### Abstract

Synonymies, new combinations, new status, revalidations, and generic transfers are presented for Western Hemisphere Cerambycidae. In the subfamily Prioninae, taxa are in the tribes Macrodoniini and Mallaspidini; in the subfamily Cerambycinae in the tribes Cerambycini, Elaphidiini, Molorchini, Rhinotragini, Compsocerini, Callidiini, Clytini, Cleomenini, Heteropsini and Trachyderini; and in the subfamily Lamiinae in the tribes Parmenini, Lamiini, Onciderini, Pteropliini, Pogonocherini, Desmiphorini, Acanthoderini, Acanthocinini, Aerenicini and Calliini.

### Introduction

The availability of a great number of specimens belonging to important collections such as the Museu Nacional, Rio de Janeiro, the Museu de Zoologia, São Paulo, the Essig Museum of Entomology, Berkeley, and several private collections in California, and also the opportunity to examine photographs of types deposited in European museums, has contributed greatly to an increased understanding of the Western Hemisphere Cerambycidae.

During the preparation of a new checklist of the Cerambycidae and Disteniidae of the Western Hemisphere, it has become necessary to incorporate certain changes in nomenclature, such as synonymy, new combinations, and changes of taxonomic assignments. Rather than publishing these changes as a part of the checklist, we are presenting the following preliminary nomenclatural notes.

Acknowledgments to Ubirajara R. Martins, Sérgio Frago, Carlos A. Campos Seabra, Gérard Tavakilian, Jesus Moure, John A. Chemsak, and Frank T. Hovore for their valuable assistance and suggestions.
