### Web-appendix 4: Symptoms for potential adverse drug reactions (ADR) - descriptive analysis

Symptom <sup>†</sup> (number, percentage)	T0		T1		T2	
	Control group (n=253)	Intervention group (n=252)	Control group (n=237)	Intervention group (n=238)	Control group (n=225)	Intervention group (n=231)
Bleeding diathesis <sup>#</sup>	44 (17)	33 (13)	28 (12)	43 (18)	34 (15)	39 (17)
Ankle edema	78 (31)	84 (33)	79 (33)	87 (37)	67 (30)	90 (39)
Dizziness <sup>#</sup>	54 (21)	54 (21)	61 (26)	52 (22)	59 (26)	46 (20)
Dyspnea <sup>#</sup>	86 (34)	70 (28)	62 (26)	68 (29)	55 (24)	53 (23)
Difficulties urinating	51 (20)	64 (25)	56 (24)	54 (23)	43 (19)	47 (20)
Abdominal pain <sup>#</sup>	36 (14)	37 (15)	29 (12)	24 (10)	38 (17)	30 (13)
Tachycardia or palpitation <sup>#</sup>	36 (14)	36 (14)	28 (12)	26 (11)	21 (9)	21 (9)
Nausea or vomiting <sup>#</sup>	16 (6)	11 (4)	22 (9)	10 (4)	8 (4)	15 (6)

<sup>†</sup>for details see Figure 1, item “h”, <sup>#</sup>symptoms appeared on at least several or almost every day
