A List of Higher Syntaxonomical Units of Slovakia

Ladislav Mucina, Stefan Maglocky

A revised list of higher syntaxonomical units of the vegetation of Slovakia is presented. This list contains 45 classes, 86 orders, 186 alliances and 31 suballiances.

Die vorgelegte Arbeit enthält eine Liste der höheren Vegetationseinheiten der Slowakei. In der Liste sind 45 Klassen, 86 Ordnungen, 186 Verbände und 31 Unterverbände zusammengefaßt.

OPUS

A List of Higher Syntaxonomical Units of Slovakia

- Ladislav Mucina and Štefan Maglocký -

ABSTRACT

A revised list of higher syntaxonomical units of the vegetation of Slovakia is presented. This list contains 45 classes, 86 orders, 186 alliances and 31 suballiances.

ZUSAMMENFASSUNG

Die vorgelegte Arbeit enthält eine Liste der höheren Vegetationseinheiten der Slowakei. In der Liste sind 45 Klassen, 86 Ordnungen, 186 Verbände und 31 Unterverbände zusammengefaßt.

Reviews and surveys have always punctuated the development of science. They aid interpretations of the progress in science and promote further research by organizing data into systems. Lists of syntaxa and prodromes in geobotany have contributed greatly, enhancing progress in vegetation science since the very first steps this science had undertaken. A major role in the progress of systematic vegetation science has been played by lists of vegetation units organized into a highly formalized syntaxonomical system, making quick and operative communication among vegetation scientists possible.

The first lists of higher syntaxa in Slovakia, above the rank of association, were produced by KLIKA et al. (1941) and KLIKA (1948, 1955). The review of HOLUB et al. (1967), bringing together characteristics of higher syntaxa occurring in Czechoslovakia, represents another milestone of Czechoslovakian geobotany. More than 15 years of syntaxonomical work since the publication date of the 1967's prodromus put forward a need for revision of the system. Simultaneously, in both Bohemia and Slovakia new revisions of the syntaxonomical systems are being completed. Recently, a new short review of higher syntaxa of Bohemia has been released (MORAVEC et al., 1983). The list of Slovakia, though in a shorter version, is presented in this paper. The full version including associations and subassociations is under preparation. The rank of division is not considered here due to the in clarity of its status. As far as the availability of literature and the knowledge of the problem allowed the Code of phytosociological nomenclature was adopted.

Although there are some new syntaxa included in the list, they are still to be described in full length elsewhere. We are aware of the fact that the new syntaxa are not validly published here.
