**INSECTA MUNDI** is a journal primarily devoted to insect systematics, but articles can be published on any non-marine arthropod. Topics considered for publication include systematics, taxonomy, nomenclature, checklists, faunal works, and natural history. Insecta Mundi will not consider works in the applied sciences (i.e. medical entomology, pest control research, etc.), and no longer publishes book reviews or editorials. Insecta Mundi publishes original research or discoveries in an inexpensive and timely manner, distributing them free via open access on the internet on the date of publication.

Insecta Mundi is referenced or abstracted by several sources, including the Zoological Record and CAB Abstracts. Insecta Mundi is published irregularly throughout the year, with completed manuscripts assigned an individual number. Manuscripts must be peer reviewed prior to submission, after which they are reviewed by the editorial board to ensure quality. One author of each submitted manuscript must be a current member of the Center for Systematic Entomology.

Guidelines and requirements for the preparation of manuscripts are available on the Insecta Mundi website at <http://centerforsystematicentomology.org/insectamundi/>

**Abstract.** A world catalogue and bibliography of the family Cybocephalidae (Coleoptera) is presented. The catalogue contains 207 species within 16 genera. Each taxon is accompanied by a complete taxonomic history, including a full annotated synonymy with original references cited. The reversal of the recent synonymy of *Cybocephalus brevis* Grouvelle over *Cybocephalus minimus* Grouvelle is proposed. *Cybocephalus aeneus* Reiche is removed from synonymy with *Cybocephalus micans* Reitter and considered *incertae sedis*.

**Key words.** *Cybocephalus*, *Eupastillus*, *Microthomas*, *Pycnocephalus*, scale predator.

## Introduction

The Cybocephalidae are a family of small predatory beetles found throughout the world (Smith 2020). While cybocephalids are typically extremely convex, shiny and dark in coloration, the defining characteristic of this group is their ability to contract their bodies to a greater or lesser degree, with many species capable of conglobulation (Fig. 1–10). These beetles are rarely collected due to their small size and the infrequency with which they are collected using traditional trapping techniques (i.e. MV/UV-light, malaise, pitfall, etc.). In most cases, cybocephalids are collected by sweeping, beating or simply gleaned by hand (Smith and Cave 2006). Edmund Reitter (1874) published the first catalogue, or at least a comprehensive list, of the cybocephalids of the world. At that time, there were 25 species known to science confined to one genus. At the time of this publication, there are a total of 207 species in 16 genera in the family worldwide, with 201 extant species in 15 genera and six extinct species in two genera.

