

Suppl. Figure 7

Suppl. Figure 7. Kinetics of survivin depletion and DNA damage induction by YM155 in neuroblastoma cells. Cellular levels of survivin and γ H2AX (indicating DNA damage) in UKF-NB-3^{p53shRNA} cells in response to YM155 treatment over 24h as indicated by quantitative, fluorescence-based Western blot analysis; values are presented as fold change relative to the respective parental cell line. Representative Western blots are provided in Suppl. Figure 4.
