

**Supplementary Figure S1. Effects of prenatal conditions on adult male brain methylation.** Nine loci (*Bdnf1* promoter region 1, *Bdnf* promoter region 2, *Crhr1*, *Fkbp5*, *Htr1a*, *Maoa*, *Nos1*, *Nr3c1* promoter, and *Nr3c1* NGFI-A binding site) were analyzed in 6 brain regions (amygdala, frontal cortex, hippocampus, hypothalamus, raphe nuclei, and striatum) of adult male mice. In the bar diagrams (mean  $\pm$  SEM) for each gene and brain region, blue bars indicate prenatal CTRL and green bars prenatal EE conditions. MS, CTRL, and EE represent postnatal conditions. The six treatment groups are shown in the following order, preCTRL/postMS vs. preEE/postMS, preCTRL/postCTRL vs. preEE/postCTRL, preCTRL/postEE vs. preEE/postEE. Significant differences between preCTRL and preEE animals of a given offspring group are indicated by thin vertical lines

**Supplementary Figure S2. Effects of prenatal conditions on adult female brain methylation.** Nine loci (*Bdnf1* promoter region 1, *Bdnf* promoter region 2, *Crhr1*, *Fkbp5*, *Htr1a*, *Maoa*, *Nos1*, *Nr3c1* promoter, and *Nr3c1* NGFI-A binding site) were analyzed in 6 brain regions (amygdala, frontal cortex, hippocampus, hypothalamus, raphe nuclei, and striatum) of adult female mice. In the bar diagrams (mean  $\pm$  SEM) for each gene and brain region, blue bars indicate prenatal CTRL and green bars prenatal EE conditions. MS, CTRL, and EE represent postnatal conditions. The six treatment groups are shown in the following order, preCTRL/postMS vs. preEE/postMS, preCTRL/postCTRL vs. preEE/postCTRL, preCTRL/postEE vs. preEE/postEE. Significant differences between preCTRL and preEE animals of a given offspring group are indicated by thin vertical lines
