

## Suppl Figure 1

**Suppl. Figure 1.** Representative Western blots and quantitative fluorescence-based quantification of Western blot data indicating cellular survivin levels in UKF-NB-3 cells, UKF-NB-3 cells with acquired resistance to cisplatin (UKF-NB-3<sup>r</sup>CDDP<sup>1000</sup>), UKF-NB-3 cells with acquired resistance to vincristine (UKF-NB-3<sup>r</sup>VCR<sup>10</sup>), UKF-NB-6 cells, UKF-NB-6 cells with acquired resistance to doxorubicin (UKF-NB-6<sup>r</sup>DOX<sup>20</sup>), or UKF-NB-6 cells with acquired resistance to vincristine (UKF-NB-6<sup>r</sup>VCR<sup>10</sup>).  $\beta$ -actin served as loading control.
