

## Appendix to *Native vegetation of southeast NSW: a revised classification and map for the coast and eastern tablelands*

### Appendix 2: Index to Map Unit Descriptions

For ease of reference, the alpha-numeric code assigned to each map unit indicates its usual structural formation (Keith 2004; see Table 8 above), and its relationship to assemblages identified by the recent classifications integrated in this study. Units corresponding directly to those identified by Keith & Bedward (1999) or Tindall *et al.* (2004) retained the unit number assigned in those reports, prefaced by either “e” or “p” respectively to denote the reference. Revised units representing a merging of previous units were assigned a code indicating the region contributing the highest number of samples. New units were assigned prefixes of ‘n’ or ‘m’.

RF e1:	Southeast Dry Rainforest	6
DSF e3:	Rocky Tops Dry Scrub Forest	9
DSF e4:	Brogo Shrub Forest	11
RF e6e7:	Southeast Warm Temperate Rainforest	13
WSF e9:	Southeast High Mountain Wet Layered Forest	18
