

Supporting Information to

Disruption of the MICOS complex leads to an aberrant cristae structure and an unexpected, pronounced lifespan extension in *Podospora anserina*

Verena Warnsmann, Lisa-Marie Marschall, Anja Meeßen, Maike Wolters, Lea Schürmanns, Marion Basoglu, Stefan Eimer, Heinz D. Osiewacz

Figure S1

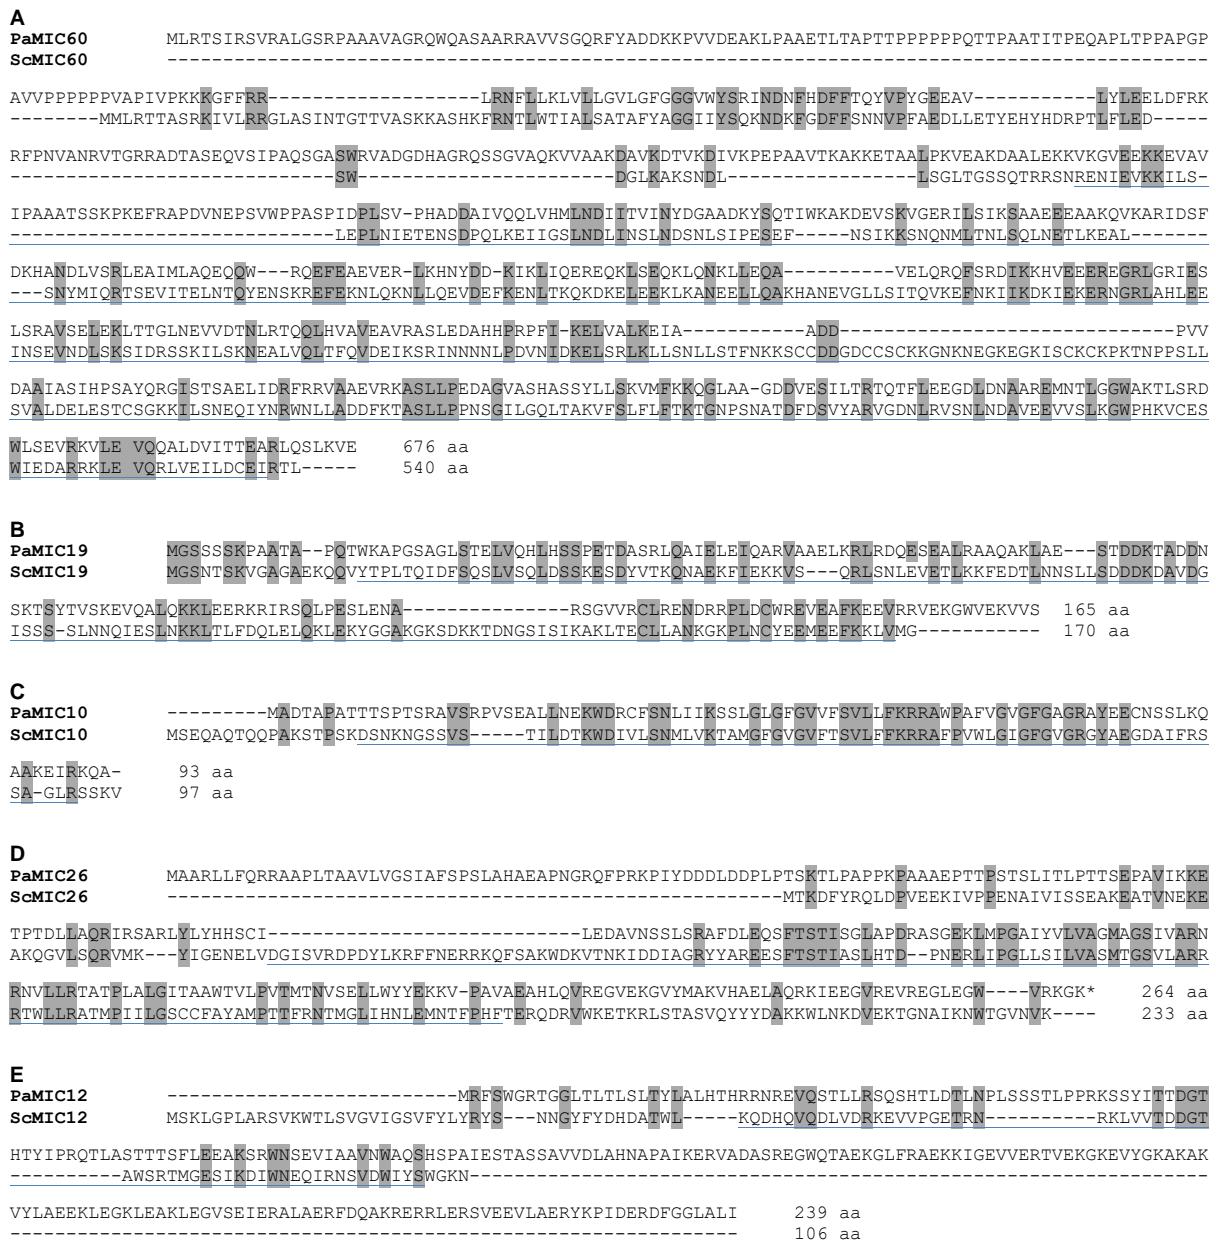

Figure S1: Amino acid sequence alignments of *P. anserina* MICOS proteins with their yeast homologs. Amino acid sequence alignment of (A) *P. anserina* MIC60 (PaMIC60; UniProt: B2A9R4) and *S. cerevisiae* MIC60 (ScMIC60; UniProt: P36112) (B) *P. anserina* MIC19 (PaMIC19; UniProt: B2AUM5) and *S. cerevisiae* MIC19 (ScMIC19; UniProt: P43594), (C) of *P. anserina* MIC10 (PaMIC10; UniProt: B2AWQ3) and *S. cerevisiae* MIC10 (ScMIC10; UniProt: Q96VH5), (D) of *P. anserina* MIC26 (PaMIC26; UniProt: B2AYB9) and *S. cerevisiae* MIC26 (ScMIC26; UniProt: P50087) and (E) of *P. anserina* MIC12 (PaMIC12; UniProt: B2B4I6) and *S. cerevisiae* MIC12 (ScMIC12; UniProt: P38341) using EMBOSS Needle (http://www.ebi.ac.uk/Tools/psa/emboss_needle/). Identical amino acids are marked by grey boxes. Conserved domains are marked by blue lines in the *S. cerevisiae* sequences.

