# Supplementary Figure 9

Uncropped Western blot of figure 7A. The nitrocellulose membrane was re-scanned by a GS-710 Imaging Densitometer (Bio-Rad) and for image processing the Quantity One 4.2.1 software (Bio-Rad) was used. The general settings were as follows:

- Application: Blot; HRP-Substrate (DAB)
- Filter: Green
- Resolution: 42,3 * 42,3 microns =High for small gels with tiny features

Transform operations: high: 3304; low: 47; gamma: 0.91
