

# Supplement 13

## Figure

**S13 Fig. Western Blot**

Densitometric analysis of Western Blots (N = 6) from whole cell homogenates obtained from transfected HEK293 cells. This figure shows examples of WBs used for densitometric analysis (data presented in Figure 5D and 5E).

A shows WB against apoptosis marker CC3 and loading control beta-actin. Since CC3 is expressed at 17 and 19 kDa both bands were used for densitometry.

B shows WB against proliferation marker PCNA and loading control beta-actin.