Figure S2

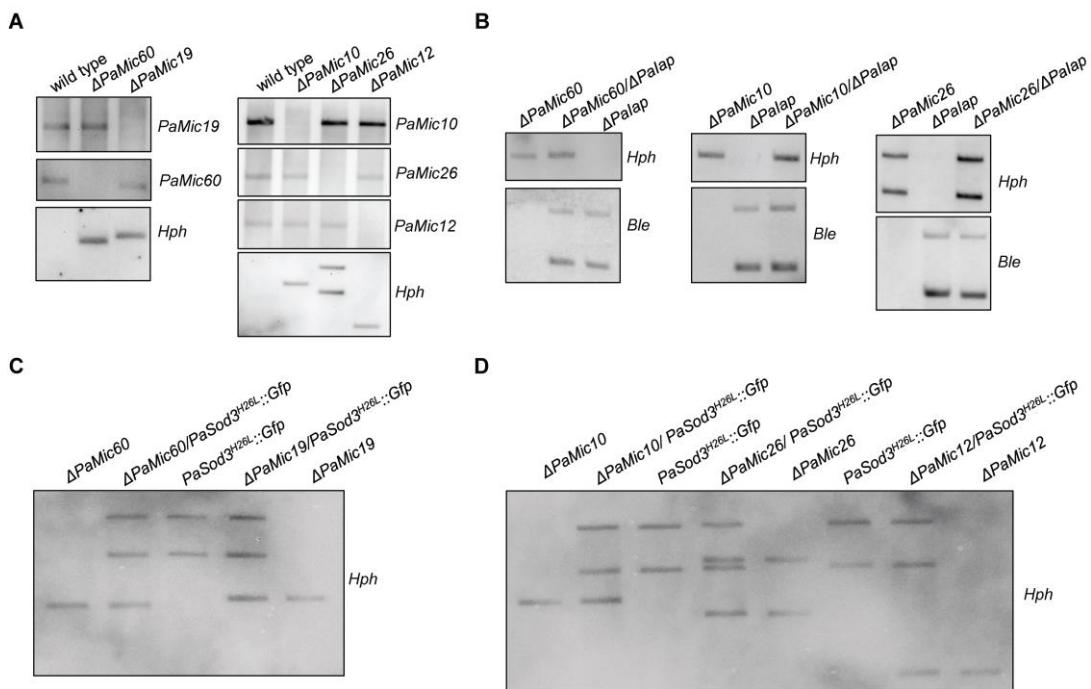

Figure S2: Southern blot verification of MICOS mutants. (A) Southern blot analyses verifying the replacement of *PaMic60*, *PaMic19*, *PaMic10*, *PaMic26* and *PaMic12* by a hygromycin resistance gene (*Hph*). *PaMic60*, *PaMic19*, *PaMic10*, *PaMic26*, *PaMic12* and *Hph* probes were used as indicated. (B) Southern blot analyses verifying the newly generated double mutants $\Delta\text{PaMic}60/\Delta\text{Palap}$, $\Delta\text{PaMic}10/\Delta\text{Palap}$ and $\Delta\text{PaMic}26/\Delta\text{Palap}$. *Ble* (phleomycin resistance), *Hph* (hygromycin resistance) probes were used as indicated. (C+D) Southern blot analysis validating the genetic constitution of different *PaSod3^{H26L}::Gfp* mutants and their respective control strains. *Hph* (hygromycin resistance) probe was used.

Figure S3

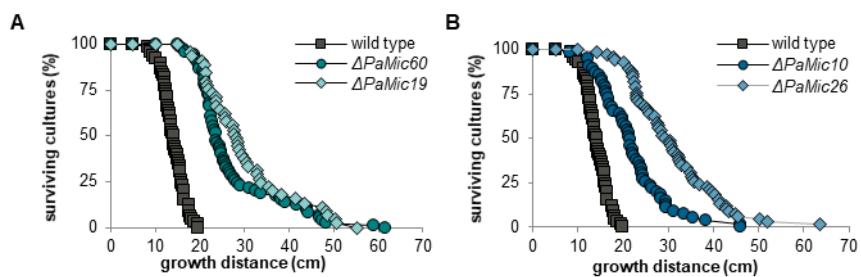

Figure S3: Ablation of MICOS leads to unexpected longevity. (A) Survival curves of *P. anserina* wild type ($n = 66$); $\Delta\text{PaMic}60$ ($n = 76$) and $\Delta\text{PaMic}19$ ($n = 45$) grown on standard M2 medium. (B) Survival curves of *P. anserina* wild type ($n = 66$); $\Delta\text{PaMic}10$ ($n = 48$) and $\Delta\text{PaMic}26$ ($n = 66$) grown on standard M2 medium.

