabricated nature not only sets them apart from their historic context but implies they could be dismantled and carted away if needs change in the future.

<http://archrecord.construction.com/projects/interiors/archives/0706fleet.asp>

### Accolades and Recognition for RISD Fleet Library

Providence, RI and Boston, MA - July 20, 2007 – Shawmut Design and Construction (www.shawmut.com), a \$700 million national construction management firm, along with the architecture firm of Office dA, both of Boston, MA, are announcing several recent award wins and feature articles on Fleet Library at the Rhode Island School of Design (RISD) in Providence, RI. The Fleet Library, located in the main hall of the historic 1920 Hospital Trust Bank building in downtown Providence, is an example of the successful synergy of preservation, architecture, construction and programming. The project team was able to not only preserve this special space, but improve its functionality, and increase its lifespan within the context of Providence's historical character. The project clearly has not only positively impacted the college community, but has significantly added to the character and charm of the Down City section of Providence. The main goal of this challenging project was to preserve and restore the unique character of the historic interior, while providing RISD with ample room to house their extensive collection and an inviting place to study and interact with fellow students. To solve

this issue, two modular birch-plywood pavilions were placed within the open hall to provide study and service spaces for the new library – this innovative solution kept the majestic feeling of the original interior completely intact, while realizing all of RISD’s program areas. One pavilion, a “study island,” features a broad amphitheater-type stair, where students can sit and informally gather, with an open reading room at the top. The other pavilion serves as a circulation and reference desk, with a lounge area set between the two structures. The library now houses an extensive collection of art and design volumes, magazines and multimedia resources, as well as group study areas, classrooms, administrative offices, and an adjacent café. With a 300-bed dormitory on the top floors, the café and the library becomes an extension of the living space where students emerge from their rooms to interact with each other and move freely between the programmed spaces.

The project has recently received several distinguished awards recognizing the library and design team’s dedication to its preservation. In the past few months, Fleet Library has won a 2006 Adaptive Reuse/Material Conservation/New Design/Institutional Award from The Providence Preservation Society, an AIA/ALA Library Building Award jointly awarded by the American Institute of Architects and the American Library Association, and it was recognized as one of the 2007 Best Environments by I.D. Magazine. The Fleet Library has also been mentioned in several international, national and local publications. In June, the project was featured in Architectural Record, Proyectto (magazine of the Latin Builders Association), and Architect Magazine. Prior to these recent features, the project was also profiled in Frame (from The Netherlands) and The Boston Globe.

About Shawmut

Headquartered in Boston, Massachusetts with offices in Providence, RI, New York, NY, and Atlantic City, NJ, Shawmut Design and Construction is a \$700 million national construction management firm providing client-oriented services for academic, banking, corporate interiors, cultural and historic preservation, retail, restaurant, and science and healthcare markets.

2006 Architecture Firm Award, Texas Society of Architects

**Libraries:**

[Grauwlyler Park Branch Library, Dallas, TX – USA 2007](#)

**Awards:**

2010 Design Award, Texas Society of Architects

The Grauwlyler Park Branch Library, at only 12,500 s.f., is Dallas’ smallest programmed new branch facility. The site, hemmed in by setbacks, a curving utility easement, and a city park, determined the footprint of the building. The residual layout is compact, efficient, and simple. Parking is shared with the park and connected to its trails. The library acts as a gateway between the two, with a clocktower as a prominent marker, integrating its community and the park. The common public portion of the library opens up to the wooded park offering expansive views, and the “back of house” areas zone to the street edges. Decking extends to shade areas of full height glazing and vertical metal sunscreens block low afternoon sunlight. The plan of the library is arranged so that all areas have natural light and views. The centrally located check-out/information desk, on axis with the single point of entry, allows for efficient staff supervision. The desk is also located directly under a clerestory skylight to give prominence to this area with optimal. Materials, such as the wood decking and beams, were chosen to give warmth to the space but also to be durable and to meet sustainable LEED criteria. Bookshelves near the information desk are held to a lower height and run parallel for ease of supervision, and to highlight views to the adjacent park. An emphasis was placed on making each user-group’s area of the library distinct, while still maintaining an overall image and easily supervised space. This was done through the use of differing, but coordinating carpets, paints, wall coverings, furnishings, and fabrics. The result is a widely-used, enduring facility that is appropriate to and appreciated by both the community and the librarians and staff who call this branch their home.

**Libraries:**

[Seattle Public Library, Southwest Branch, Seattle, WA – USA 2006](#)

Our firm played a major role in the renovation of Seattle Public Library’s neighborhood branch system with the redesign of the Southwest Branch. The addition transformed the existing 1960’s era neighborhood library into an up-to-date facility, doubling its former size to 15,000 square-feet and creating room for new books, DVDs and music. The expansion advances the building to the street, with a two story addition which increases the building’s civic presence. British Columbia artist Katherine Kerr created an installation piece of outstretched hands, cast from the hands of some of the library’s most active patrons. (Olson)

[Public Library Auburn, City of Auburn, WA – USA 2002](#)

Set in a suburban park on the edge of a busy highway, this 15,000-square-foot library forms a strong street presence, calling attention to itself amidst the riot of color and signage typical of suburban thoroughfares. On its opposite side, the building softly modulates to meet the park. Inspired by the shape of an open book, the building contains the collections area, a community resource room, computer stations and support areas (Olson)

<http://www.olsonkundigarchitects.com/Projects/178/Auburn-Library>

[Seattle University, School of Law, Sullivan Hall, Seattle, WA – USA 1999](#)

**Awards:**

Masonry Institute of Washington Citation Award 2001

Seattle AIA Merit Award 2001

Designed to accommodate 850 students, the building promotes the sense of the school as a unified entity in a comfortable, open environment. The primary building feature is the central atrium, which connects three levels of the 136,000-square-foot structure, brings in natural light and promotes a sense of community. The building complements the existing campus architecture without sacrificing its own identity. The building includes a 250,000-volume law library. Virtually every place a student can sit down is wired with data communication capabilities. This project was completed in association with Yost Grube Hall Architects. (Olson)

## **Manuel Oncina Architects (MOA), San Diego, CA –USA**

<http://oncinaarc.com>

### **Libraries:**

#### **Fallbrook Branch Library, Fallbrook, CA – USA 2011**

**Manuel Oncina Architects (MOA) is the Design Architect for the Fallbrook Branch Library project.**

**Ferguson Pape Baldwin Architects (FPBA) is the Executive Architect of Record for the Fallbrook Branch Library project.**

...At San Diego-based Manuel Oncina Architects, metal roofing is a major part of the firm's designs. In business since 1984, the firm found a niche in public buildings in the early 1990s, with a focus on libraries. The early library work featured distinct metal roofs and it has been an unofficial signature ever since.

"We really think that for low-rise public buildings, the material of choice is a standing-seam metal roof," said Manuel Oncina, FARA.

The firm recently completed two California libraries, each featuring approximately 20,000 square feet of standing-seam metal roofing. Manuel Oncina Architects was the design architect on the projects (the architect of record was Ferguson Pape Baldwin, San Diego). The Fallbrook Library, which opened in January, features metal roofing from Louisville, Ky.-based Metal Sales Manufacturing Corp. in Antique Patina and Metallic Silver. The Ramona Library, which opened in February, also features Metal Sales' Antique Patina.

"We came up with the concept for the client and won the project in a competition; designed the entire building from the interiors on out," Oncina said. "The executive architect produced all the construction documents to get the project built. We remained in constant involvement through the opening day. We were involved in every question about the building."

#### **History with Metal**

Oncina said when he was in school in the early 1970s, metal was used, but very rarely on the West Coast.

"I think that what drove me to using that material was the longevity that you could get out of it," he said. "Since I was dedicated to doing public buildings, one of the main aspects of it was how long they would last. [Metal] was also very flexible. You could use it for a lot of different shapes, which you can't do with a lot of different materials.

"From an aesthetic point of view, it will hands down beat a built-up roof. Metal roofing also expresses a lot of modernity, despite having been in use for centuries. With metal, it puts you in a mode where you're doing more modern architecture on a bigger scale." As Manuel Oncina Architects has made metal a regular part of its work, clients have come to expect it.

"Usually if it's going to be a sloped roof, it's almost expected. There's not a whole lot of convincing," Oncina said. "The design of the roof is so integral to the design of the building itself, it becomes the realm of the designer. Clients shy away from flat roofs because of maintenance and leak concerns."

A common question about metal roofs, though, is whether the higher initial cost is worth the investment. Oncina said his clients have been really good at understanding that initial cost is justified through the low maintenance and long life the product can provide.

#### **Design Approach**

"My designs are more about the site, the community it's in and the program," said Oncina, who does not adhere to any particular aesthetic style. "The site will tell you what the building can look like and [you have to consider] how the community will react to the building. Most of my buildings are different. There's no particular style. It's more of an organic style that comes out of the community that [the projects] are in."

The Fallbrook and Ramona libraries are prime examples. They are vastly different designs because they're responding to their sites. At Fallbrook, a saddle-shape roof covered in metal standing seam is visible from a lot of different places and it defines Fallbrook, mimicking the shape of the hills.

At Ramona, a half-barrel roof gives a modern shape and on the inside it's all white, so you get a cool feeling. It's very airy and you can see the exterior from the inside of the library.

In other instances, Oncina has shaped his buildings to match ocean critters or flowers, or to accentuate the view of the ocean.

"Metal gives the versatility for different looks, shapes and colors," he said....

<http://www.metalarchitecture.com/articles/magazine-features/manuel-ocina-architects.aspx>

The Fallbrook Library's green roof embodies a county-wide focus on recycling and energy conservation, which will mean minimal negative environmental impact. Manuel Oncina is the building's designer and original proponent of the feature, while Ferguson Pape Baldwin Architects function as the technical experts and landscape architects. County library director José Aponte says, "this feature is not only innovative and attractive, but serves as an environmentally friendly model and reminder for the community we serve."

#### **Ramona Library, Ramona, CA – USA 2011**

**Manuel Oncina Architects (MOA) is the Design Architect for the Fallbrook Branch Library project.**

**Ferguson Pape Baldwin Architects (FPBA) is the Executive Architect of Record for the Fallbrook Branch Library project.**

**February 15, 2011**

Members of the public joined County Supervisor Dianne Jacob and County officials Tuesday to celebrate the grand opening of the new Ramona Library, a solar-panel-crowned building in the center of town destined to become a cherished hub of culture and community.

"This beautiful new library is the start of a thrilling new chapter for Ramona," said Supervisor Jacob, who represents the people of Ramona on the Board of Supervisors. "The hard work and collaboration between the community and the County have finally turned the dream of a new library into a reality," Jacob said.

Over 21,000 square feet — and four times as big as the old building — the Tuscan and Southwestern-style Ramona Community Library is an inviting sanctuary with cozy lounge seating and a fireplace. With special spaces including a teen area, a children's space and read-aloud room, community meeting rooms, a homework and tutoring center, and a Poet's Patio for live performances, the library will serve diverse patrons.

"We're so excited to open this rich community center for learning, working and meaningful entertainment in the middle of Ramona," County Library Director José Aponte said.

Public-use computers and free wireless service provide library visitors internet access. Automated checkout stations make it easy to borrow one of the San Diego County Library system's 33 million books, DVDs and CDs.

A model of green building, the new library is expected to become the only library in the County to achieve Gold LEED certification, an international standard for sustainable design. Three solar panels on the roof cover some 5,000 square feet and will produce about

20 percent of the energy the library needs. Inside, patrons can track the library's energy consumption and production on a digital display.

C.W. Driver, Ferguson Pape Baldwin Architects, and Manuel Oncina Architects were the library's design-build team. The project cost about \$11.6 million, with \$966,000 contributed by the Friends of the Ramona Library.

### [Carlsbad Library, Carlsbad, CA – USA 2008](#)

The Carlsbad Library Learning Center project encompasses the renovation and second-story addition to the former Girl's Club building across from Holiday Park on Eureka Place in Carlsbad, California. The addition doubles the size of City existing learning center facilities and offers an expanded variety of programs in a much needed modern venue.

Three distinct but compatible programs are housed in the site: The Adult Learning Center, Centro de Informacion and the local NHA Headstart program. The challenge was to develop a functional plan with tight demands on space and proximities, while including a large amount of parking in a residential neighborhood without compromising its sense of scale.

The major materials utilized: vanilla-hued stucco, bronze aluminum storefront with lightly tinted glass and powder-coated steel trellises are reminiscent of the early Californian modernist architect Irving Gill (\*Tully, NY 26.04.1870 - +Carlsbad, CA 07.10.1936). The massing composition set back from the street offers a great counterpoint to the popular Holiday Park and a modern civic image.

### [Encinitas Community Library, Encinitas, CA – USA 2008](#)

#### **Awards:**

**McGraw Hill Construction - California Construction's Civil category Award of Merit**

**American Public Works Association - Project of the Year Award, 2008**

The Encinitas Library is the first phase of the City of Encinitas Civic Center Master Plan. The 25,000 square foot facility overlooks the civic center and offers marvelous views of the Downtown Encinitas and the Pacific Ocean. The building is designed to complement the Encinitas lifestyle with outdoor patios, while protecting west facing glass with overhangs and trellises.

"I live in Encinitas and thank God they had the vision to select a prime location and you as an architect." Dirk Sutro

<http://oncinaarc.com/projects/libr/encinitas/encinitas.html>

After four years of planning, four years of design and two years of construction, the Encinitas Community Library opened in February 2008 on a two acre site perched on the hillside above the Encinitas City Hall. This project is a fine example of cooperation between two public agencies. The County of San Diego provided half of the land, and the City of Encinitas the other half. The City of Encinitas financed and managed the library design and construction, and the County of San Diego operates the library.

Designed by architect Manuel Oncina, the project received the Society of American Registered Architects 2005 National Design Award for the exceptional work. Public input was solicited every step of the way and the result was a 26,800 square foot library with the capacity for over 90,000 volumes and a door count that has consistently averaged 1,000 visits per day since the grand opening. West-facing glass walls and a large west-facing deck offer panoramic views of the Pacific Ocean. The textured concrete structural walls finish the building's unique architecture. The library has a 2,000 square foot community room that offers seating for over 100 guests and has a full schedule of events including meetings, art displays, music and literary recitals. The San Diego Chapter of the American Concrete Institute presented the City with its 2008 Architectural Award for the project. A coffee cart concession was added in May 2009 to enhance the experience of library patrons. The library is truly the gem of public facilities in the City of Encinitas.

<http://www.strongcitiesstrongstate.com/success/encinitas/encinitas-community-library>

### [Mark Twain Library, Long Beach, CA – USA 2007](#)

This new 16,000- square-foot, one-story library building includes spread footings, plaster exterior and a mixed steel and wood frame. Architectural features include 35-foot high staggered ceilings and an intricate natural stone floor feature that winds throughout the interior, dividing space and mimicking the flowing curves of a river. This project is Silver LEED Certified and features Green elements such as construction with recycled content floor tile and metals, drought tolerant landscaping and drip irrigation.

<http://www.swinerton.com/web/do/project?oid=342>

### [El Centro Public Library, Children's Area Renovation, El Centro, CA – USA 2005](#)

The historical El Centro Library required an extensive renovation of their Children's library and the addition of computer technology.

The existing addition, a cave-like mid-Seventies box with almost no windows and a 2X4 suspended ceiling was oppressive and hardly conducive to children's inspired learning. MOA's solution included the removal of the ceiling, refinishing of the existing laminated wood beams, addition of the clerestory windows, the relocation of the air conditioning equipment, the addition of a separate unit for the computer server room and the renovation of the electrical lighting.

<http://oncinaarc.com/projects/libr/el-centro/el-centro.html>

### [Cardiff-by-the-Sea Branch Library, Cardiff-by-the-Sea, CA – USA 2003](#)

#### **Awards:**

**Project received the Society of American Registered Architects (SARA)**

**National Design Award of Honor, 2007**

**State Design Award of Honor, 2003**

#### **Literature:**

Cardiff Library enjoyed being published in L'Arca Magazine, an Italian publication of International Architecture. March 2004, Issue 190.

Three existing very large Torrey Pines (*Pinus Torreyana*) grace the site and are incorporated in the site design. Although the site has a limited ocean view, the ambience is very beach-like. The surrounding neighborhood is pedestrian-oriented.

The proposed design responds to the program by orienting the building with its long axis in the north-south direction. The parking lot is located on the north side of the lot to alleviate traffic congestion at the street corner. Two entries serve the facility: the north entry is located directly adjacent to the parking lot, while the south entry provides access to the pedestrian traffic through a pleasant plaza shaded by the giant Torrey Pines. The daylighting concept is derived from the heavily glazed north elevation rising to approximately 22 feet. The west elevation is heavily articulated and openings are protected with sunshades from direct solar exposure.

The south elevation responds to the community by placing the low curvilinear stone-like form of the children's area as an invitation to explore the library. The east façade acknowledges the apartment buildings on the east side by reducing the building height and offering an articulated roofline.

The construction system is composed of concrete stem walls, steel-troweled natural color stucco on metal stud walls, steel columns, framing and acoustic roof deck. The roof is copper-faced standing-seam steel. Exposed openings are fitted with Low E glass. The building utilizes the first displacement heating and cooling system in Southern California. The interior flooring materials are composed of recycled carpet and recycled rubber flooring.

<http://oncinaarc.com/projects/libr/cardiff/cardiff.html>

### [Earl and Birdle Talor Library, Pacific Beach, CA – USA 1997](#)

#### **Awards:**

Project received the Society of American Registered Architects (SARA)

Design Award of Honor, 1998

Project received an Orchid Award for Natural Lighting, 2001

The concept is based on three very general underlying principles: 1) The program, 2) the site and 3) the community.

The site provided ample space to respect and take advantage of the solar exposure available. The building is designed to take in northeast light with minimal danger of harsh glare.

The community is the catalyst in this project. The involvement of the community provided valuable insight into its character and uniqueness. This is a forward looking community, very much attached to its pioneering roots. In addition, the neighboring ocean and beaches lend this community an indelibly different perspective on public buildings. The public building becomes a reference point for the community as well as a social gathering place.

The construction method is consistent with usual construction practices. The library is near 12,500 square feet. Its structural frame is constructed of concrete columns, laminated wood beams and steel beams. The walls are wood frame. The ceiling is framed with light gauge metal and covered with gypsum board. The "rotunda" is enclosed with "Kalwall", a translucent plastic panel. The roof is a Kynar finish steel roof.

<http://oncinaarc.com/projects/libr/taylor/taylor.html>

### [Malcolm X Brach Library and Performing Arts Center, San Diego, CA – USA 1996](#)

#### **Awards:**

Project received the Society of American Registered Architects (SARA)

Design Award of Honor, 1998

Project received an Orchid Award for Community Enrichment, 1996

Project received an American Society of Civil Engineers Award Outstanding Civil Engineering Project Award, 1996

The building program addresses three quasi independent functions: a library for 44,000 volumes, community rooms for social events and the introduction of a literacy program called READ SAN DIEGO.

The community being vibrant, multiracial and multi-cultural called for a building that would at once speak of its readers and at the same time respect a hillside. Indeed, the site offers great opportunities for a building requiring a certain presence in the community. The architect chose to integrate the building into the hill, thereby "rooting" the building in the community using berming and low retaining walls. With this part, the building wisely reduces the grading element of the site and addresses the sensitive issue of becoming a "monument".

The structural elements of the building are cast-in-place concrete walls, wood frame walls, and glue-laminated beams all set on a split-level concrete slab. The other distinctive features of the building are the roof, constructed of pre-weathered standing seam metal and sweeping curved walls defining "friendly" massing. The building totals 26,042 square feet and sits on an eight acre site. Three-time award winner; ASCE, AIA, SARA.

<http://oncinaarc.com/projects/libr/mxl/mxl.html>

### [OPN Architects, Cedar Rapids IA, Des Moines IA – USA](#)

<http://www.opnarchitects.com>

#### **Libraries:**

#### [Baraboo Public Library, Barboo WI – USA on design](#)

Sqf. 36,800

Since 1903, the community of Baraboo, Wisconsin has respectfully preserved their beautiful, historic Carnegie library. An addition constructed in 1982 extended the functional life of the building and preserved the main public appearance of the Carnegie design. However times change and this growing community realized that the provision of modern library services requires a major addition to the facility. Utilizing a Building Program from 2009, prepared by George Lawson as a working guide, the design team organized and held a three-day public Charrette to develop the conceptual design for the new addition and renovation.

The Charrette allowed the design team, library board, community leaders, and patrons to quickly explore potential expansion options and to clearly understand the property purchase requirements with each option. Consensus was quickly found for the preferred design, but the challenge was that this option required an agreement to purchase additional land from an adjacent Church. The public participation process helped garner the support of the church congregation and the Library Board was able to successfully negotiate the purchase of additional land.

The new design preserves the setback of the original Carnegie Library and provides a new addition of the same proportion, to the east. A new, predominately glass entry zone provides a clear delineation between the original library and the new addition, while also solving a critical accessibility issue with the two-story Carnegie design. Careful attention to the axial design of the Carnegie facility helped to organize the new plan and redefine the functional layout of the library to create a design that is both respectful of the historic facility, but will also serve the library's future needs.

