

Supplementary Material

Supplementary Figure 1. Boxplots of mean localization error [°] in the sound localization test divided into age groups 60-74 years (grey box) and 75-90 years (white box).

Supplementary Figure 2. Boxplots of front-back confusions [%] in the sound localization test divided into age groups 60-74 years (grey box) and 75-90 years (white box).

Supplementary Figure 3. Scatter plot of DemTect scores and speech reception thresholds [dB SNR] obtained in MSNF with modulated noise.