Figure S4

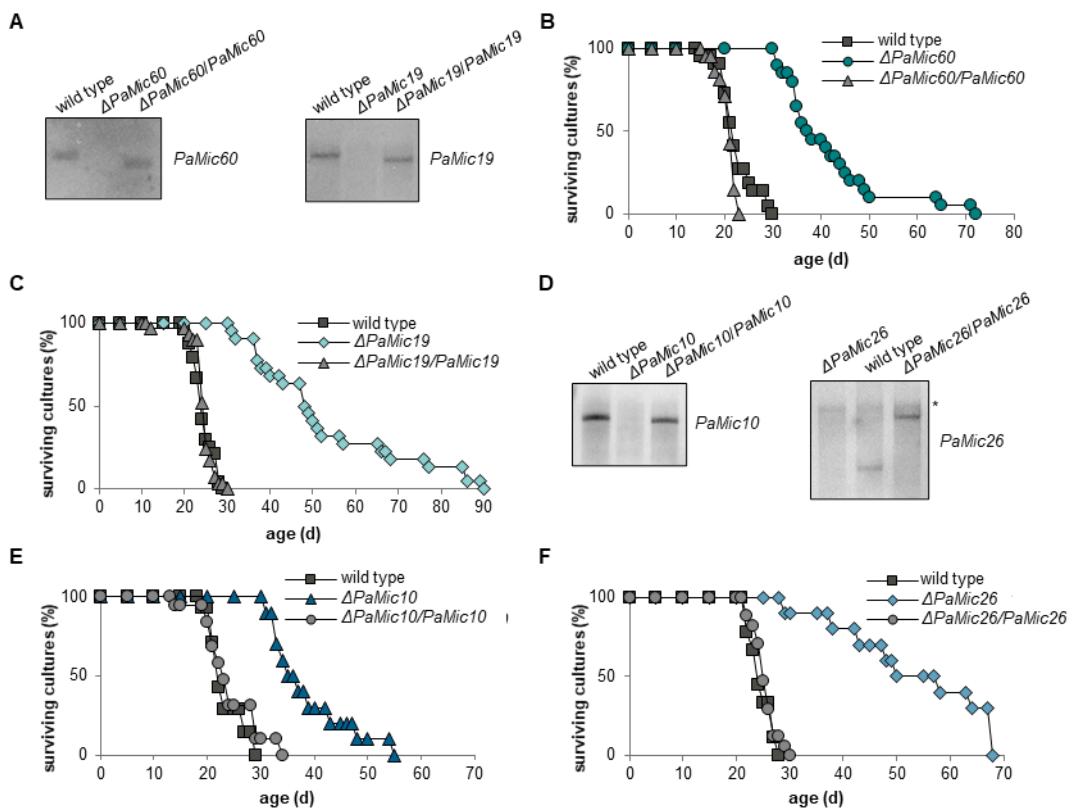

Figure S4: Southern blot verification and lifespan analysis of MICOS complementation strains. (A) Southern blot analysis validates the genotype of different complementation strains and their respective control strains. *PaMic60* and *PaMic19* specific probes were used to detect the corresponding genes. (B) Survival curves of *P. anserina* wild type ($n = 22$); Δ *PaMic60* ($n = 20$) and Δ *PaMic60/PaMic60* ($n = 21$) grown on standard M2 medium. (C) Survival curves of *P. anserina* wild type ($n = 24$); Δ *PaMic19* ($n = 22$) and Δ *PaMic19/PaMic19* ($n = 29$) grown on standard M2 medium. (D) Southern blot analysis validates the genotype of different complementation strains and their respective control strains. *PaMic10* and *PaMic26* specific probes were used to detect the corresponding genes. An asterisk (*) marks an unspecific signal. (E) Survival curves of *P. anserina* wild type ($n = 14$); Δ *PaMic10* ($n = 10$) and Δ *PaMic10/PaMic10* ($n = 19$) grown on standard M2 medium. (F) Survival curves of *P. anserina* wild type ($n = 9$); Δ *PaMic26* ($n = 10$) and Δ *PaMic26/PaMic26* ($n = 17$) grown on standard M2 medium.

Figure S5

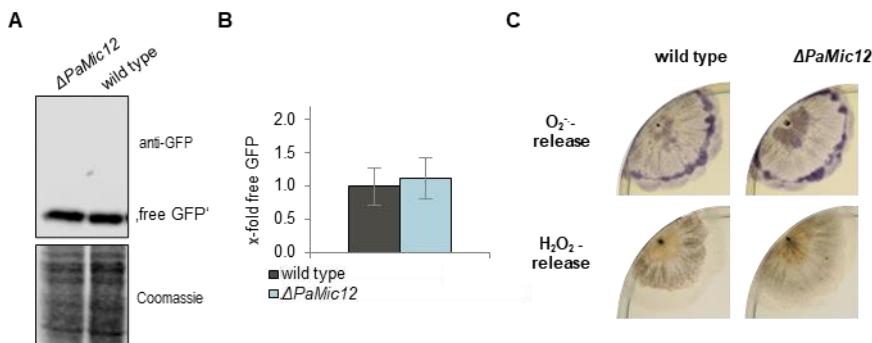