For the Baraboo project, OPN Architects partnered with Dorschner Associates, a Madison-based architecture firm. OPN is providing schematic and design development services for the project and Dorschner will provide construction documentation and administration. Fundraising for the project has begun, utilizing the presentation graphics prepared by OPN Architects. (OPN)

## Ankeny Public Library and City Offices, Ankeny IA – USA on design

\$ 30.000.000

OPN Architects is the primary designer of a new City Hall and Library project for the City of Ankeny. Plans locate the new facility in the 1200-acre Prairie Trail development, a joint venture between the City of Ankeny and DRA Properties. The goal of the development is to create a new cultural focal point for the Ankeny, a growing community just outside of Des Moines, Iowa. An 80-acre zone called the Town Center will be created at its heart built on the model of traditional Iowa town squares. Anchoring one side of the “square” will be a new structure to house the public library and city offices. As a mixed-use structure, the project presented a series of design challenges including establishing distinct entries for the building spaces and clear way-finding strategies, while creating a consistent visual style and uniform appeal. Design for the building calls for a wide variety of innovative and sustainable building options to accommodate the needs of the building’s different user groups. In addition to design, OPN Architects, working with the Weitz Company in a design/build relationship is managing all of the communications and needs for the various stakeholders, including Ankeny’s city administrators, council, residents, the Board of the public library, library administrators, and associated developers.

DRA Properties, acting as the Master Developer of Prairie Trail, is working with co-developer TerreMark to create a mixed use facility incorporating civic, commercial, residential, educational and retail components into a walkable, sustainable city center. OPN has engaged with all vested stakeholders in a series of public meetings and presentations. During these presentations, OPN presented concepts, collected feedback from each group, incorporated feedback into the plan and redistributed the updated results to participants.

Future work calls for OPN to collaborate with Nilles Associates, Civil Engineers for the project, 5o5 Design and JPRA Architects as the vision for this ambitious development is realized.

“ I will say that already we are extremely pleased with OPN and very excited to move along with them on the project! ....they are great listeners!

– Myrna Anderson, Former Library Director, Ankeny Public Library

<http://www.opnarchitects.com/work/ankeny-public-library-and-city-offices/>

## Cedar Rapids Public Library Downtown, Cedar Rapids, IA – USA 2013

\$ 45.800.000

In June 2008 a destructive flood swept through Cedar Rapids. Hundreds of homes and businesses were lost including some of the city’s most prominent public structures such as the Courthouse, the City Hall and the 25-year old Public Library. The loss of the library was particularly devastating. Everything on the first floor of the 85,000 square foot facility – which occupied a city block – was lost to the flood including the entire adult and youth collections, public access computers, computer labs, and a state of the art check-out system. Approximately 200,000 items in the collection were ruined. In addition, thousands of furniture items and pieces of electronic equipment were destroyed. OPN quickly stepped in to assist by helping design temporary library spaces downtown and in a shopping center on the west side of the city. Meanwhile the community coalesced around the need to rebuild the public library. A dedicated team of community volunteers and the Library Board of Trustees kicked off a campaign to re-envision how the library should function and to find a new home for this important public resource. A site was selected

The new site for the new library fronts Greene Square, a park within the urban core. Bookending the Cedar Rapids Museum of Art, this library completes a larger urban dialogue and civic oriented zone. The building not only completes the urban edge fronting the park, but also steps back to create a large urban plaza, an extension of the public space of the park and street. As the entire building aims to reveal inner functions to the public, it also offers patrons and building users unprecedented views to the urban and park settings beyond, connecting them to civic art, public gathering spaces, and programmed events.

The new 95,000-square foot library is designed to be a vibrant, multipurpose destination and a space for the community to mix and collaborate. The design of the new library was driven by the desire to embrace openness, transparency and foster public engagement with and within the space. With those principles in mind, the team looked for innovative ways to present vistas and views throughout the structure while visually connecting the streetscape with the functions occurring within the building.

In keeping with the themes of openness and transparency, large expanses of glass occur at the first and second floors of the collection spaces. Views into the building frame the rhythmic placement of library stacks juxtaposed with a lively and active Children’s Collection. The views in and out of the collection spaces are seen from nearly every vantage point around the new library. A 200-seat auditorium situated on the second and third levels looks outward toward Greene Square. The auditorium stage is set against a curtain wall of glass allowing for the changing seasons and cityscape to serve as a living backdrop.

Centralized Services

The central space of the library is the Service Core Zone. This space brings together all of the core patron services in a hub and spoke system allowing users to orient themselves in the building as well as gather to meet. The spaces and mixing of circulation paths is most clearly expressed within this zone. It is defined architecturally by the rake of the auditorium as it vaults over the first floor Adult Fiction collections and 2nd floor “bridge” links within the Service Core. The zone was designed with clear sight lines and open vertical circulation to allow users to readily navigate their way to various destinations.

A café and coffee shop is nestled in the core enticing visitors to gather, linger and engage with each other. Off the café is the Young Adult Area where rooms for gaming, study, and group work open to an active collection space. The Children’s Collection occupies the east portion of the first floor. The second floor consists of the Adult Non-Fiction collections, a large dividable conference space, and staff and administrative offices. The third floor consists of a break-out lobby for the Auditorium and public access to the green roof.

The 24,000 sf green roof provides an attractive space for library patrons to gather while offering yet another set of views and visual access to the surrounding cityscape. Functionally, the roof will aid in waste water management while serving as an outdoor plaza to be used by individual visitors and for library-hosted and private events. Importantly, this space is the first publically-accessible green roof in Cedar Rapids.

A Sustainable Solution

The new library represents a tremendous investment of resources. It was essential that the design be flexible to accommodate the future needs of the community. One method of “future proofing” was the integration of raised access floors as part of the design. These raised floors will allow for the distribution of power, data, and low velocity supply air permitting the collection spaces to evolve over time. The collection spaces were intentionally designed to be very open; they incorporate few walls and a clear span between the columns to allow for the full utilization of the available square footage. Dedicated mechanical spaces and “core functions” are located on the west side of the site in an area that fronts a rail line and parking garage. The southern portion of the site is surface parking, which could be utilized as space for future expansion. In addition to the green roof, the building was designed to achieve LEED Platinum status and is on-track to do so. Energy and cost-saving features were integrated into the building design and the roof itself will offer conservation-based educational opportunities for visitors.

“Green” Features:

- Targeting LEED Platinum Certification

- Designed to exceed the Iowa Energy Code by 55%
  - Pump & Re-inject Geothermal HVAC System
  - Pre-flood Library used energy at a rate of 100 kbtu/square foot
  - New Library designed to use energy at a rate of 37 kbtu/square foot
  - Exterior Glazing covers approximately 37% of the building envelope
  - Thermally broken aluminum framing
  - 1” insulating glass has low-E coating and is argon filled
  - Exterior Envelope: R-28, maximized thermal performance
  - Daylight Harvesting: (Daylight sensors, dimmable ballasts, and T5/LED Lights)
  - Use of Natural Light: (15 solatubes and large clerestory on roof)
  - Storm Water Management: Retain 90% of normal annual rainfall and 100% of all rainfall up to 1” in a 24 hour period on site.
  - 24,000 SF accessible green roof with rainwater harvesting for irrigation
  - Pervious paving with storm water collection chambers below parking lot
- <http://www.opnarchitects.com/work/cedar-rapids-public-library-downtown/>

### Williamsburg Public Library, Williamsburg IA – USA 2011

Sqf. 17,825, \$ 2,700,000

The new Williamsburg Public Library is sited on the northwest corner of the town’s main square. It engages the square with an entry plaza on the southeast corner of the site and utilizes a clock tower to signal both the entry as well as give the library it’s civic presence. The exterior material palette is composed mainly of brick with stone accents which relates to the traditional character of the buildings on the square but has a metal standing seam roof and metal skinned window bays to hint at the contemporary nature of the functions within.

The upper level contains 12,400 sf and features the reading areas, book collections, children, young adults and computer area as well as three different sized study and meeting rooms. The main entry, public bathrooms, staff offices and workspace encompass the remainder of this level. The lower level contains the multi-purpose room(s), a meeting room and staff lounge. It also includes public bathrooms for this level, mechanical spaces and has an ADA entrance serviced by an elevator.

The interior has an articulated vaulted ceiling over the stacks and reading areas along the North and South bays. It has a high ceiling with a slot for the skylights over the central bay. It has an undulating curved ceiling plane over the Youth Area. The casework at the main and children circulation desk has a slated wood motif to recall the areas agrarian history. The cherry wood interior woodwork and gas fired fireplace gives a warm comfortable feel to a contemporary library space.

The library targeted LEED Silver certification and was awarded LEED Gold.

### Carnegie Stout Public Library, Dubuque IA –USA 2010

Sqf. 54,957, Budget4,730,176, Market Historic Restoration Library, LEEDLEED Silver

#### **Awards:**

**2011 Merit Award – American Institute of Architects – Iowa Chapter**

**2011 Silver Award – International Interior Design Association – Great Plains Chapter**

The renovation and restoration of Dubuque’s historic Carnegie library was a tremendous challenge. The 50,000 sf building consisted of the original Carnegie structure constructed in 1901 and a 1984 addition that, while dramatically increasing the size of the library, effectively created two separate halves, each with its own architectural style and personality, and with very little connection between the two. The 1984 addition also housed the majority of the public spaces, limiting the community’s opportunities to experience the historic portion of the building. The design team was challenged to unify these two disparate halves as a part of a building-wide reorganization and remodel, while reclaiming the historic, original portion of the building for public use. Rather than a strict historic restoration, which would limit the building’s functionality, the renovation honors the historic nature of the building, restoring certain key components, while re-purposing others for modern use.

To embrace the historic aspects of the original building, the team focused on a number of design goals:

- Opening the grand main entrance;
- Opening the historic mezzanine and skylight above;
- Renovating a community meeting room on the upper level while opening the skylight in that room;
- Reopening the exterior windows on the lower level, and relocating significant parts of the collection to the historic building.

Perhaps the most dramatic impact created by the new design is the experience of entering through the reopened historic main entrance. Since the 1984 addition, the mezzanine had been off-limits, the skylight was covered, a wall blocked views to the exterior windows, and the historic entry doors were locked. Today patrons stepping through the main entrance are greeted by an axial view through the historic lobby to the reinvented mezzanine seating area. The seating area is flooded with natural light from the skylights above and the dramatic windows on the back of the building.

The collection and seating areas are now equally divided between the historic portion of the building and the 1984 addition. The challenge of unifying the original and added portions of the building was perhaps the greatest difficulty faced by the design team. This was addressed by creating a new opening between the two building halves on the main level and simplifying vertical circulation. Two solutions that have dramatically increased the feeling of connection and improved patron circulation and way-finding. An historic central staircase that was removed in the 1984 remodel was reconstructed and reinstalled, restoring the original character. The rotunda in the historic lobby acts as a unifying, signature feature that creates a dramatic “sense of arrival.” Taking cues from the rotunda, a round form is introduced as an arrival feature in both the Children’s Area and the Teen Area. In the Children’s Area, this custom built seating area becomes the heart of the space, while in the Teen Area, this contemporary rotunda-like feature signifies the entrance to the area and acts as a threshold or buffer between this age group and other patrons.

In addition to the final design and project management, OPN completed the pre-funding phase of planning and developed a presentation package of drawings and illustrations that were used by the library board for capital campaign fundraising.

“ I am proud we had the foresight to choose your firm as our architects. I’ll always be grateful for the chance I had to be a part of helping to bring your inspiring vision for our library to the citizens of Dubuque. ”

- Susan F. Lindsay, Former Board of Trustees Member, Carnegie-Stout Public Library

[jz2jGHdfLb1f1WxPQq8=&docid=pO2ERTH7aTp5aM&sa=X&ei=GI8wU-nHO4zHsgaTnIGwDQ&ved=0CDIQ9QEwAQ&dur=1578](http://www.opnarchitects.com/work/washington-free-public-library/)

### Washington Free Public Library, Washington IA – USA 2009

Sqf. 30.000, \$ 5.000.000

OPN Architect's design for the Washington's Free Public Library placed the library in a new building, replacing three vacant storefronts, and will serve as a catalyst for future downtown development.

The library occupies portions of three levels with approximately 10,000 sf per floor. Meeting rooms, the reference and adult non-fiction collections and an adult reading lounge overlooking the town square are located on the upper floor. The main level features the children's collection, circulation services, popular materials, another reading lounge, and the adult fiction collection. The local genealogy collection and future library expansion areas are located on the lower level.

An open stairway and elevator link the three floors; as does an opening in the upper level floor which visually connects that floor with the main level. Natural light is brought into the library through glass storefronts and a skylight located above the opening in the upper floor.

Sustainable Design Features:

- Recycled and salvaged as much interior structure as possible, including three stories of hardwood floors.
- Exploring geothermal systems for energy
- Daylight Harvesting: by utilizing the orientation of the site, maximize the amount of light available while minimizing the amount of artificial lighting.
- Responsible use of sustainable and renewable building materials
- Maximizing indoor air quality by using low VOC emitting products and finish.

<http://www.opnarchitects.com/work/washington-free-public-library/>

### Fort Madison Public Library, Fort Madison, IA – USA 2007

Sqf. 16.000, \$ 1.832.000

In 2007, OPN assisted the town of Fort Madison in locating and designing a new home for their public library. The former Valley Clinic building was converted into a welcoming and functional space for the Fort Madison Public Library. The existing building was renovated and an addition of approximately 2,000 square feet created to provide 16,000 sf of finished library space. One of the challenges of the design was that the original ceiling heights were too low to accommodate the height of library book stacks and suspended indirect lighting. The entire roof structure was removed and a portion of it was raised between six and eight feet in order to accommodate the necessary elements. A new radiant entrance was added to the front of the building providing a sense of place in keeping with the civic importance of the structure.

Sustainability Features:

Adaptive reuse of an existing structure reduced waste Cool Roof membrane to avoid heat-island effect Low E glazing on glass for improved energy efficiency Light shelves and advanced daylighting techniques including sun screens Indoor chemical and pollutant controls for improved indoor air quality Recycled cellulose and denim based building insulation Water conserving fixtures in bathrooms and public spaces Upgraded HVAC uses water source heat pump Site provides bike racks and easy access to public transportation

<http://www.opnarchitects.com/work/fort-madison-public-library/>

### Marengo Public Library, Marengo, IA – USA 2007

Sqf. 12.570, \$ 1.540.000

The Marengo Public Library, one of the State's original Carnegie libraries (Normand Smith Patton \* 10.071852 Hatford, CT - + 15.03.1915 Chicago, IL [http://en.wikipedia.org/wiki/Normand\\_Smith\\_Patton](http://en.wikipedia.org/wiki/Normand_Smith_Patton) + Grant C. Miller) served the community for almost 100 years with little change to its functional layout. Recognizing that the facility needed to be modernized to accommodate new uses, OPN Architects was selected to reprogram the existing Carnegie and to design a two-story addition. The new addition provides a much needed increase in collection space, staff areas, and seating, while also providing a new public meeting room, genealogy space, and room for children's programming.

The design team set out to meet the programmatic requirements while maintaining the historic integrity of the building. Before beginning the design process, the team analyzed the existing facility to determine the proportioning system used by the original architect. The team then applied the rules of the original building to design the addition creating a seamless aesthetic between the two buildings.

A new on-grade entrance leads to a dramatic two-story lobby that provides access to both levels via a stair or elevator. All library functions are located on the upper floor, allowing for ease of supervision from the staff area. The lower level, containing the public meeting room, genealogy, and children's program space, is accessible after-hours, while maintaining the security of the library. A complete new mechanical and electrical system was also part of the project.

### Kirkwood Benton Hall Library, Cedar Rapids IA – USA 2007

Sqf. 16.800, \$ 1.480.000

Kirkwood Community College initiated a remodeling of the central library following the successful issue of a \$27 million bond for capital improvements. The library's original character and furnishings, circa 1973, were still in place and in declining use. The outdated finish palette and well-worn furnishings portrayed a "tired" environment, and student usage had been declining.

OPN Architects worked with users to develop a new cosmetic that combined freshness, durability, and aesthetic longevity.

Operational areas were renovated to support current technologies and processes. The overall layout was modified to promote a "friendly" attitude, and reinforce a message of customer service.

Mechanical systems were improved to increase fresh air ventilation and the lighting system was redesigned to brighten the space. The furnishings were replaced in their entirety, using two-tone wood accents and durable fabrics. The project was executed in phases and while maintaining library operations.

**Project Objectives:**

- Improve and update operational aspects
- Align space with student usage
- Aesthetically refresh space & furnishings

**Project Constraints:**

- Maintain library operations during project
- Overhaul, improve mechanical systems
- Maintain 44,000 sq. ft. two-story space
- Hypo-allergenic materials and methods throughout

<http://www.opnarchitects.com/work/kirkwood-benton-hall-library/>

**Ross & Elisabeth Baty Monticello Public Library and Renaissance Center, Monticello IA – USA 2006**

Sqf. 16,000, \$ 3,600,000

The Monticello Public Library and Renaissance Center is a multipurpose building that sits adjacent to City Hall. In addition to the library, the center features a new community meeting room which serves as the City Council Chambers and a Veteran's Memorial Hall.

The public library occupies the entire upper floor with an at-grade entrance on the side of the building facing Grand Avenue. The entrance to the Veteran's Memorial Hall and community meeting room / Council Chambers on the lower floor sits at sidewalk level along First Street. The First Street facade features brick and limestone details. These materials echo the materials used on other historic downtown buildings and help the new structure blend in. A recessed arcade with arched openings and projecting, suspended canopies leads to the main entrance on the lower floor. Large windows on the upper level, as well as a centrally located "eyebrow" dormer window introduce natural light into the library's interior. The building is capped by a colored standing seam metal roof and flanking brick chimneys.

**Sustainable Design Features:**

- Use of building materials that use recycled content
- Low VOC paints, adhesives and carpeting
- Low-E glass; daylight harvesting sensors
- Locally extracted and manufactured building materials
- State-of-the-art ventilation system that will provide a high level of indoor air quality

" I also want to extend my appreciation to all for the design of our new library. It not only is a classical design but very functional. When we started this process I expressed my concern that we have a building that would be architecturally pleasing. You achieved that and more. This building is a wonderful addition to our downtown and something we can all be proud of."

— Jon C. Husman, Building Committee Member

<http://www.opnarchitects.com/work/monticello-public-library-and-renaissance-center/>

**Moline Public Library, Moline IL – USA 2006**

Sqf. 72,710, \$ 10,300,000

The library is two stories with an arrangement of the active collection areas, primarily the popular materials and children's collection, on the ground floor. The general adult collection, consisting of the reference, periodical, non-fiction, and fiction collections, was located on the upper floor. The design concentrated the enclosed staff areas, conference space, and mechanical/storage areas on the east side of the facility.

A large expanse of fenestration created transparency and opened the collection spaces to passing motorists to serve as a beacon and highlighted the library and what it offered. The two-story library was constructed of brick with stone accents and a variety of window openings. The size and scale of the window openings responded to the interior layout of the facility. The goal was to create a variety of experiences within the library so that each patron could find their "favorite spot".

A copper-clad entry form housed a coffee shop and public meeting areas. The facility was designed so that these areas were accessible during non-library hours. The City of Moline now has a library that truly lives up to its vision: Treasured Past, Vibrant Future.

**Unique Aspects of the Design Process:**

- Extensive community charrettes
- Explored multiple option for renovation vs. new construction including multiple site plans
- Provided furniture and fixture options and managed purchasing/installation

**Sustainable Design Features:**

- Ambient light sensors control interior light levels and lower energy use
- Interior materials choices favored recycled or low VOC products
- Exterior materials sourced from local suppliers

<http://www.opnarchitects.com/work/moline-public-library/>

**Des Moines Public Library, East Side Branch, Des Moines, Iowa – USA 2006**

Client: City of Des Moines, sqf. 13,000, \$ 2,400,000

OPN Architects was selected by Des Moines Public Library Board of Trustees to design an addition and to renovate the East Side Branch Library. The East Side Branch renovation was one component of the Des Moines Public Library's \$48 million capital improvement plan. The dated facility was greatly in need of an update. OPN's design added a new 100-seat community room, entrance gallery, and landscaped entry walks. The interior layout was reorganized to improve way-finding and establish an identifiable sense-of-place for the children's and young adult areas. The result was a modern, functional and welcoming library for the city's east side.

**Sustainability Highlights:**

- Cool roof membrane to avoid heat island effect
- Maximizing indoor air quality by using low VOC emitting products and finishes
- Low E glazing on windows for improved energy efficiency
- Light shelves and advanced daylighting techniques for improved energy efficiency

- Indoor chemical and pollutant control improved indoor air quality
- Responsible use of sustainable and renewable building materials

### [Anamosa Public Library and Learning Center, Anamosa, Iowa – USA 2004](#)

Sqf 14.300, \$ 1.450.000

In 1983, the historic Anamosa Library was listed as one of three Eastern Iowa libraries entered in the National Register of Historic Places. The community cherished the historic building, but recognized the need for a larger, more accommodating library and learning center. OPN Architects, Inc. worked with the community and library leadership to design a new 14,300 sf public library. The design condensed the “hard-wall” space accommodating the program room, staff area, friends room, restrooms, and mechanical in the south third of the building. This created a continuous, open space for the collection and seating areas. The service desk, located in the center of the facility, has visibility to the entire collection area. Features of the design include the ability to secure the library area while still maintaining after-hours access to the program room, two outdoor reading rooms, ICN capabilities, a drive-up book drop, and flexibility for future expansion.

