

Supplementary Figures

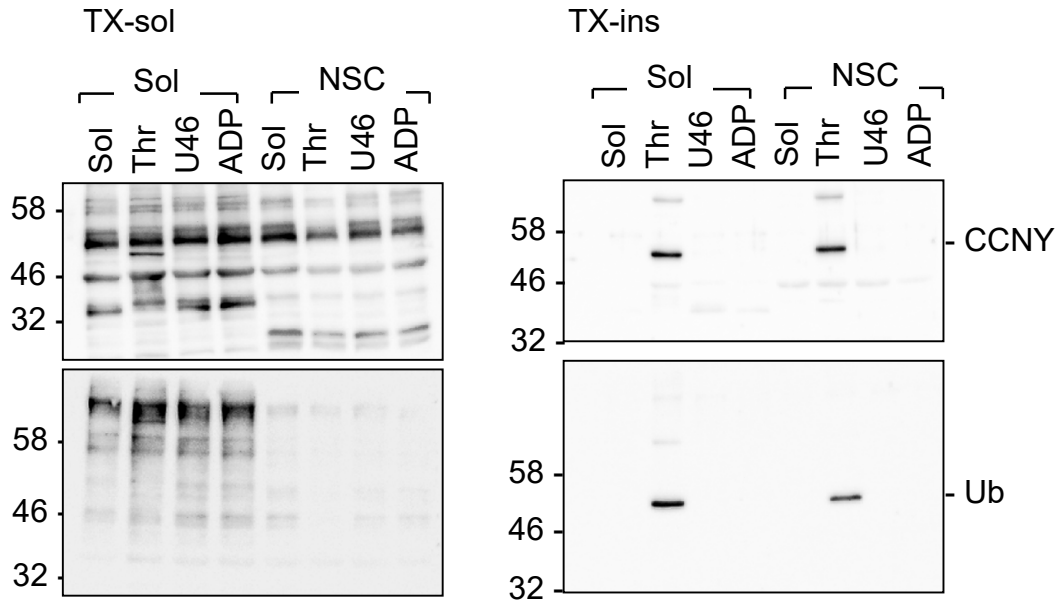

Figure I: Representative blot showing the levels of CCNY and ubiquitin in triton soluble vs triton insoluble fraction in resting platelets and after stimulation with thrombin (Thr, 1U/ml, 10 minutes), the thromboxane A2 analogue U46619 (U46, 100 nmol/L, 10 minutes) or ADP (1 μ mol/L, 10 minutes).

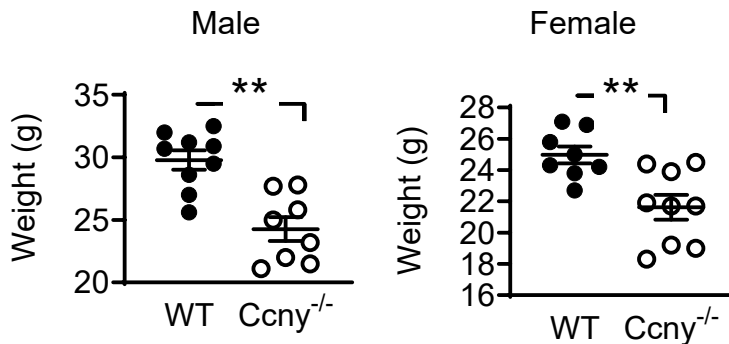

Figure II: Body weight of wild-type and Ccny^{-/-} male (left panel) and female (right panel) mice; n=4-9 (Unpaired *t* test), ***P<0.005.