Figure S5: Mitophagy and ROS release in the *PaMic12* deletion mutant. (A) Monitoring mitophagy by western blot analysis of total protein extracts from *PaSod3^{H26L}::Gfp* (here wild type) and $\Delta\text{PaMic12}/\text{PaSod3}^{\text{H26L}}\text{:Gfp}$ ($\Delta\text{PaMic12}$) cultures with a GFP antibody (each 4 biological replicates). (B) Quantification of 'free GFP' protein level normalized to the Coomassie stained gel. Protein level in *PaSod3^{H26L}::Gfp* cultures was set to 1. Data represent mean \pm SD. (C) Qualitative determination of superoxide anion and hydrogen peroxide release, respectively, by histochemical NBT- and DAB-staining of *P. anserina* wild-type and $\Delta\text{PaMic12}$ strains.

Figure S6

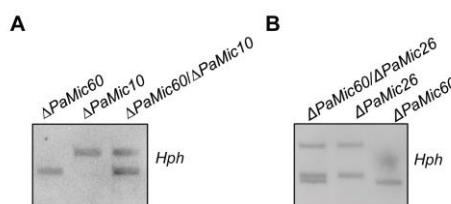

Figure S6: Southern blot analysis of MICOS double deletion mutants. Southern blot analysis verifies the genotype of (A) $\Delta\text{PaMic60}/\Delta\text{PaMic10}$ and of (B) $\Delta\text{PaMic60}/\Delta\text{PaMic26}$ and their respective control strains using an *Hph*-specific gene probe.

Table S1

Table S1: Oligonucleotides used for amplification of flanking regions for deletion of specific genes. The restriction sites are underlined in the sequences. All oligonucleotides were purchased from Biomers, Ulm, Germany.