The exterior character of the library recalled the historic atmosphere of the community. Five varieties of Anamosa stone, native to this region, are incorporated into the exterior design. The hip roof form culminates in a raised element that provides clerestory lighting to the center of the facility. In November of 2004, the new Anamosa Library and Learning Center opened. In 2005, the historic town library was re-purposed as the home for the Anamosa Police Department.

“ We are so pleased and proud of our Anamosa Library and much credit goes to OPN for putting all our ideas together and coming up with a great design.”

- Charlene George, President, Board of Trustees

<http://www.opnarchitects.com/work/anamosa-public-library-and-learning-center/>

### [Oskaloosa Public Library, Oskaloosa IA – USA 1997](#)

Sqf. 25.000, \$ 2.700.000

The original Oskaloosa Public Library was constructed in 1902 in the Jeffersonian Revival style. Funding for the original library was provided by Andrew Carnegie. In 1996, OPN Architects was selected to provide professional design services for the renovation and addition to the Oskaloosa Public Library. Funding for the new addition and renovation was provided by a local option sales tax. Prior to schematic design, OPN analyzed the Carnegie facility to determine the organizing principles used by the original designer. Utilizing these same principles of design, a new addition was created that was in harmony with the character of the historic building and satisfied the program requirements for contemporary library. OPN assisted in the specifications of all finishes for the facility. OPN also provided design services to assist the library staff in the selection and specification of all furnishings.

“ I would give OPN my highest recommendation for any public library planning a building project. From the beginning they conducted the architectural design of our new facility in a very professional manner. They realize the importance of the library staff’s time. Punctuality and good organization were hallmarks of each meeting. I would be happy to visit with anyone about our experience with OPN.”

— Nancy Simpson, Former Library Director Oskaloosa Public Library

#### **Libraries:**

### [Performing Arts Building, Reed College, Portland, OR – USA 2013](#)

78,000 sf, Estimated Completion 2013, Earth Advantage Commercial Pilot - Silver Certification (Pursuing)

The Reed College Performing Arts Building (PAB) consolidates drama, dance and music programs, currently scattered across campus, into a new vibrant and cross-disciplinary home for the arts. The facility will create intellectual, social and creative communities that cut across disciplines to encourage teamwork and experimentation while meeting the technical needs of each program. The 78,000 SF building, will be an iconic presence on the western edge of campus and will enclose the Commons Quad, connecting the performing arts to the academic core of the campus community.

The facility is organized around a central atrium lobby and informal learning space that provides an address for each program and three performance venues: 300-seat multi-use proscenium theatre for drama, dance and film, 180-seat studio theatre with flexible seating configurations and highly experimental 90-seat black box theatre. Instruction and rehearsal spaces include: multi-media lab and resource library, three large dance and drama rehearsal spaces, instrument /choral rehearsal hall, costume and design studio, shared classrooms and faculty offices. Opsis is designing the PAB to achieve LEED Gold certification and working closely with Hoffman Construction in an integrated CMGC process.

### [Parkdale Elementar School, Hood River, OR – USA 2011](#)

At Parkdale Elementary, Opsis added 3,800 sf of new library and computer lab spaces to an existing building originally built in the 1940s. The new facilities are tucked into a U-shaped courtyard allowing the computer lab to have excellent natural daylighting while avoiding glare. The library combines a warm wood-finished space with magnificent views of Mt. Adams across the Columbia River Gorge.

The addition brings together two active, growing and community-oriented spaces, which were originally located at opposite ends of the building. With a goal of creating a community space and maintaining a sense of openness, the interiors focus on transparency and flexibility. The utilization of warm wood finishes create a calming atmosphere that are balanced by colorful walls in each space. The outstanding views of Mount Adams and the Gorge result in a scenic backdrop for students and staff. Furniture throughout the space is sized for both children and adults, reinforcing its accessibility to various user groups.

### Cascade Park Community Library, Vancouver, WA – USA 2009

25,000 sf, Completed 2009, Opsis Architecture - Design Architect, Johnston Architects - Associate Architect

#### **Awards:**

**Community Pride Design Award, 2010**

Opsis and Johnston Architects <http://www.johnstonarchitects.com> collaborated to provide comprehensive services for the design of a new \$6.3 million branch library. The building also completing the Opsis designed masterplan for the site that includes the Firstenburg Community Center. This complex was conceived as a new “civic center” for the recently annexed portion of Vancouver – a place to elevate the “body and mind.” The 25,000 square foot library replaced the existing, severely undersized, 2,500 sf Cascade Park Community Library.

Sited to preserve a number of large existing fir trees, the building focuses views into the trees and captures filtered daylight. The dramatic, sloping wood ceiling reading room, stacks, and checkout are visually connected to the surrounding children’s area, teen area, and meeting rooms. A large community meeting room features a shared but securable entrance for use when the Library is closed. The children’s area includes a curving wood parent perch, a family story room, and an outdoor courtyard.

<http://www.opsisarch.com/blog/project/cascade-park-community-library/>

### Interactive Learning Center, Boise State University, Boise, ID – USA 2007

59,000 sf, Completed 2007, Opsis Architecture - Design Architect, Lombard Conrad Architects - Architect of Record

#### **Awards:**

**ACUI Facility Design Award, 2010**

**Idaho AIA Honor Design Award, 2009**

The 59,000 sf Interactive Learning Center (ILC) is a teaching and learning facility located in the heart of the Boise State University Campus. Intended to be an active environment for learning, the center focuses on creating dynamic teaching, study and community learning spaces infused with technology and informal interaction zones. The Center includes state-of-the-art interactive classrooms, multi-media computer labs and spaces for informal and group study. Home of the BSU Center for Teaching and Learning, the facility provides space for “teaching teachers how to teach” using new pedagogues and technologies.

The ILC combines aspects of a student union, classroom building, technology center and library, into one unique facility, creating a new hybrid typology for today’s learning paradigms. The ILC is layered vertically from the highly active ground floor to the quieter upper level study areas. The ground floor, a satellite of the student union, contains a cyber café, food court, convenience store, a 200-seat auditorium and a multi-media lab. The upper level classrooms open up to both enclosed collaborative learning rooms and open study lounges. The central light filled atrium contains a specialized 3-D visualization lab and teaching and learning center that links technology and learning. A dramatic two-story reading room provides panoramic views of the campus and foothills.

Opsis was the design architect with LCA serving as the executive architect.

### Foothills Cultural Arts Center, Scottsdale, AZ – USA 2005

230,000 sf, Completed 2005

#### **Awards:**

**Winning Submission Design Competition 2001**

Opsis Architecture won the nationally invited design competition for this new performing arts and cultural center in the Foothills region of north Scottsdale. The overall program included a 70,000 sf performance venue (with a 900-seat multi-purpose hall and a 350-seat theatrical space), a 60,000 square foot branch library, 40,000 square feet of retail space, and 60,000 square feet of office space. The complex is envisioned as a dynamic village of the various functions surrounding a desert botanical garden.

The Opsis scheme revolved around preserving as much of the natural desert as possible while weaving the new cultural center’s functions with its incredible natural setting. Parking is placed under the office buildings to minimize intrusion into the desert landscape, and the performance building’s mass is used to shelter outdoor rooms from sun and the noise of nearby roads. Elevated wood walkways bring visitors through the desert landscape to the performance hall’s main lobby, which faces west to catch the sunset’s brilliant colors on the nearby mountains.

<http://www.opsisarch.com/blog/project/foothills-cultural-arts-center/>

### **Osborn Architects, Glendale, CA – USA**

<http://www.osborn320.com>

#### **Libraries:**

**Robert Viramontes Learning Resource Center, Baldwin Park CA – USA in design**

Client Baldwin Park USD, Size 19,000 sqft., Project Value \$9,000,000

The design of the Robert Viramontes Learning Resource Center is the product of an intense collaboration between the designers, administrators, teachers, librarians, parents and students. The library includes a large open reading area defined by an acoustical wood ceiling and a central glass atrium. Private study rooms are located to the north, while past the reference desk to the south is a gallery, audiovisual room, computer lab, faculty workroom and a conference room.

<http://www.osborn320.com/robert-viramontes/>

### **Glendale Satellite Library, Glendale, CA – USA 2008**

Client City of Glendale, Size 2,400 sqft., Project Value \$610,000, Completion Date 2008

#### **Awards**

**Pasadena & Foothill AIA, Honor Award, Interiors, 2008**

The final design of this new satellite library in Glendale creates an open and adaptive working space within a limited area. At 2,000 square feet, the small, semi-circular space realizes an evolving paradigm for libraries, changing from stack-centered and spatially intensive to resource-driven, time-based, and community-oriented. Programmatically, the Glendale Public Library system proposed a library wherein the collection was entirely flexible, drawing from the Central Library. The design amplifies the fluid relationship

between an institution and its stakeholders through material transparency where the changing content in the library becomes the literal façade.

<http://www.osborn320.com/glendale-library-connection/>

### [Duarte High School Library, Duarte, CA – USA 2004](#)

Client Duarte USD, Size 46,000 sqft., Project Value \$3,000,000, Completion Date 2004

Duarte High School selected Osborn to design the modernization and expansion of the prominently sited library on the school's west end of the campus courtyard. The design provided an opportunity to expand the book stack collections, improve and redirect access and circulation, upgrade IT/technology and computer stations, increase acoustics and sound isolation, and upgrade mechanical components. The study room is the heart of the building. A high wood panel ceiling with acoustic backing guarantees a quiet, comfortable area and different roof heights allow clerestory windows to bring abundant light into the building, while additional large window openings allow for views into the landscape.

<http://www.osborn320.com/duarte-library/>

### [La Cañada Middle and High School Library & Classroom Building, La Cañada CA – USA 2002](#)

Client La Cañada USD, Size 14,500 sqft., Project Value \$5,000,000. Completion Date 2002

#### **Awards:**

School Construction & News Design Award, 2002

La Cañada Unified School District asked Osborn to create a new classroom building and a new library building. The new library creates a sense of place with the juxtaposition of the curving wall of the library reading room to the three-story façade of the new classroom building creating a powerful dynamic both inside and outside the building. An open plan with a mezzanine provides the library staff complete visual connection to all spaces from the circulation desk. Separate entries allow the building to function independently after school to serve the needs of the surrounding community. The additions create a new courtyard that provides a separate identity for the lower grade students.

### **Overland Partners Architects, San Antonio, TX – USA**

<http://www.overlandpartners.com>

see: [Good Fulton and Farrell](#)

#### [Bozeman Public Library, Bozeman, MT – USA 2004](#)

The Library was designed by: Overland Partners and Johnston Architects In 2004, principal architect Mark Headley left Overland Partners and started his own firm, StudioFORMA Architects, located in Bozeman. The design was completed by Mark Headley with assistance from Ray Johnston of Johnston Architects, and Vanessa Van Beusekom, project manager.

The Landscaping was designed by: CTA Architects Engineers with help from DLM Contracting and Sweet Pea Landscaping, Inc.

[http://www.bozemanlibrary.org/green/arch\\_landscapes.php](http://www.bozemanlibrary.org/green/arch_landscapes.php)

The new Bozeman Public Library is located on a site that is adjacent to two of the greatest assets of downtown Bozeman -- Lindley Park and the historic Main Street district. Capturing delightful views into the spruce-filled landscape of the Park on the east, the main two-level library space will create a dynamic space that fosters introspection and community. Located between the new facility and Main Street, a landscaped plaza will become one of the great civic spaces in Bozeman, accommodating ice-skating in the winter and outdoor music and speaking events in the summer. Reconstruction of the Old Milwaukee Depot has been masterplanned on the south end of the site. Sustainable strategies such as natural daylighting, night flushing, low-use plumbing fixtures, water harvesting and a large photovoltaic electrical generation system will make this one of the most environmentally sensitive projects in Montana.

#### **Libraries:**

#### [Sam Gary Branch Library, Denver Public Library, Denver, CO - USA 2012](#)

Area: 28,000 sf, LEED Gold Certified

Designed as a vibrant activity center for the neighborhood, Sam Gary Library is the first branch library that synthesizes Denver Public Library's innovative "Children and Family" and "Contemporary" styles into one space. Designed to multi-task, the library contains minimal built partitions and uses moveable screens to allow for future flexibility as the library's use shifts and adjusts over time. A large welcoming lobby is furnished for use as a meeting spot to gather with neighbors and friends for coffee or lunch. A high tech beehive space can be used by the community for informal classes and meetings, and is equipped with state-of-the-art digital technology that is fully accessible to users. Spaces range from collaborative and energized to quiet and semi-private to provide a place for everyone in this diverse community.

The L-shaped building parallels the street edge and is largely transparent to allow a window into library activities. Entries are connected with a sweeping, sheltering curved roof structure that becomes the community's front porch. A series of glass "lantern" structures placed along the roof spill pools of natural daylight into the central part of the building. These elements also organize the layout placement inside and create a highly visible beacon in the center of the community.

<http://ozarch.com/portfolio/sam-gary-branch-library/>

#### [Old Town Library, Poudre River Public Library District, Fort Collins, CO – USA 2012](#)

Existing remodel: 34,400 sf , Addition: 6,000 sf

Originally designed in 1975 by one of OZ's founding partners, the Poudre River Public Library was ready for a remodel and a shift to new uses for the space. Over the Library's life, a new service model based on community needs had emerged that includes more

self-service usage, social interaction spaces, community spaces, technology, and efficiencies in resource handling, all requiring a re-focused space.

Engaging the community in a visioning process helped build consensus for how to best reflect the spirit of the community and meet its diverse needs. The design added additional first floor infill space below the existing cantilevered second floor to add square footage without increasing the footprint of the original building or impacting the surrounding Library Park. New large windows and seating areas oriented to park views are popular spots for readers. The remodel update provides a more open, welcoming space with convenient access to technology, a reorganized collection, and a variety of spaces for visitors exploring all the new things their Library can do.

<http://ozarch.com/portfolio/old-town-library/>

### **Nederland Community Library, Nederland, CO – USA 2011**

Designed to be reflective of the natural beauty surrounding it, the Nederland library is accessed across a stream via a pedestrian bridge or from the scenic Peak-to-Peak Highway. A well-used community resource, the library is a busy activity center, with expanded space for book collections, computers available for public use, reading areas, work tables, and a fireplace. A multi-purpose room accommodates children's story hours, small meetings, craft projects, book talks, and public presentations. Support areas for staff work, a Director's office, and book storage for the Library Foundation are

### **Basalt Regional Library, Basalt, CO – USA 2010**

The design vision is for the library to serve as a 'junction' for the elements: Community, Sustainability, Education, Nature, Art/Culture, and Technology. This concept provides a seamless link between all of these elements, thus creating an inviting environment for stimulating thought and creating a haven for knowledge.

The 22,000 sf Basalt Regional Library will provide a gathering place for the Community to come together. This dynamic library's sloped roof rises to the North, affording fabulous views of the mountains and overlooking the Roaring Fork River. The main stack and reading room is the central focus of the facility and the Community Room and lobby are designed for a multitude of different functions. The interior spaces allow for neighborhood assembly, educational events and the display of art. The number of monolingual Spanish-speaking patrons is an important aspect of the design. The library will educate the community not only by providing resource materials, but also by providing an example of sustainable design.

More than just a library, the Basalt Regional Library is a true gathering place for the area's mountain towns ranging from Aspen to Glenwood Springs. Sited overlooking the Roaring Fork River with the Rocky Mountains in the background, the Library's design takes full advantage of its orientation to both. Nature appears throughout the space in the form of local natural materials and a small grove of aspen tree trunks "planted" under a skylight in the Children's area. The Community Room and lobby are designed for flexible configuration for community functions and interior spaces provide settings for events, art displays, and neighborhood meetings. The Library is a busy nexus, echoing Basalt's early days as a bustling railroad junction town.

<http://ozarch.com/portfolio/basalt-regional-library-2/>

When the Basalt Regional Library District built a new library, no one dreamed it would become a cultural magnet for the entire Roaring Fork Valley. The first year after its opening in January 2010, the "gate count" of people entering the facility increased 85% and 10,000 new library cards were issued, making the number of patrons exceed the Library

The main reading room is a large open space bathed in natural light, with an intimate connection to a riparian habitat along the Roaring Fork River. The transparency of the space draws people in, together with tree-like steel columns inspired by the cottonwoods outside. Diverse spaces from a seating area around a fireplace to small individual study rooms, a children's library with its signature circle of trees, a business center for scans and photocopies, a public conference room, and a Spanish language area, support the needs of many different people in the community. Even without dedicated programming, elementary and middle school children flock to the library after school to make use of its leading edge technology.

Concerts, films, lectures and meetings take place in the community room, which can be used when the library is closed. The building lobby is configured not only to allow library patrons to chat comfortably outside the reading room, but also to support exhibits and receptions for community room events.

The building occupies a natural, park-like setting along the main traffic entrance into town. The green copper-clad community room volume announces its presence and addresses the street in a formal manner appropriate to a civic building. The rest of the building is clad in a wood rain screen and shaped to take maximum advantage of daylight, views and solar access. A photovoltaic array on the roof supplies 90% of the electrical power for the building, which received a LEED Silver certification. A4 was the Design Architect and Architect of Record with OZ Architecture in Denver serving as the Associated Architect.

### **Decker Library, Denver Public Libraries, Denver, CO – USA 2009**

OZ provided remodeling services the Decker Branch for Denver Public Library. Scope of work is to update the library with new finishes, energy efficient lighting, low flow water fixtures and to convert it to a Family Style library. This involves creating new zones for the library to support the family style needs. Includes re-laying out the library collection, new circulation desk and service points, integrating RFID and self check machines, ergonomic upgrades to the staff work area, and new furniture.

### **Blair-Caldwell African-American Research Library, Denver, CO – USA 2003**

In 2001, Mayor Wellington Webb decided to build a project as his legacy to the City of Denver. A new Denver Public Library branch located in Five Points, the historic heart of Denver's African-American community, would honor the history of African-Americans in the Rocky Mountain West. This historic commission had several goals: create a culturally important building that would be of its time, fit comfortably yet respectfully into a historic context, serve as a gateway to the redeveloping Five Points

neighborhood, and integrate art seamlessly into its design. The result: a nationally recognized, award-winning building that has become an icon for the region's African-American community and a highly popular event venue, generating much-needed funds for the Denver Public Library.

This Library's unique service model combines a public library, a research library with space for a visiting Fellow, art gallery, museum and event/community center. The galleries, used for display as well as circulation, lead to a dramatic staircase ascending three stories with beautiful views of downtown Denver, signifying the achievements of African-Americans in the Denver community and beyond.

The Blair-Caldwell Library has quickly become a recognized landmark in Five Points, anchoring an urban renaissance in the surrounding neighborhood. Mayor Webb's legacy recently celebrated its 10th anniversary.

The building that you have designed is a beautiful, useful structure...Perhaps even more praiseworthy than the building's design is your diligent navigation of the waters of an astonishingly complex project.

— Rick J. Ashton, City Librarian, Denver Public Library

Staten Island Advance, Summer 2008

Bookmark Magazine, Fall 2008

The project is a one-story branch library for the local community and is situated on a 16,000 SF plot in the Mariner's Harbor neighborhood of Staten Island. The design concept is of a cracked open shell, rougher on the outside and smooth and mother of pearl like inside. The main environmental objectives are daylight and views, energy efficiency and preserving the existing mature trees in the back garden. "Since the 1930s, residents of this former oystering community have been harboring a dream of producing a pearl of their own – a community library. In a few years, that dream will become reality with the completion of a gem of a building inspired by the neighborhood's rich maritime history. The end result, unveiled a few weeks ago during a Community Board 1 meeting, is receiving praise from residents and board members alike. The branch will have another unique feature: it will be the first NYPL branch to have a ground-level outdoor terrace." -Staten Island Advance, Summer 2008. "In the single story, 10, 000 SF building, transparent glass walls and skylights will draw an abundance of natural light, minimizing the need for overhead lighting during the day. The luminous new Mariner's Harbor library will engage the surrounding community-promoting the library as a freely accessible public gathering space for information and ideas, and serving as a true beacon for the residents of Mariner's Harbor." - Bookmark magazine, Fall 2008.

ArchDaily, October 2013

Plataforma Arquitectura, February 2013

Open House NY, fall 2012

Culture Now, December 2012

The library at this primary school is located within the historic C.B.J. Snyder building from 1895 on the Upper East Side and faces one of the historic Carnegie libraries.

Because the principal of the school desired a sober yet articulated space, Atelier PT conceived of a unique design that weaves elements reminiscent of old libraries with contemporary language. Wood paneling with integrated shelving and a new high undulating ceiling with a compelling light pattern were inserted in the space.

A stepped niche at one end of the room will create a storytelling area with low shelving accessible to the smaller children. The sequence of spaces subdivided with modular and movable furniture allows the users great flexibility.

Efficient lighting, shades that protect from glare without obstructing natural light and environmentally friendly materials were used throughout the renovated space.

## [M 13 Central Park East Library, Manhattan, New York, NY – USA 2011](#)

### References:

CultureNow, December M13 Central Park East Library 2012

Architizer M13 Central Park East Library 2012

Atelier Pagnamenta Torriani has completed renovations of school libraries throughout several boroughs of the city. With the aim of spending energy where it matters, the firm has put a good deal of time into public schools in order to provide quality for those who can benefit the most.

The libraries are conceived as friendly oases within these institutional buildings, specific to each school. Once built, they soon become a living room used by the whole school.

The Central Park East library serves both High School and Middle School students. The reading area can morph into a classroom with an interactive whiteboard. Furnished with ergonomic seating and modular light tables, the space can be organized to fit multiple configurations for parent or teacher meetings. The media area is defined as a bright ribbon with motivational signage, drawing students.