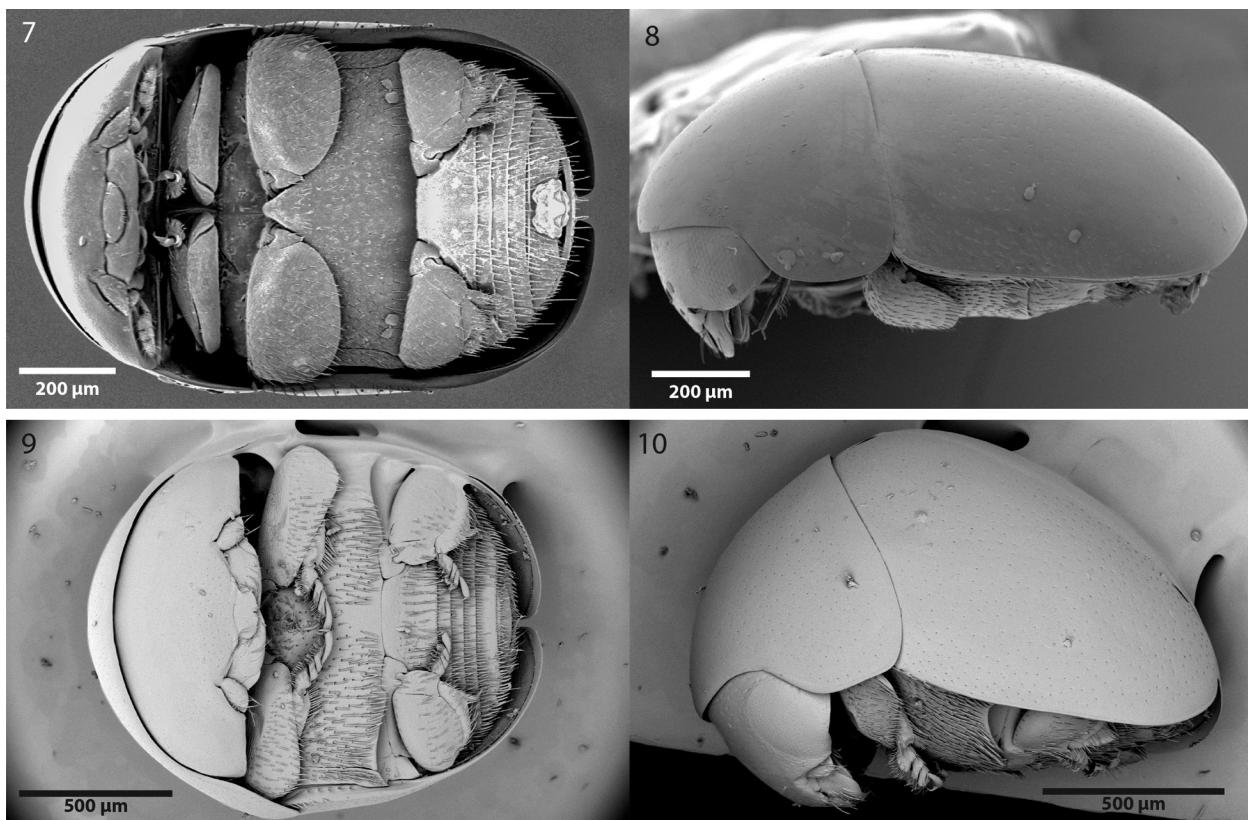

## Materials and Methods

All original species descriptions, taxonomic treatments, checklists and catalogues pertaining to this group were examined for this manuscript and are cited where needed. The most relevant publications for building this catalogue were the early works of Reitter (1874, 1875, 1878, 1885, 1890, 1898, 1900, 1908) and the extensive works of Endrödy-Younga (1962a,b, 1964, 1965, 1967, 1968, 1969, 1971a,b, 1974, 1976, 1982, 1984), in particular his “Monograph of the Palearctic Species of the Family Cybocephalidae.” Other catalogues and major contributions not specific to this family but significant to the development of this publication were the works of Grouvelle (1913a), Blackwelder (1945), Lawrence and Newton (1995), Jelínek and Audisio (2007) and Jelínek et al. (2010).

In the list below, valid genera, species and subspecies are in bold. Synonyms, original combinations for valid species or infrasubspecific taxa are not bolded. Every valid species is also given a number; subspecies are not.

*Cybocephalus brevis* Grouvelle 1913b: 114–115; synonymy by Endrödy-Younga 1964: 64. (Subsequently, Endrödy-Younga [1982: 260] proposed to revalidate *C. brevis* by reversing his synonymy because *C. minimus* and *C. minutus* were “disturbingly similar”. However, Endrödy-Younga [1964] acted as the First Revisor [ICZN 1999, Articles 23.6, 24.2] which set priority for use of *C. minimus* over *C. brevis*. The two letter differences between “minimus” and “minutus” are enough to prevent homonymy [ICZN 1999, Article 57.6]. Thus, Endrödy-Younga's [1982] proposed reversal is invalid.)

#### Incertae sedis

1. *Cybocephalus aeneus* Reiche 1864: 327. This species was synonymized by Endrödy-Younga 1968: 85 under *Cybocephalus micans* Reitter, 1874: 2. Endrödy-Younga stated he was unable to locate the type of *C. aeneus* and that Reiche's original diagnosis was insufficient and unclear to confidently identify the species. He stated the species most consistent with the diagnosis was *C. micans* and placed the two in synonymy with a “?”. While *C. aeneus* clearly has seniority, because its identity could not be determined with certainty, Endrödy-Younga chose the more recent *C. micans* with an unambiguous description as the name to use. This decision does not follow the Principle of Priority (ICZN 1999, Article 23) and must be corrected in some manner. In the interest of stability, with *C. micans* being consistently used in the literature for almost 150 years, *C. aeneus* is here relegated to *incertae sedis* status until the type is located and studied.

