

Supplemental figure 2: Univariate subgroup analyses on progression-free (PFS) according to baseline factors

Univariate subgroup analyses were calculated for PFS in the overall cohort. ISS: international staging system; riSS: revised ISS; cytorisk: cytogenetic risk status (high vs. standard [=low] risk; ldhrisk: LDH (elevated [yes] vs. normal [no]); crearisk: serum creatinine (>2 mg/dl [yes] vs. <2 mg/dl [no]); diploidy: cytogenetic hyperdiploidy [HD].