[http://www.american-architects.com/en/projects/36060\\_m13\\_central\\_park\\_east\\_library/11/indexAll](http://www.american-architects.com/en/projects/36060_m13_central_park_east_library/11/indexAll)

Situated in the Jackie Robinson School Campus in a building from 1956 in Spanish Harlem, this library serves high school and middle school students. Inspired by the famed Graffiti Hall of Fame in the schoolyard, Atelier PT incorporated bold colors and strong graphics in the new library's design, conceived to meet the project challenge of reconfigurable spaces.

A bright orange ribbon of alcoves was introduced along the interior wall, surmounted by a strong graphic interpretation of favorite quotes chosen by the school. The orange alcoves is the computer area, while the main space, flooded by natural light, is divided with low furniture elements, providing a classroom and lounge areas. The sequence of spaces is articulated by modular and movable furniture that allows great flexibility of use for composing study, meeting, and discussion areas for students, teachers, and parents alike.

The library's materials and technologies, such as shades that reduce glare but allow penetration of natural light, as well as energy efficient light fixture, responded to the latest environmental standards and followed specific environmental requirements developed with the client.

This project is part of a transformative series of A\*PT Architecture school libraries that are expanding their educational purposes by unifying New York student communities in new ways.

## [A. E. Smith High School, Library, Bronx, New York, NY – USA 2010](#)

### References:

A. E. Smith High School Library. Architonic Website, May 2010

The Alfred E. Smith vocational high school is located in the South Bronx and was built in 1938 with additions in 1963.

The vast automobile mechanics and building construction workshops integral to the school building galvanized the design concept and inspired Atelier PT to design a large three-dimensional element suspended in the library space.

The large soffit was designed as a geometrical progression: a double helix repeating modules of 12 triangular facets. This element, while serving as a sound attenuator and spatial modulator, highlights the arts and crafts of this high school.

Low open shelving units separate the classroom, the lounge, and the open computer area.

All furniture is ergonomic and the modular tables can be adjusted to fit multiple configurations for parents-teachers meetings.

Efficient lighting, shades that protect from glare without obstructing natural light and environmentally friendly materials were used throughout the renovated space.

## [Wagner Middle School Library, Manhattan, New York NY – USA 2007](#)

The Wagner Middle School is a large school building on the Upper East Side of Manhattan for junior high school students. The project is the reconstruction and enlargement of a library space. The goal is to transform this space into the school's living room.

The librarian requested shelving, a classroom, computer areas, a media center, lounge area and a librarian's desk. The young principal imagined a space that could morph from a classroom to an informal crescent layout to a formal meeting area for the teachers and parents.

We manipulated the space by creating a series of waves. Waves of knowledge, expressed as deep shelving with an undulating soffit above and a waving flooring pattern below, create intimate spaces, where the young adults can linger. Low shelving units in the main library space define the various reading areas. The use of light and dark wood characterizes the periphery and the middle section of the space.

All furniture is modular, light and stackable. The ergonomic chairs and lounge furniture, as well as the modular tables can be reconfigured easily to suit the needs of each day. The computer niches are set near the main desk, where the librarian will have an unobstructed view to the whole library space.

All materials and finishes used in the project are environmentally friendly, recyclable and contain low VOC.

The Wagner School library is located on the Upper East Side in a school building from 1953.

Atelier PT manipulated the space by creating a series of waves, such as those in Under the Great Wave of Kanagawa by Hokusai.

Waves of knowledge, expressed as deep shelving with an undulating soffit above and a waved flooring pattern below, create an intimate space for young adults. Low shelving units in the main library space define the various reading areas. The use of light and dark wood characterizes the periphery and the middle section of the space.

All furniture is modular, light and stackable. The ergonomic chairs, lounge furniture, and modular tables can be reconfigured easily to suit the needs of each day. The computer niches are set near the main desk, where the librarian will have an unobstructed view to the whole library space.

### **Gibran Library, Byblos – Lebanon 2008**

#### **Literature:**

**Abitare, June 2005**

The University desires to offer library spaces where the electronic access is ubiquitous and where books have a strong presence. In addition to the 650 seats and open air reading spaces, the new library complex will include video conferencing facilities, an auditorium and a museum. The library will be built in a limestone hill above the ancient town of Byblos, overlooking the Mediterranean. The main elements will be layered deep into the hillside: the book depository at the back, then the reading spaces and the lower components, the annex, the museum and the information technology areas, resting at the foot of the hill generating a layered courtyard. A dynamic filter expressed by a series of skewed columns, symbolizing the rhythm of Khalil Gibran's verses in the Prophet, ties the project components together. The exterior skin is composed of modular horizontal limestone layers alternatively forming a flat opaque surface or opening up to allow filtered daylight inside. The limestone hills into which the library is placed are in dialogue with the building materials. The lower floors along the courtyard are glazed, establishing a direct relationship between the library and the whole campus. Passive design features rooted deep in the local culture and derived from the typology of the region were used throughout the project. The traditional library as the permanent symbol of the values of civilization and the laboratory library where the users connect anywhere in the world through electronic impulses coexist and interact side by side. The Byblos Gibran Library for the Lebanese American University is currently under construction with an anticipated completion date of 2008. The architect of record is ACE Engineering.

[http://www.atelier-pt.com/frame\\_nav\\_projects\\_news.html](http://www.atelier-pt.com/frame_nav_projects_news.html)

<http://www.aptaarchitecture.com/filter/education/Byblos-Campus-Complex>

### **Nassar Library, Beirut – Lebanon 2006**

The 70,000 s.f. library serves a projected enrollment of 4,000 students and accommodates a collection of over 250,000 volumes. Additionally the library provides 480 study spaces, periodical and audiovisual collections, lounge areas, offices, classrooms, electronic access at each seat, and four levels of compact shelving. The interior architecture was developed to optimize natural light, local materials and user needs. The low e-glass, the automatic interior shades, provide passive strategies to protect the reading rooms, facing a northern exposure, from indirect glare. The Nassar Library for the Lebanese American University was finished in Summer 2006. The opening ceremony took place on November 11, 2006. The architect of record is SKP Architects and Planners. (Pagnamenta)

The firm researched the local culture, the environment and interpreted it in a contemporary language and heavily influenced the façade design by persuading the client to use low-e clear glazing with automatic shades instead of tinted glass along the main northern exposure to bring the outdoors inside. Atelier PT opened up the interior spaces and glazed all the interior partitions to allow natural light deep into the building and finally proposed energy efficient and state-of-the art technologies. Local materials and artisanship were used throughout the project.

The Nassar Library offers many reading spaces, serials, reference and computer areas, as well as classrooms, and open access to the network anywhere in the building. There is a large open collection, as well as compact storage to house the volumes collected since the original school was founded in 1847.

The library was inaugurated in November 2006 with the Culture Minister & was compared to "an inner sanctum in the Knowledge Tribe's temple where people could refresh their soul, refine their spirit, and let their minds be filled with wisdom."

The architect of record is SKP Architects and Planners

#### **Awards/Certifications:**

AIA San Francisco Chapter 2012 Honor Award for Historic Preservation

AIA California Council 2012 Honor Award for Architecture

LEED Gold – CI

David K. | December 7, 2012

As part of the San Francisco Public Library's Branch Library Improvement Program, Tom Eliot Fisch and Paulett Taggart Architects renovated the historic Golden Gate Valley Branch Library in the city's Cow Hollow neighborhood. Completed in 1918 as a Carnegie library, the two-level brick and terra cotta Beaux-Arts structure was designed by Ernest Coxhead in the shape of a basilica. The project had to meet the Secretary of the Interior's Standards for Rehabilitation & Guidelines for Rehabilitating Historic Buildings and comply with the Americans with Disabilities Act while targeting Silver certification or greater under the LEED for Commercial Interiors rating system. The project has exceeded its sustainability goal by achieving LEED Gold certification.

The most significant challenge was to provide access for people with disabilities while maintaining the 7,400-square-foot structure's historic integrity. Rather than add a long ramp to the main entrance, which would distract from the original facade, the design team created a new, small modern addition in the existing courtyard toward the building's back corner. An aluminum and glass box, this addition provides elevator access to both levels of the library and clearly reads as contemporary while complementing the historic architecture. The existing building's southwest corner is showcased as an interior element within the two-story addition, celebrating the combination of old and new.

To reduce solar heat gain, windows on the south-facing facade to the rear were replaced with high-performance glazing, while historic windows on the other three sides were restored and cleaned. Solar panels provide about 25 percent of the building's power. A new high-efficiency mechanical system ties into the existing radiant system. Other resource-saving elements include specification of energy-efficient lighting and low-flow plumbing fixtures, restoration of original furniture, and new linoleum flooring.

Previously, the main level reading room was lit with harsh fluorescents. New pendants provide ambient lighting, while a new metal valance along the perimeter conceals a strip fluorescent that washes the walls with light. Daylight sensors dim these fixtures depending on the amount of natural light available. New lighting also brightens the formerly dark basement program room, which was leveled to eliminate a flight of stairs that broke up the space. The renovation of the basement also added a sink and ADA-accessible bathrooms while increasing the amount of storage space.

Staff support areas at the back of the building were reorganized to make them more functional. Adding a staircase at the new entry allowed for the removal of an existing stair to make more room for the support areas and provide an office for the branch manager. The project also involved seismic strengthening and creation of a new designated teen area separate from the main reading room.

<http://www.pbk.com>

### **Libraries:**

#### **Collin College Library, Spring Creek Campus, Plano, TX – USA 2013**

Jan. 29, 2013 – Students at Collin College had cause for celebration as the highly- anticipated, new library at the Spring Creek Campus in Plano opened on the first day of the spring semester.

The new two-story, 88,000-square foot structure added much-needed classroom space and created a new front door for the campus, facing Jupiter Road, with majestic architecture inspired by Thomas Jefferson's design for the University of Virginia.

"This new library is a triumph for our master expansion plan, which spanned four locations over the course of a decade," said Mac Hendricks, who chairs the Collin College Board of Trustees. "This forever changes the face of Spring Creek Campus and eastern Plano."

The new library building and renovation of space in the original building will yield 16 classrooms, dozens of faculty offices and three times as many study rooms—space that is likely to fill quickly with student demand. The expansion follows the design plan completed at the college's Preston Ridge Campus in Frisco in 2005 and Central Park Campus in McKinney in 2010, with libraries constructed as the centerpieces of the campuses.

"The Spring Creek Campus was originally built to accommodate 7,000 students, and in fall 2012, the college squeezed in 13,188 students with creative scheduling, like Weekend College," Cary Israel, the district president of Collin College, said. "This is the most significant expansion to the Spring Creek Campus since it opened 24 years ago."

The facade of the new library features striking classic stone columns and brick accents. Inside, a grand reading room capped by a 60-foot dome overlooks a grassy courtyard. Classrooms, study rooms, faculty offices and an instructional design center are located on the second floor.

One unique feature of the new library building is a mock trial courtroom, where aspiring student attorneys from Collin College's mock trial team can learn to plead cases in front of the bench, complete with audio and video. The courtroom can also be converted into a large, general-purpose classroom for courses like speech and broadcasting.

The area the library previously called home will be renovated and repurposed. This phase of construction, which is now in progress, will add classrooms and space for Honors Institute classes, a veterans' resource office, computer labs, writing and math labs, tutoring, conference rooms, a new print shop and a counseling area. It will also relocate facilities for students with disability service needs. Additional projects include an American Sign Language lab, widening of the main stairways to accommodate increased enrollment, a refurbished atrium and new police offices. The college is also converting existing space for two new science labs for courses in environmental science, biology and microbiology.

Patrons of the college will have VIP access to the library at the college's annual scholarship fundraiser on Sat., Feb. 23. The event, titled the Stetson & Stiletto Standoff, is a Texas and Collin County trivia competition, hosted in the reading room of the library.

Sponsorships are still available by calling 972.599.3145.

The Spring Creek Campus library hours are from 7:45 a.m.-9:45 p.m. on Monday-Thursday; 7:45 a.m.-5 p.m. on Friday; 8 a.m.-5 p.m. on Saturday; and 1-5 p.m. on Sunday.

For more information about the Spring Creek Campus library, call 972.881.5860 or visit [www.collin.edu](http://www.collin.edu).

Collin College serves about 53,000 credit and continuing education students annually and offers more than 100 degree and certificate programs. The only public college in the county, Collin College is a partner to business, government and industry, providing customized training and work force development.

#### **Collin College, Campus Central Park Library, McKinney, TX – USA 2009**

65,000 sqf., Cost per sqf. \$223.89

In June 2009, Collin College opened the Central Park Library in McKinney, Texas. The design successfully combines timeless classical architecture with 21st-century innovation, creating a true learning-centered environment. The library presents itself as a showcase of Jeffersonian architecture; a grand entry leads to a rotunda bathed in sunlight, with arched windows, tall columns, marble parquet flooring and a stone staircase that leads to the second-floor gallery. The challenge to create an accommodating atmosphere of open communication for students and professors was met by designing a learning community within a teaching library. The flexible plan has lecture rooms, laboratories and faculty offices on the second floor encircling a grand reading room below. Students have a variety of research settings: group and private study areas, interspersed lounge seating or in the library's cafe—all of which contain the latest computer technology. The interior finishes include wood paneling, stainless steel, marble and an expansive wall of windows framing cottonwood trees. Completed in 28 months and while classes were in session, the library incorporates a centralized chilled-water system, automated building controls, energy-efficient lighting and HVAC equipment throughout. The result is a modern architectural environment that serves as a catalyst for student achievement.  
[http://schooldesigns.com/Project-Details.aspx?Project\\_ID=3817](http://schooldesigns.com/Project-Details.aspx?Project_ID=3817)

The new Learning Resource Center (LRC) is the transformation of an office building into a vibrant campus focused on student learning. The new 74,000 square foot library and grand entry drive provide a new focal point for a campus that has been master planned to more than double. Phase I of the project involves:

- New 74,000 square foot library
  - Student Quad with Amphitheater
  - Conference Center
  - Science Lab/Classroom Renovations
  - Book Store, Student Center, Financial Aid & Auxiliary Services
  - 350 space Parking Garage
  - Additional Surface Parking spaces
  - Pedestrian Bridge to adjacent Restaurant/Cafes

### [Oliveira Library Renovation, Southmost College, Brownsville, TX – USA 2009](#)

Interior renovations to the Oliveira Library consist of a Paseo concept in which UTB-TSC students, faculty, staff and visitors can enjoy all aspects of exhibitions, resource/research materials and study areas through a unique environment. The renovated library has a Hunters Collection off the main entry where exhibits and stored material can be viewed. The technology learning area has state-of-the-art technology, providing more than 120 computer stations. A separate learning center has been created for video teleconferencing/distant learning, as well as two separate conference rooms. The core areas include renovated restrooms, a lounge, and small cafe. Access around the Paseo leads to the Longoria

### [Pearce Brinkley Cease + Lee, Raleigh, NC – USA](#)

<http://www.pbclarchitecture.com>

We are pleased to announce that the architectural firm, Pearce Brinkley Cease + Lee (PBC+L), of Raleigh and Asheville, NC, has merged with Clark Nexsen, an architecture and engineering firm headquartered in Norfolk, VA, with branch offices in Roanoke and Richmond, VA; Charlotte and Raleigh, NC; Washington, DC; and Atlanta, Macon, and Brunswick, GA.

The Clark Nexsen/PBC+L merger creates a 500+ multi-disciplined firm including architects, engineers, interior designers, and landscape architects. The combined staff represents decades of expertise in commercial, cultural, educational, governmental, healthcare, industrial, recreational, retail, and environmentally sustainable design and engineering.

As Clark Nexsen and Pearce Brinkley Cease + Lee grow together as one team, we look forward to achieving our common goal of offering clients a world-class architecture and engineering firm recognized for exceptional design and service. A new website is forthcoming. Until then, for more information, please visit

**Libraries:**

[James B. Hunt jr. Library, North Carolina State University, Raleigh, NC – USA 2013](#)

<http://www2.ed.gov/about/bdscomm/list/hiedfuture/bios/hunt.pdf>

Pearce Brinkley Cease + Lee was the executive architect for the James B. Hunt jr. Library, working in collaboration with the New York office of Snøhetta <http://www.snohetta.com>, an internationally acclaimed Norwegian firm that provided lead design for the new building. The Hunt Library is a signature building serving as the intellectual and social heart of the rapidly growing population on centennial campus. The iconic new library embodies the essence of Centennial Campus as a community built around knowledge. Anchoring the Centennial Campus' academic oval, the new library embodies the spirit of NC State's competitive advantage in science and technology and will play a major role in attracting and retaining the best faculty, students, and corporate partners. Prior to the opening of Hunt Library, NCSU libraries could seat less than 5% of NC State students. The UNC system standard is to provide study seating for 20%. The Hunt Library doubles the NCSU Libraries' available study seats to narrow this gap. NCSU Libraries has made its mark by providing generations of students and faculty with access to the latest technology. From its iconic design to the latest in computing and collaboration tools, the Hunt Library prepares students to lead and support cutting-edge research in a technology-driven economy. Hunt Library houses the IEI, a public policy "think-and-do" tank that brings together leaders from business, non-profit organizations, government, and higher education to tackle some of the biggest issues facing North Carolina's future growth and prosperity.

### [Boyle County Public Library, Danville, KY – USA 2010](#)

<http://www.pparch.com/bcpl.html>

### [Shelby County Public Library, Shelbyville, KY – USA 1997](#)

8,586 s.f. Renovation + 7,880 s.f. Addition - Completed 1997

The Shelby County Public Library is located in a 1903 Carnegie Library in the downtown historical district of Shelbyville. An analysis of the existing library was performed to determine functional relationships and square footage areas to be allocated. The design for the addition is respectful of the original building using brick with stone foundations to match. The rearrangement of interior functional spaces allows the grand domed space and curved apse area of the original Carnegie Library to be maintained and experienced by all the Library's patrons. The upper level of the addition houses the Adult collections while the lower level provides an expanded Children's collection with increased space for reading programs. The goal was to create an addition that would be respectful of the historical structure and its character, but provides for the transformation of the building into a modern library facility which will meet the community's needs for years to come.

## Libraries:

### [Carol Grotnes Belk Library & Information Center, Appalachian State University - Boone, NC – USA 2005](#)

Pease, along with Boston architectural firm **Shepley Bulfinch Richardson and Abbott**, designed the \$44-million Belk Library and Information Commons at Appalachian State University. The facility meets the needs of 14,600 fulltime students and houses a collection of more than a million volumes.

21st Century "Information Center"

The Belk Library is not just a place to house the written word; It is technology- rich "information center". The library incorporates state-of-the-art computer and telecommunications technology and offers a full range of traditional and electronic information resources. The library features a warm and inviting environment with comfortable lounge seating, The Wired Scholar cyber cafe, numerous group study rooms, electronic classrooms and a multimedia authoring center. The distance learning center serves a learning alliance between the university and ten area community colleges.

An environmentally controlled special collections reading room houses the renowned W.L. Eury Appalachian Collection and other rare book materials. A cold storage room for photos and film is also included here.

Sustainable Design

The Belk Library is considered to be the most sustainable and energy-efficient building currently on campus. The HVAC system is completely energy efficient, comprised of multiple built-up air handlers with VFD fan operation; direct digital temperature, humidity, building pressure and carbon dioxide/IAQ controls; OA energy recovery units; variable speed centrifugal chiller; cooling tower and waterside economizer.

Distinctive design features include:

- A three-story, circular glass atrium, which provides natural lighting.
- Environmental rooms, which will contain and help preserve the University's museum quality documents, manuscripts and artifacts.
- Exterior granite stone veneer supplied by a local Blue Ridge Mountain quarry

<http://www.pease-ae.com/Pease/Portfolio/Education/AppalachianStateUniversity.aspx>

BOONE – Carol Grotnes Belk Library and Information Commons at Appalachian State University has been recognized for its green architectural design by two leading library magazines. The April 2008 issue of American Libraries included Belk Library among 27 facilities spotlighted in its "2008 Library Design Showcase." The magazine featured libraries that "demonstrate a commitment to making a beautiful space that serves both the community and the planet." American Libraries is the magazine of the American Library Association. Belk Library was also included in the December 2007 issue of Library Journal, which highlighted 21 academic buildings and 168 public library projects in an article titled "Going, Going Green." Library Journal described Belk Library as "a 21st-century facility that combines the best of technology with the expertise to retrieve and validate its information. The central atrium is the focal point of the new four-story structure, built with environmental sensibility and sustainability in mind."

The green features of Belk Library include an emphasis on natural lighting as well as advanced mechanical equipment for energy savings, cork flooring, energy-efficient elevator system, electronic sensor faucets and toilets, computer-controlled shades and recycled/recyclable carpeting. "We are proud of this national recognition of Appalachian's bright and spacious Carol Grotnes Belk Library and Information Commons, and we are thrilled that students are using the facility's great study spaces, technology and information resources in greater and greater numbers each year," said University Librarian Mary Reichel. "Library personnel were proud to work with the university's Office of Design and Construction, which led the way in making the new library as environmentally sound as possible. We know students appreciate this guardianship of the environment as well," she said. Belk Library and Information Commons opened in summer 2005. It has 221,000 square feet, making it about 50 percent larger than the 1960s structure it replaced. The \$37.5 million building was designed by Pease Associates Inc. and Shepley Bulfinch Richardson & Abbott. The library's construction was funded through the 2000 bond referendum in which North Carolina voters approved \$3.1 billion for capital construction and renovation on UNC campuses and at the state's community colleges.