#### *Endrodiellus* Endrödy-Younga, 1962

*Endrodiellus* Endrödy-Younga 1962b: 275–276. Type species: *Endrodiellus speciosus* Endrödy-Younga 1962b: 276–277; by original designation.

1. *Endrodiellus speciosus* Endrödy-Younga 1962b: 275–276.

#### *Eupastillus* Lawrence, 2019

*Eupastillus* Lawrence 2019: 77–82. Type species: *Eupastillus minimus* Lawrence 2019: 77–82; by original designation.

1. *Eupastillus minimus* Lawrence 2019: 77–82.

#### *Hierronius* Endrödy-Younga, 1968

*Hierronius* Endrödy-Younga 1968: 108. Type species: *Cybocephalus laevis* Wollaston 1864: 117; by original designation.

1. *Hierronius angulosus* Endrödy-Younga 1968: 110–111.
2. *Hierronius laevis* (Wollaston) 1864: 117; combination by Endrödy-Younga 1968: 109–110.  
*Cybocephalus laevis* Wollaston 1864: 117.
3. *Hierronius madeiraensis* Kirejtshuk and Mantič 2015: 197–201.
4. *Hierronius nanus* Endrödy-Younga 1968: 111–112.

#### *Horadion* Endrödy-Younga, 1976

*Horadion* Endrödy-Younga 1976: 113. Type species: *Horadion villiersi* Endrödy-Younga 1976: 114–116; by original designation.

1. *Horadion villiersi* Endrödy-Younga 1976: 114–116.

#### *Microthomas* T. R. Smith, 2020

*Microthomas* T. R. Smith 2020: 15–19. Type species: *Microthomas brevicornis* T. R. Smith 2020: 19–20. Soon after publication of the description of *Microthomas* (Smith 2020), an error was realized that needs correction (D. Yanega, in litt. Jan. 2021). *Microthomas* was erroneously stated to be neuter when it was originally intended to be masculine, with the result that the name as given, *Microthomas brevicornis*, does not actually agree in gender as mandated by the ICZN (1999, Article 31.2). That error in gender assignment is here corrected, and the genus name is declared to be masculine, so the spelling “*brevicornis*” can be retained.

1. *Microthomas brevicornis* T. R. Smith 2020: 19–20.

#### *Pacicephalus* Kirejtshuk and Mantič, 2015

*Pacicephalus* Kirejtshuk and Mantič 2015: 203. Type species: *Cybocephalus gressitti* Endrödy-Younga 1971b: 284–285; by original designation.

1. *Pacicephalus gressitti* (Endrödy-Younga) 1971b: 284–285.  
*Cybocephalus gressitti* Endrödy-Younga 1971b: 284–285; combination by Kirejtshuk and Mantič 2015: 203.

#### *Pastilloccenicus* Kirejtshuk and Nel, 2008

*Pastilloccenicus* Kirejtshuk and Nel 2008: 427–429 (Extinct – French Eocene amber). Type species: *Pastilloccenicus grandiclavus* Kirejtshuk and Nel 2008: 431–432; by original designation.

1. *Pastilloccenicus grandiclavus* Kirejtshuk and Nel 2008: 431–432 (Extinct – French Eocene amber).
2. *Pastilloccenicus longifrons* Kirejtshuk and Nel 2008: 429–430 (Extinct – French Eocene amber).
3. *Pastilloccenicus polyaki* Kirejtshuk and Nel 2008: 430–431 (Extinct – French Eocene amber).

#### *Pastillodes* Endrödy-Younga, 1968

*Pastillodes* Endrödy-Younga 1968: 112. Type species: *Cybocephalus agathidioides* Peyerimhoff 1927: 238–239; by original designation.

1. *Pastillodes agathidioides* (Peyerimhoff) 1927: 238–239; combination by Endrödy-Younga 1968: 113–114.  
*Cybocephalus agathidioides* Peyerimhoff 1927: 238–239.
