

Suppl Figure 10

Suppl. Figure 10. Effects of RNAi-mediated Mcl-1 depletion on UKF-NB-3 cells. UKF-NB-3 cells were treated without siRNA, with non-targeting 'scrambled' (scr) siRNA, or siRNA directed against Mcl-1. Cellular Mcl-1 levels were detected 24h post transfection by Western blot. Cell viability was determined 72h post transfection by MTT assay.