## [Solar Library, City of Mount Airy, NC – USA 2004](#)

Funded by a U.S. Department of Energy grant, the 14,000 SF library was designed to be a model of solar energy usage. Innovative methods were developed to enhance natural daylighting, while passively heating and ventilating the spaces within an acceptable range. Orientation, insulation systems, landscaping, infiltration controls and glass shading devices help achieve the required energy efficiency.

Continuous review by the Department of Energy indicates that energy consumption is 35% of the energy required by similar non-solar structures.

Areas for reading and other tasks requiring higher levels of illumination are strategically located under clerestories along the southern edge of the building for maximum optimization of daylighting.

The white Mount Airy granite exterior is consistent in finish with other buildings in the city center and facilitates cooling in the summer.

The award-winning library has been featured in *Solar Age*, *Architectural Record*, and several other national publications.

## [Steele Creek Branch Library, Public Library of Charlotte and Mecklenburg County, Charlotte, NC – USA 2004](#)

The Steele Creek Library introduces a civic presence into an otherwise commercial built environment. The 15,000 SF library accommodates up to 70,000 volumes.

The library connects with the agrarian roots of the area, with a design driven by a strong relationship between the inside and outside. Upon entering the building, the outside is reintroduced through the use of clerestory windows and direct exterior views along the main axis.

The Program Room serves the children's programs as well as the community, making this area an integral part of the library's civic function. Support spaces include a Computer Learning Center, silent study room, conference room, and adult and children's reading areas. Clerestory windows light the high, central space running the length of the building. Computer casework in the children's area is designed as a garden trellis, framing the view of the circular gazebo story-time area.

Restricted by the driveways and setback, the available building footprint is long and narrow. The street elevation features the community room accented by a large portico. A trellis covered with evergreen vines runs along the parking area near the library entrance.

## [Law School and Residence Hall, Fordham University Lincoln Center Campus, New York, NY – USA 2014](#)

This competition-winning design is the centerpiece of the first phase of Fordham University's 15-year master plan for its Lincoln Center campus. The project consists of a 22-story building, clad in a curtain wall of architectural precast panels, metal, and glass and shaped with a series of undulating arcs to make an engaging gesture toward Lincoln Center while providing a distinctive identity for the Law School. The latter will be housed in the lower nine stories, with a residential tower accommodating 430 undergraduates rising above.

When completed in 2014, the 468,000-square-foot building will more than double the Law School's current program, event, and office space. The structure, which is designed for LEED Silver certification, will feature a two-story atrium, a moot and trial court facility, and a 562,000-volume law library. The Residence Hall will contain primarily double rooms with shared baths, and apartments for faculty and resident directors will be distributed throughout.

Major Components

Moot and Trial Courtrooms, Law Library, Law Clinic, tiered classrooms, event spaces, student and faculty dining, faculty and staff offices.

## [Edmund D. Bossone Research Enterprise Center, Drexel University, Philadelphia, PA – USA 2005](#)

80,000 sqf. new construction, 70,000 sqf. renovation

The Edmund D. Bossone Research Enterprise Center is designed to create a powerful architectural statement reflecting Drexel University's presence in the vanguard of technology research and education. The program combines 80,000 s/f of new construction with 70,000 s/f of renovated space within the adjacent Commonwealth Hall, creating an integrated facility for multidisciplinary

research. The new facility serves to achieve synergy among researchers, the student body, and the surrounding scientific and corporate communities. The new facility, situated at the gateway to the Drexel campus, was designed to coordinate with campus master planning efforts to strengthen the reading of Drexel as an urban campus, combining strong street frontage with landscaped mid-block gathering spaces for visitors, students, and staff. The main entry to the building off Market Street is provided by a seven-story, north-facing public atrium, reinforcing the definition of the street while beckoning visitors as a grand entrance to the new facility. Major programmatic components at the ground level include a 280-seat lecture hall and reception area, student cafe, exhibition lab, and electron microscope suite. Penetrating the atrium at the upper three levels from the south, the primary body of the new lab program is oriented perpendicular to the diagonal axis of historic Lancaster Avenue and set back from the Peck Alumni Center, which is located on the adjacent site to the west and originally designed as a bank by Frank Furness. The resulting exterior space bordered by the public atrium, lab wing, and Peck Alumni Center provides an upper-level outdoor terrace overlooking the main entry atrium to the north and a landscaped garden to the south. Internally, the new and renovated laboratories at the upper levels provides flexible, state-of-the-art lab space organized around a three-story skylit private atrium, creating a common gathering space for the building's users and focusing the horizontal and vertical circulation in a manner that facilitates a sense of community within the building and informal interaction among faculty, students, and staff. Laboratory complex with "wet" and "dry" labs for multidisciplinary research, as well as computer-based telemetry stations for data gathering and analysis; 7-story public atrium; 3-story private atrium; 280-seat lecture hall; student cafe; electron microscope suite; outdoor terrace.  
<http://www.pcf-p.com/a/p/0007/s.html>

### [Center for Government and International Studies, Harvard University, Cambridge, MA – USA 1998-2005](#) 268.000 sqf.

The Center for Government and International Studies houses the Department of Government and various research centers affiliated with the Faculty of Arts and Sciences at Harvard University. The Center includes new and existing structures in an integrated complex accommodating a range of academic and administrative uses, including faculty offices, classrooms, library and computer facilities, the Harvard-MIT Data Center, and a café. The new complex unites members of the Government Department in a single location alongside the thriving research centers. It promotes both formal and informal interactions among faculty from different departments and disciplines and with visiting scholars from other universities in the United States and abroad. It provides space for graduate students in close proximity to their faculty advisers and to students in related fields, thus deepening the mentoring relationship so essential to graduate education and opening opportunities for first- and second-year graduate students to learn from and interact with their more advanced colleagues. And, by including undergraduate instruction among the functions of the new complex, it will provide Harvard College students with the opportunity to learn in a modern facility while increasing their opportunities for everyday contact with faculty, tutors, and teaching fellows. Knafel Building: 5-story atrium, Library, Data Center, interior Wintergarden, Café, faculty and graduate student offices, seminar rooms, interconnection to the Graduate School of Design (Gund Hall), exterior Garden, South Building: 5-story atrium, 149-seat Lecture Hall, 60-seat Case Study room, seminar rooms, faculty and graduate student offices, exterior sunken garden.

### [San Francisco Main Public Library, CA – USA 1990-1996](#)

Pei Cobb Freed with SMWM

#### **Awards:**

State-of-the-Art public library

Lead Designer: Lames Ingo Freed

Building Stone Institute: Annual Tucker Award 1998

AIA / ALA Library Building Award. Award of Excellence for Library Architecture 1997

18<sup>th</sup> Annual Interiors Award: Best Library 1996

77.000 sqf.

This public library was designed to complete San Francisco's Civic Center, perhaps the finest example of the City Beautiful movement in America. It echoes with a modernist attitude the materials and massing of neighboring Beaux-Arts institutions, fronting on the Civic Center with two symmetrical façades. The library's two other facades make a contemporary response to the adjacent commercial district. The design is organized to permit passage into and through the building and out to the opposite side of the full-block site. The Library is thus both a destination and a link connecting the modern city with its cultural core, a bridge between the people of San Francisco and the institutions that serve and enrich them. Internal organization centers around a monumental open staircase and a five-story atrium, 60 feet in diameter, that provides a luminous hub of orientation. A glass-enclosed Periodicals Reading Room, suspended above, further helps to draw light into the core of the 300' x 200' building. Bridges link the different precincts and reinforce the metaphor of connection in a library that provides access to both advanced online information systems and more than three million books on open/closed stacks. The New Main attempts to integrate the different people, interests, and precincts of the city, both traditionally and electronically, physically and symbolically, now and well into the future. 32 miles open / closed books stacks; 300 terminals, 500 on-line ports; 80' high public atrium (3,700 s/f circular component only); Monumental Stair; 5,700 s/f Periodicals Reading Room; Special Collections (8 rooms @ 1,100 s/f each), 3,550 s/f auditorium (620 seats), public meeting rooms, exhibition spaces, roof garden, café, bookstore, commissioned art (Alice Aycock Stair, Nayland Blake Installation, Ann Hamilton and Ann Chamberlain Installation, Charley Brown and Mark Evans ceiling mural)

Associate Architect: Simon Martin-Vegue Winkelstein Moris, San Francisco, CA

### [John E. Anderson Graduate School of Management at UCLA \(University of California\), Library, Los Angeles, CA – USA 1987 - 1995](#)

#### **Awards:**

AIA:New York State Design Awards: Honor Award 1998

AIA-Brick Institute of America: Brick in Architecture Award 1997

270.000 sqf.

GSM is the second largest building at UCLA on one of its most important sites. The challenge was to integrate its 270,000 s/f mass within a complex campus setting so as to benefit not only the management school but also the university as a whole. The building's language, materials and modest scale are all informed by the nearby historic campus core. A bucolic creek, a multilevel garage, and a key campus walkway otherwise border the site. In solution, AGSM was designed not as a single building, but as a campus within a campus, permeable and fragmented in response to both the varied site and to a multifaceted client institution with diverse

programmatic requirements. The five-story complex consists of seven components, each distinct but linked on several levels so that it functions internally as a whole. At center is an outdoor plaza that invites personal interaction and community as it emphasizes circulation. AGSM was designed as a pivotal campus crossroads. It maximizes its sloped site with access to the outdoors on four of its five levels and provides a much-needed link between UCLA's upper and lower compounds. It acknowledges its privileged site by providing new and very useful pedestrian paths, by augmenting UCLA's memorable and attractive spaces, and by extending the rich architectural traditions of the University's academic core.

154,000 s/f MBA Halls (3); 5,400 s/f Convocation Hall (420-seats); 50,700 s/f library; 31,350 s/f Executive Education Center; 35,800 s/f Commons Building; 3 pedestrian bridges; Anderson Court 48'-5" radius; underground parking for 80 cars below courtyard.

### [John Fitzgerald Kennedy Library, Boston, MA – USA 1979 / 1991](#)

#### **Awards:**

**Adaptive Environment Center: The Best of Accessible Boston: Commendation Award 1986**  
**Pressed Concrete Institute Award 1980**

The Kennedy Library was erected on a landfill site overlooking Boston, Dorchester Bay, and the ocean beyond. To overcome existing conditions, the site was raised 15 feet and planted with beach grasses to recall Kennedy's love of the sea. Within a limited space and budget, the design had to fulfill a complex-mixed use program while symbolically remembering the late young president in terms both contemporary and timeless. A split-level design was developed, organizing museum spaces in a layer below ground, with key emotive elements dramatically isolated above. The solution consists of a triangular 10-story tower housing archival, educational and administrative functions, a two-story base containing exhibition space and two 300-seat theaters, and a 110-foot high memorial pavilion, which gives coherence and focus to the whole. After viewing a film about Kennedy's life, visitors descend into linked exhibition areas highlighting the president's family and administration. From this darkened setting they emerge into the sun-filled, silent void of the space-framed glass pavilion. Except for an enormous American flag suspended above, the space is empty to allow the viewer to contemplate what he has seen and experienced against a great panorama of sky, land and open sea. In 1991 a 21,000 s/f multifunction waterfront addition was constructed to support the library's active educational and cultural programs.

### [China Europa International Business School, Shanghai – China Phase I 1999 / Phase II 2004](#) 34,000 sqf.

The four-hectare CEIBS Campus provides international-standard teaching, research and residential facilities for the school's MBA, EMBA and Executive Development programs. Acknowledging initial funding limits and the likelihood of future growth, the design permits phased construction, without disruption of school activities. Four key elements are involved: 1) a modular organizational grid, 2) a large L-shaped central garden enclosed by a six-meter-high arcaded walkway, 3) an adjacent zone for school buildings, each linked by the arcaded walkway, and 4) a perimeter zone providing vehicular access and parking on all sides of the campus. The buildings are arrayed around the garden for functional adjacency and to foster lively interaction. Their uniform 15-meter height, together with their shared materials and details, collectively creates a memorable campus identity. The library alone asserts a strong figural presence, affirming its role as the school's symbolic heart. The most important principle governing the design is the primacy of open space over buildings. The extensive garden landscape and its enclosing arcade are intended to affirm those values that underlie the CEIBS educational mission: communication, teamwork, social and ecological responsibility, and harmony born of mutual respect in the increasingly fruitful partnership between China and the West. (Pei)

In León, Mexico, a white stone-and-glass-clad structure expresses monumental solidity while maintaining indoor-outdoor connectivity. A three-story pergola of white-painted steel covers a plaza and rooftop terrace, adding a rhythmic lightness to the composition. This is the new library designed by Pei Partnership Architects for the state of Guanajuato.

The building was recognized for outstanding library design by the American Institute of Architects and the American Library Association in the 2009 AIA/ALA Library Building Awards. From a small-town public library in Arkansas to an immense cultural complex in China, the award-winning eight libraries address many similar challenges, balancing transparency and modern library functional needs with a strong institutional presence.

#### **State Library in Mexico**

The Guanajuato State Library Wigberto Jiménez Moreno is the first building constructed toward Pei Partnership's master plan for the encompassing 9.6-hectare (24-acre) cultural forum.

Two primary stone-clad volumes connected by a two-story glass gallery compose the library, totaling 6,750 square meters (72,700 square feet). Providing access and visual connection, the gallery contains a grand staircase for vertical circulation, and connects to the central atrium in the taller structure. The glazing offers views of trees and gardens to those inside, and reveals the activity inside the library to passersby.

#### **Libraries:**

#### [Guanajuato State Library Wigberto Jiménez Moreno, León – Mexico 2006](#)

The 6,750-sq. meter Guanajuato State Library is the first building of the Centro Cultural Guanajuato masterplanned by Pei Partnership Architects in 2003. The library consists primarily of two volumes interconnected by means of a 2-level glass gallery. The main volume is composed of three levels and the second volume of two levels. A large terrace occupies the third level of the lower volume. This terrace and the elevated plaza of the library are covered by a large, 3-story steel pergola painted white. On the lower level of the library, the gallery serves as an access and distribution vestibule which leads directly to a central atrium covered by a skylight, which connects the three levels of the principal volume. The vertical circulation of the building is assured primarily by means of a monumental staircase located on the north façade of the access gallery whose own glass space offers generous views of the gardens to those inside and the activity and animation within the library. Three materials dominate the exterior of the building: white cantera, a Mexican stone which covers the outside walls; the glass of the gallery and the main staircase and the steel painted white of the pergolas. The Guanajuato State Library was dedicated in September 2006. The project which was designed under strict cost constraints, was selected in March 2009 as one of eight recipients of the 2009 AIA/ALA Library Building Award. Biennially, representatives from the American Institute of Architects and the American Library Association (ALA) gather to celebrate the finest examples of library design by architects licensed in the US. ## **Pelli Clarke Pelli Architects, New Haven, CT – USA**

<http://www.pcparch.com>

### **Libraries:**

#### **Minneapolis Central Library, Minneapolis, MN – USA 2006**

Minneapolis's original library was called the Minneapolis Athenæum. It was organized by Minneapolis businessmen in 1859 as a private subscription library, and its shares were traded on the local stock market. After T. B. Walker moved to Minneapolis he bought shares in the Athenæum and gave away memberships to it, promoting the idea of a free public library for the city. Other stock holders raised objections, but the technique worked and soon the city financed a free library for the public with a one mill property tax. When the Minneapolis Public Library was established in 1885 the Athenæum became a partner of it and still exists as a separate nonprofit organisation sharing space with the library.

Three central libraries have been built in Minneapolis, each replacing the last with a bigger and more up-to-date building. The first opened in 1889, the second in 1961 and the third and current building in 2006.

On November 7, 2000 Minneapolis voters approved a \$140 million package to improve library services, including funding a new Central Library building. The building was designed by Cesar Pelli, along with the Minneapolis firm Architectural Alliance. It opened to the public on May 20, 2006. At a cost of \$250 per square foot, the library features a host of energy-efficient measures, including a roof garden and substantial daylight. While the building was under construction, most services were provided at the interim Central Library Marquette location, located on two floors in Marquette Plaza (formerly the Federal Reserve Bank of Minneapolis). Cost of providing an interim site while the old library was demolished and rebuilt exceeded \$10 million.

Until the 2002 closure and demolition of the old central library, the Minneapolis Planetarium Society found its home there, possessing a projector machine literally older than the space age itself (delivered and installed originally in 1954, three years before the launch of Sputnik I). In 2005, the Minnesota Legislature apportioned funding for the inclusion of a planetarium in the new Central Library building. As of May 2007, a 37,000-square-foot (3,400 m<sup>2</sup>) Minnesota Planetarium Society is planned for the roof of the new building.

[http://en.wikipedia.org/wiki/Minneapolis\\_Public\\_Library](http://en.wikipedia.org/wiki/Minneapolis_Public_Library)

353,000 square feet / 33,000 square meters

The Minneapolis Central Library is a vital civic and cultural center for downtown Minneapolis. The highly sustainable design — the result of a collaborative, public process — reinvigorates the idea of the grand urban library, making it accessible and appealing to new generations.

The library is located between two of the city's most active thoroughfares: Nicollet Mall, the central shopping and business district, and Hennepin Avenue, the city's main street for the performing arts. Two street grids meet at the site, inspiring the building's design: two rectangular volumes, one aligned with each grid. The two volumes come together at the Commons, an enclosed public space that joins the two avenues.

The Commons is a six-story glass atrium that fills the building with light and activity. This space is topped by a metal "wing" that appears to hover overhead, extending beyond the building at both ends. Visible from afar, the wing is a new landmark for downtown Minneapolis. The design also accommodates the addition of a planetarium dome, which would project from the corner of the roof. Architecturally, the two halves of the building are reminiscent of warehouse lofts, with large open floors structured by a grid of concrete columns. A strip of ochre Minnesota limestone outlines the edges of the floor plates on the building's exterior and glass walls stretch from floor to ceiling. Windows vary in scale, depth and transparency and include surface patterns digitally translated from photographs of four Minnesota landscapes: water ripples, birch trees, snowy branches, and prairie grasses. The result is an active, lively composition.

The library's design includes many sustainable elements. The roof of the building is planted with drought-resistant ground cover, creating an 18,500-square-foot roof garden that slows storm water runoff and reduces the urban heat island effect. An under-floor ventilation system reduces cooling costs by 20 percent, and the combination of copious daylight and energy-efficient light fixtures contributes to a building that exceeds Minnesota's energy code requirements by 27 percent. Finally, materials with high recycled content and low volatile organic compounds were specified, and 96 percent of the demolition and construction waste was recycled.

#### **Sarah M. and Charles E. Seay Building, University of Texas, Austin, Texas – USA 2002**

[http://www.google.de/imgres?sa=X&rlz=1C2ARAB\\_enDE460DE460&biw=1280&bih=890&tbn=isch&tbnid=SCdGTY2\\_8XdzoM:&imgrefurl=http://giving.utexas.edu/2009/05/09/a-laboratory-for-life-2/&docid=MulaDbH4i\\_MT5M&imgurl=http://giving.utexas.edu/wp-content/uploads/2010/04/Charles-and-Sarah-Seay.png&w=269&h=224&ei=4VSbUpDSPMrTsgaunoHwCg&zoom=1&iact=hc&vpx=421&vpy=598&hovh=179&hovw=215&tx=113&ty=166&page=1&tbnh=146&tbnw=175&start=0&ndsp=34&ved=1t:429,r:23,s:0,i:158](http://www.google.de/imgres?sa=X&rlz=1C2ARAB_enDE460DE460&biw=1280&bih=890&tbn=isch&tbnid=SCdGTY2_8XdzoM:&imgrefurl=http://giving.utexas.edu/2009/05/09/a-laboratory-for-life-2/&docid=MulaDbH4i_MT5M&imgurl=http://giving.utexas.edu/wp-content/uploads/2010/04/Charles-and-Sarah-Seay.png&w=269&h=224&ei=4VSbUpDSPMrTsgaunoHwCg&zoom=1&iact=hc&vpx=421&vpy=598&hovh=179&hovw=215&tx=113&ty=166&page=1&tbnh=146&tbnw=175&start=0&ndsp=34&ved=1t:429,r:23,s:0,i:158)

175,000 square feet / 16,000 square meters, 2002

The Seay Building is the first project completed under the Pelli Clarke Pelli master plan for the University of Texas at Austin. The building extends the Spanish Mediterranean vocabulary of Paul Cret's original master plan in a new structure that holds street edges and encloses a landscaped courtyard.

The building, which houses the Department of Psychology and Human Ecology's Division of Human Development and Family Sciences, contains wet laboratories, a library, computer classrooms, student counseling and observation rooms, acoustic isolation chambers, faculty and administrative offices and a preschool.

Following the natural slope of the site, the building steps down from a five-story lab wing on the west, around the landscaped courtyard before ending on the west side in a three-story wing scaled for the preschool. Five main entrances with appropriate security are located around the building perimeter, while the building's formal entry on the southeast corner is an open double-height space with a grand stair that brings visitors up to the reception area. From this corner on the fourth floor, the library affords commanding views of the campus and the state Capitol.

The building's materials and details are designed as modern interpretations of the original Cass Gilbert and Paul Cret buildings that form the heart of the campus. A solid stone base, Texas brick body, and glassy top express the tripartite composition of the older buildings. The painted wood soffits found on the roof overhangs of many UT buildings are recreated on the Seay Building with brightly colored enameled metal panels that will not fade in the Texas sun.

The courtyard, clearly defined by the rectangular bars of the building, imparts a sense of life and energy with the swooping curves of its plantings and walkways. The focus of the courtyard, which has a patio on the south side, is a center seating area used as an outdoor classroom. A modest fountain in the center, fed by a rill of water that flows alongside the walkway, creates a cool oasis.

### [Greenwich Library Addition and Renovation, Greenwich, CT – USA 1999](#)

100,000 square feet / 9,000 square meters, 1999

This addition to the Greenwich Library joins the original 1931 building and a 1960 addition. The design is respectful of the new building's context, of the urban qualities of the surroundings, and of the civic nature of the public library. With two large curved areas of glass, each one overlooking a small open courtyard, the building is transparent, friendly and welcoming.

Although the site is at the edge of the retail center of Greenwich, almost all patrons of the library arrive by car, and many are dropped off and picked up. Such drop-offs and pick-ups are not allowed on the street because of its heavy traffic. This dictated that the main entrance of the library be towards its parking lot. A street entrance for pedestrians is on the original building, and the Library presents a very urban façade to the street.

Upon entering, patrons are greeted by a Welcome Center and continue along a circulation path called Main Street, which is defined by a double row of columns visible from the entrance. The east end of Main Street ends in a new reading area located along a large, curved, glass wall facing an open garden. Patrons can ascend to the second level on elevators or via a dramatic metal and wood curved stair suspended from the ceiling. A counter curved, two-story glass wall serves as a backdrop for the stair. The glass wall views onto a courtyard, open to the sidewalk, where an existing large oak tree has been preserved.

The New Book area is in a two-story public gathering space, while another public gathering space on the second level offers views of the expanded gallery through the glass entry wall. The Children's Room is a comfortable, friendly place with child-sized furniture in the form of train cars, while the Program Room features a fiber optic ceiling display of a starry sky.

At the eastern end of the building, by the main entry driveway, the building includes a new reading room in a sculptural form that combines the geometries of a triangle and a circle. This element marks the main auto entrance and announces the special character of the new Greenwich Library.

### [Physics and Astronomy Building, University of Washington, Seattle, WA – USA 1994](#)

265,000 square feet / 25,000 square meters, 1994

#### **Awards:**

In 1997, the Physics and Astronomy Building received a Brick in Architecture Design Award from the American Institute of Architects.

A major research and instructional building on the University of Washington campus, the Physics and Astronomy Building includes laboratories, faculty and administrative offices, classrooms, computer facilities, four auditoria, a planetarium and a library. The building consists of a six-story tower, a four-story horizontal building, and a two-story structure, all resting on a one-story basement platform that ties the components together internally. A one-acre courtyard planted with large trees is the primary outdoor public space for this part of the campus.

The building forms and details relate to campus building traditions. The exterior surfaces are textured multi-colored brick set in an English cross bond pattern, with cast stone accents and copper panels. The planetarium and the largest auditorium are emphasized with argyle patterns like those on existing campus buildings.

An exterior colonnade reinforces the tall, linear auditoria lobby space. An adjacent circular stair to astronomy classrooms and the planetarium is contained in a tall glass structure, creating a focus for the lobby as well as a location for a Foucault pendulum.

Physics and astronomy demonstrations are incorporated throughout the building: the Foucault pendulum, a sundial, crystal formation and atomic grid patterns in patterned glass and tile, and carvings of physics and astronomy formulae in the cast stone piers.

There are gathering spaces throughout the building, particularly at important entrances. The two-story building, which houses the most used instructional spaces, includes a lobby used as a waiting space for students and for departmental gatherings and receptions. Smaller spaces are used for informal meetings. Faculty offices are grouped in clusters around semi-open discussion areas, which have become essential places for the exchange of ideas among faculty.

The building is designed to easily incorporate future changes. Where appropriate, labs are in a linear layout to provide flexibility for function and size. The mechanical, electrical and other support systems of the building are also designed to allow easy conversion of spaces should functional changes occur. In addition, the basement level contains 15,000 square feet of expansion shell space.

### [Frances Lehman Loeb Art Center, Vassar College, Poughkeepsie, NY – USA 1993](#)

69,000 square feet / 6,000 square meters, 1993

#### **Awards:**

In 1996, the Frances Lehman Loeb Art Center received an Honor Award from the AIA/Connecticut and the Taylor Hall received a Preservation Award from the Preservation League of New York State.

In 1994, the Center received an Honor Award from the AIA Westchester/Mid-Hudson Chapter and a Certificate of Merit from the State of New York Executive Chamber.

The Frances Lehman Loeb Art Center combines the academic requirements of teaching art history with the exhibition and support requirements of a major regional museum. The new construction contains exhibition spaces, curatorial and administrative offices, storage and conservation spaces. The renovated art history department includes classrooms, offices, slide and photography study rooms and a library.

The Center responds to its position on campus. It establishes a presence at the main campus entrance and along Raymond Avenue, the most public edge of the campus. Its connection to Taylor Van Ingen Hall, the existing art history department and former art gallery, unifies the complex and establishes a dialogue between the two buildings.

The entrance to the gallery is a hexagonal glass pavilion. As a symbol of the Art Center, it connects to the art department by a colonnade, reiterating the scale of Taylor Van Ingen Hall and creating a new forecourt for the complex. The gallery is situated between Taylor Van Ingen and the Vassar Chapel on Raymond Avenue. The gallery is connected to Taylor Van Ingen by a glass-

walled passageway, creating a procession to the gallery and another small courtyard. The gallery wing entrance is a vertical space with light emanating from high dormer windows. This space acts as an entry hall to the prints and drawings gallery, the permanent gallery, and the temporary exhibitions area.

The exhibition spaces are designed for maximum flexibility on a near-cubic module 20 feet on each side with 4.5-meter-high (15 feet) walls converging at six meters (20 feet) to clerestory windows. The clerestory brings down controlled natural light into the modules, which can be joined and recombined freely for changing exhibitions. Limestone walls, infilled with rust-colored brick, complement the fieldstone framed with limestone walls of the existing building. While Taylor Van Ingen repeats medieval forms, the new structure, which is of similar proportion, materials and color, is expressed in a crisper and more abstract manner.

Together with the renovated and enlarged home of the Art Department, the Frances Lehman Loeb Art Center contributes to the high profile of the visual arts on the Vassar campus.

### **Yale-NUS (National University Singapore) College, Singapore – Singapore 2015**

667,000 square feet / 62,000 square meters, 2015

Yale-NUS College will be first liberal arts college in Singapore, offering four-year undergraduate degrees on a campus that integrates learning and living. This new institution, jointly created by Yale University and the National University of Singapore, will enroll up to 1,000 students. Adjacent to NUS's University Town, the Yale-NUS campus comprises a central campus green flanked by academic and administrative buildings as well as three residential colleges, each arranged around its own courtyard.

Balancing the traditions of Yale with the cultures of Southeast Asia, the campus is designed in a contemporary architectural language influenced by the climate of Singapore. Sun- and rain-screened colonnades and roofs with generous eaves are used throughout the campus. Five-foot ways, the shaded walkways found alongside traditional Singapore shop houses, further tie the buildings together. For clear and inviting processional entrances, the signature gates of the Yale campus are reinterpreted with metalwork patterns inspired by Southeast Asian textiles. At the main entrance, glass-enclosed stairwells and a colonnade are topped by an inward-sloping roof of grand scale. At the center of the roof is a square oculus, which sends a dramatic cascade of rainwater into a large circular reflecting pool below.

The heart of the campus is a lush garden and arboretum with six heritage trees and an eco-pond that will capture and filter rainwater. At opposite sides of the central green space will be academic and administrative buildings to include a library, performance complex, science labs and sports center. The Learning Commons, which contains the library and a multi-media center, will be set on a slope to symbolize the pinnacle of knowledge. Outside the Commons is the Agora, an open-air, sheltered gathering place.

The residential colleges will be central to campus life. Students will expand their social and leadership skills while enjoying the support of "nested academic communities." These small-scale communities are arranged vertically in residential towers, which contain both student suites and faculty apartments. Floors will be grouped into neighborhoods, each with its own skygarden, a landscaped outdoor space for high-rise buildings that was pioneered in Singapore. In addition to residential towers, the colleges will have their own dining halls and butteries, the informal student-run eateries that are a Yale tradition. As an extension of the academic environment, the colleges will also have classrooms, seminar rooms, faculty offices, and study spaces. To reinforce the distinct identities of the residential colleges, the design of the buildings within each will vary. The campus is being designed to achieve the highest rating under the Building and Construction Authority's Green Mark, Singapore's benchmark for sustainable design. In addition to visible sustainable design strategies such as the eco-pond and the frequent use of natural ventilation, the campus will integrate advanced building systems for energy efficiency.

<http://pcparch.com/project/yale-nus-college>

NEW HAVEN, Conn. (July 12, 2012) — Ground was broken on July 6th for the Yale-NUS College campus, designed by Pelli Clarke Pelli Architects in collaboration with Forum Architects of Singapore.

Jointly created by Yale University and the National University of Singapore, Yale-NUS College is the first college campus established by Yale outside of New Haven, Conn. The campus opens in 2015 and is designed to achieve the highest rating under the Green Mark, Singapore's benchmark for sustainable design.

Comprised of three residential colleges for 1,000 students, and balancing the traditions of Yale with the cultural and climatic influences of Southeast Asia, Pelli Clarke Pelli Architects developed a contemporary architectural language of clear and inviting processional entrances, sun and rain-screened colonnades and roof forms with generous eaves.

"Much like the educational mission of the college, the architecture of Yale-NUS is keenly attuned to its antecedents and committed to the ideas and responsibilities of today," explains Fred Clarke, senior principal of Pelli Clarke Pelli Architects. "In this way, it is also a vision for the future."

Set in a lush landscape, the 62,000-square-meter campus is comprised of courtyards punctuated by residential towers and a community of learning and social spaces. At its heart is a campus green flanked by academic and administrative buildings, including the learning commons, auditorium, sports hall, and an open-air, sheltered gathering place -- the Agora.

The residential colleges, each home to 330 students plus faculty, form nested academic communities. Tower floors are grouped into neighborhoods around skygardens. The tower designs and those of the courtyards, dining halls, and common rooms will differ in each residential college.

The new campus design is based on original programming, a master plan and early architectural plans developed by KieranTimberlake and Pfeiffer Partners Architects.

### **Kuravoshi Library, Kurayoshi – Japan 2003**

Collaboration with Apicella + Bunton Architects, New Haven CT (<http://www.apicellabunton.com>)

43,000 square feet / 4,000 square meters 2001

The Kuravoshi Library is located in the heart of Tottori Prefecture, adjacent to the new Chubu Cultural Center and Museum also designed by Pelli Clarke Pelli Architects. Comprised of two primary sections – the main City library and a disaster communications center – the facility includes spaces for computer training, group seminars and a 180-seat auditorium.

The Library is accessed through a two-story glazed lobby, which will display exhibits of community arts, books and information. A sweeping glass wall in the reading room and open stack area faces a landscaped plaza that separates the

Library from the Cultural Center. A 14-meter (46-foot) high elliptical atrium space is located above the reference desk at the center of the building with a ribbon window stretching from end to end along the top of its northern edge. Three custom designed skylights penetrate the roof, creating patterns of light and shadow on the atrium walls and Library floor. A series of custom-shaped windows articulate the south wall of the atrium and allow views from the second floor to the Library below.

### **Libraries:**

**NYC School Construction Authority: Mott Haven Campus, Bronx, New York, NY – USA 2011**

### **Awards:**

Architect Magazine, Annual Design Review-Grow Category: Honorable Mention (2011)

The New York Observer, New York's Most Eye-Popping New Buildings of the Year (2010)

Composed of four separate schools sharing diverse specialty program spaces, the new Mott Haven Campus of the NYC School Construction Authority (NYCSCA) brings a much-needed educational facility to the South Bronx. Housing 2,310 students on a 6.5-acre site, Mott Haven has been recognized as the largest single school construction project in New York City history.

Designed in association with Alexander Gorlin Architects, the Mott Haven Campus marked the emergence of a new facility solution that addresses the growing demand for seats while providing an economy of scale in both capital costs and operational expenses. In response to the proven benefits of a “small learning communities,” the design team located the four schools above a podium of shared spaces. With this design, the dining and recreation spaces open onto the field, while the schools face the street, providing a contextual and welcoming front door. Each school functions as an independent entity, with distinct color schemes and separate entryways, classrooms, administrative spaces, and dining facilities. A state-of-the-art 600-seat performing arts center acts as the centerpiece of a shared program for the campus and can also be used as the off-hours community theater.

**University of Pittsburgh: Falk Laboratory School, Pittsburgh, PA – USA 2010**

### **Awards:**

University of Pittsburgh: Falk Laboratory School, The Council of Educational Facility Planners, Northeast Region: Edward Kirkbride Award (2013)

In direct response to an increased demand on an aging facility, the Falk Laboratory School commissioned Perkins Eastman to lead the renovation and addition to the existing 27,000 sf building. The 39,000 sf addition includes newly programmed spaces for science, art, and music and library, as well as a larger communal area for students, faculty, and families. The design successfully resolves an otherwise challenging site while creating usable outdoor teaching spaces and a formal connection to the lush, wooded hillside behind the school.

An extension of the University's School of Education, the Falk Laboratory School is a research facility exploring new teaching methods, assessing student outcomes, and documenting its findings for the benefit of the greater educational community. The current program, which serves 275 children in grades K to eighth grade, will be expanded to include two full sections in each grade with a total enrollment of more than 400 students.

**University of Arkansas: Donald W. Reynolds Center of Aging, Little Rock, AR – USA 2008**

The Reynolds Center on Aging is an interdisciplinary clinical and research center for gerontology medicine, science, and education. Intended to accelerate and disseminate patient-oriented research, the Center on Aging will pioneer integrated therapeutics in the care of the aging. The Center was conceived as the first functioning model for translational geriatric medicine, in which the powerful new tools of genomic and structural biology are directly applied to patient outcomes in the clinic setting, and at the bedside.

Within this single new building, the Medical Center provides a gerontology primary care and physical rehabilitation clinic; two floors of clinical and basic research laboratories; and a library, classrooms, and lecture hall, all equipped for video imaging and distance learning. Throughout the Center, the University committed resources for a sophisticated telecommunications infrastructure to connect students and faculty to colleagues and clinicians, not only via the Internet, but also, via video connection in live time, to other sites in the Medical Center's network.

**C.C.Young: The Point, Dallas, TX – USA 2007**

The Point center for arts and education at C.C. Young offers a fresh concept for a senior activity center: a standalone facility at a continuing care retirement community (CCRC) that attracts both residents and the surrounding intergenerational community with a distinct identity and innovative programming. The 20,000 sf building was designed to create an environment "where the spirit is ageless," a key focus of the client. The facility serves this mission through a strong emphasis on the arts. Spaces within the center correspond to one of three specific focal points—mind, body, and spirit—and play host to highly interactive, creativity-focused programs that welcome people of all ages. To enrich the mind the library offers extensive resources on healthy aging, multipurpose classrooms support lifelong learning, and a computer lab plays host to training on next-generation technologies. The body is nourished at a café offering healthy choices and strengthened at a fitness center that embraces preventative wellness. To engage the spirit, a performance hall presents live entertainment, art studios support the expression of creativity, and a meditation room and sculpture garden provide sanctuaries for reflection.

[http://www.perkinseastman.com/project\\_2400309\\_cc\\_young\\_the\\_point](http://www.perkinseastman.com/project_2400309_cc_young_the_point)

**Princeton Day School, Princeton, NJ – USA 2007**

Princeton Day School is an independent school nestled in a heavily-wooded 103-acre campus on the outskirts of Princeton with 900 students ranging from grades Pre-K to 12. The school sought a master plan that would encourage their core mission of teaching integrity, respect, and compassion. Perkins Eastman translated these goals into a facilities expansion project that added 52,000 sf

and renovated 33,000 sf with an emphasis on a rigorous and competitive academic curriculum balanced by athletics, visual and performing arts, and music.

The master plan honors the historic nature of Princeton Day by adding the new upper school arts facility, visual/performing arts space, and the expanded libraries to the rear of the existing building. The new art studios dedicated to ceramics and sculpture, architecture, painting, woodworking, and photography strengthen the arts program in conjunction with the expanded music rooms and a state-of-the-art recording studio. The libraries include seminar rooms and “smart” rooms equipped with digital and multimedia capabilities. All newly designed interior spaces, which are defined by clean, modern lines, anchor to a circulatory spine and integrate the best and latest technology and tools.

### **Roger Ludlowe Middle School, Fairfield, CT – USA 2005**

#### **Awards:**

**Boston Society of Architects, New England Architects Exhibition (2004)**

**AIA Westchester/Mid-Hudson, First Honor Awards for Recognition of Architectural Excellence, Institutional Category (2004)**

Perkins Eastman won a competition to design the new 200,000 sf Roger Ludlowe Middle School for 875 students in Fairfield, Connecticut, followed by a renovation of the former middle school into Roger Ludlowe High School for 1,400 students and renovation of the current Warde High School for another 1,400 students.

The middle school features a full-sized gymnasium with seating for 1,000 students, an auxiliary half-court gymnasium, a library/media center, a 650-seat auditorium, and a cafeteria, in addition to administrative offices and support spaces. To take full advantage of the sloping site, the gym and auditorium are at the level of the playing fields, the classrooms are on the top floors, and all common areas surround a mid-level patio.

At the adjacent high school, 287,000 sf of renovations and a 40,000 sf addition address curriculum changes, solve code compliance issues, and implement significant technology upgrades. To maximize the limited amount of space on the campus, many of the athletic fields are shared by both schools. Perkins Eastman then renovated the existing ‘50s-era Fairfield High School building to address curriculum changes, code compliance issues, building infrastructure replacement, and significant technology upgrades to the facility.

[http://www.perkinseastman.com/project\\_3408930\\_fairfield\\_public\\_schools](http://www.perkinseastman.com/project_3408930_fairfield_public_schools)

### **University of Connecticut (UNCONN), Stamford Branch Campus, Library, Stamford, CT – USA 2005**

Perkins Eastman designed a new branch campus for this state university in downtown Stamford. The design team master planned a new university precinct in the downtown area, as well as the \$58M campus building. This first phase included renovation of a vacated department store for use as the major academic building, rehabilitation of an existing parking garage, and a new urban park. The building program consists of traditional instruction spaces including auditoriums, classrooms, teaching laboratories, art studios and computer laboratories with ancillary spaces such as faculty and administrative offices, research laboratories, library, lounges, dining and exercise rooms, conference center, and support spaces. The building was planned as the centerpiece of a growing campus located next to the Rippowam River and marks the northwest gateway to Stamford’s Central Business District. A three-story academic concourse which was added to the south street front of the existing building. Forming the primary entry to the university, this concourse is clad in a transparent cable-truss curtain wall. The program for the concourse includes the more public functions of the campus: the library entrance with overhead reading room, food facilities, bookstore, art gallery, entrance to the conference center, open access computer labs, student service functions, and the main security and information desk

[http://www.perkinseastman.com/project\\_2400269\\_university\\_of\\_connecticut\\_stamford\\_branch\\_campus](http://www.perkinseastman.com/project_2400269_university_of_connecticut_stamford_branch_campus)

### **Fairfield Public Schools: Roger Ludlowe Middle School (Library), Fairfield, CT – USA 1998**

After winning a competition, Perkins Eastman designed a new 200,000 gsf middle school for 875 students in Fairfield, Connecticut. Its features include a full-size gymnasium with seating for 1,000, an auxiliary half-court gymnasium, a library/media center, a 650-seat auditorium, a cafeteria, administrative offices and support spaces. The new three-story middle school shares the site with a newly renovated high school. The site development includes athletic playing fields, vehicular and service parking, and an educational wetlands/ecosystem area. To take full advantage of the sloping site, the gym and auditorium are at the level of the playing fields, the classrooms are on the top floors, and all common areas surround a mid-level patio. The siting of the building maximizes the benefit of the landscape features and creates a strong relationship with the adjacent high school. This new school is part of a three-school project Perkins Eastman designed for Fairfield. The other projects include renovations of the existing building on site to accommodate 1,400 high school students, and, on a separate site in the town, renovations to a second building to house an additional 1,400 high school students.

[http://www.perkinseastman.com/project\\_3408930\\_fairfield\\_public\\_schools](http://www.perkinseastman.com/project_3408930_fairfield_public_schools)

### **Cairo American College, Cairo – Egypt 2012**

Located on 11 acres in the Maadi district, Cairo American College (CAC) provides an American-based curriculum to 1,400 students from pre-K to 12th grade. The school adopted a new master plan and commissioned Perkins Eastman for the design of Phase II, a new Middle School and Middle School/High School Library. CAC believes its facilities play an important role in the vital progression a middle school student makes toward the more independent learning encouraged in high school. Echoed in the layout of dedicated program spaces organized around a grade-level commons, the middle school years are critical ones for children—significant for the development of their self esteem and their life-long attitudes toward learning and relationships.

The design of the new 8,400 sm (90,400 sf), 375-student middle school reflects key issues for the school: environmental stewardship, connectivity of inside and outside spaces, employment of local materials, Middle Eastern themes, and landscape design as organizing principles. The 2,100 sm (22,600 sf) library’s overlapping program functions as a physical link between the middle school and high school, providing opportunities for peer mentorship as well as generating anticipation for educational growth.

[http://www.perkinseastman.com/project\\_2401208\\_cairo\\_american\\_college](http://www.perkinseastman.com/project_2401208_cairo_american_college)

### **Chongqing Library, Chongqing – China 2007**

€ 38,000,000

The 50,000 sm (540,000 sf) Chongqing Library is an important educational, cultural, and social center where people will meet to study, access knowledge, and exchange ideas. The building’s design is modern and evocative of the traditional form of the Chinese courtyard. Three main programmatic elements—the open public access zone, secure public zone, and the private secure zone—are built around a center courtyard garden that acts as an experiential space or a scenic opportunity from the adjacent reading rooms and café. The design uses glass and stone to articulate public and private areas of the library. The public areas facing Feng Tian Avenue are sheathed in glass to connote transparency and visibility for users and

pedestrians. It also provides a visual transition from the public plaza to the public areas of the library. The book stacks and service areas to the west are clad in stone to represent security and the solidity of the library's collection. The stone pattern also reflects the design of older buildings in Chongqing, linking the library to the city's architectural heritage as it looks to the future.

### [Hopkins – Nanjing University Center for Chinese and American Studies, Samuel Pollard Building, Nanjing – China 2005](#)

Johns Hopkins University and Nanjing University selected Perkins Eastman to design a new academic building on the campus of Nanjing University. The new Samuel Pollard Building expands the unique academic program of the Hopkins-Nanjing Center for Chinese and American Studies, and serves as a signature landmark of the area that establishes a precedent of construction quality for subsequent build-out of the Nanda campus. The new ten-story, 10,000 sm (108,000 sf) academic building, located next to a building currently housing the program, comprises academic space including classrooms, lecture halls, faculty offices, student lounges, resource areas, and a library. Although the new building represents an aesthetic departure from the existing campus, a portion of the building will take on architectural cues from the old prominent provincial government buildings on Beijing Road—marking the transition between old and new. A glass curtain wall juxtaposed with solid wall space sets up a visual dialogue with the surrounding campus. The glass corner of the building overlooking Beijing road features an uninterrupted expanse of glass that blurs the point at which the building ends and the sky begins, making the building seem taller and lighter than its actual dimensions.

### [Ballou Senior High School Washington, D.C. – USA 2014](#)

Ballou Senior High School sets a new standard for K-12 education in the District of Columbia. It was awarded by design competition to a joint venture between Perkins+Will and Bowie Gridley Architects. Designed to be not only a flagship high school but a community asset and symbol, the complex includes a performing arts theater, aquatic center, athletic and fitness complex, health center, day care center, 700-seat auditorium, and library in addition to academic and administrative spaces. A “main street” organizes destinations and can be accessible during non-school hours as a public gathering space; non-public spaces can be secured. Two internal courtyards create a collegiate feel; community gardens and improved green spaces are incorporated in the design. Academic grades and programs are organized into five distinct academies—clearly identified along the main street—that each have classrooms, flexible multi-use rooms, and science labs. The building, designed with sustainability in mind includes energysaving features such as solar panels and abundant natural daylighting. The new school has been sited on the former Ballou football field so new construction can proceed while the original school remains occupied.

### [Gateway Community College, New Campus, New Haven, CT – USA 2012](#)

Square Footage: 367,000

Gateway is one of the top community colleges in the state, serving more than 11,000 students a year. Its new consolidated campus is a key element in New Haven's plans to revitalize the southwest precinct of the City. Its presence in the center of New Haven enables the college to play a central role in the educational, economic and workforce development initiatives in the Greater New Haven region. The campus occupies a two-block site along Church Street. Transparency, openness, identity and engagement characterize the design. The two site parcels are united into a single campus with a light-filled linear atrium, an “internal street”, that spans George Street with a multi-story glass wall. The building culminates in a curved 3-story glass volume that houses the college's library and makes a dramatic urban gesture as a “gateway” to the city. The College's new home optimizes learning opportunities, engages the community, incorporates efficiency and sustainability, projects a strong institutional identity and provides an inviting, secure campus environment for its diverse student body. The public atrium is a visible space defined by an interactive “learning wall” that allows views into the building and features interactive displays. Within the atrium, stadium seating can be used for studying, informal and formal gatherings. Program elements include teaching and administrative space for general education, allied health, culinary arts and early childhood development as well as community accessible spaces including an art gallery and meeting rooms. The project also includes a day care center and a 600-car parking garage. Tracking LEED-NC Gold certification, Gateway Community College's new campus incorporates numerous sustainable strategies and technologies, including solar hot water, ice storage, photovoltaic and green roof systems.

## [UCLA Charles E. Young Research Library, University of California, Los Angeles, CA – USA 2011](#)

<http://www.pastleaders.ucla.edu/young.html>

Completion: 2011 Square Footage: 60,000 renovation

The Young Research Library was originally designed by renowned architect A. Quincy Jones (\* 29.04.1913 Kansas City MO - + 03.08.1979 Los Angeles CA) in the 1960s (1964/1971). Our multi-phased renovation to the library supports the evolving educational and research needs of students and staff. We incorporated new technologies and re-designed spaces to create a welcoming, multi-purpose facility while respecting its modern legacy. We opened the interiors to take advantage of natural light and used contextual materials to create a rich and inviting atmosphere. The renovated lower level creates a study commons for more than 100 users and offices for staff. On the first level, new amenities such as meeting and event spaces, collaborative spaces and a café.

## [Blue Valley Southwest High School, Overland Park, KS – USA 2010](#)

Completion Date: 2010 Square Footage: 300,000

Located in Overland Park, Kansas, a southern suburb of Kansas City, Blue Valley Unified School District 229 serves over 20,000 students in grades Pre-K to 12. In the fall of 2006, Perkins+Will was asked by Blue Valley Unified School District 229 to facilitate a series of participatory workshops that would result in a facility program statement for the District's fifth High School to be ready for the 2010/2011 academic year. These program guidelines were translated into a dynamic high school environment. Sited on a sloping 112 acre site, the 300,000 square foot high school will serve 1,600 students in grades 9-12. The design is organized around a courtyard, with all common spaces: theater lobby, administration, cafeteria, library, and cyber cafe opening directly onto this central space. The courtyard allows students an easy connection to the outdoors in a safe and secure manner. Recognizing that students tend to gather in small groups, the sloping courtyard permits several distinct zones: an amphitheater, breakout patio for the theater patrons, open green space, and seating terraces for the library and cafeteria. The academic area has been organized into four small learning communities. These spaces are designed to move easily between a variety of curricular models: grade level houses, academic departments, or interdisciplinary academies. At the heart of the academic zone is the media center and a distributed administrative suite. The outstretched wings of the academic communities are linked to the library and administrative zone by "Flexible Teaching and Learning Areas (FTLAs)" which allow larger, more flexible teaching spaces for special projects, team gatherings, and informal common space. The new school incorporates many sustainable design ideas. Central to this effort is a below floor, quiet, displaced air delivery system which allows improved indoor air quality and thermal comfort while using less energy to deliver conditioned air. The building features generous natural day lighting, with borrow lights throughout the interior, indirect lighting with higher ceilings, and daylight sensors. The building has high-reflectance roofing materials and locally produced materials such as Kansas brick and limestone. The school was sited with careful attention to solar orientation to minimize heat gain yet maximize views. An existing pond was enhanced to collect storm water run-off and provide water for irrigation of the surrounding landscape.

## [Atrisco Heritage Academy Albuquerque, NM – USA Completion Date: 2008 \(Phase I\)/2010 \(Phase II\)](#)

Square Footage: 480,000

### **Awards:**

**Award of Excellence - Education, 2010 National Association of Industrial and Office Properties - New Mexico**

**Best of 2010 Award - K-12 Education Southwest Contractor**

**Exhibition of School Architecture Grand Prize, 2009 National School Boards Association**

**Design Concept Award, 2009 Council of Educational Facilities Planners International**

**Citation for Design, 2009 Pasadena & Foothill Chapter AIA**

**Design Award, 2008 AIA San Fernando Valley Chapter**

Atrisco Heritage Academy High School on the southwest mesa of Albuquerque, New Mexico is a new high school campus striving to preserve the community's past, with an eye toward the future. The 60-acre site is the spearhead of development in the larger, rapidly growing community. The campus architecture and interiors boast colors and murals that represent the unique cultural heritage of the community with a modern bent. The campus serves the immediate needs of 2,400 students with a planned capacity of 3,100 students. The planning of the school involved the students, staff and community alike. As a result, the campus consists of career academies organized into three distinct buildings. Each academy has planning and activity space internally and externally to promote hands on work. Partnerships with the community create curriculums and facilitate real life experiences that are often hard to come by in a traditional school environment. One such partnership with the New Mexico Educators Federal Credit Union (NMEFCU) results in a school credit union branch as part of the International Business, Language and Marketing Academy. Other partnerships exist with the University of New Mexico School of Law, New Mexico Hispanic Bar and University of New Mexico School of Medicine and Health and Sciences. The open campus and common areas provide dynamic places for people of all backgrounds to meet and create. –

## [Sammamish Library, Sammamish, WA - USA 2010](#)

The new library currently being built next to city hall in Sammamish is being constructed to cutting edge standards, and will be the first library of its kind to adopt a number of energy saving design features. This week The Reporter took a look around the library-in-progress with Construction Manager Bob Carns to learn more about how the building will take advantage of nature's own energy - light, heat and air - to reduce energy consumption and increase the comfort levels of patrons. One of the most remarkable features of the building is the use of geothermal heating and cooling. While the construction site may look just like a heap of dirt and mess, about 6 feet underneath that soil a state of the art energy system has been put in place. Geothermal heating and cooling systems work by absorbing the heat contained under the surface of the earth, and circulating it through a closed loop. In the case of the new library, that closed loop includes a system of pipes laid into the radiant concrete floor. This geothermal loop circulates a carrier fluid, in this case water, through a system of coiled pipes buried in the ground. "They're a lot like a big slinky," Carns said. "They

stretch the slinky out, lay it in a long trench, and then fill it up." As the fluid circulates underground it absorbs heat from the ground, which in this area is typically at about 55 degrees. A heat pump uses electricity to extract the heat from the fluid. Even cold ground contains heat, and due to advances in technology, geothermal heat pumps are more available now to everyday builders than in previous decades. By utilizing the natural heat from the ground, more heat is generated than if electricity alone had been used directly for heating. Switching the direction of the heat flow, the geothermal system can be used to circulate cooled water through the building in the summer months. This alternative energy technology that is becoming more common, particularly in states like Washington where there is a lot of exploration into green design. While some private houses are currently taking advantage of geothermal loop systems, the new Sammamish building may well be breaking new ground for library facilities. "It's just driven by the library's desire to do the right thing," Carns said. The reason geothermal technology is more energy efficient is this: air temperature ranges throughout the various seasons drop as low as 26 degrees and rise as high as 86 degrees. To provide a comfortable working environment air conditioning systems need to convert this to about 70 degrees. The water in a geothermal loop is already at a fairly constant 60 degrees by the time it circulates out of the ground, meaning that much less energy output is required to reach that 70 degree point. According to Brian Griffith of mechanical engineering firm Stantec, one of the library design teams, water is four times more efficient at distributing energy than air, and the geothermal loop system meshes very well with the radiant flooring. This ensures even temperatures throughout the building, and reduces the energy wastage of having particularly cold or warm sections, as is often the case with air conditioning systems. But Griffith said the way the building was heated or cooled was only part of the idea of energy efficiency. "What it is also about is reducing the need for energy consumption," he said. "We do this by creating a good quality "envelope," the building's shell." Griffith said that a number of other modern design elements had been included to both help the building retain warmth or repel excessive heat, regulating fluctuations in the internal temperature. Some of these are as simple and traditional as shade trees, and the inclusion of operable windows, so those inside can make use of breezes and fresh air. It might not sound like a particularly new or interesting idea - but when was the last time you were in an institutional building and were able to open a window? Sealed environments are energy intensive, and the use of natural elements such as this is a big part of the library's construction which designers believe will save between 30 and 50 percent on energy costs. Another is the inclusion of large windows and sky lights, so as often as possible the library will be lit by natural light from outside. The east-west siting of the building will maximize daylighting and minimize solar heat gains. But it's not all low-tech. The large west facing window will feature the use of Warema blinds, a technology from Germany equipped with a solar tracking system which automatically regulates the positioning of the blinds to provide the most, or least, shading, depending on the temperature inside the building. As the City of Sammamish begins to deal with the imposition of new, stricter Department of Ecology storm water regulations, they will be pleased to know that the library next door is ahead of the game when it comes to filtration and retention. A portion of the roof will soon be covered with 8 to 10 inches of soil into which will be planted rows of low maintenance Sedums, a hardy leaf succulent native to the area. The purpose of this green roof is to filter rain water that falls on the roof and regulate the water's flow into a system of filtration and retention tanks underneath the site. Green roofs such as this are one of a number of design features that the Department of Ecology is encouraging cities like Sammamish to include in their development as a way to simulate the natural functioning of watersheds. They have also been found to improve insulation values. Parking for the library will be directly underneath the library building, thus reducing the footprint of impervious surface.

<http://www.issaquahreporter.com/news/52960307.html>

To accommodate the growing City of Sammamish, the Sammamish Library decided to move to a larger site to accommodate a new 20,000 square foot facility within the Sammamish Commons. The new building is sited immediately to the south of the Civic Plaza edge. Large expanses of glazing and programmatic elements such as the meeting room, cyber bar and teen area overlook the plaza. Below this glazing, a plaza seat wall, landscaped zone and vertical green plantings greet visitors. The library space main reading and stack area contains skylights and clerestories of both translucent and clear vision glazing to reduce the need for artificial lighting and create a warm and inviting space. This main space terminates in a great reading room concept that draws people to the glazed edge with views to the west overlooking the nature preserve, Olympic Peninsula and Seattle skyline. A gas fireplace in a concrete finish and glass enclosure provides a central gathering point at this great reading room. Wood elements mark a progression through the library and include the entry lobby signature wall, meeting room walls and ceiling and lower column enclosures in the primary reading room. The children's area overlooks the new eastern lawn which includes a reflexology path, native plantings and a grove of birch trees. Sustainable design practices have been a top priority in the development of the site and the building. In order to reduce the impervious surface on the site, parking is located under the building with an elevator to access the library floor. In addition, the library's lower roof is planted with low maintenance, native sedum to reduce the water runoff from the roof. Water runoff from the exposed parking area is infiltrated into the site through pervious surface parking and an on-site rain garden. The new library features a highly insulated and efficient building envelope designed to reduce heat gain and loss while maximizing passive solar gain and daylighting. The primary cooling and heating for the building is through a radiant slab with a mechanically assisted ventilation system.

### [Fuqua School of Business, Breeden Hall and the Ford Library, Duke University, Durham, NC – USA 1999 – 2008](#)

90,469, sqf., LEED NC Silver Certified

Breeden Hall and **Ford Library** is our most recent project for the School of Business. It is part of our phased, long-range planning effort to provide a physical framework for collaborative learning and research and the result of a successful 14-year working relationship with the school. Breeden Hall is linked to the Fox Student Center and East Fuqua campus by a three-level skylit atrium, an extension of the school's mallway. It is designed with a great sense of openness and transparency in the interior common spaces and library as well as the natural landscape outside. The program includes business-style classrooms, executive lecture rooms with distance learning and TelePresence capabilities, breakout and team rooms and large multipurpose rooms that open to an outdoor roof terrace. The TelePresence classroom provides business school students with access to professors, business leaders and guest lecturers located around the globe. The 18,000 square foot Ford Library, located at the second level, provides students with a spacious setting to support browsing and the more intense studying that occurs during the short 6-week terms. It is designed for reader comfort with abundant natural light, a variety of comfortable lounge seating, reading tables and generous display space.

### [Stanford Auxiliary Library III – Rare Book & Collections Archive, Stanford University, Livermore, CA – USA 2000 – 2004 / 2013](#)

The Rare Books and Collections Archive at Stanford University achieves a fine balance between highly technical requirements of a complex building and the need for a warm, inviting work environment. Stanford Auxiliary Library III provides high-density archival storage for 2.88 million volumes in a low-temperature and low-humidity environment. Due to the extreme value of the collection, risk management informed almost every aspect of design, including site layout, structural systems, envelope detailing, and the development of state-of-the-art fire detection and suppression systems. Future phases are planned to quadruple the storage capacity of the facility. Due to the relative isolation of the site and its location in an industrial park, creating a pleasant work environment with a reading room, staff lounge, offices and processing space was important. Interior and outdoor gardens provide a landscaped buffer and bring a sense of intimacy to the facility. Work areas are characterized by generous natural light and warm colors with abundant views of the distant hills or adjacent gardens. The exterior palette of buff-colored split-face concrete masonry and precast panels, reflects the hues of the coastal hills and brings some of the character of the Palo Alto campus to this outpost.

## [Oak Park Public Library, Oak Park, IL – USA 2003](#)

104,000 sqf.

### **Awards:**

Signage & Environmental Graphics Category, 2005

American Corporate Identity Annual Corporate Office over 30,000 SF Category, 2004

ASID, Illinois Chapter

In collaboration with building architect Nagle Hartray Danker Kagan McKay Penney, the Perkins+Will Branded Environments practice developed a new public library for Oak Park, a reinvigorated educational and civic meeting center adjacent to the city's central park space and across from Frank Lloyd Wright's Unity Temple. We based our interior design, finishes, environmental graphics, wayfinding and new identity system on a series of experiences to "open the door to a community at home in the world of learning." We integrated the inspirational concepts of "discover, connect and participate" throughout the facility, including the community space, main lobby, children's educational "exploratorium" and glass-enclosed elevator shaft. Our design solutions expressed the spirit and rich diversity of Oak Park and created a destination in the heart of the community for today and decades to come. (Perkins)

## [Xi'an Jiaotong-Liverpool University, Campus Plan and Academic Building, Shuzhou – China 2006 – 2018](#)

<http://www.xjtlu.edu.cn/en/about-us/campus-development.html>

407,000 m<sup>2</sup>

Xi'an Jiaotong Liverpool University – the first independent Sino-foreign university in China – is a partnership between Xi'an Jiaotong University and the University of Liverpool in the United Kingdom. The University's vision is to develop a world-class research university, committed to training leaders with the skills necessary to excel in the emerging global marketplace. Our design concept for the University's campus master plan structures the campus into three zones, each reflecting different cultural and environmental characteristics of Suzhou, an international commercial hub renowned for its ancient and beautiful gardens. A contemplative Nature Garden at the campus core is the focus of campus community life. Incorporating features of traditional Chinese water gardens, the Nature Garden links the existing Academic Building #1 to the Library, the Student Activities Center, the Administrative Building, an International Residence Building, and the multiple classroom and lab structures of the Academic Village. The first Phase of the master plan is the construction of the new Academic Building #2, which establishes a campus design vocabulary of ground level courtyards and elevated green plazas with numerous points of connection from the outdoor gathering spaces to indoor classrooms, lecture halls, and laboratory spaces. At Academic Building #2 a landscaped podium structure of lecture halls supports four wings of teaching labs, research labs, and classrooms. One level above the ground, a continuous interior circulation loop links the pavilions to lecture halls, faculty office spaces, courtyards and interior gathering spaces. This academic "street" provides opportunities for spontaneous interaction and collaboration among students, faculty, and staff. At the third level, the landscaped roof gardens of the lecture halls create casual environments for socializing and learning.

## [Universidade Agostinho Neto, New Campus, Phase I, Luanda – Angola Complete: 2011, Phase I](#)

330,000 sqf.

### **Awards:**

American Architecture Award, 2009 - the Chicago Athenaeum

This new national university is sited on a 5,000-acre green field site southeast of Luanda. Our master plan, developed in 2000 and updated in 2009, is designed to accommodate 40,000 students when all phases are complete. Phase I, of this new campus comprises the University's core curriculum, and includes: four classroom buildings housing faculties of chemistry, mathematics, physics and computer sciences; the central library and plaza; a refectory, student union and conference center. Subsequent phases will complete the development around the central plaza, adding administration, student residences, foodservice, sports fields and facilities, a research zone, parking and user-friendly service areas. Classroom buildings feature a cantilevered canopy system providing solar shading. The canopies extend between buildings, covering an elevated walkway system interconnecting the facilities within each college. In addition to screening the tropical sun, the canopy's innovative design encourages air movement around campus buildings. The library is the tallest structure on the campus, creating a focal element and identifying landmark. The library is sited upon a central plaza featuring native plantings, reflecting pools and a sunken garden. The plaza and garden serves as a gathering space as well as an outdoor reading room.

### University of Toronto at Mississauga, McCallion, Hazel McCallion Academic Learning Centre, Mississauga, Ontario – Canada 2007

sqf. 98,000

LEED silver certified

#### **Awards:**

Innovation in Sustainable Design Award, 2008 - American Library Association/International Interior Design Association  
Award for Design Excellence, 2008 - Ontario Association of Architects  
Award of Excellence, 2007 - Mississauga Urban Design Awards

This Learning Centre and Library provides a vibrant focus for student activity on the University's north campus. It is sited and designed to reinforce the campus plan with indoor and outdoor spaces that animate the campus, and link to existing pathways and green space. The need for high density mobile compact shelving to house the Library's permanent collection, and the University's desire to create a structure that would adapt well to the demands of future digital content, led to a building design inspired by the metaphor of the Japanese puzzle box. An arrangement of interlocking pieces is organized around the building core – the “treasure” (library collection) within the box. This allows generous perimeter space for study and lounge areas, in an open and flexible arrangement with views out to the surrounding campus and natural landscape. The library provides a wide range of collaborative study and work environments that reflect evolving pedagogical and technological trends as well as student work habits. A series of interconnected two-story spaces provide clear circulation and orientation within the building, as well as space for social interaction and collaboration. An information commons, café, conference space, instructional lab and career counseling center are located along this linear “street”. The stepped atrium, two-story cantilevered study wing on the building's west façade, study bays to the east and north, the south-facing roof garden and three sunken gardens – all these elements pull the outdoor environment into the building, and push the building into the fabric of the campus. Exterior wood panels reflect the naturalized landscape and respond to the campus' ecological context. (Perkins)

### Whitby Public Library and Civic Square, Whitby, ON - Canada 2005

Square Footage: 56,000

The primary design objective for this 50,000 square foot central library is the creation of a dynamic relationship between a grand interior public space and an outdoor urban public space in the form of a new civic square. The design team has adopted a simple “L”-shaped configuration in order to maintain the existing library structure during construction and to create a strong spatial definition for the proposed urban plaza that faces onto a heavy traffic artery. A three storey, north-facing Library hall opens directly on to the urban square. The new urban square is animated by the concentration of vertical circulation, information commons and displays, all visible through an uninterrupted expanse of glass at the edge of the square. From the urban square, landscape elements including a green promenade and a linear reflecting pool penetrate the building bringing natural light and colour deep into the building mass. The lower east wing of the building brings the presence of municipal archives, meeting rooms and a café to the existing streetscape. While the building's south facade presents an abstract composition of masonry planes with a reduced scale to the existing residential neighborhood. (Perkins)

### Angus Glen Community Centre and Library, Town of Markham, ON – Canada 2004

150,000 sqf.

#### **Awards:**

Silver Award for Architecture - Commercial Category, 2005, National Post Design Exchange  
Good Design is Good Business, 2006, Ontario Association of Architects  
Large Institution, 2006, Canadian Wood Council, Wood WORKS! Award, Wood Design  
Sports and Recreation Facility, Facility of Merit Award - Outstanding, 2006, Athletic Business Award

Angus Glen Community Centre and Library is situated on a 12-hectare, gently, sloping site overlooking the Angus Glen Golf Course in Markham, Ontario. The major elements of the program include a twin-pad arena, gymnasium, pool, related change rooms and service spaces, multipurpose rooms, senior and youth areas, a district library as well as ancillary retail, food and beverage outlets. The building layout connects at several locations on three levels to outdoor passive and competitive activities. The building is designed to harmonize with the strong natural landscape incorporating natural materials such as zinc cladding, Warton limestone, clay brick and Douglas Fir heavy timber and glulam. The massing of the building similarly utilizes the topography of the site to partially bury the large bulky volumes of the arena, while showcasing the more animated volumes such as the pool and library. Large sweeping roofs above the pool and arena create a strong design theme, replicating the undulations of the site. (Perkins)

<http://www.perkinswill.com/work/angus-glen-library.html>

### Nicola Valley Institute of Technology, Eagle's Perch Campus, Merritt, BC - Canada 2001

sqf. 48,631

#### **Awards:**

Excellence in Architecture/Honor Award, 2005, AIA Committee on Education and Society for College and University Planning  
High Performance Building Award, 2005, Canadian Wood Council  
Excellence in Architecture, 2004, Governor General Award  
Design Award, 2002, International Green Building Challenge

This institute is one of the first facilities in Canada shared by native and non-native students. Phase I of the 43-acre campus master plan is a semi-circular plan that will ultimately evolve into a circle, a shape chosen for its deep significance to native cultures. The building is symbolically oriented to the four cardinal points with the main entry at the east axis facing the rising sun. The design process involved intensive user group interaction and many site visits with native elders resulting in learning spaces that support traditional First Nations' culture and foster student success. Spaces are functionally organized to eliminate any sense of hierarchy. Program elements include classrooms, faculty offices, social spaces, laboratories, a bookstore, cafeteria and library. The building is designed to grow out of the landscape with minimal disruption to the surrounding area. Its wood column structure visually recalls native pithouses with poles rising up through the interior space. As a cold climate green building, it reflects traditional aboriginal structures and values. A glazed ventilation stack with

operable windows creates airflow patterns that ventilate the building naturally. Tensioned fabric, a reference to 'stretched skins' in aboriginal design, is used for shading and for the front entrance canopy. (Perkins)

## **Perry Dean Rogers Partners Architects, Boston, MA – USA**

### **Libraries:**

#### **Florida State University, Tallahassee, FL – USA on design**

COMPLETED 2012 (STUDY), 333,000 GSF RENOVATION; 270,000 GSF POSSIBLE ADDITION, LIBRARY NEEDS ANALYSIS AND DEVELOPMENT PLAN

Florida State University engaged Perry Dean to develop a library needs analysis and development plan for the Florida State University Library System. The scope of the master plan study focuses on 3 current campus library buildings (Strozier Library, Dirac Science Library and the Library Technical Services Facility) and evaluates a program for a new library building (the Library Information Commons). The study includes all collections associated with the University Library that are held in remote storage facilities as well as those in Strozier and Dirac. The first phase of the study focuses on programming right-sized space needs and their relationship with each other presently, as well as anticipating changes for a fifteen-year time-frame. The second phase explores optimal ways of utilizing the two main library buildings and considers options for siting the new Information Commons and its relationship to campus. It includes planning options for three time frames: 1. Immediate renovation of Dirac Science Library to improve day-to-day operations and service delivery 2. Short-term proposal of renovation + additions for the optimal transformation of Strozier Library 3. Longer-term proposal that defines optimal library design for new Undergraduate Learning Commons

#### **National Library of Medicine, National Institutes of Health, Bethesda, MD – USA (on design) on hold pending congressional funding**

Client: National Institutes of Health, Location: Bethesda, MD, Cost: \$136M (est), Completed: 2003 (construction documents). Scope: Pre-design, Schematic Design, Design Development, How Green? LEED Certified (target), Credit: Perry Dean Rogers | Partners Architects, Staff : Rick was a Project Designer while at Perry Dean Rogers | Partners Architects.

The National Library of Medicine addition nearly doubles the footprint of the existing Library and provides three distinct new programs: subterranean book storage; office / research space for the growing number of employees whose work is computer-based; and a series of public spaces including conference facilities and space for medical exhibitions. Together with a comprehensive reorganization of existing space, the addition provides the Library with a sophisticated facility appropriate for current and future work, and reflective of its global significance. Sustainability: Solar gain and glare are not acceptable for computer-intensive research environments such as the National Library of Medicine so the building form and envelope respond accordingly. Aserrated western façade selectively captures diffuse north light and a double-layered eastern façade acts as a climate buffer while providing flexible program space. Roof gardens and terraces cascade down the south façade, providing outdoor spaces for inhabitants of this high-security building. Project Type: Addition and Renovation, Size: Existing: 332,500 gsf, New 194,500 gsf, Construction Cost: \$133,000,000 (estimate), Completion Date: On hold pending congressional funding.

<http://www.ionesarch.com/p-nlm-ja.pdf>

#### **Southern New Hampshire University, Library, Manchester, NH – USA 2014**

Perry Dean is proud to announce that we have recently been selected to design the new Library/Learning Commons at Southern New Hampshire University in Manchester. SNHU was founded in 1932 as the New Hampshire School of Accounting and Secretarial Science. Since that time the school has grown into a University serving a growing population of 6,584 students a year.

The project aims to create an innovative and vibrant learning space on campus and will house the library, along with media services, instructional support, IT help desk, faculty development, and an assembly/performing arts space, among other programs. It is the hope of SNHU that this will be the signature building on campus.

The project is approaching the end of the programming phase and site analysis, site selection and preliminary design exploration have commenced. Below are a few sketches from a series produced during an office-wide charrette last week.

<http://perrydean.squarespace.com/pdrnews/2011/11/22/learning-commons-at-snhu-starting-up.html>

<http://libguides.snhu.edu/content.php?pid=498703&sid=4101400>

#### **Saint Louis University, Pius XII Memorial Library, Renovation, St. Louis, MO – USA 2012**

A recent exhibit mounted by Archives & Manuscripts of the Saint Louis University Special Collections — Pius Library Then and Now: An Exhibit on Renovation in Pius XII Memorial Library — presents images and artifacts of old and newly renovated university libraries showing how the buildings have changed and advanced over time.

The first building constructed by the Jesuits in 1829 to house Saint Louis College

In nearly two centuries of operation, the Saint Louis University Library has undergone a number of moves and renovations. The library's first home was in downtown St. Louis in a building at the junction of Ninth Street and Washington Avenue that served as the home of the newly incorporated Saint Louis University from 1832 to 1854. In 1854 the library was moved to a new second floor location of a nearby building on that original campus. DuBourg Hall from east of Grand AvenueIt was not until 1888 that the library moved into space on the current campus grounds at Grand Boulevard and Lindell Boulevard. There the library took up residence in DuBourg Hall, where it remained until 1959 when Pope Pius XII graciously allowed Saint Louis University to dedicate a new library building in his honor.

Promotional Material for the new Pius XII Memorial Library

The new 157,000 square foot Pius XII Memorial Library was cutting-edge library architecture and technology. Designed by the Leo A. Daly Company of St. Louis, Missouri, it offered an innovative, open plan that allowed patrons direct access to its book stacks (a new concept then!), Pius Library from south east of West Pine Boulevardprovided spacious and brightly lit study areas for students, efficient library facilities and services, and advanced microfilm technology in the Vatican Film Library. Compared to the nineteenth-century structure that had housed the university library since 1888, Pius Library — built to house a million volumes — was the future.

Greeting desk at Pius XII Memorial Library

In 2012 the University Library received its first major remodeling and update. The Anheuser-Busch Wing and Lewis Annex were added in 1986, but were primarily intended to extend available space. By reintroducing many features of the original design, the current renovations restore Pius Library to the future. Spacious student study areasRenewed on every floor, the library presents its

patrons with a central greeting desk standing in front of the new entrance on West Pine Mall, broad areas for student study and cooperative projects, increased numbers of computer and digitization equipment to access and manipulate information, and efficient library services to

<http://libraries.slu.edu/newsletter/issue/fall2012/pius-then-and-now>

read more:

<http://sga.slu.edu/academic-affairs#TOC-Pius-XII-Memorial-Library-Renovatio>

### [Miller Library, Washington College, Chestertown, MD – USA 2012](#)

Project Type: Addition and Renovation, Size: Existing 40,000 gsf, New 10,000 gsf, Construction Cost: \$16,500,000 (estimate)  
Completion Date: In predesign phase, anticipated completion 2011.

Miller Library sits at the heart of campus, tucked between the contemplative and historic College Green and the bustling hardscape of Martha Washington Square, a principal gathering place for student activities. The proposed design links and streamlines these exterior spaces, and introduces an addition whose materials and forms reflect and reinterpret the character of existing campus structures. New program includes group study rooms, an academic skills center, staff offices and a café. Sustainability: Transferring a portion of the library collection to compact shelving reduces square footage requirements and minimizes new construction. The streamlined addition sits to the north of the existing library and funnels diffuse north light to the interior through a large expanse of glazing. East and west facades incorporate louvers to prevent direct solar gain. Interior spaces use demountable partition systems for long-term flexibility. (Perry)

<http://washingtoncollegenews.blogspot.de/2012/11/college-to-dedicate-renovated-miller.html>

### [Massachusetts Maritime Academy, The American Bureau of Shipping Information Commons, Buzzards Bay, MA – USA 2011](#)

43,000 GSF NEW CONSTRUCTION, LEED PLATINUM TARGET, Client THE AMERICAN BUREAU OF SHIPPING INFORMATION COMMONS

This new library integrates a rich program of study, training, and research spaces, in a cutting-edge building that is targeting LEED Platinum Certification. Perry Dean was commissioned to program, evaluate, and create the conceptual design for the re-use or replacement of the existing Hurley Library, and provide the Academy with a facility that enhanced learning and research. Following the programming phase, we conducted extensive campus planning and existing building evaluations, which concluded that a new library was required and that the existing building can be successfully renovated to support other academic and student services programs. The program is dispersed on two principal floors with high ceilings and extensive views of the campus, the Academy's training ship, and the Cape Cod Canal beyond. On the lower 'deck' is an open plan learning commons with student-centered flexible furniture to foster collaborative and social learning. On the upper 'deck' is the Academic Resource Center with flexible, technology-rich learning spaces. It includes academic advising, learning resources, a writing center, multimedia classrooms, study rooms and instruction labs. A ship bridge simulator (essential to the Academy's mission) and a smart classroom form a cylindrical object that runs through both of these spaces. The Academy's traditional library collections and library offices are stacked on the north side of the building with views to Buttermilk Bay. A new plaza was created, connecting the new library, the old library, the nearby dining hall, and residence halls.

[http://www.perrydean.com/projects/Mass-Maritime-SIC/MMA\\_projsheet.pdf](http://www.perrydean.com/projects/Mass-Maritime-SIC/MMA_projsheet.pdf)

<http://www.perrydean.com/>

### [St. George's School Hill Library Addition & Renovation, Middletown, RI – USA 2011](#)

Targeted LEED Gold, Addition: 5,200 GSF, Renovation: 16,700 GSF, Construction Cost: \$6.4m, Completion: August 2011

Scope of Services: St. George's School approached Perry Dean Rogers to design an addition to the existing library with the goal of providing students with a new facility that will prepare them for college-style learning. The project was defined by this important mission, which translated into spaces programmed for active, collaborative learning.

The addition includes a new entrance and multi-purpose teaching space that reorients the Hill Library towards a student-centered hub which includes the Arts Building, the Student Center, and Dining. A transparent, three-story volume is introduced, defining a new entry and bringing light down into the ground floor level. The renovation opens up the interior with an open-plan service desk, group study rooms and light-filled, technology-rich learning spaces.

Indoor environmental quality is improved by increasing natural light with new skylights and enlarged existing openings. Thermal performance of the existing exterior brick constructed facade is greatly augmented with a new interior wall system filled with spray foam insulation. Similarly, roof replacement with regional slate shingles allows added insulation, ensuring an overall weather-tightness of the exterior envelope. Finally, mechanical systems will be upgraded for optimized performance.

"The St. George's library serves as a vital center of campus intellectual life. It supports our academic programs by providing outstanding services, resources, and facilities for research and study.", Mission Statement. (Perry)

[http://www.perrydean.com/projects/St-Georges-Hill-Library/STG\\_ProjectSheet.pdf](http://www.perrydean.com/projects/St-Georges-Hill-Library/STG_ProjectSheet.pdf)

<http://www.perrydean.com>

### [Daemen College, Center for Information, Research and Community Programs, Amherst, NY – USA 2009](#)

Size: 49,000 GSF new construction, 2,000 GSF Renovation, Cost: \$13.4m, Completion: 2009

#### **Awards:**

2010 AIA New England Award for Design Excellence

The Center for Information, Research and Community Programs gives Daemen College a prominent public face by maximizing street frontage and using a bold expanse of curtain wall to frame student activity within. A 24-hour, multi-story Information Commons forms the core of the new structure, joining traditional and high tech research facilities to become a major campus destination. The building also provides the largely commuter population with spaces – including a lobby, café and group study rooms – for social interaction. Sustainability: A central light well spans the full height of the Library, drawing natural light into the heart of the plan. Selective glazing on north, east and west facades lights perimeter classrooms and offices, and a fully-glazed southern façade lights public study spaces. Vermont slate shingle is a sustainable cladding choice because it is regional and durable. The building interior uses a raised floor system that allows for long-term flexibility of building systems and technology infrastructure. This project is working toward LEED Gold. Project Type: Addition and Renovation. Size: Existing: 12,185 GSF

[http://www.perrydean.com/projects/Daemen-College-Center/Daemen\\_ProjectSheet\\_08.pdf](http://www.perrydean.com/projects/Daemen-College-Center/Daemen_ProjectSheet_08.pdf)

<http://www.perrydean.com>

### **Clark University, Goddard Library, Worcester, MA – USA 2009**

Goddard Library, an award-winning structure designed in 1966 by John Johansen (\* 29.06.1916 New York, NY – 26.10.2012 Brewster, MA) <http://www.bluffton.edu/~sullivanm/johansen/johansen.html>, presents the challenge of introducing new programmatic, technological and space requirements to a historically significant structure without damaging its original character. The addition and renovation remain respectful by capturing an existing but under-used exterior plaza to house a 24-hour information commons, and locating additional program – group study spaces and a faculty teaching center – on the existing second level. Materials are clearly contemporary, providing an engaging dialogue between old and new. Sustainability: Conscious of the effort, cost, and energy required to modify the cast-in-place mass of the existing library, the design proposes to reuse existing space rather than to introduce new construction. An underused two story plaza tucked under the library becomes a new information commons when enclosed and reworked. This creative and unexpected approach is cost-effective and contextually sensitive as well as environmentally sustainable. Project Type: Addition and Renovation, Size: Existing: 93,000 GSF, New 13,000 GSF, Construction Cost: \$12,000,000 (estimate) Completion: 2009

[http://www.perrydean.com/projects/Clark-University-Goddard-Library/Clark\\_ProjectSheet\\_08.pdf](http://www.perrydean.com/projects/Clark-University-Goddard-Library/Clark_ProjectSheet_08.pdf)

<http://www.perrydean.com>

### **Frank and Laura Lewis Library, Lagrange College, LaGrange, GA - USA 2008**

This project is working toward LEED Silver certification. Project Type: New Construction, Size: Existing: 44,884 GSF, New 28,100 GSF, Construction Cost: \$10,933,782 (estimate), Completion Date: 2008 (December)

The Frank and Laura Lewis Library sits atop the College's historic Hill Campus where it shapes significant new exterior spaces: a plaza at the main entrance and a quadrangle connecting the Hill Campus to existing buildings to the south. The program reflects an increased interrelationship between library collections, media, and campus-wide computing services but at the same time emphasizes the building's role as an important campus "place". Strong inside / outside relationships, interconnected interior spaces, and copious natural lighting reflect a contemporary design approach. Sustainability: Extensive daylighting – achieved with a series of north-facing roof monitors and exterior wall glazing – dramatically reduces the Library's electrical load. Overhangs and shading elements prevent solar gain and glare. Locally harvested and finished brick, wood, concrete and stone with low embodied energies further reduce the building's environmental impact, as do the recycled carpet tiles from a nearby manufacturer that are a uniquely regional contribution to the project. This project is working toward LEED Silver certification. Project Type: New Construction, Size: Existing: 44,884 GSF, New 28,100 GSF, Construction Cost: \$10,933,782 (estimate), Completion Date: 2008 (December) (Perry)

[http://www.perrydean.com/projects/LaGrange-College-Library/LaGrange\\_ProjectSheet\\_08.pdf](http://www.perrydean.com/projects/LaGrange-College-Library/LaGrange_ProjectSheet_08.pdf)

<http://www.perrydean.com/>

### **Agnes Scott College, McCain Library, Decatur, GA – USA 2002**

For more than six decades the McCain Library has stored the College's "food for the soul." A contribution of \$15,000 for books from the Carnegie Corporation made the construction of a library essential. An additional contribution from the corporation made it possible to commission outside librarians and architects as consultants. The building was designed by Edwards and Sayward of Atlanta and built in 1936. Originally named for Andrew Carnegie, the library was renamed for Agnes Scott's second president James Ross McCain upon his retirement in 1951. Smaller renovations occurred through the years, but it wasn't until 2001 that a total renovation was achieved.

The library houses more than 200,000 volumes with capacity for 250,000. The 2001 renovation added features that included wireless internet connectivity throughout the building, a multimedia production facility and classroom, sound-buffered group study rooms, and a speaking and writing center. Central to the academic life on campus, McCain Library also contains the College archives, which include a collection of Robert Frost's poetry and memorabilia from his visits to the College. Robert Frost maintained a 30-year relationship with the Agnes Scott, visiting numerous times during annual pilgrimages to Florida. The McCain Library houses one of the nation's finest Frost collections, including original material and a portrait of the poet.

The Best College Library in the Country *The Princeton Review*, 2004

The synthesis of contemporary forms and old materials in the award-winning addition integrates the existing library, a late International Style building, into the Civil War-era campus fabric. The addition knits disparate campus elements together by using the same limestone used for the original campus, an original wood window system, and carefully scaled building components. The addition provides new stack and reader spaces as well as a self-contained Special Collections area with dedicated stacks and readers. Sustainability: Choosing to reuse an existing building, rather than to build anew, is one of the most sustainable decisions an institution can make. At Dickinson, renovation of an existing mid-century library combines with an addition to accommodate new program requirements with as little new construction as possible. The addition minimizes environmental impact with natural lighting throughout, and with stone cladding sourced from the same regional mine that provided materials for the original civil war-era campus.

### **Flo K. Gault Library for Independent Study, College of Wooster, Wooster, OH – USA 1995**

The Flo K. Gault Library for Independent Study (1995) is named for Flo Kurtz Gault, '48, whose husband, Stanley C. Gault '48, contributed the principal gift to the building in her honor. Completed in 1995, the 32,000 square foot structure is connected to Andrews Library and serves as a focus for Wooster's commitment to the Independent Study program. Independent Study, or I.S. as it is known to students, faculty, and a half-century's worth of alumni, is the cornerstone of a Wooster education. Each Wooster
